All information contained in these materials, including products and product specifications, represents information on the product at the time of publication and is subject to change by Renesas Electronics Corp. without notice. Please review the latest information published by Renesas Electronics Corp. through various means, including the Renesas Electronics Corp. website (<https://www.renesas.com>)

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
 2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.
Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
 6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

1. Handling of Unused Pins
Handle unused pins in accordance with the directions given under Handling of Unused Pins in the manual.
 - The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.
2. Processing at Power-on
The state of the product is undefined at the moment when power is supplied.
 - The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.
In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.
3. Prohibition of Access to Reserved Addresses
Access to reserved addresses is prohibited.
 - The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.
4. Clock Signals
After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.
 - When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.
5. Differences between Products
Before changing from one product to another, i.e. to a product with a different part number, confirm that the change will not lead to problems.
 - The characteristics of Microprocessing unit or Microcontroller unit products in the same group but having a different part number may differ in terms of the internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Chapter 1 Introduction

The RH850/F1x Application Board is part of the RH850 Evaluation Platform and serves as a simple and easy to use platform for evaluating the features and performance of Renesas Electronics 32-bit RH850/F1x microcontrollers. The piggyback board (Y-RH850-F1X-100PIN-PB-T1-V3) can be used as a standalone board or it can be connected to a main board (Y-RH850-X1X-MB-Tx-Vx) for extended functionality.

Main features:

- Socket for mounting of device
- Standalone operation of the board
- Direct supply of device voltage (typ. 3.3V-5.0V)
- Device programming capability
- Device debugging capability
- Pin headers for direct access to each device pin
- Reset switch
- MainOSC circuitry
- Signal LEDs
- Jumpers for device mode selection
- Connectors to a main board

This document describes the functionality provided by the piggyback board and guides the user through its operation.

For details regarding the operation of the microcontroller, refer to the related User's Manual and Datasheet.

This manual describes the following board revisions:

- RH850-F1X-100PIN-PB-T1-V3 Gen 1 (marked "EESS-0401-139-01")
- RH850-F1X-100PIN-PB-T1-V3 Gen 2 (marked "D015312-06-V02")

For differences to the RH850-F1X-100PIN-PB-T1-V2 see the Revision History.

1.1 Package Components

The Y-RH850-F1X-100PIN-PB-T1-V3 product package consists of the items included in below table. After you have unpacked the box, check if your Y-RH850-F1X-100PIN-PB-T1-V3 package contains all these items.

Item	Description	Quantity
D015312	RH850/F1x 100pin piggyback board	1
Dxxxxxx	Documentation CD	1
D010816-24	China RoHS document	1
Dxxxxxx	Product contents List	1
Jumpers (2-way, 0.1")	In the bag	29
Red Hirschmann 4 mm power lab sockets	In the bag	2
Black Hirschmann 4 mm power lab sockets	In the bag	1
Crystals, HC49 (8MHz, 16MHz, 20MHz, 24MHz)	In the bag	3

Note: Please keep the Y-RH850-F1X-100PIN-PB-T1-V3 packing box at hand for later reuse in sending the product for repairs or for other purposes. Always use the original packing box when transporting the Y-RH850-F1X-100PIN-PB-T1-V3. If packing of your product is not complete, it may be damaged during transportation.

Chapter 2 Overview

There are 2 different production versions of the piggyback board.

Boards of the first generation have the marking “EESS-0401-139-01”. The boards have an issue in the connection of pin 34 and pin 36 on connector CN2. This is described in *Chapter 9 Precautions*.

Boards of the second generation have the marking “D015312-06-V02”. With these boards the connection on CN2 has been corrected and the precautions described in chapter 9 do NOT apply.

2.1 Board EESS-0401-139-01

Figures 1 and 2 provide the views of the RH850-F1X-100PIN-PB-T1-V3 Piggyback Board.

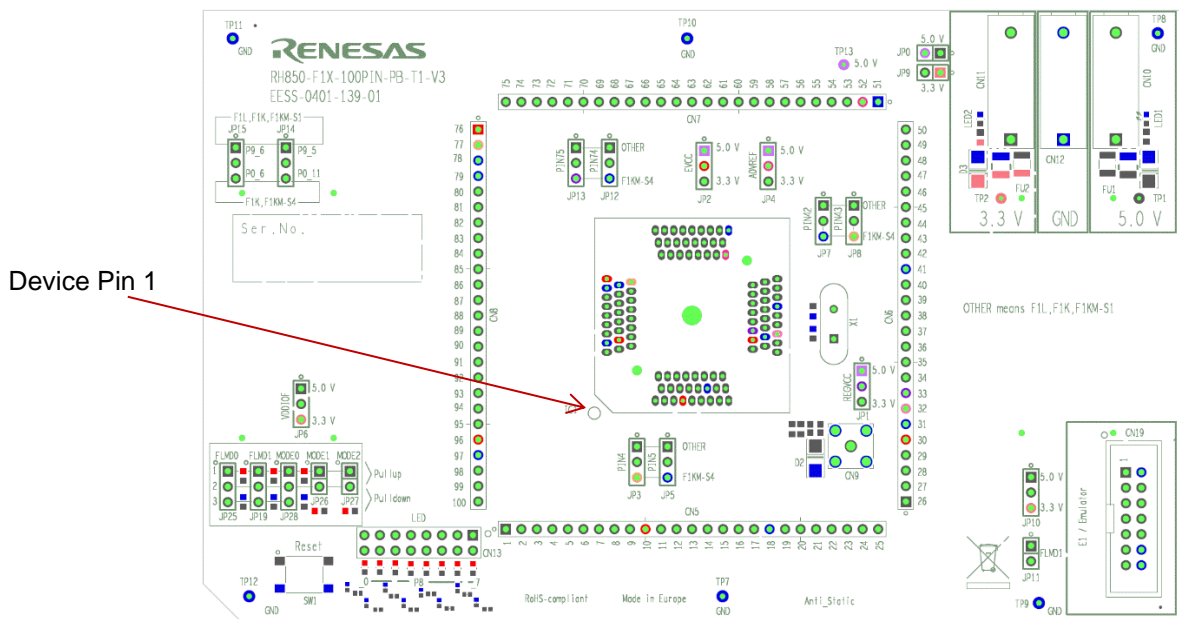

Figure 1 - RH850-F1X-100PIN-PB-T1-V3 top view

Figure 2 - RH850-F1X-100PIN-PB-T1-V3 bottom view

2.2 Board D015312-06-V02

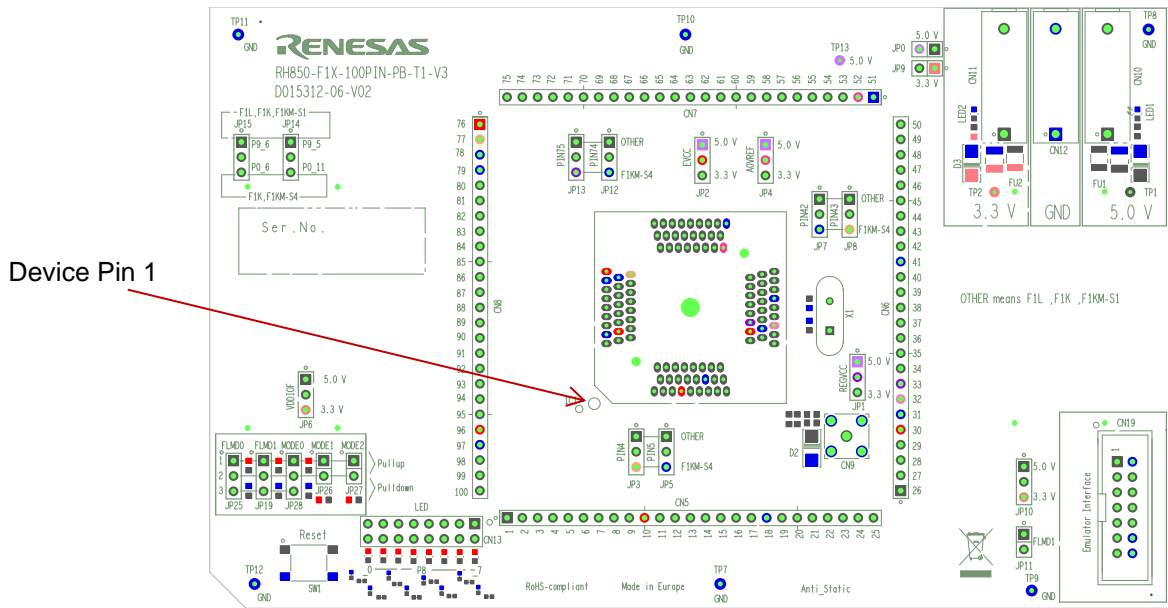

Figure 3 - RH850-F1X-100PIN-PB-T1-V3 top view

Figure 4 - RH850-F1X-100PIN-PB-T1-V3 bottom view

2.3 Mounting of the Device

The board is designed for use with the following devices, all in 100pin package:

- RH850/F1L
- RH850/R1L
- RH850/F1K
- RH850/F1KM-S1
- RH850/F1KM-S4

The device must be placed inside the socket IC1. To insert the device, press down the lid, align the #1 pin of the device to the #1pin of the socket, insert the device inside the socket and release the lid.

Chapter 3 Jumper Configuration

The function of the board can be configured via jumpers. This chapter describes the standard configuration, i.e. jumper setting for the intended devices. For the supported function of the used device, please refer to the corresponding HW user's manual.

Jumper settings are valid for both generations of Y-RH850-F1X-100PIN-PB-T1-V3, even if the picture in *Figure 5 - Example for jumper settings* shows the generation 1 board.

The table has the following meaning:

- x-y: Connect the pins x and y; valid for 3-pin jumpers (e.g. JP14)

Pin #1 can be identified by a small circle in the vicinity of the jumper.

Depending on the used device a configuration of several jumpers is required. The detailed configuration is shown below:

Jumper	F1L	R1L	F1K	F1KM-S1	F1KM-S4	Function
JP3	1-2	1-2	1-2	1-2	2-3	Selection pin #4: Either P10_15 or ISOVCL
JP5	1-2	1-2	1-2	1-2	2-3	Selection pin #5: Either P11_0 or VSS
JP7	1-2	1-2	1-2	1-2	2-3	Selection pin #42: Either P8_0 or VSS
JP8	1-2	1-2	1-2	1-2	2-3	Selection pin #43: Either P8_1 or ISOVCL
JP12	1-2	1-2	1-2	1-2	2-3	Selection pin #74: Either P9_5 or VSS
JP13	1-2	1-2	1-2	1-2	2-3	Selection pin #75: Either P9_6 or REGVCC
JP14 [1-2]	Close	-	Either	Close	-	Selection of PWM34
JP14 [2-3]	-	-	- or	-	Close	Either from P9_5 or P0_11
JP15 [1-2]	Close	-	Either	Close	-	Selection of PWM35
JP15 [2-3]	-	-	- or	-	Close	Either from P9_6 or P0_6

The jumper settings also are shown in the picture on the next page.

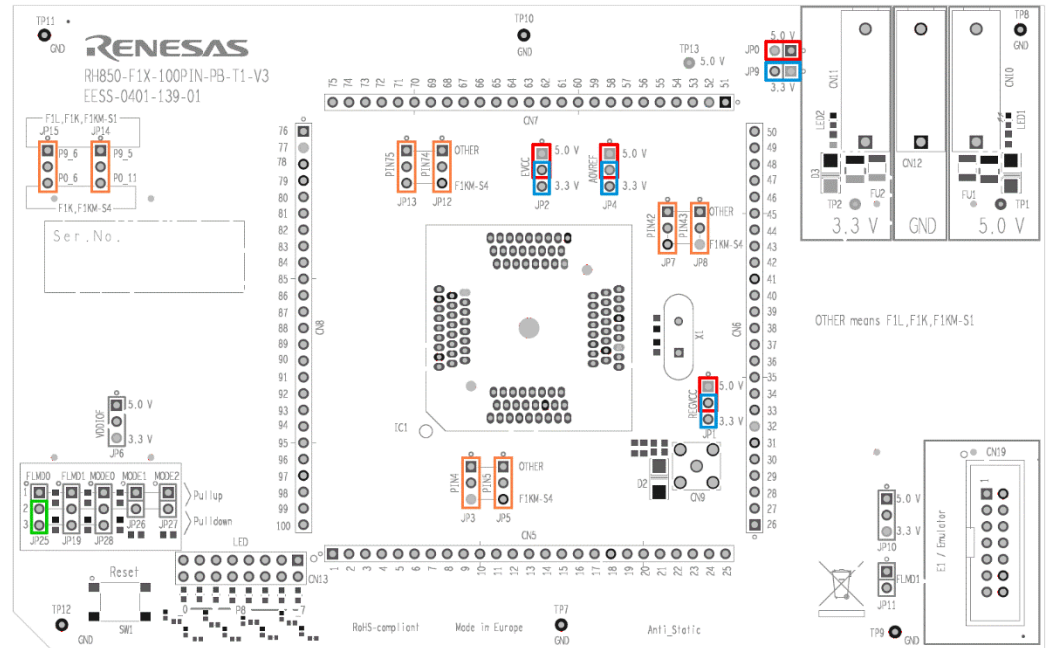

Figure 5 - Example for jumper settings

- The green jumper JP25 for FLMD00 always must be closed (at the position 2-3) for a 'normal' (user mode and debug) operation of the device.
- The red jumpers must be set for a single "Voltage 1" (typ +5.0V) operation of the device.
- The blue jumper must be set for a single "Voltage 2" (typ +3.3V) operation of the device.
- The orange jumpers must be selected depending on the used device. See the printing on the board for the applicable setting.

For jumper settings related to the device operation mode, refer to chapter 8.2 Mode Selection

Chapter 4 Power Supply

4.1 Board Power Connection

For operation of the device, a supply voltage must be connected to the board. Though a single supply voltage is sufficient to operate the device, it is possible to power the board with two different voltages.

Within this document the following voltages are considered as 'typical' connections:

Voltage1 = 5.0V

Voltage2 = 3.3V

The following connectors are available to supply those voltages:

- Three 4mm 'banana-type' connectors:
 - Two red connectors for voltages *Voltage1* (CN10) and *Voltage2* (CN11)
 - A black connector for VSS connection on CN12**Note:** The three connectors are supplied with the board but are not assembled.
- The E2 emulator, that is used for debugging or flash programming, can also supply a single operating voltage ("DBG_Voltage"). The voltage is programmable via the E2 configuration as 3.3 or 5.0V (typ). See the documentation of E2 and *Chapter 5 Clock Sources* for details.
- In case the piggyback board is mounted on a main board, the voltages *Voltage1* and *Voltage2* are supplied by the on-board regulators of the main board.

NOTE: Do not supply any voltage directly to the piggyback board in case it is mounted on the main board.

For each of the two voltages, 'Voltage 1' and 'Voltage 2', a green LED (LED1 and LED2) is available to signal that the related voltage is available on the piggyback board.

4.2 Voltage Distribution

The table shows the required device power supply pins and their function:

Device supply pin	Function
REGVCC	Supply for the device <u>internal regulators</u> for the digital logic.
EVCC	Supply for <u>ports</u> of AWO area.
A0VREF	Supply for <u>ports</u> and <u>analog functions</u> of ADC0.
VDDIOF	IO supply voltage for components located on a connected mainboard.

For each of the above voltages, the power supply can be selected from *Voltage1* (typ. 5.0V) or *Voltage2* (typ. 3.3V) by the jumpers JP0, JP1, JP2, JP4, JP9 and JP6. See the picture below for details.

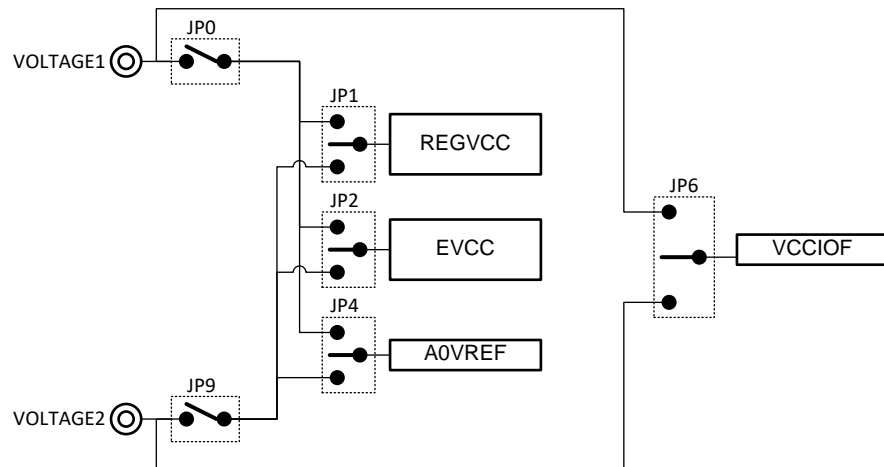

Figure 6 - Jumper settings to select supply voltage

Chapter 5 **Clock Sources**

For mounting of the external crystal oscillator, a socket is available.

A crystal or ceramic resonator in the range of 8MHz to 24MHz can be mounted on socket X1.

The package with generation 1 of Y-RH850-F1X-100PIN-PB-T1-V3 included 2 crystals of 8MHz and 16MHz.

The package with generation 2 of Y-RH850-F1X-100PIN-PB-T1-V3 includes 4 crystals with 8MHz, 16Mhz, 20MHz and 24MHz.

Chapter 6 Debug and Programming Interface

Connector 19 is provided as interface for debug and flash programming tools to the microcontroller.

The signal connection of connector CN19 is shown in the table below:

CN19	Device Port	Device signal
1	JP0_2	DCUTCK / LPDCLK
2	GND	GND
3	JP0_4	DCUTRST
4	FLMD0	FLMD0
5	JP0_1	DCUTDO / LPDO
6	P10_8*	FLMD1
7	JP0_0	DCUTDI / LPDI
8	DBG_Voltage	-
9	JP0_3	DCUTMS
10	-	-
11	JP0_5	DCURDY / LPDCLKOUT
12	GND	-
13	RESET	-
14	GND	-

* In case the FLMD1 signal must be controlled by the debug/programming tool, the pin header JP11 must be closed.

The DBG_Voltage (on CN19 pin 8) can be monitored by debug and flash programming tools. It is possible to select either Voltage1 or the Voltage2 by pin header JP10 for this monitoring:

JP10	Selection for DBG_Voltage
1-2	Voltage1 (5.0V) is selected
2-3	Voltage2 (3.3V) is selected

Chapter 7 Connectors for Device Ports

The piggyback board has 2 groups of connectors.

One group (CN1-CN3) provides the connection of the device pins to a main board.

The second group (CN5-CN8) provides access to each device pin to the user.

7.1 Connectors to Main Board

Three connectors (CN1 to CN3) are available to connect the piggyback board to a main board.

The signal connection of each connector is described in the following tables:

7.1.1 Connector CN1

Pin	Function	Device Port	Pin	Function	Device Port
1	VOLTAGE1	-	2	VOLTAGE1	-
3	VOLTAGE1	-	4	VOLTAGE1	-

7.2 Connectors for User Access

Connection to each pin of the device is possible via the connectors CN5 to CN8.

Note :The pin headers are directly connected to the pins of the device, therefore special care must be taken to avoid any electrostatic or other damage to the device.

Pin	Device Function			
	CN5	CN6	CN7	CN8
1	P10_3	JP0_2	A0VSS	EVCC
2	P10_4	JP0_1	A0VREF	ISOVCL
3	P10_5	JP0_0	AP0_15	ISOVSS
4	P10_15	RESET	AP0_14	EVSS
5	P11_0	EVCC	AP0_13	P10_6
6	P0_0	AWOVSS	AP0_12	P10_7
7	P0_1	AWOVCL	AP0_11	P10_8
8	P0_2	REGVCC	AP0_10	P10_9
9	P0_3	X2	AP0_9	P10_10
10	EVCC	X1	AP0_8	P10_11
11	P0_4	FLMD0	AP0_7	P10_12
12	P0_5	P0_10	AP0_6	P10_13
13	P0_6	P0_9	AP0_5	P10_14
14	P0_11	P0_8	AP0_4	P11_1
15	P0_12	P0_7	AP0_3	P11_2
16	P0_13	EVSS	AP0_2	P11_3
17	P0_14	P8_0	AP0_1	P11_4
18	EVSS	P8_1	AP0_0	P11_5
19	P8_2	P8_3	P9_0	P11_6
20	P8_10	P8_4	P9_1	P11_7
21	P8_11	P8_5	P9_2	EVCC
22	P8_12	P8_6	P9_3	EVSS
23	JP0_5	P8_7	P9_4	P10_0
24	JP0_4	P8_8	P9_5	P10_1
25	JP0_3	P8_9	P9_6	P10_2

Chapter 8 Other Circuitry

8.1 Push Button for RESET

In order to issue a RESET to the device, the push-button SW1 is available.

8.2 Mode Selection

The PiggyBack Board gives the possibility to configure the following mode pins

- FLMD0 via jumper JP25
- FLMD1 via jumper JP19
- MODE0 via jumper JP28
- MODE1 via jumper JP26
- MODE2 via jumper JP27

To apply “High” or “Low” to the mode pins, the pins 1 and 2, or the pins 2 and 3 (if available) of the corresponding jumper must be closed, respectively.

Note: Pin 1 of all jumpers is marked by a small circle.

CAUTION: Be careful in configuration of mode related pins. Wrong configuration and operation of the device outside of its specification can cause irregular behaviour of the device and long term damage cannot be ruled out completely. Be sure to check the corresponding User’s Manual for details, which modes are specified for the used device.

Note: In most cases the ‘Normal operating mode’ of the device will be used. This mode is for execution of the user program. The on-chip debug functions also use this mode.

To select the ‘Normal operating mode’ of the device, the FLMD0 pin must be pulled low. To do so, **close** the pins 2-3 on the jumper JP25:

All other jumper related to the mode selection can be left open.

8.3 Signalling LEDs

Eight LEDs are provided to allow visual observation of the output state of device port pins. Device pins P8_0 to P8_7 are connected to the odd pins 1 to 15 of the pin header CN13, while the LEDs 1 to 8 are connected to the even pins 2 to 16, respectively.

The LEDs can be either connected to

- the device port pins P8_0 to P8_7 by closing the connection on CN13 using a jumper, or
- any device port pin by using wire connections provided with the main board.

Chapter 9 Precautions

9.1 Usage of LIN15

On piggyback board V3 the LIN15 Rx/Tx signals on CN2 have been crossed.

This applies only to the pcb with the marking “EESS-0401-139-01”.

Port P10_11 is LIN15RX, but it is connected to LIN15TX.

Port P10_12 is LIN15TX, but it is connected to LIN15RX.

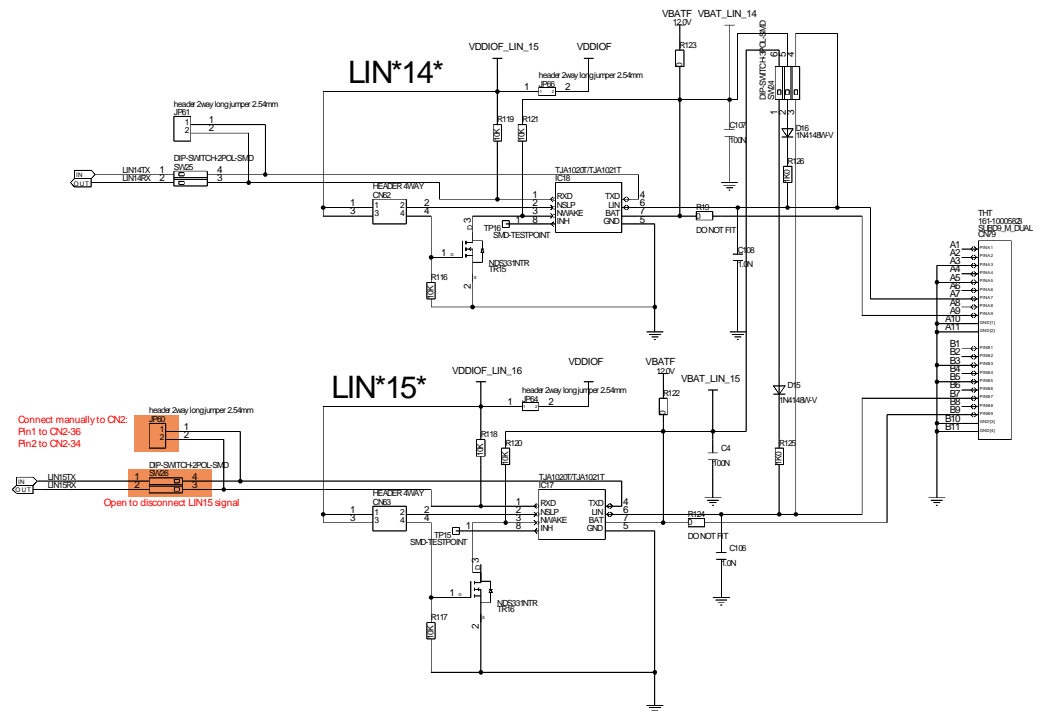

In order to fix this it is best to make the appropriate modifications on the RH850/X1x Network Main Board (Y-RH850-X1X-MB-T2-V1 or Y-RH850-X1X-MB-T2-V2) or on the RH850/X2x Main Board (Y-RH850-X2X-MB-T1-V1).

9.1.1 Adjustments on RH850/X1x Network Main Board

In order to use LIN15 on the RH850/X1x Network Main Board following modifications on the main board are needed:

1. Disconnect LIN15Tx and LIN15Rx from connector CN2 by setting switch SW26-1 and SW26-2 to “OFF”.
2. Connect LIN15Tx manually from jumper JP60-1 to connector CN2-36.
3. Connect LIN15Rx manually from jumper JP60-2 to connector CN2-34.

Please see below picture for the necessary changes.

9.1.2

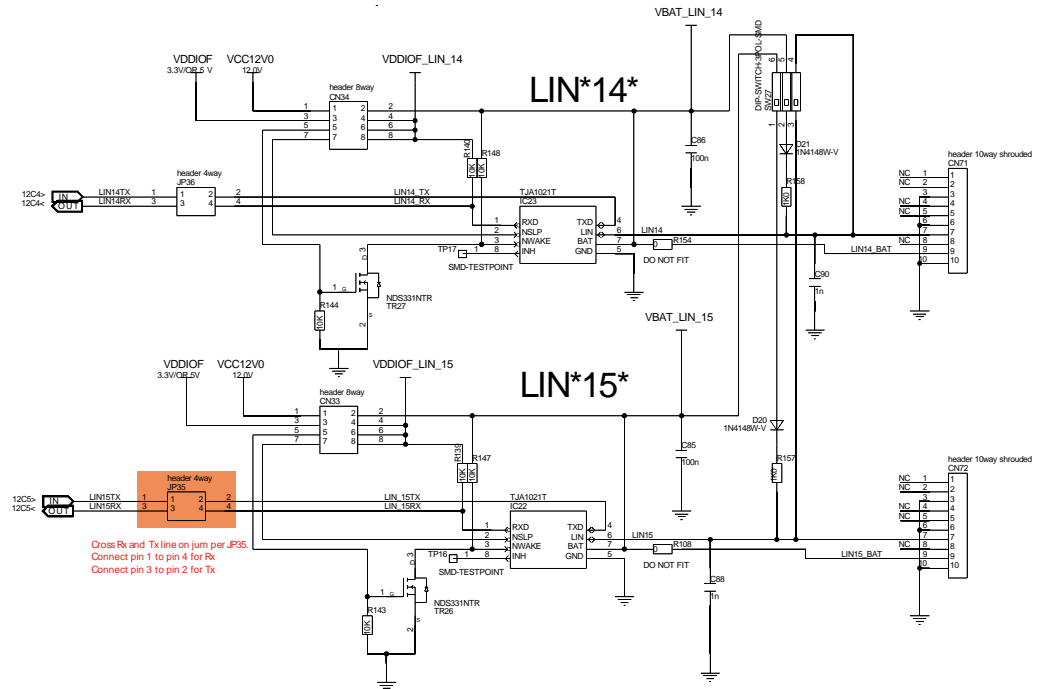

Adjustments on RH850/X2x Main Board

To be able to use LIN15 with the RH850/X2x Main Board changes are very simple.

On RH850/X2x Main Board the connection of LIN15Tx and LIN15Rx to connector CN2 is by jumper JP35. This can be modified easily to accommodate the pin swap on CN2:

1. Remove the jumpers on JP35.
2. On JP35 connect JP35-1 with JP35-4 for LIN15Rx.
3. On JP35 connect JP35-2 with JP35-3 for LIN15Tx

Please see below picture for the necessary changes.

Chapter 10 Mechanical dimensions

These intangible goods are not subject to Annex I of common Dual-Use list (428/2009) in its current version.

These intangible goods are not subject to Annex I of common Dual-Use list (428/2009) in its current version.

Chapter 12 Schematic of PCB marked "D015312-06-V02"

These intangible goods are not subject to Annex I of common Dual-Use list (428/2009) in its current version.

Chapter 13 Revision History

The table provides information about the major changes of the document versions.

Rev.	Date	Description	
		Page	Summary
V1.00	2016-11-25	–	Initial release
V1.01	2019-11-27	16 20	Changed “Function” for pin 34 and pin 36 on CN2 Added precaution for LIN15 signal on connector CN2
V1.02	2020-01-17	–	Released an updated pcb with modified signals on CN2.
V1.03	2020-09-09	9	Corrected jumper setting for F1KM-S1 in table in chapter3. JP14 and JP15 setting was changed.

Main differences to the RH850-F1X-100PIN-PB-T1-V2:

- Added support for the RH850/F1KM-S1 and RH850/F1KM-S4 device. This mainly relates to the added jumpers on page 1 of the schematic for the device pin selection.
- Modified signals on CN1, CN2 and CN3.
- Added functionality for the mode selection of the device.
- Added signalling LEDs.
