LITCOG II: Health Literacy and Cognitive Function among Older Adults

The proposed longitudinal study will provide an in-depth investigation of older adults' health literacy and ability to manage health, and whether these skills are affected by cognitive decline and the aging process. Our research will improve our understanding of the true barriers underlying the problem of low health literacy, and how best to inform present and future intervention strategies.

Refining Conceptual Models for the Role of Health Literacy in Health Outcomes

Our study objectives are to improve our understanding of (1) the causal pathways linking health literacy to health outcomes by testing an existing conceptual framework, and (2) the role of health literacy in explaining health disparities.

Longitudinal Study of Cognition, Health Literacy, and Self-Care in COPD Patients

The objective of this study is to understand how health literacy and cognitive function change over time in patients with chronic obstructive pulmonary disease (COPD) and affect self-management of this condition, and how social support may mitigate their effects. By describing the vicissitudes of health literacy, the study will identify the contexts in which intensive interventions are needed to adequately support self-care for COPD.

Seniors' Health Literacy, Beliefs and Asthma Management

The objective of this study is to understand how health literacy and beliefs about chronic disease interact to affect older adults' ability to self-manage their chronic illness. The study will be conducted in New York City and Chicago, IL, and will involve interviews of 500 patients, 60 years or older with chronic asthma. The study findings will expand our understanding of health literacy and provide new insights into best methods for educating older asthmatics about managing their disease.

Improving Psychosocial Quality of Life in Women with Advanced Breast Cancer

The overall study objective is to improve psychosocial quality of life among women with metastatic breast cancer by promoting patient participation during clinical encounters through use of a Patient Participation Aid (PPA).

Evaluation of the Impact of California State Policy for Patient-Centered Prescription Drug Labeling

The overall objective of this study is to perform a critical evaluation of SB 472, California's patient-centered drug labeling legislation; the first of its kind in the country. We will evaluate compliance among state pharmacies and make specific recommendations for future amendments to the bill.

iChoose Kidney Decision Aid for Treatment Options

The goal of this project is to conduct a two-arm, randomized trial of the iChoose Kidney decision aid among 450 late-stage CKD or ESRD patients who are undergoing evaluation for kidney transplantation at three large, diverse transplant centers across the United States (Emory Transplant Center in Atlanta, Columbia University in New York, and Northwestern in Chicago) to test clinical efficacy of a decision support tool.

Development of an EHR-enabled, Patient-Centered Medication Adherence Mobile Application for Transplant

We will work with patients, families and clinicians to devise a mobile application working in both iPhone and Android platforms that can support proper, sustained use to complex medication regimens, linking into an EHR. A specific focus on transplant (kidney, liver) will be targeted.
