About this document

This document provides the command information indicated in the ESC/Label Command Reference Guide (Rev. **H**) listed alphabetically according to the command name and includes model information.

REVISION SHEET

Revision	Summary
A	Enactment
B	Added a column for factory-set initial values to the Command List
	Revised the insufficient descriptions in the corresponding ZPL column of the Command List
	^S(CCA: Changed the initial value Alias for drive B: R → E
	^S(CMF/~H(CMF: Added parameter Set backfeed procedure
	^S(CMV: Changed the initial value Permitted clogged nozzle number: 2 → 6
	^S(CPC: Changed the parameter name Print quality: Standard → Normal
	^S(CUL: Changed definition range Added Polish
	^S(CUI/~H(CUI: Added parameter Enable/disable peeler reset button
C	^BX: Changed definition range
	~DY: Changed definition range Added extension UCL
	Added the ^H(E command
	Added the ^JC command
	Added the ^P(M command
	^S(CMQ/~H(CMQ: Added parameter Added wait time adjustment after peeling label
	^S(CUL/~H(CUL: Added parameter Deleted panel brightness
	Corrected List of Printer Errors in Appendix Table A-1 CS → CO
D	Correction of errors

E	^S(CLM: Added the media type
	Added the ~H(IMM command
F	^S(CUB/~H(CUB: Added parameter
G	^S(CMS/~H(CMS: Added parameter

Command List of the Alphabetical Order

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
^A		Font	Sets the font used to render character strings in the field.	Text	^Afo,h,w	f: Font identifier	0 ≤ f ≤ 9, Capital letter of the alphabet (A to Z)	0 ≤ f ≤ 9, Capital letter of the alphabet (A to Z)		0 ≤ f ≤ 9, Capital letter of the alphabet (A to Z)		^A	Low
						o: Field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)			
						h: Character height [dot]	0 ≤ h ≤ 9999	0 ≤ h ≤ 3000		0 ≤ h ≤ 3000			
						w: Character width [dot]	0 ≤ w ≤ 9999	0 ≤ w ≤ 3000		0 ≤ w ≤ 3000			
^A@		Font file	Sets the font used to render character strings in the field.	Text	^A@o,h,w,d:f,x	o: Field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^A@	Low
						h: Character height [dot]	0 ≤ h ≤ 9999	0 ≤ h ≤ 3000		0 ≤ h ≤ 3000			
						w: Character width [dot]	0 ≤ w ≤ 9999	0 ≤ w ≤ 3000		0 ≤ w ≤ 3000			
						d: Font storage drive	d = R/E/B/A/Z R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory Z: Non-rewritable memory	d = R/E/B/A/Z R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory Z: Non-rewritable memory		d = R/E/B/A/Z R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory Z: Non-rewritable memory			
						f: Font file name	ASCII code within 8 characters	ASCII code within 8 characters		ASCII code within 8 characters			
						x: Extension	x = FNT/TTF/TTE/DAT	x = FNT/TTF/TTE/DAT		x = FNT/TTF/TTE/DAT			
^B(Q		Micro QR Code	Creates a Micro-QR Code symbol with a smaller symbol size than the QR Code.	Barcode	^B(Qo,v,s	o: Micro QR Code field orientation	o = N (Fixed) N: Normal	o = N (Fixed) N: Normal		o = N (Fixed) N: Normal			Low
						v: Micro QR Code version	v = 0/1/2/3/4 0: Auto 1: M1 (11 × 11) 2: M2 (13 × 13) 3: M3 (15 × 15) 4: M4 (17 × 17)	v = 0: Auto		v = 0: Auto			
						s: Micro QR Code module size [dot]	1 ≤ s ≤ 99	1 ≤ s ≤ 20		1 ≤ s ≤ 20			
^B(R		GS1 Databar (HRI character attachable)	^B(R command generates GS1 DataBar as well as ^BR command. HRI character is attachable.	Barcode	^B(Ra,b,c,d,e,f,g	a: Field orientation	a = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	a = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		a = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)			Low
						b: Type of barcode or symbol	1 ≤ b ≤ 12 1: GS1 DataBar 2: GS1 DataBar Truncated 3: GS1 DataBar Stacked 4: GS1 DataBar Stacked Omnidirectional 5: GS1 DataBar Limited 6: GS1 DataBar Expanded 7: UPC-A 8: UPC-E 9: EAN-13 10: EAN-8 11: UCC/EAN-128 and CC-A/CC-B 12: UCC/EAN-128 and CC-C	1 ≤ b ≤ 12 1: GS1 DataBar 2: GS1 DataBar Truncated 3: GS1 DataBar Stacked 4: GS1 DataBar Stacked Omnidirectional 5: GS1 DataBar Limited 6: GS1 DataBar Expanded 7: UPC-A 8: UPC-E 9: EAN-13 10: EAN-8 11: UCC/EAN-128 and CC-A/CC-B 12: UCC/EAN-128 and CC-C		1 ≤ b ≤ 12 1: GS1 DataBar 2: GS1 DataBar Truncated 3: GS1 DataBar Stacked 4: GS1 DataBar Stacked Omnidirectional 5: GS1 DataBar Limited 6: GS1 DataBar Expanded 7: UPC-A 8: UPC-E 9: EAN-13 10: EAN-8 11: UCC/EAN-128 and CC-A/CC-B 12: UCC/EAN-128 and CC-C			
						c: Magnification factor of barcode or symbol	1 ≤ c ≤ 99	1 ≤ c ≤ 20		1 ≤ c ≤ 20			
						d: Height of separator	d = 1/2	d = 1/2		d = 1/2			
						e: Height of barcode part [dot]	1 ≤ e ≤ 32000	1 ≤ e ≤ 14400		1 ≤ e ≤ 14400			
						f: Number of segments	2 ≤ f ≤ 22, even numbers only	2 ≤ f ≤ 22, even numbers only		2 ≤ f ≤ 22, even numbers only			
						g: Set/cancel of HRI character addition	g = Y/N Y: Set N: Cancel	g = Y/N Y: Set N: Cancel		g = Y/N Y: Set N: Cancel			

Command List of the Alphabetical Order

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
^B(V		Set barcode printing validation function	Use the ^B(V command to enable/disable the barcode printing validation function.	Barcode	^B(Va	a: Barcode printing validation function	a = Y/N Y: Enabled N: Disabled	a = Y/N Y: Enabled N: Disabled		a = Y/N Y: Enabled N: Disabled			Low
^B0		Aztec Code	Sets the Aztec Code symbol to the field.	Barcode	^B0o,m,e,t,i,n,id	o: Aztec Code field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^B0	Low
						m: Aztec Code module size	1 ≤ m ≤ 99	1 ≤ m ≤ 20		1 ≤ m ≤ 20			
						e: Aztec Code extended channel interpretation (ECI) enabled/disabled	e = Y/N Y: Enabled N: Disabled	e = N N: Disabled		e = N N: Disabled			
						t: Aztec Code mode type and data layer count	t = 0 01 ≤ t ≤ 99 101 ≤ t ≤ 104 201 ≤ t ≤ 232 t = 300	t = 0 01 ≤ t ≤ 99 101 ≤ t ≤ 104 204 ≤ t ≤ 232		t = 0 01 ≤ t ≤ 99 101 ≤ t ≤ 104 204 ≤ t ≤ 232			
						i: Aztec Code leader initialization symbol	i = Y/N Y: Yes N: No	i = N N: No		i = N N: No			
						n: Number of symbols for structured append with Aztec Code	1 ≤ n ≤ 26	1 ≤ n ≤ 26		1 ≤ n ≤ 26			
						id: Aztec Code message ID	ASCII code within 24 characters	ASCII code within 24 characters		ASCII code within 24 characters			
^B2		Interleaved 2 of 5 barcode	Sets Interleaved 2 of 5 barcode to the field.	Barcode	^B2o,h,i,a,c	o: Interleaved 2 of 5 field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^B2	Low
						h: Interleaved 2 of 5 barcode height [dot]	1 ≤ h ≤ 32000	1 ≤ h ≤ 14400		1 ≤ h ≤ 14400			
						i: Set/cancel of HRI character addition for Interleaved 2 of 5	i = Y/N Y: Set N: Cancel	i = Y/N Y: Set N: Cancel		i = Y/N Y: Set N: Cancel			
						a: Set/cancel of HRI character addition for top of Interleaved 2 of 5 barcode	a = Y/N Y: Set N: Cancel	a = Y/N Y: Set N: Cancel		a = Y/N Y: Set N: Cancel			
						c: Set/cancel check digit printing for Interleaved 2 of 5	c = Y/N Y: Set N: Cancel	c = Y/N Y: Set N: Cancel		c = Y/N Y: Set N: Cancel			
^B3		Code 39 barcode	Sets Code 39 barcode to the field.	Barcode	^B3o,c,h,i,a	o: Code 39 field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^B3	Low
						c: Set/cancel check digit printing for Code 39	c = Y/N Y: Set N: Cancel	c = Y/N Y: Set N: Cancel		c = Y/N Y: Set N: Cancel			
						h: Code 39 barcode height [dot]	1 ≤ h ≤ 32000	1 ≤ h ≤ 14400		1 ≤ h ≤ 14400			
						i: Set/cancel of HRI character addition for Code 39	i = Y/N Y: Set N: Cancel	i = Y/N Y: Set N: Cancel		i = Y/N Y: Set N: Cancel			
						a: Set/cancel of HRI character addition for top of Code 39 barcode	a = Y/N Y: Set N: Cancel	a = Y/N Y: Set N: Cancel		a = Y/N Y: Set N: Cancel			

Command List of the Alphabetical Order

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
^B7		PDF417 barcode	Sets the PDF417 symbol to the field.	Barcode	^B7o,h,e,c,r,t	o: PDF417 field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^B7	Low
						h: PDF417 row height [dot]	1 ≤ h ≤ Label length	1 ≤ h ≤ 14400		1 ≤ h ≤ 14400			
						e: PDF417 error correction level	0 ≤ e ≤ 8	0 ≤ e ≤ 8		0 ≤ e ≤ 8			
						c: PDF417 column count	c = 0 (Auto) 1 ≤ c ≤ 30	c = 0 (Auto) 1 ≤ c ≤ 30		c = 0 (Auto) 1 ≤ c ≤ 30			
						r: PDF417 row count	r = 0 (Auto) 3 ≤ r ≤ 90	r = 0 (Auto) 3 ≤ r ≤ 90		r = 0 (Auto) 3 ≤ r ≤ 90			
t: Truncate right row indicators and stop pattern for PDF417	t = Y/N Y: Set N: Cancel	t = Y/N Y: Set N: Cancel		t = Y/N Y: Set N: Cancel									
^B8		EAN-8 barcode	Sets EAN-8 barcode to the field.	Barcode	^B8o,h,i,a	o: EAN-8 field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^B8	Low
						h: EAN-8 barcode height [dot]	1 ≤ h ≤ 32000	1 ≤ h ≤ 14400		1 ≤ h ≤ 14400			
						i: Set/cancel of HRI character addition for EAN-8	i = Y/N Y: Set N: Cancel	i = Y/N Y: Set N: Cancel		i = Y/N Y: Set N: Cancel			
						a: Set/cancel of HRI character addition for top of EAN-8 barcode	a = Y/N Y: Set N: Cancel	a = Y/N Y: Set N: Cancel		a = Y/N Y: Set N: Cancel			
^B9		UPC-E barcode	Sets UPC-E barcode to the field.	Barcode	^B9o,h,i,a,c	o: UPC-E field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^B9	Low
						h: UPC-E barcode height [dot]	1 ≤ h ≤ 32000	1 ≤ h ≤ 14400		1 ≤ h ≤ 14400			
						i: Set/cancel of HRI character addition for UPC-E	i = Y/N Y: Set N: Cancel	i = Y/N Y: Set N: Cancel		i = Y/N Y: Set N: Cancel			
						a: Set/cancel of HRI character addition for top of UPC-E barcode	a = Y/N Y: Set N: Cancel	a = Y/N Y: Set N: Cancel		a = Y/N Y: Set N: Cancel			
						c: Set/cancel check digit printing for UPC-E	c = Y/N Y: Set N: Cancel	c = Y/N Y: Set N: Cancel		c = Y/N Y: Set N: Cancel			
^BA		Code 93 barcode	Sets Code 93 barcode to the field.	Barcode	^BAo,h,i,a,c	o: Code 93 field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^BA	Low
						h: Code 93 barcode height [dot]	1 ≤ h ≤ 32000	1 ≤ h ≤ 14400		1 ≤ h ≤ 14400			
						i: Set/cancel of HRI character addition for Code 93	i = Y/N Y: Set N: Cancel	i = Y/N Y: Set N: Cancel		i = Y/N Y: Set N: Cancel			
						a: Set/cancel of HRI character addition for top of Code 93 barcode	a = Y/N Y: Set N: Cancel	a = Y/N Y: Set N: Cancel		a = Y/N Y: Set N: Cancel			
						c: Set/cancel check digit printing for Code 93	c = Y/N Y: Set N: Cancel	c = Y/N Y: Set N: Cancel		c = Y/N Y: Set N: Cancel			

Command List of the Alphabetical Order

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
^BC		Code 128 barcode	Sets Code 128 barcode to the field.	Barcode	^BCo,h,i,a,c,m	o: Code 128 field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^BC	Low
						h: Code 128 barcode height [dot]	1 ≤ h ≤ 32000	1 ≤ h ≤ 14400	1 ≤ h ≤ 14400				
						i: Set/cancel of HRI character addition for Code 128	i = Y/N Y: Set N: Cancel	i = Y/N Y: Set N: Cancel	i = Y/N Y: Set N: Cancel				
						a: Set/cancel of HRI character addition for top of Code 128 barcode	a = Y/N Y: Set N: Cancel	a = Y/N Y: Set N: Cancel	a = Y/N Y: Set N: Cancel				
						c: Addition of a Mod10 check digit for Code 128	c = Y/N Y: Yes N: No	c = Y/N Y: Yes N: No	c = Y/N Y: Yes N: No				
					m: Code 128 mode	m = N/U/A/D N: Normal U: UCC Case A: Automatic D: UCC/EAN	m = N/U/A/D N: Normal U: UCC Case A: Automatic D: UCC/EAN		m = N/U/A/D N: Normal U: UCC Case A: Automatic D: UCC/EAN				
^BD		MaxiCode	Sets the MaxiCode symbol to the field.	Barcode	^BDm,n,q	m: MaxiCode mode	m = 2/3/4/5/6 2: Structured carrier message: numeric postal code (U.S.A.) 3: Structured carrier message: alphanumeric postal code (International) 4: Standard symbol 5: Full EEC 6: Reader program	m = 2/3/4/5/6 2: Structured carrier message: numeric postal code (U.S.A.) 3: Structured carrier message: alphanumeric postal code (International) 4: Standard symbol 5: Full EEC 6: Reader program		m = 2/3/4/5/6 2: Structured carrier message: numeric postal code (U.S.A.) 3: Structured carrier message: alphanumeric postal code (International) 4: Standard symbol 5: Full EEC 6: Reader program		^BD	Low
						n: Number in the MaxiCode structured append	1 ≤ n ≤ 8	1 ≤ n ≤ 8	1 ≤ n ≤ 8				
						q: Total number of symbols in the MaxiCode structured append	1 ≤ q ≤ 8	1 ≤ q ≤ 8	1 ≤ q ≤ 8				
^BE		EAN-13 barcode	Sets EAN-13 barcode to the field.	Barcode	^BEo,h,i,a	o: EAN-13 field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^BE	Low
						h: EAN-13 barcode height [dot]	1 ≤ h ≤ 32000	1 ≤ h ≤ 14400	1 ≤ h ≤ 14400				
						i: Set/cancel of HRI character addition for EAN-13	i = Y/N Y: Set N: Cancel	i = Y/N Y: Set N: Cancel	i = Y/N Y: Set N: Cancel				
					a: Set/cancel of HRI character addition for top of EAN-13 barcode	a = Y/N Y: Set N: Cancel	a = Y/N Y: Set N: Cancel		a = Y/N Y: Set N: Cancel				
^BF		Micro PDF417	Sets the Micro PDF417 symbol to the field.	Barcode	^BFo,h,m	o: Micro PDF417 field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^BF	Low
						h: Micro PDF417 symbol height [dot]	1 ≤ h ≤ 9999	1 ≤ h ≤ 9999	1 ≤ h ≤ 9999				
						m: Micro PDF417 mode	0 ≤ m ≤ 33	0 ≤ m ≤ 33	0 ≤ m ≤ 33

						i: Data Matrix ECC200 escape sequence identifier	Any ASCII single character	Any ASCII single character		Any ASCII single character			
						f: Data Matrix ECC200 symbol shape	f = 1/2 1: Square 2: Rectangle	f = 1/2 1: Square 2: Rectangle		f = 1/2 1: Square 2: Rectangle			
^BY		Set barcode parameters default values	Sets the default values for parameters used in barcodes.	Barcode	^BYx,n,h	x: Module width [dot]	1 ≤ x ≤ 9999	1 ≤ x ≤ 85		1 ≤ x ≤ 85		^BY	Low
						n: Bar width ratio	2.0 ≤ n ≤ 3.0	2.0 ≤ n ≤ 3.0		2.0 ≤ n ≤ 3.0			
						h: Barcode height [dot]	1 ≤ h ≤ 32000	1 ≤ h ≤ 14400		1 ≤ h ≤ 14400			
^C(D		Delete image of drawing canvas saved temporarily	The ^C(D command deletes the image of drawing canvas of format which was temporarily saved by using ^C(S command.	Graphic	^C(D	None	None	None		None		Low	
^C(L		Load temporary saved image of drawing canvas	The ^C(L command loads the image of drawing canvas of format which was temporarily saved by using ^C(S command, and puts the image onto the current format.	Graphic	^C(L	None	None	None		None		Low	

Command List of the Alphabetical Order

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
^C(S		Save image of drawing canvas temporarily	The ^C(S command temporarily saves the image of drawing canvas of current format.	Graphic	^C(Sa	a: Print image after saving	a = Y/N Y = Set N = Cancel	a = Y/N Y = Set N = Cancel		a = Y/N Y = Set N = Cancel			Low
^CC		Set prefix character for format command	Sets the prefix character which indicates the format command.	Miscellaneous	^CCp	p: Prefix character for format command	One ASCII code character excluding <C>, <D>, and <T>	One ASCII code character excluding <C>, <D>, and <T>		One ASCII code character excluding <C>, <D>, and <T>		^CC	High
~CC		Set prefix character for format command	Sets the prefix character which indicates the format command.	Miscellaneous	~CCp	p: Prefix character for format command	One ASCII code character excluding <C>, <D>, and <T>	One ASCII code character excluding <C>, <D>, and <T>		One ASCII code character excluding <C>, <D>, and <T>		~CC	High
^CD		Set command parameter delimiter	Sets the character which indicates a break between command parameters.	Miscellaneous	^CDs	s: Parameter separator character	One ASCII code character excluding <C>, <D>, and <T>	One ASCII code character excluding <C>, <D>, and <T>		One ASCII code character excluding <C>, <D>, and <T>		^CD	High
~CD		Set command parameter delimiter	Sets the character which indicates a break between command parameters.	Miscellaneous	~CDs	s: Parameter separator character	One ASCII code character excluding <C>, <D>, and <T>	One ASCII code character excluding <C>, <D>, and <T>		One ASCII code character excluding <C>, <D>, and <T>		~CD	High
^CF		Default font specification	Specifies the default font used to render character strings in the field.	Text	^CFf,h,w	f: Default font identifier h: Default character height [dot] w: Default character width [dot]	0 ≤ f ≤ 9, Capital letter of the alphabet (A to Z) 0 ≤ h ≤ 9999 0 ≤ w ≤ 9999	0 ≤ f ≤ 9, Capital letter of the alphabet (A to Z) 0 ≤ h ≤ 9999 0 ≤ w ≤ 9999		0 ≤ f ≤ 9, Capital letter of the alphabet (A to Z) 0 ≤ h ≤ 9999 0 ≤ w ≤ 9999		^CF	Low
^CI		Set international font/encoding	Sets the link between the input character code and the rendered characters.	Text	^CIa,s1,d1,s2,d2,...	a: Character code set s1: Source 1 (character output image) d1: Destination 1 (character input image) ...	<International character set> 0 ≤ a ≤ 12 <Code page> a = 13/27/31/33/34/35/36 <Encode> a = 14/15/16/17/24/26/28/29/30 0 ≤ s1 ≤ 255 0 ≤ d1 ≤ 255	0 ≤ a ≤ 12 a = 13/14/15/16/ 17/24/26/27/28/ 31/33/34/35 0 ≤ s1 ≤ 255 0 ≤ d1 ≤ 255		0 ≤ a ≤ 12 a = 13/14/15/16/ 17/24/26/27/28/ 31/33/34/35 0 ≤ s1 ≤ 255 0 ≤ d1 ≤ 255		^CI	Low
^CM		Set drive character allocation	Sets the allotment of drive character for accessing memory devices.	Miscellaneous	^CMb,e,r,a,m	b: Memory device to allot drive character B to e: Memory device to allot drive character E to r: Memory device to allot drive character R to a: Memory device to allot drive character A to m: Enable/disable multiple drive allotment	b, e, r, a = B/E/R/A B: Optional memory device E: Internal non-volatile memory device R: Internal volatile memory device A: Optional memory device b, e, r, a = B/E/R/A b, e, r, a = B/E/R/A b, e, r, a = B/E/R/A m = M/No character input M: Enable multiple drive allotment No character input: Disabled	b = E/R E: Internal non-volatile memory device R: Internal volatile memory device e = E/R r = E/R a = E/R m = M/No character input M: Enable multiple drive allotment No character input: Disabled		b = E/R E: Internal non-volatile memory device R: Internal volatile memory device e = E/R r = E/R a = E/R m = M/No character input M: Enable multiple drive allotment No character input: Disabled		^CM	Low
^CT		Set prefix character for control commands	Sets the prefix character which indicates the control command.	Miscellaneous	^CTp	p: Prefix character for control commands	One ASCII code character excluding <C>, <D>, and <T>	One ASCII code character excluding <C>, <D>, and <T>		One ASCII code character excluding <C>, <D>, and <T>		^CT	High
~CT		Set prefix character for control commands	Sets the prefix character which indicates the control command.	Miscellaneous	~CTp	p: Prefix character for control commands	One ASCII code character excluding <C>, <D>, and <T>	One ASCII code character excluding <C>, <D>, and <T>		One ASCII code character excluding <C>, <D>, and <T>		~CT	High
^CV		Barcode validation	Enables/disables the barcode validation.	Barcode	^CVe	e: Enabled/disable barcode validation	e = Y/N Y: Enabled N: Disabled	e = Y/N Y: Enabled N: Disabled		e = Y/N Y: Enabled N: Disabled		^CV	Low

Command List of the Alphabetical Order

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
^CW		Set font identifier allocation	Allots a font identifier to the font file saved to the printer.	Text	^CWF;d;o:x	f: Font identifier allotted to the font file	0 ≤ f ≤ 9, Capital letter of the alphabet (A to Z)	0 ≤ f ≤ 9, Capital letter of the alphabet (A to Z)		0 ≤ f ≤ 9, Capital letter of the alphabet (A to Z)		^CW	Low
						d: Drive where the font file is stored	d = R/E/B/A/Z R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory Z: Non-rewritable memory	d = R/E/B/A/Z R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory Z: Non-rewritable memory		d = R/E/B/A/Z R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory Z: Non-rewritable memory			
						o: Font file name	ASCII code within 8 characters	ASCII code within 8 characters		ASCII code within 8 characters			
						x: Extension	x = FNT/TTF/TTE/DAT	x = FNT/TTF/TTE/DAT		x = FNT/TTF/TTE/DAT			
~DE		Download a character code conversion table	Downloads the character code conversion table to the printer.	Text	~DEd;o,x,s,data	d: Storage memory device	d = R/E/B/A R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory	d = R/E/B/A R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory		d = R/E/B/A R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory		~DE	Low
						o: Character code conversion table file name	ASCII code within 8 characters (20H to 7EH)	ASCII code within 8 characters (20H to 7EH)		ASCII code within 8 characters (20H to 7EH)			
						x: Extension	x = CNV	x = CNV		x = CNV			
						s: Data size (bytes) of the character code conversion table	Numerical value The maximum size depends on the model.	Numerical value The maximum size depends on the model.		Numerical value The maximum size depends on the model.			
		data: Character code conversion table data	Binary data in CNV format	Binary data in CNV format		Binary data in CNV format							
^DF		Save label format	Saves the commands in the label format to the label format file.	Format	^DFd;o:x	d: Drive for storing the label format file	d = R/E/B/A R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory	d = R/E/B/A R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory		d = R/E/B/A R: Volatile memory E: Non-volatile memory B: Optional memory A: Optional memory		^DF	Low

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
^FH		Set hexadecimal identifier	Sets the hexadecimal identifier to the field.	Format	^FHi	i: Hexadecimal identifier	1 character in ASCII code	1 character in ASCII code		1 character in ASCII code		^FH	Low
^FM		Multiple field origin locations in PDF417	Divides a PDF-417 or micro PDF-417 barcode and renders it at each specified coordinate.	Format	^FMx1,y1,x2,y2,...	x1: X coordinate of the 1st symbol [dot]	0 ≤ x1 ≤ 32000, x1 = e e: Remove from rendering target	0 ≤ x1 ≤ 32000, x1 = e e: Remove from rendering target		0 ≤ x1 ≤ 32000, x1 = e e: Remove from rendering target		^FM	Low
						y1: Y coordinate of the 1st symbol [dot]	0 ≤ y1 ≤ 32000, y1 = e e: Remove from rendering target	0 ≤ y1 ≤ 32000, y1 = e e: Remove from rendering target		0 ≤ y1 ≤ 32000, y1 = e e: Remove from rendering target			
						x2: X coordinate of the 2nd symbol [dot]	0 ≤ x2 ≤ 32000, x2 = e e: Remove from rendering target	0 ≤ x2 ≤ 32000, x2 = e e: Remove from rendering target		0 ≤ x2 ≤ 32000, x2 = e e: Remove from rendering target			
						y2: Y coordinate of the 2nd symbol [dot]	0 ≤ y2 ≤ 32000, y2 = e e: Remove from rendering target	0 ≤ y2 ≤ 32000, y2 = e e: Remove from rendering target		0 ≤ y2 ≤ 32000, y2 = e e: Remove from rendering target			
						...	(max 60pairs)	(max 60pairs)		(max 60pairs)			
^FN		Field number	Allots a field number to the field.	Format	^FNn	n: Field number	0 ≤ n ≤ 9999	0 ≤ n ≤ 9999		0 ≤ n ≤ 9999		^FN	Low
^FO		Field origin location	Sets the field origin location relative to the home position.	Format	^FOx,y,j	x: X coordinate of field origin on label [dot]	0 ≤ x ≤ 32000	0 ≤ x ≤ 32000		0 ≤ x ≤ 32000		^FO	Low
						y: Y coordinate of field origin on label [dot]	0 ≤ y ≤ 32000	0 ≤ y ≤ 32000		0 ≤ y ≤ 32000			
						j: Specifies field origin location	j = 0/1/2 0: Left 1: Right 2: Auto	j = 0/1/2 0: Left 1: Right 2: Auto		j = 0/1/2 0: Left 1: Right 2: Auto			
^FP		Set field text format	Sets the format for character string rendering in the current field.	Format	^FPd,s	d: Field character string rendering direction	d = H/V/R H: Horizontal (Left-to-right) V: Vertical (Top-to-bottom) R: Horizontal (Right-to-left)	d = H/V/R H: Horizontal (Left-to-right) V: Vertical (Top-to-bottom) R: Horizontal (Right-to-left)		d = H/V/R H: Horizontal (Left-to-right) V: Vertical (Top-to-bottom) R: Horizontal (Right-to-left)		^FP	Low
						s: Added amount of space between characters [dot]	0 ≤ s ≤ 9999	0 ≤ s ≤ 9999		0 ≤ s ≤ 9999			
^FR		Set field reverse print	Sets monochrome reversal for field rendering.	Format	^FR	None	None	None		None		^FR	Low
^FS		Field separator	Ends the field definition.	Format	^FS	None	None	None		None		^FS	Low
^FT		Field origin location	Sets the field's rendering origin relative to the home position.	Format	^FTx,y,j	x: X coordinate of field rendering origin on label [dot]	0 ≤ x ≤ 32000	0 ≤ x ≤ 32000		0 ≤ x ≤ 32000		^FT	Low
						y: Y coordinate of field rendering origin on label [dot]	0 ≤ y ≤ 32000	0 ≤ y ≤ 32000		0 ≤ y ≤ 32000			
						j: Rendering origin in the field	j = 0/1/2 0: Left 1: Right 2: Auto	j = 0/1/2 0: Left 1: Right 2: Auto		j = 0/1/2 0: Left 1: Right 2: Auto			
^FV		Field variable	Renders the field data to the field.	Format	^FVdata	data: Variable field data	Up to 3,072 bytes of ASCII code, excluding characters set for the prefix	Up to 3,072 bytes of ASCII code, excluding characters set for the prefix		Up to 3,072 bytes of ASCII code, excluding characters set for the prefix		^FV	Low
^FW		Set default field orientation	Sets the default field orientation and origin position.	Format	^FWo,j	o: Default field orientation	o = N/R/l/B N: Normal R: 90° rotation (clockwise) l: 180° rotation B: 270° rotation (clockwise)	o = N/R/l/B N: Normal R: 90° rotation (clockwise) l: 180° rotation B: 270° rotation (clockwise)		o = N/R/l/B N: Normal R: 90° rotation (clockwise) l: 180° rotation B: 270° rotation (clockwise)		^FW	Low
						j: Default field origin location	j = 0/1/2 0: Left 1: Right 2: Auto	j = 0/1/2 0: Left 1: Right 2: Auto		j = 0/1/2 0: Left 1: Right 2: Auto			
^FX		Comment	Defines a character string that does not affect label format printing.	Miscellaneous	^FXdata	data: Comment character string	Up to 3,072 bytes of ASCII code, excluding characters set for the prefix	Up to 3,072 bytes of ASCII code, excluding characters set for the prefix		Up to 3,072 bytes of ASCII code, excluding characters set for the prefix		^FX	Low

Command List of the Alphabetical Order

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
^GB		Graphic box	Renders a rectangle to the field.	Graphic	^GBw,h,t,c,r	w: Rectangle width [dot]	1 ≤ w ≤ 32000	1 ≤ w ≤ 5006		1 ≤ w ≤ 2551		^GB	Low
						h: Rectangle height [dot]	1 ≤ h ≤ 32000	1 ≤ h ≤ 14400		1 ≤ h ≤ 14400			
						t: Outline thickness [dot]	1 ≤ t ≤ 32000	1 ≤ t ≤ 5006		1 ≤ t ≤ 2551			
						c: Outline color	c = B/W B: Black (Color set if color is set to field) W: White	c = B/W B: Black (Color set if color is set to field) W: White		c = B/W B: Black (Color set if color is set to field) W: White			
						r: Size of corner rounding	0 ≤ r ≤ 8	0 ≤ r ≤ 8		0 ≤ r ≤ 8			
^GC		Graphic circle	Renders a circle to the field.	Graphic	^GCd,t,c	d: Circle diameter [dot]	3 ≤ d ≤ 32000	3 ≤ d ≤ 5006		3 ≤ d ≤ 2551		^GC	Low
						t: Outline thickness [dot]	2 ≤ t ≤ 32000	2 ≤ t ≤ 5006		2 ≤ t ≤ 2551			
						c: Outline color	c = B/W B: Black (Color set if color is set to field) W: White	c = B/W B: Black (Color set if color is set to field) W: White		c = B/W B: Black (Color set if color is set to field) W: White			
^GD		Graphic diagonal line	Renders a diagonal line to the field.	Graphic	^GDw,h,t,c,d	w: Diagonal line width [dot]	3 ≤ w ≤ 32000	3 ≤ w ≤ 5006		3 ≤ w ≤ 2551		^GD	Low
						h: Diagonal line height [dot]	3 ≤ h ≤ 32000	3 ≤ h ≤ 14400		3 ≤ h ≤ 14400			
						t: Diagonal line thickness [dot]	1 ≤ t ≤ 32000	1 ≤ t ≤ 5006		1 ≤ t ≤ 2551			
						d: Diagonal line orientation	d = R/L/</>/<\> R, </>: Top-right to bottom-left L, <\>: Top-left to bottom-right	d = R/L/</>/<\> R, </>: Top-right to bottom-left L, <\>: Top-left to bottom-right		d = R/L/</>/<\> R, </>: Top-right to bottom-left L, <\>: Top-left to bottom-right			
^GE		Graphic ellipse	Renders an ellipse to the field.	Graphic	^GEw,h,t,c	w: Ellipse width [dot]	3 ≤ w ≤ 32000	3 ≤ w ≤ 5006		3 ≤ w ≤ 2551		^GE	Low
						h: Ellipse height [dot]	3 ≤ h ≤ 32000	3 ≤ h ≤ 14400		3 ≤ h ≤ 14400			
						t: Outline thickness [dot]	2 ≤ t ≤ 32000	2 ≤ t ≤ 5006		2 ≤ t ≤ 2551			
						c: Outline color	c = B/W B: Black (Color set if color is set to field) W: White	c = B/W B: Black (Color set if color is set to field) W: White		c = B/W B: Black (Color set if color is set to field) W: White			
^GF		Bitmap graphic	Renders the black and white bitmap graphic to the field.	Graphic	^GFf,t,s,w,data	f: Data format	f = A/B/C A: Hexadecimal character string B: Binary C: Compressed binary	f = A/B/C A: Hexadecimal character string B: Binary C: Compressed binary		f = A/B/C A: Hexadecimal character string B: Binary C: Compressed binary		^GF	Low
						t: Graphic data size [byte]	0 ≤ t ≤ 9999999	0 ≤ t ≤ 9014400		0 ≤ t ≤ 4593600			
						s: Graphic size [byte]	0 ≤ s ≤ 9999999	0 ≤ s ≤ 9014400		0 ≤ s ≤ 4593600			
						w: Horizontal width (Number of horizontal dots, divided by 8. Fractions are cut off.)	0 ≤ w ≤ 9999999	0 ≤ w ≤ 9014400		0 ≤ w ≤ 4593600			
^GS		Special font	Sets a symbol mark to the field.	Graphic	^GSo,h,w	o: Field orientation	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)	o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		o = N/R/I/B N: Normal R: 90° rotation (clockwise) I: 180° rotation B: 270° rotation (clockwise)		^GS	Low
						h: Character height [dot]	0 ≤ h ≤ 32000	0 ≤ h ≤ 9999		0 ≤ h ≤ 9999			
						w: Character width [dot]	0 ≤ w ≤ 32000	0 ≤ w ≤ 9999		0 ≤ w ≤ 9999			
~H(C	BB	Send barcode information	Sends information related to barcode size.	Barcode	~H(CBB,b	b=M: Default value of magnification	None	None		None			High
~H(C	BW	Send bar width correction value	Sends the bar width correction value applied when printing barcodes.	Barcode	~H(CBW,b	b=C: Bar width correction value [dot]	None	None		None			High

Command List of the Alphabetical Order

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
~H(C)	CA	Send an alias for the drive	Sends an alias for the drive.	Miscellaneous	~H(CCA,b)	b=A: Alias for the drive A	None	None	None	None		High	
						b=B: Alias for the drive B	None	None	None				
						b=E: Alias for the drive E	None	None	None				
						b=R: Alias for the drive R	None	None	None				
~H(C)	FE	Send valid character code conversion table	Sends the file name of the character code conversion table file that links the designated character code with the character code that makes up the font.	Text	~H(CFE,b)	b=T: File name of the valid character code conversion table	None	None	None		High		
~H(C)	LB	Send background image setting file name	Sends the setting file name which specify the image file for the background image loaded in the overlay function.	Graphic	~H(CLB,b)	b=I: Background image setting file	None	None	None	None		High	
						b=X: Background image X position [dot]	None	None	None				
						b=Y: Background image Y position [dot]	None	None	None				
~H(C)	LE	Send paper edge adjustment	Sends the adjustment value for paper edge (left edge or leading edge) position. Sends the adjustment value for the black mark position for the leading edge of the label.	Media configuration	~H(CLE,b)	b=L: Logical label left edge position adjustment [dot]	None	None	None	None		High	
						b=M: Physical label left edge position adjustment [dot]	None	None	None				
						b=T: Physical label leading edge position adjustment [dot]	None	None	None				
~H(C)	LM	Send media type	Sends media type (label edge detection, media source, media shape, or media coating type).	Media configuration	~H(CLM,b)	b=D: Label edge detection	None	None	None	None		High	
						b=P: Media source	None	None	None				
						b=S: Media shape	None	None	None				
						b=T: Media coating type	None	None	None				
~H(C)	LP	Send paper feeding adjustment	Sends paper feed amount, or cut position adjustment.	Media configuration	~H(CLP,b)	b=O: Cut position adjustment [dot]	None	None	None	None		High	
						b=T: Continuous paper leading edge adjustment [dot]	None	None	None				
~H(C)	LR	Send resolution settings	Sends resolution settings (printing, rendering, or rendering of background image loaded with the overlay function).	Printer setting	~H(CLR,b)	b=B: Background image rendering resolution [dpi]	None	None	None	None		High	
						b=M: Print resolution magnification	None	None	None				
						b=P: Print resolution [dpi]	None	None	None				
						b=R: Format base in dots per inch [dpi]	None	None	None				
~H(C)	LS	Send media setting	Sends media layout (distance between labels, label length, or label width).	Media configuration	~H(CLS,b)	b=C: Distance between labels [dot]	None	None	None	None		High	
						b=L: Label length [dot]	None	None	None				
						b=P: Label width [dot]	None	None	None				
~H(C)	LV	Send media size error	Sends setting value for media size error detection.	Media configuration	~H(CLV,b)	b=H: Media size error (width) detection	None	None	None	None		High	
						b=V: Media size error (length) detection	None	None	None				
~H(C)	MF	Send feed operation	Sends the setting of the media feed sequence when the power is turned on and the media is changed, or the setting of the media suction strength.	Printer setting	~H(CMF,b)	b=B: Set backfeed procedure	None	None	None	None		High	
						b=H: Operation at change media	None	None	None				
						b=M: Manual paper suction strength	None	None	None				
						b=P: Operation at power on	None	None	None				
						b=S: Paper suction strength	None	None	None				

Command List of the Alphabetical Order

¹"Priority" indicates the function is executed with priority.

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
~H(C	MN	Send nozzle clogging recovery enabled/disabled	Sends whether the automatic nozzle clogging recovery function is enabled/disabled.	Printer setting	~H(CMN,b	b=S: Enable/disable nozzle clogging recovery	None	None		None			High
~H(C	MP	Send print operation mode settings	Sends print operation settings (print operation mode, basic printer unit system, or printing direction).	Printer setting	~H(CMP,b	b=M: Print operation mode b=U: Basic printer unit system b=D: Printing direction	None None None	None None None		None None None			High
~H(C	MQ	Send peeler control adjustment amount setting	Sends peeler control adjustment amount setting.	Printer setting	~H(CMQ,b	b = A: Peel position adjustment during automatic application [dot] b = B: Peel position adjustment during manual application [dot] b = W: Wait time adjustment after peeling label [sec]	None None None	None None None		None None None			High
~H(C	MS	Send printing control adjustment amount	Sends setting value for printing control adjustment amount.	Printer setting	~H(CMS,b	b=C: Wait time adjustment for closing caps [sec] b=H: Drying time per head pass [sec]	None None	None None		None None			High
~H(C	MT	Send auto cleaning on designated time setting	Sends settings for auto cleaning on designated time (auto cleaning on designated time or time to start auto cleaning).	Printer setting	~H(CMT,b	b=T: Time to start auto cleaning	None	None		None			High
~H(C	MV	Send nozzle self-test setting	Sends nozzle self-test operation settings (cleaning after self-test, permitted clogged nozzle number, self-test interval in printing (number of labels), operation at clogged nozzle detection, or enable/disable nozzle self-test).	Printer setting	~H(CMV,b	b=A: Cleaning after self-test b=C: Permitted clogged nozzle number b=I: Self-test interval in printing (number of labels) b=O: Operation at clogged nozzle detection b=S: Enable/disable nozzle self-test	None None None None None	None None None None None		None None None None None			High
~H(C	PC	Send image correction settings	Sends correction settings for image to be printed (saturation, type of color correction, ink profile level correction value, spot color list file, tone (yellow), tone (magenta), tone (cyan), contrast, ratio of black to composite, print quality, or brightness).	Printer setting	~H(CPC,b	b=A: Saturation b=C: Type of color correction b=D: Ink profile level correction value b=I: Spot color list file b=L: Tone (yellow) b=M: Tone (magenta) b=N: Tone (cyan) b=O: Contrast b=P: Ratio of black to composite b=Q: Print quality b=R: Brightness	None None None None None None None None None None None	None None None None None None None None None None None		None None None None None None None None None None None			High
~H(C	UB	Send buzzer setting	Sends the buzzer settings for printing operations, or the volume level.	Printer setting	~H(CUB,b	b=E: Enable/disable buzzer sound after error b=F: Enable/disable continuous buzzer sound after error b=S: Buzzer timing b=Z: Buzzer volume	None None None None	None None None None		None None None None			High

Command List of the Alphabetical Order

Command	Function identifier	Command name	Description	Classification	Command code	Description of parameters	Definition range for ESC/Label	CW-C6500 series		CW-C6000 series		Corresponding ZPL II command	Priority ¹
								Definition range	Factory-set initial value	Definition range	Factory-set initial value		
~H(C)	UI	Send enable/disable buttons	Sends enable/disable buttons.	Control panel	~H(CUI,b)	b=B: Enable/disable cancel button	None	None	None	None		High	
						b=C: Enable/disable cut button	None	None	None				
						b=D: Enable/disable peeler reset button	None	None	None				
						b=F: Enable/disable feed button	None	None	None				
						b=P: Enable/disable pause button	None	None	None				
~H(C)	UL	Send panel settings	Sends panel language	Control panel	~H(CUL,b)	b=L: Panel language	None	None	None	None	High		
~H(C)	WR	Send error reprinting setting	Sends the setting for the function to reprint label printing that was stopped due to an error mid-printing.	Configuration	~H(CWR,b)	b=P: Set/cancel error reprinting function	None	None	None	None	High		
^H(E)		Echo back	The character string specified by a parameter is returned.	Status	^H(Ea)	a: Echo character string	0- to 18-character ASCII string	0- to 18-character ASCII string	0- to 18-character ASCII string		Low		
~H(I)	MF	Send firmware version	Sends the firmware version or font version.	Status	~H(IMF,b)	b=V: Firmware version	None	None	None	None	High		
~H(I)	MM	Send model information	Sends the model information.	Status	~H(IMM,b)	b=I: Ink model	None	None	None	None	High		
~H(I)	MP	Send printer individual information	Sends the printer individual information.	Status	~H(IMP,b)	b=S: Serial number	None	None	None	None	High		
~H(Q)	IQ	Send remaining ink	Sends the remaining ink for all colors in the printer.	Status	~H(QIQ)	None	None	None	None	None	High		
~H(Q)	MN	Send available capacity in maintenance box	Sends the available capacity in the maintenance box.	Status	~H(QMN)	None	None	None	None	None	High		
~H(Q)	WN	Send warnings	Sends all types of warnings that occurred at the point in time when the printer received the command.	Status	~H(QWN)	None	None	None	None	None	High		
~H(S)	CM	Send maintenance counter	Sends maintenance counter value to the host.	Status	~H(SCM,b)	b=C : Auto cutter counter	None	None	None	None	High		
						b=O : Operating time (hour)	None	None	None				
~H(S)	CN	Send non-resettable counter	Sends non-resettable counter value to the host.	Status	~H(SCN,b)	b=C: Non-resettable counter (centimeter)	None	None	None	None	High		
						b=I: Non-resettable counter (inch)	None	None	None				
						b=L: Non-resettable counter (printed label number)	None	None	None				
~H(S)	DS	Send available capacity in the drive	Sends the available capacity in the drive accessible by the user.	Status	~H(SDS,b)	b=A: Available capacity in drive A	None	None	None	None	High		
						b=B: Available capacity in drive B	None	None	None				
						b=E: Available capacity in drive E	None	None	None				
						b=R: Available capacity in drive R	None	None	None				
~H(S)	EA	Send error status	Sends the error status (error name).	Status	~H(SEA,b)	b=E: Error status	None	None	None	None	High		
						b=F: Fatal error status	None	None	None				
~H(S)	LS	Send media detection	Sends the size of the media detected by the printer.	Media configuration	~H(SLS,b)	b=H: Media width	None	None	None	None	High		
						b=V: Media length	None	None	None				
~H(S)	MA	Send printer operation status	Sends the printer operation status.	Status	~H(SMA,b)	b=S: Printer operation status	None	None	None	None	High		
~H(S)	PA	Send print stopping status	Sends the status in which factors that stop printing occurred.	Status	~H(SPA,b)	b=C: Cover open status	None	None	None	None	High		
						b=O: Panel operation waiting status	None	None	None				
						b=P: Paper out status	None	None	None				
						b=S: Pause status	None	None	None				
~H(S)	PB	Send buffer full status	Sends the buffer full status.	Status	~H(SPB,b)	b=F: Buffer full status	None	None	None	None	High

Appendix A List of Printer Errors and Warnings

- Use the "~H(S)" (Get printer operation status) command to get the printer error status.
- Use the "~H(Q)" (Get printer status) command to get the printer warning status.

The lists of printer errors and warnings of the CW-C6000 and CW-C6500 series are indicated in Tables A-1 and A-2.

Table A-1 List of Printer Errors

Definition Range Value	Error Description
NE	No error
FE	Fatal error
CO	Cover open error (paper cover) *1
IE	Replace Ink cartridge, or No Ink cartridge error
SJ	Paper jam error
SN	Paper out error
MF	Replace maintenance box error
SS	Media size error
ST	Media source error
SR	Paper recognition error
CI	Ink cartridge cover open error
MN	No maintenance box error
CM	Maintenance box cover open error
SE	Paper removal error
LT	Maintenance error (tube life)
CF	Front cover open error
CR	Release lever open error
CG	Guide unit open error
SC	Sensor calibration error
IC	Cleaning not available due to low remaining ink
MC	Cleaning not available due to insufficient waste ink capacity

*1 In the CW-C6000 and CW-C6500 series, the roll cover and paper cover have been integrated as a paper cover.

Table A-2 List of Printer Warnings

Definition Range Value	Warning Description
IC1	Cyan ink cartridge low warning
IM1	Magenta ink cartridge low warning
IY1	Yellow ink cartridge low warning
IK1	Black ink cartridge low warning
MNF	Maintenance box near full warning
NCR	Nozzle clog recovering warning
NSU	Nozzle check disabled
WSC	Service call warning
WNC	Nozzle clog warning
