

greensmart<sup>™</sup> Product Guide

The Greensmart logo consists of a stylized white plant with two leaves and a stem, positioned above the text "greensmart". The text "greensmart" is in a lowercase, sans-serif font, followed by a trademark symbol (™). To the right of "greensmart" is the text "Product Guide" in a larger, bold, uppercase, sans-serif font.

Promoting sustainability in healthcare

## Medline's Sustainability Mission

Pollution is a serious public health concern that affects everyone, but it especially affects vulnerable populations such as the elderly, sick, children and the poor. At Medline we feel that preserving a healthy planet for future generations is not only the right thing to do, but it is our responsibility as leaders in the healthcare industry to do our part.

We believe that sustainability is a journey and commit to meeting our customers wherever they are in their own journey. We will provide sustainable products and services for all steps along the way, so that customers can do what's right for and within the capacity of their facility.

Bamboo and other rapidly renewable sources are used in Medline's greensmart™ paper products

## Ideas for Greening Your Operating Room

Operating Rooms (along with L&D) make up 25-30% of a hospital's waste and account for 70% of regulated medical waste (RMW). Even though RMW represents about a quarter of all hospital waste, it accounts for 86% of total hospital disposal costs.<sup>1</sup>

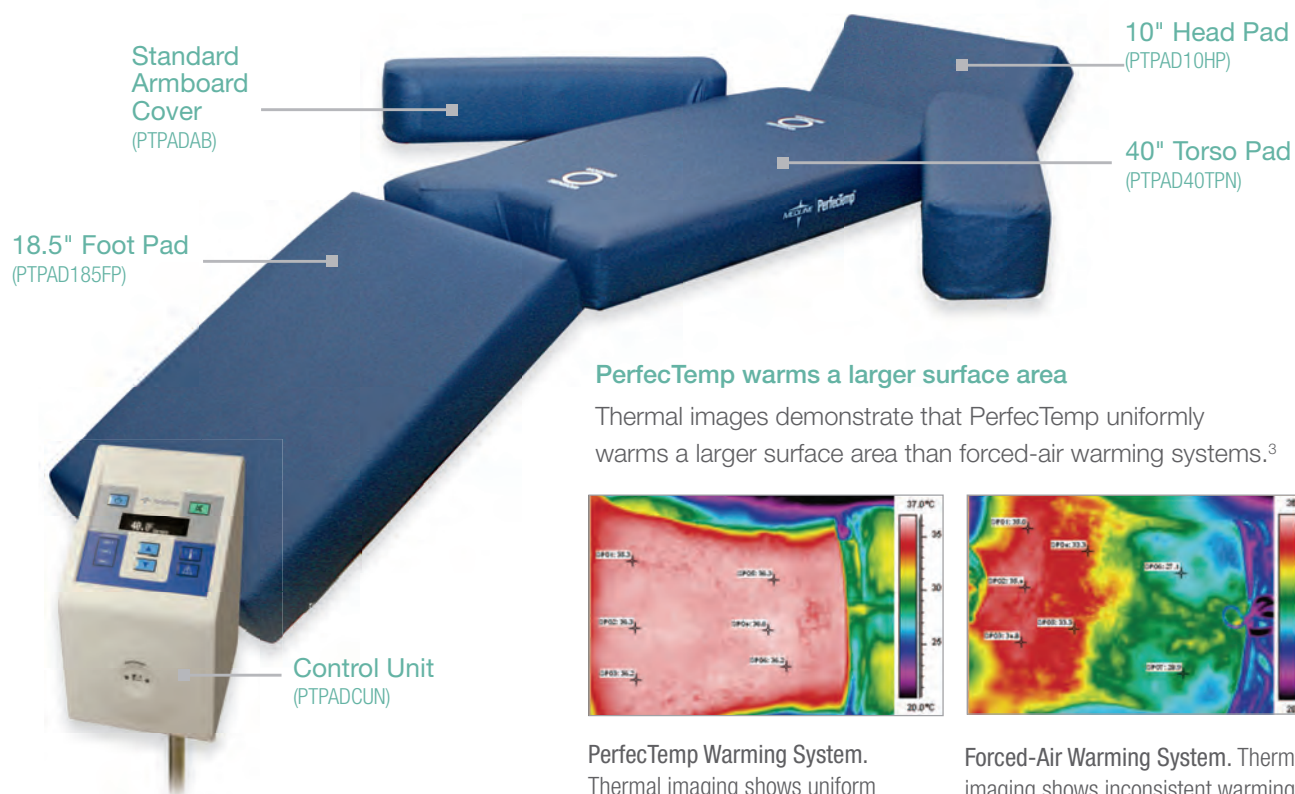

Because of the sheer volume of supplies that pass through the OR, small incremental changes can add up to significant overall impacts. These impacts are both environmental and economic, and greensmart products are designed to enhance both. Waste reduction and energy conservation reduce both immediate and ongoing costs, while simultaneously reducing carbon emissions and the need for landfills and their associated risks.

## PerfectTemp™ Patient Warming System

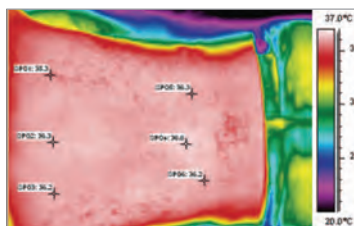

ordering details on page 20

The Surgical Care Improvement Project (SCIP) is a national quality partnership of organizations focused on significantly reducing surgical complications. PerfectTemp helps you comply with SCIP Measure 10, which recommends the use of active warming intraoperatively to achieve the target temperature of 36°C (96.8 degrees F) within 30 minutes before or 15 minutes after anesthesia end time. The measure applies to patients of all ages undergoing surgical procedures under general or neuraxial anesthesia for 60 minutes or more.<sup>2</sup>

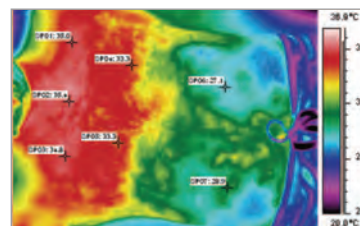

### PerfectTemp warms a larger surface area

Thermal images demonstrate that PerfectTemp uniformly warms a larger surface area than forced-air warming systems.<sup>3</sup>

PerfectTemp Warming System. Thermal imaging shows uniform warming over a large surface area.

Forced-Air Warming System. Thermal imaging shows inconsistent warming.

## PerfectTemp greensmart Features

Improving efficiencies and reducing SKUs can help save time and money:

No disposables – with forced air systems, a disposable blanket (costing \$8 – \$10) is thrown away after every procedure

Improve OR turnaround time – simply disinfect the PerfectTemp surface, and you're ready for the next case

Reusable pads – no need to maintain additional inventory

Low energy use – save on your electric bill and reduce your carbon footprint

## Sterilization Containers

ordering details on page 21

Compared to disposable sterilization wrap, reusable sterilization containers are the hands-down winner when it comes to sustainability. And among sterilization containers, Medline's SteriSet® containers rise to the top. Our more sustainable design eliminates the need for plastic locks and disposable inner filters. The engineered aluminum case is designed for strength and longevity, and at the end of the container's useful life, it can be recycled easily. A variety of sizes and color options suit your requirements; all come with the ThermoLoc® automatic locking latch and a temperature-activated valve and drain system.

WAG2V11ASA, WAG2V15ASA, WAG2V26ASA

DYNDS500P, DYNDS1000P,  
DYNDS1500P, DYNDS3000P

## Liquid Solidifiers

ordering details on page 21

Plastic bottle packaging has been eliminated with Liqui-Loc™ and and Liqui-Loc Plus solidifier. PVA packets containing the solidifier dissolve when introduced to liquid (think of those dishwasher detergent packs). Liqui-Loc is available in different sizes to accommodate 500cc to 3000cc suction canisters. Available in two formulas, straight solidifier and solidifier with disinfectant.

## SPT Packs

ordering details on page 21

Medline SPTs are all highly customizable, so you can specify greensmart™ components in any pack. Or, you can start with one of six standard greensmart SPTs and tailor it to your requirements from there. The greensmart items you'll find in our SPTs include natural OR towels, pigment-free plastics, EcoDrapes™ and table covers and paper trays with water-based barrier coatings.

DYNJS9804ECO

**EcoDrape™**

## Single Sterile EcoDrapes™

ordering details on page 22

EcoDrapes are made of more than 96% natural fibers without dyes, chemical binders or fluorochemicals. EcoDrape's base material is composed of wood pulp gathered from sustainably managed forests. They have all the same great features as other Medline drapes, including hook-and-loop line holders, large reinforcement zones, and premium tape and incise film flush to the fenestration. They are available in over two-dozen procedure-specific designs.

## Proxima Packs with EcoDrape

ordering details on page 23

Simplify your procedure setups and boost your sustainability efforts with convenient procedure packs featuring EcoDrapes appropriate for your procedure. EcoDrape packs include laparotomy, laparoscopic abdominal, extremity, pediatric, EENT, central line and more.

## Pigment-free Patient Plastics

ordering details on page 23

Medline patient plastics are found in the OR, in procedure packs and in patient rooms. What you won't find in them is pigments. That means you won't find pigments in the manufacturing process, as they're being used, or in the waste stream as they're disposed of. Many items are engineered to stack, store and ship more efficiently, too. Pigment-Free's translucent quality helps make visualizing contents easier from any angle. Product strength and other functional characteristics are equivalent to our legacy colored plastics—and they're recyclable, too.

## Ideas for Greening the Laundry

If you're looking for a greener laundry, you should look to using greener linen.

**What** you wash can affect your energy and water usage no matter **how** you wash.

The PerforMAX™ line of textiles from Medline is designed to look better, perform longer, and save resources with every washing. The advanced polyester fabric in our scrubs and sheets feels great and keeps you cool and comfortable. The ringspun towels are plush and absorbent. Yet all materials wash with less water and fewer chemicals and dry in a fraction of the time.

## PerforMax™ Scrubs

ordering details on page 24

PerforMAX apparel works like high-tech athletic gear to move heat and moisture away from the body while remaining light and dry. In addition to water, chemical and energy savings because of their superior laundering performance, the factory uses extensive reverse osmotic and nano filtration to reclaim a full 99.5% of water used in production. Sediments and precipitates from the purification process are redirected to other users, rather than sent to a landfill.

Style 810

## PerforMax Gowns

ordering details on page 24

Finally, a print that lasts. Say goodbye to faded prints.

Medline's 100 percent synthetic PerforMAX patient apparel resists fading and shrinkage, keeping these gowns looking newer longer than traditional blended patient gowns.

Because these gowns are built to withstand 100 commercial washes and still look good, your savings from cooler washing and quicker drying add up over the gown's long life.

MDTPG7ITSCAG

## PerforMax™ Underpads

ordering details on page 24

The PerforMAX reusable incontinence underpad is nothing like the traditional pads of long ago. Quick absorption helps keep skin dry and more uses-per-pad helps keep costs under control. New Medicare reimbursement rules are bringing pressure ulcer prevention to the forefront at hospitals. Pressure ulcers frequently are associated with skin breakdown caused by moisture, friction or shear. Absorbent underpads are one tool for reducing the chance of skin breakdown.

MSC319000

## PerforMax Bath and OR Towels

ordering details on page 24

PerforMAX towels combine comfort and durability. They wash with less water and dry faster than ordinary cotton towels. 94% of the electricity used to manufacture these towels is generated with on-site wind power. A special boiler in the plant is fueled with reclaimed cotton lint from other nearby mills that is usually sent to a landfill. Bath towels are shipped corrugate-free, in bales wrapped in protective 100% recycled polystyrene.

MDTBT7B38R

MDTST7A29JAD

## PerforMax Bedding

ordering details on page 24 – 25

Engineered from proprietary 100 percent synthetic fibers, PerforMAX sheets will change the way you think about healthcare linens. This patent-pending technology delivers many benefits: lasting whiteness, reduced staining, minimal shrinkage, long product life – your patients will notice that your sheets and pillowcases consistently look brand new.

## Microfiber Cloths

ordering details on page 25

Medline's MicroMax™ Microfiber Cleaning Cloths add efficiency to your cleaning. To start with, they're reusable, not disposable. These multipurpose cleaning cloths are ideal for patient contact areas such as countertops and bedside tables. They clean effectively with fewer chemicals. They launder extremely well and dry quickly. 100 percent microfiber construction is 80% polyester/20% polyimide fibers.

MicoMax Microfiber Cleaning Cloths

MDT217720

MDT217619

## Microfiber Mops

ordering details on page 25

All-in-one microfiber works for both wet and dry mopping. This mop can be used as both a dust mop and a wet mop or dampduster, which keeps airborne particles down. This unique mop is made from two layers of 100 percent split microfiber. The primary layer of split fibers is designed for maximum cleaning results, accompanied by a second layer of spun microfiber for absorption and longevity. Lighter than traditional mops, these are kinder to your housekeepers backs, joints and muscles, too.

“PerforMAX gowns are very quickly and easily processed and their color retention is phenomenal. The gowns we injected nearly a year ago look as great today as the gowns we injected last week.”

**Jaye Park**, Chief Operating Officer, Emerald Textiles

## Ideas for Greening Housekeeping

Consider all the environments your housekeeping touches. It's responsible for the clean and sanitary spaces in your facility. It also must consider the larger environment as powerful housekeeping chemicals go down the drain and into the air. Finally, the human ecology of housekeepers, patients and other workers are affected by the products and practices of the housekeeping team.

Studies suggest that facilities using greener cleaning have lower absenteeism and respiratory complaints from housekeepers.<sup>4</sup> And microfiber floor care is lighter weight and uses less water than traditional mops, meaning less chance for lifting and straining injuries for workers.

Using more reusable products (like microfiber cloths) or disposables made with low-impact renewable resources (like Green Tree® basics) or using products that reduce waste stream impact like ReadyFlush® wipes and Degrade-Away™ liners are also effective ways to make sustainability part of your housekeeping plan.

## TWL Cleaning Products

ordering details on page 26

TWL cleaning products are bio-based with lower VOCs for better air quality. They carry lower Hazardous Material Identification System (MHIS) health ratings than conventional cleaners. Because they are shipped in concentrated form and automatically diluted by the on-site dispenser, transportation impact is greatly reduced. Packaging is recyclable plastic.

FW549

FW553

## Fresh Wave® IAQ Deodorizer

ordering details on page 26

Fresh Wave IAQ natural odor eliminators effectively remove both organic and inorganic odors from the air, laundry, carpets, upholstery and surfaces. Fresh Wave IAQ products are dye-free and made with natural, non-toxic and biodegradable ingredients, and they're packaged in recyclable material. Fresh Wave IAQ has been recognized by the EPA's Design for the Environment program (DfE).

## Microfiber Cloths

ordering details on page 27

Microfiber cleaning tools use microscopic synthetic fibers to trap dirt, dust and contaminants instead of a solution of chemicals, so you use much less water and chemicals during cleaning. The same fiber structure that makes for excellent cleaning lets the mop or cleaning cloth dry quickly after machine washing.

MicoMax Microfiber  
Cleaning Cloths

MDT217720

MDT217619

## Microfiber Mops

ordering details on page 27

All-in-one microfiber works for both wet and dry mopping. This mop can be used as both a dust mop and a wet mop or dampduster, which keeps airborne particles down. This unique mop is made from two layers of 100 percent split microfiber. The primary layer of split fibers is designed for maximum cleaning results, accompanied by a second layer of spun microfiber for absorption and longevity. Lighter than traditional mops, these are kinder to your housekeepers backs, joints and muscles, too.

## Trash Liners

ordering details on page 27

Degrade-Away™ 100% degradable liners come in a variety of sizes and meet ASTM D6954-04 standards for degradable plastic. They use an additive that breaks down the long hydrocarbon bonds of the plastic, eventually reducing the film strength and providing a nutrient source for microbes. These microbes eat the broken down molecules leaving water, carbon dioxide and reusable biomass. This aerobic process can take between 2 months and 5 years, requires oxygen, and can occur at the top layers of a landfill or in the presence of sunlight.

NONDA404816

## Paper Towels

ordering details on page 28

Medline's Green Tree® Basics line includes paper towels, toilet tissue and facial tissue in many sizes and configurations. They are all made with a blend of recycled pulp and rapidly renewable materials like grass, sugar cane and bamboo, with a plant-to-harvest cycle of less than ten years. Green Tree products are pleasantly soft and gentle on the environment but strong enough to stand up to tough cleaning needs.

## ReadyFlush® Wipes

ordering details on page 28

Effective, soothing and hypoallergenic, ReadyFlush flushable wipes are truly dispersible. That means they break apart just like toilet paper. Many wipes are called flushable but don't break down, clogging pipes and causing high plumbing bills. Made of 98 percent cellulosic fibers from renewable sources, ReadyFlush is a sewer- and septic-safe way to divert material from your solid waste stream.

“Microfiber mops used with regular tap water are effective removing bacteria from smooth surfaces. A bacterial culture after a traditional wet mop cleaning showed only a 30% reduction to precleaning. The bacterial culture taken after the microfiber mop cleaning showed a 99% reduction.”<sup>5</sup>

## Ideas for Greening Food Services

In the United States, we hardly know what to do with our abundance of food. By one estimate, we could feed a city like Birmingham, Alabama or Fort Wayne, Indiana for an entire **year** on what the U.S. wastes in a **day**. And consider that, on average, food travels 1200 miles to reach your plate.<sup>6</sup>

Buying local, sustainably produced food can help, as can growing your own garden. Preparing food in quantities to minimize waste is smart, and when too much is made, finding community-based organizations that share food with those in need is complementary to the caring mission of just about any hospital.

Commercial or even small-scale composting can divert food waste from a landfill and even provide you with an organic product you can sell or use to grow fruits and vegetables yourself. You could also promote your sustainability efforts with a "community compost day" during garden planting time in your area.

Switching to products in your food services area that have less upstream impact (as they are produced) and downstream impact (as they are used and disposed of) helps sustainability, too. Here are some greensmart products to consider.

## TWL Cleaning Products

ordering details on page 29

Two favorite TWL cleaners for the kitchen include heavy-duty degreaser and stainless steel cleaner. The degreaser is non-toxic to humans and aquatic animals; phosphate, petroleum, alkali and fragrance-free. It's effective on carbon and grease on just about any surface—even carpet. The stainless steel cleaner is bio-based, VOC-compliant and safe for the environment. It's suitable for any stainless steel surface; a little on a cloth goes a long way.

TWL11924714

TWL11922825

TWL11923214

## Sugarcane Tableware

ordering details on page 29

A natural alternative to plastic and foam, these foodservice products are 100% compostable (ASTM D6868 and ASTM D6400) and made with sugar cane fibers, a by-product of the sugar refining process. They are microwave and freezer safe, as well as grease and cut resistant. Combining sustainability and strength, these are the perfect solution for bio-based disposables that meet environmentally-preferable purchasing (EPP) standards.

To earn the greensmart™ label, a product goes through a rigorous verification process. Its environmental impact is assessed from the time the product is made through its final disposal. Only then are the best-of-the-best named a greensmart product. The Sustainability Facts box tells you exactly why the product is more eco-friendly.

**greensmart™**
