

# Prison Inmate Visitation

Two K-1500-6A's and a DLE-200B can provide communication for prison visitation applications at a fraction of the price offered by competitors. The K-1500-6A is designed to be flush mounted in a double gang box, but can be surface mounted using a VE-5x5 (black) or VE-5x5-SS (stainless steel) surface mount box along with two 261330 double gang plate adapters for each K-1500-6A. More savings can be achieved by replacing the visitor's phone with a less vandal resistant K-1500P-W wall phone or K-1500P-D desk phone. Internal dip switch 1 in the DLE-200B should be set to the ON position for this application.
