

Garmin Ltd.
Conflict Minerals Report
For the Year Ended December 31, 2013

This report for the year ended December 31, 2013 is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934 (the “SEC Rule”), which was approved by the U.S. Securities and Exchange Commission (the “SEC”) on Aug. 22, 2012 under Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. The SEC Rule requires companies, like Garmin, that are listed on a U.S. stock exchange to make reasonable inquiries, and depending on the circumstances, undertake further due diligence to attempt to determine the source and chain of custody of “conflict minerals” that are necessary to the functionality or production of a product manufactured or contracted by the company to be manufactured, and to publicly report on an annual basis whether any such “conflict minerals” originate and finance armed groups in the Democratic Republic of the Congo (“DRC”) or an adjoining country. The term “adjoining country” means a country that shares an internationally recognized border with the DRC. The term “conflict minerals” means columbite-tantalite (coltan), cassiterite, gold, wolframite, or their derivatives, tantalum, tin, and tungsten.

If a registrant can establish that the conflict minerals originated from sources other than the DRC or an adjoining country or are from recycled and scrap sources, the registrant must submit a Form SD to the SEC which describes the reasonable country of origin inquiry completed.

If a registrant has reason to believe that any of the conflict minerals in their supply chain may have originated in the DRC or an adjoining country and are not from recycled or scrap sources, or if they are unable to determine the country of origin of those conflict minerals, then the registrant must exercise due diligence on the conflict minerals’ source and chain of custody. The registrant must annually submit a conflict minerals report to the SEC on Form SD that includes a description of those due diligence measures.

Because Garmin has reason to believe that conflict minerals in its products may have originated in the DRC or an adjoining country and may not be from recycled or scrap sources, Garmin undertook due diligence measures in 2013 to attempt to determine the source and chain of custody of these minerals. This report describes the design, implementation and results of Garmin’s due diligence.

- 1. Design of Garmin’s Due Diligence Framework.** With respect to the 2013 calendar year, Garmin designed a due diligence framework to attempt to determine the source and chain of custody of conflict minerals that conforms in all material respects with the Organisation for Economic Co-operation and Development (“OECD”) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High Risk Areas, as further set forth in the specific guidance for downstream companies contained in the supplements on tin, tantalum, tungsten and gold (collectively, the “OECD Guidance”). In accordance with the OECD Guidance, Garmin’s due diligence framework was designed to follow the following five steps: (1) establish strong company

Garmin Ltd.
Conflict Minerals Report
For the Year Ended December 31, 2013

management systems; (2) identify and assess risk in the supply chain; (3) design and implement a strategy to respond to identified risks; (4) carry out independent third-party audit the due diligence practices of smelters/refiners; and (5) report annually on the supply chain due diligence.

2. Implementation of Garmin's Due Diligence Framework. Garmin implemented its due diligence framework as follows:

a. Garmin established strong company management systems.

- i. *Steering Committee and Working Group.*** In 2013 Garmin established a steering committee (the "Steering Committee") comprised of senior executive officers to oversee the design and implementation of Garmin's conflict minerals due diligence framework. Garmin also formed a core working group to design and implement this due diligence framework. The core working group reports directly to the Steering Committee, and includes representatives from Garmin's Legal, Sourcing, and Compliance Engineering departments. Throughout 2013 the core working group met on a weekly basis, and representatives of the core working group periodically updated and sought the direction of the Steering Committee.
- ii. *Conflict Minerals Policy.*** Garmin adopted a Conflicts Minerals Policy and made this policy publicly available on its home website at <http://www.garmin.com/en-US/company/conflict-minerals>. Among other things, this policy sets forth Garmin's expectations of suppliers. Garmin incorporated these supplier expectations into its Supplier Code of Conduct, and also incorporated the Supplier Code of Conduct into its form supplier contract.
- iii. *Grievance Mechanism.*** Garmin's Code of Conduct sets forth a company-level grievance mechanism. The Code of Conduct is publicly available on Garmin's home website at http://www8.garmin.com/aboutGarmin/invRelations/documents/Code_of_Conduct.pdf.

Garmin Ltd.
Conflict Minerals Report
For the Year Ended December 31, 2013

b. Garmin identified and assessed risk in the supply chain.

i. *Identification of Suppliers and Manufacturers.* During 2013 Garmin identified first-tier suppliers that provide products to Garmin that contain or might reasonably be expected to contain one or more of the conflict minerals. Garmin also identified manufacturers who supply products that contain or might reasonably be expected to contain one or more of the conflict minerals to Garmin or to suppliers from whom Garmin purchases such products.

ii. *Engagement with Suppliers and Manufacturers.* Garmin sent a cover letter to those suppliers and manufacturers educating them about the SEC Rule. In this cover letter Garmin also (x) requested that the recipients complete the EICC/GeSI Conflict Minerals Reporting Template (the “Template”), including all smelter/refiner information for any of the conflict minerals contained in their products, (y) provided a link to Garmin’s Conflict Minerals Policy on its home website, and (z) provided contact information for a dedicated employee at Garmin to whom any questions could be directed. In addition to the cover letter and the Template, Garmin also sent the recipients detailed instructions for completing the Template and a Frequently Asked Questions document prepared by Garmin, which provides answers to questions related to the SEC Rule and Garmin’s expectations of its suppliers.

iii. *Review of Templates and Responses, and Review of Listed Smelters and Refiners.* Garmin developed Acceptance Criteria to be used by its responsible employees when reviewing completed Templates and other responses submitted by suppliers and manufacturers. Templates and other responses that satisfied the Acceptance Criteria were then reviewed to compare the smelters/refiners identified by the suppliers and manufacturers against the list of smelters and refiners included in the EICC/GeSI Conflict-Free Smelter Program to assess whether the suppliers and manufacturers are using conflict-free smelters and refiners.

c. **Garmin designed and implemented a strategy to respond to identified risks.** Garmin designed a procedure for following up and escalating with suppliers and manufacturers who do not submit a completed Template by our established response deadline. The procedure involved escalating points of contact at the supplier or manufacturer if the supplier or

Garmin Ltd.
Conflict Minerals Report
For the Year Ended December 31, 2013

manufacturer continued to be non-responsive. Garmin also designed and implemented a procedure to follow-up with suppliers who submitted a Template or other response that did not satisfy our expectations and Acceptance Criteria. This involved sending a letter identifying the missing information or other information necessary to satisfy our expectations and Acceptance Criteria, along with a deadline for providing this missing or additional information to Garmin.

Suppliers and manufacturers were informed that a failure to respond fully and within established deadlines could adversely affect their supplier rating and could result in corrective action, up to and including Garmin ceasing to source products from them. Garmin's core working group maintained and discussed records detailing the suppliers and manufacturers contacted, the responses received, the responses that were accepted by Garmin, and the number of responses that were rejected and resulted in follow-up efforts. This information was updated frequently and shared periodically with the Steering Committee throughout 2013.

- d. Garmin supported the development and implementation of independent third-party audits of the due diligence practices of smelters/refiners.** In 2013, Garmin became a member of the Electronic Industry Citizenship Coalition ("the EICC"). With the financial and other support of their members the EICC and the Global e-Sustainability Initiative ("GeSI") developed the Conflict-Free Smelter ("CFS") program. The CFS is a voluntary program in which an independent third party evaluates a smelter/refiner's procurement activities and determines if the smelter/refiner demonstrated that all the materials they processed originated from conflict-free sources. The program aims to enable companies to source conflict-free minerals. The EICC and GeSI publish and update lists of smelters/refiners, by metal, found to be compliant with the CFS protocol.
- e. Garmin reports annually on its supply chain due diligence, starting with the 2013 calendar year reporting period.** As required under the SEC Rule, Garmin files with the SEC on an annual basis a Conflict Minerals Report. This Conflict Minerals Report is the first report to be filed with the SEC and covers the 2013 calendar year. Subsequent reports will cover subsequent calendar years. Garmin also publishes its Conflict Minerals Report on its home website at <http://www.garmin.com/en-US/company/conflict-minerals>.
- f. Findings.** Garmin is unable to determine, after exercising the due diligence described in this Conflict Minerals Report, whether or not the products described in Paragraph 3 below contain conflict minerals that

Garmin Ltd.
Conflict Minerals Report
For the Year Ended December 31, 2013

directly or indirectly finance or benefit an armed group in the DRC or an adjoining country. The term “armed group” means an armed group that is identified as a perpetrator of serious human rights abuses in an annual Country Reports on Human Rights Practices under sections 116(d) and 502B(b) of the Foreign Assistance Act of 1961 (22 U.S.C. 2151n(d) and 2304(b)) relating to the DRC or an adjoining country.

- 3. Description of Garmin’s products.** Garmin’s products include navigation, communication and information devices— most of which are enabled by GPS technology. For purposes of this Conflict Minerals Report, including Paragraphs 2(f), 4, 5 and 6, Garmin’s products consist of the following products in the following product segments (and accessories for these products such as power cables and adapters):
- a. Automotive.** Garmin’s lines of personal navigation devices for automobiles, motorcycles, trucks and recreation vehicles, dashboard cameras, backup cameras and head-up displays.
 - b. Outdoor Recreation.** Garmin’s lines of handheld golf devices and golf watches, running watches, wearable fitness activity tracking devices, cycling computers, pedal-based power meters, swimming watches, multi-sport watches, action cameras, outdoor handheld devices, outdoor wrist-worn devices, two-way radios, and dog training and tracking devices.
 - c. Marine.** Garmin’s lines of chartplotters, sounders, fishfinder/GPS combination devices, fishfinders, marine wrist-worn devices, radars, autopilots, radios, sailing instruments, transducers and black box bridges, audio system, marine instruments and transducers, and marine cameras.
 - d. Aviation.** Garmin’s lines of GPS-enabled navigation, VHF communications transmitters/receivers, multi-function displays, electronic flight instrumentation systems (EFIS), automatic flight control systems, traffic advisory systems and traffic collision avoidance systems, terrain awareness and warning systems, instrument landing system (ILS) receivers, surveillance products, audio panels, cockpit datalink systems, and wrist-worn pilot device.

For additional information regarding these products please see Item 1 of our 2013 Annual Report on Form 10-K, which was filed with the U.S. Securities and

Garmin Ltd.
Conflict Minerals Report
For the Year Ended December 31, 2013

Exchange Commission on February 19, 2014 and can be found here:
<http://www.garmin.com/en-US/company/investors/sec/form-10-K/>.

- 4. Facilities (smelters/refiners) used to process conflict minerals in products, if known.** The table set forth on Schedule 1 to this Conflict Minerals Report lists the facilities identified by suppliers and manufacturers we surveyed that process conflict minerals in the supply chains of the suppliers and manufacturers. Not all of these facilities have necessarily processed tantalum, tin, tungsten and/or gold contained in our 2013 products. This is because our suppliers and manufacturers generally provided facility information via the Template at the company level, representing the suppliers' and manufacturers' entire product lines, and generally did not limit their Template responses to facility information for tantalum, tin, tungsten and gold in products that they supply to Garmin specifically.
- 5. The country of origin of conflict minerals in products, if known.** The suppliers and manufacturers we surveyed who identified the countries of origin of conflict minerals in their products identified the following countries of origin: Japan, Australia, Mozambique, Canada, Indonesia, Belgium, Bolivia, Brazil, China, Malaysia, Peru, the DRC, Nigeria, Rwanda, Spain, Portugal, England, Taiwan, Ethiopia, Korea, the Philippines, Zimbabwe, the United States of America, Russia, and Switzerland. Suppliers or manufacturers who identified the DRC or an adjoining country as the country of origin for conflict minerals identified processing facilities for such conflict minerals that are listed as having been verified as CFS compliant (or that have received a "conflict-free" designation from another independent third party audit program). Conflict minerals contained in our 2013 products did not necessarily originate in the countries listed above. This is because our suppliers and manufacturers generally provided country of origin information via the Template at the company level, representing the suppliers' and manufacturers' entire product lines, and generally did not limit their Template responses to countries of origin for products they supply to Garmin specifically.
- 6. Efforts to determine mine or location of origin of conflict minerals with the greatest possible specificity.** Garmin determined that our participation in the EICC and the EICC/GeSI CFS program, our requests of suppliers to complete and submit the Template, and the policies and expectations set forth in our Conflict Minerals Policy, Supplier Code of Conduct and supplier contracts that require our suppliers to undertake due diligence on the source and chain of custody of conflict minerals in products supplied to Garmin constitute the most reasonable efforts

Garmin Ltd.
Conflict Minerals Report
For the Year Ended December 31, 2013

Garmin can undertake to determine the mine or location of origin of conflict minerals in our supply chain.

7. Steps Garmin plans to take in 2014 to mitigate any risks that conflict minerals in its products benefit armed groups in the DRC or adjoining countries. Garmin intends to take the following steps during 2014 to further mitigate the risk that conflict minerals in its products benefit armed groups in the DRC or adjoining countries:

- a. Strengthen engagement with suppliers and continue to educate them on the requirements of the SEC Rule and Garmin's Conflict Minerals Policy.
- b. Include a conflict minerals flow-down clause in new or renewed supplier contracts.
- c. Continue to support the ongoing development of the EICC/GeSI CFS program and encourage suppliers to transition their supply chains to CFS compliant sources of conflict minerals.
- d. Expand the scope of our grievance mechanism and expressly reference this mechanism in our Conflicts Minerals Policy so that suppliers or other external parties have a formal avenue to report any concerns and violations of our Policy to Garmin.
- e. Consider the availability of alternative sources of products if we determine that a supplier has supplied us with any conflict minerals that directly or indirectly finance or benefit an armed group in the DRC or an adjoining country.
