GLOBAL

OUR MISSION

We strive to provide the highest quality products and customer service with the goal of creating lifelong Maxxis customers. Anchored by a strong commitment to our values, we form close partnerships with our stakeholders, and together we work to consistently exceed our customers' expectations.

From design to production, from the factory floor to your favorite road or trail, Maxxis products lead the way in technological advances. For bicycle, automotive, light truck, ATV, motorcycle, kart, trailer and lawn & garden, Maxxis provides the quality customers have come to depend on.

Total customer satisfaction has been Maxxis' guiding purpose since 1967. Working toward this goal has built Maxxis into the successful, worldwide company it is today. Champions around the world choose Maxxis because they know that our extensive product research, unique designs and rigorous testing standards produce tires that will elevate riders to the next level.

For more information on the entire Maxxis product line, visit us at [maxxis.com](https://www.maxxis.com)

MAXXIS BICYCLE TIRE SAFETY

- Consult your owner's manual for specific tire information.
- Clearance around tires must be maintained. Increasing tire size may require an increased rim width. Inspect tires closely for sufficient clearance.
- Always wear protective eyewear when installing inner tubes or tires.
- When replacing tires, be sure to also replace the inner tubes. Stretched inner tubes can crease and fail due to thinning of the inner tube rubber.
- Consult your bicycle professional for correct rim strip replacement.
- Make sure your tube size markings match the tire size.
- Use tire only for designated terrain, on an appropriate bicycle and using proper safety equipment at all times.
- Follow tire pressure guidelines located on your tire.
- Check tire pressure before every ride.
- Check your valve cores for damage. If valve cores are damaged, replace them.
- Check your tires for damage before and after riding. Punctured, cracked, bulging or blistered tires should be replaced immediately. If not replaced, damage can result in sudden and complete tire failure.
- Check to ensure that the beads of the tires are fully and evenly seated around the entire circumference of the rims before every ride.
- After replacing worn tires, take time to become acquainted with the handling and performance of your new tires.
- Do not cut, sipe or otherwise modify your tires.
- Check for broken or damaged spokes and replace as necessary.
- Replace bent or damaged rims or wheels immediately.
- Liquid sealants should only be used in the following types of tires: Tubeless Road, Tubular, and Tubeless Ready. The use of liquid sealants in any other Maxxis tire will void the warranty.
- Tube-type tires should only be used in conjunction with an inner tube on an approved rim.
- Do not store tires in direct sunlight for extended periods of time.
- Allowing tires to stand in oil, gasoline or other chemicals may have an adverse effect on the rubber compounds of the tire.
- Failure to follow these guidelines can result in accelerated tread wear and may cause catastrophic tire failure.

Maxxis makes every effort to ensure the accuracy of the information we publish. Maxxis is not responsible for errors or misprints in our materials. Specifications and item availability are subject to change without notice. Actual weights and measurements may vary from those published herein. Weights are listed in grams. © 2013 Maxxis International. All rights reserved.

BASIC TIRE CONSTRUCTION

CASING

SINGLE-PLY CASING

One layer of nylon wrapped from bead to bead. A single-ply casing conforms well to the terrain and is lighter weight.

DOWNHILL (DH) CASING

Two layers of casing material are used from bead to bead, providing additional protection and sidewall stiffness for downhill applications.

THREADS PER INCH (TPI)

The number of threads that cross through one square inch of a single ply of the tire's casing. Lower TPI gives better puncture, cut and abrasion resistance but is heavier. Higher TPI conforms better to the terrain, offering a smoother, more comfortable ride while reducing the weight of the tire. **Maxxis TPI ratings are the threads-per-inch of a single casing ply, as compared to some competitor TPI ratings.**

BEAD

WIRE BEAD

The function of the bead is to keep the tire in contact with the rim while the tire is inflated. A rigid metal wire is utilized as bead material in applications where ultimate strength is needed and transportability is not a factor.

FOLDABLE BEAD

Foldable beads also keep the tire secured to the rim but are lighter weight and easily transported. The bead is made of spun aramid or Kevlar® fibers.

CARBON FIBER BEAD

A flexible material with greater strength to withstand the forces exerted by a high-pressure road tire.

TUBELESS READY

Tubeless tires provide the rider with many benefits: the ability to run lower air pressures, which improves traction; lower rolling resistance when compared to a tube-type tire; and less chance of flattening since there is no tube. Maxxis Tubeless Ready (TR) tires provide the benefits of a UST tubeless tire without the weight penalty. Our TR tires use a standard casing and require the use of a liquid sealant in order to make them airtight. Maxxis Tubeless Ready tires are the only Maxxis tires approved for use with liquid sealants. Using a liquid sealant in any non-TR Maxxis tire will void the warranty.

PROTECTION

SILKWORM

Silk Worm Technology is an exclusive material incorporated into the casing of select models, increasing puncture and tear resistance. Silk Worm is featured under the tread as a breaker (denoted as Silk Worm).

SILKSHIELD

SilkShield offers protection from bead to bead whereas Silk Worm is found under the tread only. SilkShield provides an additional level of protection for sidewalls in addition to under the tread.

MAXXSHIELD

MaxxShield represents the ultimate in flat protection. We begin with our SilkShield bead to bead protection and add our K2 (Kevlar® Composite) layer for unparalleled durability.

MAXXPROTECT

A poly-fiber material positioned between the tire tread and the casing. With varying thicknesses of 0.9mm – 1.5mm, MaxxProtect is designed to maximize puncture resistance in select hybrid models.

BUTYL INSERT

An extra piece of butyl rubber that extends from the bead of a downhill tire up into the sidewall. The butyl insert helps prevent pinch flats, protects the rim from hard hits and adds sidewall stability.

NYLON BREAKER

The nylon breaker is a reinforcement option that offers protection from punctures directly under the tread area. The nylon breaker is available in select road tires.

KEVLAR® INSIDE

A Kevlar® material positioned between the tire tread and the casing. Similar to MaxxProtect technology, Kevlar® Inside varies in thickness and provides optimal puncture protection.

KEVLAR® COMPOSITE (K2)

Available in select tires, this Maxxis-exclusive fabric provides greater puncture protection than both standard Kevlar® and Vectran®. The addition of this lightweight and supple material ensures that ride quality and performance remain unsurpassed.

L.U.S.T.

Maxxis mountain tubeless tires, certified to UST® standards, featuring Lightweight Ultimate Sidewall Technology (L.U.S.T.). This technology offers better puncture resistance, improved air retention, better longevity and lower weight than previous tubeless technologies. By adding a thin fabric layer to the sidewall, covered in a special airtight rubber compound, Maxxis created a casing that is lighter, tougher and holds air better.

LUST

EXO PROTECTION

An extremely cut-resistant and abrasion-resistant material added to the sidewalls of select mountain tires. This densely woven fabric is also lightweight and highly flexible, ensuring that the performance of the tire remains unaffected. Choose EXO Protection for exceptionally rocky, treacherous trails where the chance of sidewall cuts and abrasions is high.

**EXO
PROTECTION**

TUBULAR

A traditional tire construction in which the tire casing is sewn or wrapped around an inner tube. These types of tires must be glued or taped onto tubular-specific rims.

PUNCTURE PROTECTION LAYER

CASING

INNER TUBE

CLOTH BASE TAPE

RADIAL ROAD

A radial construction orients the casing threads perpendicular to the direction of rotation. This allows the sidewall to easily bend and flex, resulting in a very compliant and supple ride.

PUNCTURE PROTECTION LAYER

RADIAL CONSTRUCTION

TUBELESS ROAD

Tubeless technology that combines a carbon fiber bead for strength and a butyl inner liner for air retention to eliminate the need for an inner tube. The Silkworm layer provides puncture protection from road debris. Choose Maxxis tubeless road tires for the ultimate road experience.

CARBON FIBER BEAD

BUTYL INNER LINER

COMPOUNDS

The most important part of a tire is arguably the rubber compound within the tread. By changing the amounts of various components of the rubber formula, engineers can make two identical looking tires perform completely differently. A list of the Maxxis compounds and their distinct characteristics is below.

SINGLE One compound throughout the tread optimized for longevity and performance.

DUAL Two compounds used within the tread of select tires to offer lower rolling resistance and increased cornering grip.

ST SUPER TACKY A special low rebound, high traction compound used in select mountain tires.

3C TRIPLE COMPOUND ROAD

Triple Compound road technology utilizes three distinct silica compounds in different locations within the tread of the tire. The center compound is optimized for exceptional treadwear and low rolling resistance. The progressively softer shoulder compounds provide increased grip while cornering. Choose a Triple Compound Maxxis road tire for the ultimate in tire handling in all conditions.

3C TRIPLE COMPOUND MOUNTAIN

Maxxis 3C Triple Compound mountain technology uses a harder, longer lasting base layer and two progressively softer top layers in order to optimize traction and stability. Maxxis offers three different configurations of our 3C Triple Compound mountain technology: Maxx Speed, Maxx Terra and Maxx Grip.

MAXX SPEED Used primarily in cross country and enduro tires, the two compounds in the outer layer are specially formulated to reduce rolling resistance and optimize treadwear and traction.

MAXX TERRA An intermediate compound configuration used in select mountain tires. 3C Maxx Terra is softer and offers more traction than 3C Maxx Speed, yet provides better treadwear and less rolling resistance than Maxx Grip.

MAXX GRIP A new name for the downhill 3C compound configuration that you have come to know and trust. 3C Maxx Grip offers the ultimate in grip and slow rebound properties for unparalleled traction in downhill applications.

RACING	SPORT	TRAINING	URBAN COMMUTE	PUNCTURE PROTECTION
				1 2 3 4

The Campione is the race-specific tubular tire from Maxxis. The supple, high-TPI casing provides the ultimate in ride quality and feel, while the three compounds used in the tread lower rolling resistance and increase cornering grip. And because its Kevlar® Composite (K2) breaker outperforms both Vectran® and regular Kevlar® breakers, the Campione will get you to the finish line. The Campione is the obvious choice for the traditional road racer.

TB88102000	28"x23	60	TBD	Dual	170	Black	Silkworm

RACING	SPORT	TRAINING	URBAN COMMUTE	PUNCTURE PROTECTION
				1 2 3 4

The Forza is the tubular tire for sport training. The casing provides the optimal mixture of performance and durability, and the dual-compound tread ensures that the tire will last for many miles, yet still grip hard when needed most. The proprietary Silkworm breaker makes the Forza extremely resistant to cuts and punctures. Choose the Forza if you prefer the feel of tubulars every day.

				1 2 3 4

The Padrone is designed with dual-compound technology for enhanced treadwear and improved cornering control. This tubeless road tire also uses our proprietary Silkworm material for puncture protection, along with a high-strength carbon fiber bead. Maxxis' tubeless technology allows the Padrone to easily conform to the road surface, resulting in the highest ride quality.

RACING	SPORT	TRAINING	URBAN COMMUTE	PUNCTURE PROTECTION
				1 2 3 4

The Maxxis Radiale-TL pushes road racing tire technology to new levels. The Radiale-TL combines the excellent ride quality our radial casing tires are known for and adds the benefits of road tubeless compatibility. When used on a road tubeless-compatible wheel, the Radiale-TL offers a supple ride, excellent cornering traction and a reduced chance of flatting. The Radiale-TL has a lightweight 120 TPI casing, dual-compound rubber and a 2-ply nylon breaker for puncture protection. Choose the Radiale-TL for your next local crit or century ride.

NEW

RADIALE 22c

PART #	SIZE	ETRTO	TPI	BEAD	WEIGHT	COMPOUND	MAX PSI	COLOR	TECH
TB86171000	700x22C	22-622	120	Foldable	215 g	3C	145	Black	3C/SilkShield

RACING	SPORT	TRAINING	URBAN COMMUTE	PUNCTURE PROTECTION
				1 2 3 4

Using a true radial casing, the Radiale produces a soft, supple ride, smoothing out the roughest roads. A radial casing allows the sidewall to easily bend and flex, resulting in fewer hysteresis losses than a standard clincher, which stretches or compresses at the contact patch. This technology is designed to produce the supplest ride of any clincher tire. In addition to the radial casing, the tire also uses Maxxis' 3C Triple Compound Technology for greater wear life and cornering control along with SilkShield puncture protection.

- /// **M211R**

--------	-------	----------	---------------	---------------------

1 2 3 4

With its dual-compound tread pattern, the Maxxis Detonator provides a durable training tire with a race pedigree. Softer silica compound on the outer edges of the tire allows for great traction in a variety of road conditions. The Detonator is durable enough to provide plenty of winter miles, yet supple and grippy enough to race on in the summer.

HARD PACK	LOOSE/HARD	MEDIUM	LOOSE	WET	MUD	CORNERING CONTROL	ROLLING EFFICIENCY
						1 2 3 4	1 2 3 4

The Mud Wrestler offers outstanding performance in wet conditions so common to this grueling race discipline. The center knobs are continuously ramped to roll fast, while the aggressive side knobs cut through the nastiest mud and snow. The Mud Wrestler sheds mud with ease thanks to its open tread design. If you are looking for an all-conditions race tire, then the Mud Wrestler is for you.

- /// **M209P**

HARD PACK	LOOSE/HARD	MEDIUM	LOOSE	WET	MUD	CORNERING CONTROL	ROLLING EFFICIENCY
						1 2 3 4	1 2 3 4

Accept no limitations. The diverse terrain of a cyclocross race requires a unique solution: the Raze. A fast-rolling center ridge with widely spaced side lugs sheds mud. The Raze's slightly softer compound remains pliable in cold conditions, and the improved casing maintains integrity at low pressures.

The TT works on a vast number of terrains and conditions, which is why it is the favored tread of many of our pro riders. The TT hooks up well because each small, square lug in the tread pattern is ramped to roll easily, yet tightly spaced so more knobs are making contact with the ground. The contact patch is effective on a wide variety of surfaces.

- /// **M132**
- /// **Ramped square-knob design**

Racers take note: If you're looking for a fast, light tire with a consistent, predictable feel from straight-line to corner, the Monorail delivers. The micro-ramped center knobs offer spacing to grab rough and sandy surfaces, while the stability bars keep flex and rolling resistance to a minimum. Widely spaced mid-knobs help shed mud, while the C-shaped side knobs produce the cornering predictability necessary in any terrain.

HARD PACK	LOOSE/HARD	MEDIUM	LOOSE	WET	MUD	CORNERING CONTROL	ROLLING EFFICIENCY
						1 2 3 4	1 2 3 4

One of our most popular and versatile mountain tires, the High Roller's ramped leading edges roll fast, while the side lugs offer stability at higher speeds and a sharp edge to hold corners. The grooved center knobs provide straight-line control. The High Roller's tread design translates well to all mountain bike disciplines including downhill, cross country and freeride.

HARD PACK	LOOSE/HARD	MEDIUM	LOOSE	WET	MUD	CORNERING CONTROL	ROLLING EFFICIENCY
						1 2 3 4	1 2 3 4

Inspired by our professional European XC racers for racing on muddy terrain. The small profile is lightweight and cuts through loose terrain, while the spiked tread pattern works to find traction through the mud. The widely spaced tread pattern resists packing by shedding mud and loose, damp soil. The Medusa performs well in mud, and the low profile also makes it an excellent choice for lighter riders.

- /// **M137**
- /// **Widely spaced, cleated knob design**
- /// **Low-volume mud tire**

DIRT	STREET	PARK	FLAT	VERT
------	--------	------	------	------

Drop-The-Hammer. The first few pedal strokes win the holeshot. The holeshot wins the race. The foldable DTH is super-light to accelerate like no other BMX tire, yet holds up to the abuse you dish out. The dual-compound tread corners incomparably on hardpack tracks and rolls fast on the straights. The gold medal is just a sprint away.

DIRT	STREET	PARK	FLAT	VERT
------	--------	------	------	------

It almost feels like cheating: The foldable bead and lightweight materials allow tricks to flow so much easier – without the extra weight to throw around. High pressure and dual-compound tread make landings stick at any angle. Maxxis used these technologies and more to produce the Grifter – simply the best freestyle tire ever.

The Maxxis Modular Valve System allows you to easily customize your bike. The separation of the tube and valve stem allows you to choose your valve length and custom color without having to deal with finicky valve extensions. When the tube eventually needs to be replaced, the valve stem transfers to the new tube, instead of ending up in the trash. Available in Presta valve stem lengths of 48mm, 60mm, 80mm and 100mm and in nine different colors.

- Available in Presta valve stem lengths of 48mm, 60mm, 80mm and 100mm
- Removable valve core
- Available in 9 custom colors!
- For use with MVS Tube or Maxxis tubular tires only
