

OSEBERG E-INVOICE PEPPOL BIS

All you need for a fully integrated, secure and efficient sending of PEPPOL (EHF) Invoices and Credit Memos

INCLUDING

- Access point in the price
- Direct upload of files with instant sending receipt through API
- Updated status on all documents and in lists
- Status center monitoring sending status and enabling user to easily find documents with errors or missing delivery receipts
- Automatic PDF copy of the document embedded in the PEPPOL (EHF)
- Enables the user to attach other files such as timesheets, product information or other files that should be received with the invoice

The PEPPOL BIS format covers all the mandatory information you need to Issue a Norwegian EHF 3.0 file.

To be able to send PEPPOL E-invoices and Credit Memos you must establish an “electronic mailbox”, also known as an **Access point**. This is included in our product.

To avoid that the user needs to handle manual files. We have a **direct API** ensuring that both sending of files and receiving receipts is done secure and automatically.

The system shows the user the exact **status of the documents**, either it is just sent, if it was returned with an error or if the final receipt says that the document has been registered as received at your customer’s electronic mailbox. The statuses are always available directly on the document or in the list of posted documents.

We have created a **status center** that you can show in your preferred Role Center in Business Central. This to help you keep track on error situations or sending’s that has not been confirmed by the receiver’s mailbox yet.

Your customers might prefer a **PDF copy of their invoice** as well. This is automatically embedded in the sending to ensure that your users don’t forget to attach it.

We also have functionality for letting the users add **other PDF attachments** that they wish to send to the customers. This can be all types of documentation such as timesheets, 3. Party invoices, product specifications, requisitions or whatever you need to show your customers.
