

Mapping Microsoft Cyber Offerings to: NIST CSF, CIS Controls, ISO27001:2013 and HITRUST CSF

The NIST Cybersecurity Framework (CSF) is a voluntary Framework consisting of standards, guidelines, and best practices to manage cybersecurity-related risk. The Framework complements an organization’s risk management process and cybersecurity program. The organization can use its current processes and leverage the Framework to identify opportunities to strengthen and communicate its management of cybersecurity risk while aligning with industry practices. Alternatively, an organization without an existing cybersecurity program can use the Framework as a reference to establish one. Just as the Framework is not industry-specific, the common taxonomy of standards, guidelines, and practices that it provides also is not country-specific. Organizations outside the United States may also use the Framework to strengthen their own cybersecurity efforts, and the Framework can contribute to developing a common language for international cooperation on critical infrastructure cybersecurity.

For this document, we referenced the [NIST CSF for Improving Critical Infrastructure Cybersecurity version 1.1](#), [CIS Controls version 7](#), [ISO 27001:2013](#) and [HITRUST CSF v9.2](#). Note: the CIS Controls and ISO 27001:2013 frameworks have been mapped by NIST within their CSF document, so we replicated that mapping below. In addition, we have mapped to HITRUST CSF, which rationalizes relevant regulations

and standards into a single overarching security framework. Because the HITRUST CSF is both risk- and compliance-based, organizations can tailor the security control baselines based on a variety of factors including organization type, size, systems, and regulatory requirements.

What we provide in this document is information and guidance on Microsoft Cyber Offerings that can help organizations meet many of the security functions described in these frameworks. In the table below, we have included four out of the five NIST CSF Core Functions (Identify, Protect, Detect, Respond and Recover) for which Microsoft Cyber Offerings can help. These offerings can help organizations with 70 of the 98 subcategories. Under the column “Microsoft Cyber Offerings that Help”, the resources (hyperlinks) listed reflect product information and how-to documentation. Where no offering is shown, the activity should be covered by the implementing organization utilizing internal resources or third parties. For Microsoft partners, that white space is the opportunity to step in and provide much needed services.

ID.AM: Asset Management

The data, personnel, devices, systems, and facilities that enable the organization to achieve business purposes are identified and managed consistent with their relative importance to business objectives and the organization's risk strategy.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
ID.AM-1 Physical devices and systems within the organization are inventoried	1	A.8.1.1, A.8.1.2	07.a, 07.d	System Center Configuration Manager Inventory – for fully managed devices Active Directory (AD) – Domain Joined Devices Azure AD Registered Devices IoT Hub – Device Identity Registry Microsoft Intune Device Inventory – for lightly managed devices Windows Analytics	Inventory devices and systems (both Microsoft and non-Microsoft such as iOS, Mac OS X, Android).
ID.AM-2 Software platforms and applications within the organization are inventoried	2	A.8.1.1, A.8.1.2	01.l, 07.a, 07.d	Software Inventory with System Center Configuration Manager Microsoft Intune Device Inventory – for lightly managed devices Azure Subscription Inventory and Analysis – MSIT Showcase Windows Server 2016 – Software Inventory Logging Windows Server 2016 – Software Restriction Policies Shadow IT/SaaS App Discovery with Cloud App Security (CAS)	Inventory software platforms and apps (both Microsoft and non-Microsoft).
ID.AM-3 Organizational communication and data flows are mapped	1	A.13.2.1	01.l, 01.m, 01.o, 05.i, 09.m, 09.n	Shadow IT/SaaS App Discovery with Cloud App Security Service Map solution in Azure Azure Network Watcher Azure Network Security Groups – ACLs Azure IoT Hub IP Filtering Enhanced Security Administrative Environment (ESAE)	Automatically discover, map and monitor various data flows (cloud apps usage, Network Security Groups, IP filtering, and application components on systems, administrative activity) and map communication between services.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>ID.AM-4</p> <p>External information systems are catalogued</p>		A.11.2.6	01.i, 09.e, 09.n	<p>Azure AD Integrated Apps</p> <p>Shadow IT/SaaS App Discovery with Cloud App Security</p>	<p>Maintain accountability of users' access and usage of SaaS apps.</p>
<p>ID.AM-5</p> <p>Resources (e.g., hardware, devices, data, and software) are prioritized based on their classification, criticality, and business value</p>		A.8.2.1	01.a, 01.w, 06.c, 07.a, 07.b, 07.d, 12.a, 12.c, 12.d	<p>Azure Information Protection (AIP) – Data Classification</p> <p>Privileged Access Reference Material</p> <p>Azure AD Privileged Identity Management</p>	<p>Enable data classification, secure privileged access, and the ability to manage, control, and monitor access to Azure and Azure AD resources and other online services (e.g. Office 365 or Intune).</p>
<p>ID.AM-6</p> <p>Cybersecurity roles and responsibilities for the entire workforce and third-party stakeholders (e.g., suppliers, customers, partners) are established</p>		A.6.1.1	00.a, 01.a, 01.c, 02.a, 02.b, 02.c, 02.d, 02.e, 05.e, 05.j, 05.k, 07.b, 07.c, 07.d, 09.m, 09.n, 10.k, 10.m, 11.d, 12.a, 12.c, 12.d, 12.e	<p>Privileged Access Reference Material</p> <p>Azure AD Privileged Identity Management</p> <p>Just Enough Administration</p> <p>Just in Time Administration – Privileged Access Management</p>	<p>Define roles and responsibilities (e.g. related to privileged access) across Azure and Windows environments, to prevent credential theft and to safeguard sensitive resources and data.</p>

ID.BE: Business Environment

The organization’s mission, objectives, stakeholders, and activities are understood and prioritized; this information is used to inform cybersecurity roles, responsibilities, and risk management decisions.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
ID.BE-1 The organization’s role in the supply chain is identified and communicated		A.15.1.3, A.15.2.1, A.15.2.2	05.d, 09.g, 09.h, 10.l	Privileged Access Workstation Design and Implementation for Active Directory (DIAD)	Define, communicate as needed, and centrally store and manage information about organization’s users’ roles (including their privileges).
ID.BE-2 The organization’s place in critical infrastructure and its industry sector is identified and communicated			05.a, 12.b		
ID.BE-3 Priorities for organizational mission, objectives, and activities are established and communicated			01.w, 03.a, 05.a, 05.b		

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
ID.BE-4		A.11.2.2, A.11.2.3, A.12.1.3	08.h, 12.b, 12.c		
ID.BE-5		A.11.1.4, A.17.1.1, A.17.1.2, A.17.2.1	12.a, 12.b, 12.c, 12.d	Designing Resilient Applications for Microsoft Azure	Define resilience requirements to support building and delivery of applications/services in Azure.

ID.GV: Governance

The policies, procedures, and processes to manage and monitor the organization’s regulatory, legal, risk, environmental, and operational requirements are understood and inform the management of cybersecurity risk.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
ID.GV-1		A.5.1.1	00.a, 04.a, 04.b, 05.a, 05.c		
ID.GV-2		A.6.1.1, A.7.2.1	04.a, 05.a, 05.b, 05.c, 05.k	Azure – Shared Responsibility Microsoft Incident Response and Shared Responsibility	Microsoft and its customers have certain information security roles and responsibilities that must be coordinated and aligned for successful outcomes for the organization.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>ID.GV-3</p> <p>Legal and regulatory requirements regarding cybersecurity, including privacy and civil liberties obligations, are understood and managed</p>		A.18.1	01.a, 02.a, 02.b, 02.c, 02.e, 03.a, 04.a, 04.b, 05.a, 05.b, 05.e, 05.g, 05.i, 05.k, 06.a, 06.b, 06.c, 06.d, 06.e, 06.f, 06.g, 07.b, 08.b, 08.c, 08.h, 09.ab, 09.n, 09.v, 09.x, 09.z, 10.a, 10.f, 11.a, 11.c, 11.e, 12.e	<p>Microsoft Compliance Offerings</p> <p>CAS – third-party risk evaluation and known certifications</p> <p>Microsoft and General Data Protection Regulation (GDPR)</p> <p>Microsoft Compliance Manager</p> <p>Privacy with Microsoft</p>	<p>Microsoft itself as a technology solutions provider adheres to legal, data privacy and regulatory/compliance requirements regarding cybersecurity and enables customers to do the same.</p>
<p>ID.GV-4</p> <p>Governance and risk management processes address cybersecurity risks</p>			00.a, 01.a, 01.q, 01.w, 01.x, 01.y, 02.e, 03.a, 03.b, 03.d, 04.a, 04.b, 05.a, 05.d, 05.g, 05.h, 06.a, 06.c, 06.i, 07.b, 07.d	<p>Microsoft Cloud Services Risk Assessment</p>	<p>Microsoft cloud services have implemented security and privacy controls. If desired, customers can perform risk assessment of the services to assess compliance.</p>

ID.RA: Risk Assessment

The organization understands the cybersecurity risk to organizational operations (including mission, functions, image, or reputation), organizational assets, and individuals.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
ID.RA-1 Asset vulnerabilities are identified and documented	4	A.12.6.1, A.18.2.3	03.b, 03.d, 06.h, 09.ab, 09.r, 09.z, 10.c, 10.m, 11.b, 12.b	Vulnerability Assessment in Azure Security Center Office 365 Secure Score AD Risk Assessment Microsoft Cloud Services Risk Assessment PAW DIAD	Microsoft offers tools and services to help identify and report /document vulnerabilities across assets on premise and in the cloud.
ID.RA-2 Threat and vulnerability information is received from information sharing forums and sources		A.6.1.4	05.g, 03.b, 03.d, 07.d, 10.i, 10.m, 12.b	Microsoft Security Intelligence Azure Monitor	Microsoft analyzes many billions of data points monthly, building intelligence on threats and vulnerabilities which is then used to actively protect the information of enterprises and customers.
ID.RA-3 Threats, both internal and external, are identified and documented				Microsoft Threat Modeling Tool Microsoft Threat Management Azure Monitor	Microsoft provides various tools, products and services to help organizations identify (detect) and document (report on), protect and respond to threats.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>ID.RA-4</p> <p>Potential business impacts and likelihoods are identified</p>			<p>03.b,</p> <p>03.d,</p> <p>05.d,</p> <p>07.d,</p> <p>09.g,</p> <p>10.k,</p> <p>10.m,</p> <p>12.b</p>		
<p>ID.RA-5</p> <p>Threats, vulnerabilities, likelihoods, and impacts are used to determine risk</p>		<p>A.12.6.1</p>	<p>03.b,</p> <p>03.d,</p> <p>07.d,</p> <p>10.k,</p> <p>10.m,</p> <p>12.b</p>	<p>Cybersecurity Operations Service</p>	<p>Microsoft provides proactive analysis (including detection of threats and vulnerabilities) by incident response experts to determine likelihoods to determine risk.</p>
<p>ID.RA-6</p> <p>Risk responses are identified and prioritized</p>			<p>03.c,</p> <p>06.g,</p> <p>06.h,</p> <p>10.l,</p> <p>10.m</p>	<p>Cybersecurity Operations Service</p>	<p>Microsoft provides proactive analysis (including detection of threats and vulnerabilities) by incident response experts to determine likelihoods to determine risk.</p>

ID.RM: Risk Management Strategy

The organization’s priorities, constraints, risk tolerances, and assumptions are established and used to support operational risk decisions.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>ID.RM-1</p> <p>Risk management processes are established, managed, and agreed to by organizational stakeholders</p>			<p>01.c, 03.a, 03.b, 05.a, 05.h, 05.i</p>		
<p>ID.RM-2</p> <p>Organizational risk tolerance is determined and clearly expressed</p>			<p>03.a, 05.h, 05.i</p>		
<p>ID.RM-3</p> <p>The organization’s determination of risk tolerance is informed by its role in critical infrastructure and sector specific risk analysis</p>			<p>03.a, 05.h, 12.b</p>		

PR.AC: Protect (PR) Access Control

Access to assets and associated facilities is limited to authorized users, processes, or devices, and to authorized activities and transactions.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
PR.AC-1 Identities and credentials are managed for authorized devices and users	16	A.9.2.1, A.9.2.2, A.9.2.4, A.9.3.1, A.9.4.2, A.9.4.3	01.a, 01.b, 01.c, 01.d, 01.e, 01.f, 01.j, 01.k, 01.p, 01.q, 01.r, 01.v, 02.g, 02.i, 05.j, 06.j, 09.m, 10.i	Best Practices for Securing AD Microsoft Identity Manager: Connect to your Directories Hybrid identity (on-premises and cloud-based) Azure AD – Group Management Automated User Provisioning and Deprovisioning to SaaS Apps Azure AD Join (Devices) Enroll devices for management in Microsoft Intune Control Access to Azure IoT Hub Azure IoT Hub – Device Identity Registry Azure AD Privileged Identity Management Privileged Access Management for AD Domain Services PAW DIAD Azure AD B2C Fast Start – Azure for Identity Dynamic Identity Framework (DIF) ESAE Microsoft Identity Manager Implementation Services Privileged Access Management Azure AD Implementation Services (AADIS) Enterprise Modernization for AD	Microsoft offers tools, products and services for managing identities and credentials for authorized devices and users (e.g. privileged accounts).

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
PR.AC-2 Physical access to assets is managed and protected		A.11.1.1, A.11.1.2, A.11.1.4, A.11.1.6, A.11.2.3	01.g, 01.k, 01.l, 01.v, 01.x, 01.y, 08.a, 08.b, 08.c, 08.e, 08.f, 08.h, 08.i, 10.i	Protecting Data in Azure (Page 23, Physical Security) PAW DIAD	Microsoft provides protections for Azure (e.g. employs rigorous operations and processes to prevent unauthorized access, Azure nodes physically protected, and so forth), hardens dedicated physical workstations used by administrators and for Active Directory, offers a service engagement for deployment of read-only domain controllers (RODCs) for locations where physical security cannot be guaranteed.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
PR.AC-3 Remote access is managed		A.6.2.2 A.13.1.1, A.13.2.1	01.j, 01.n, 01.q, 01.v, 01.y, 05.i, 05.j, 09.e, 09.s, 09.w, 10.i	Conditional Access in Azure AD Remote Desktop Services in Server 2016 Server 2016: Web Application Proxy Secure Remote Access to on-premises applications: Azure AD App Proxy Azure Security – Remote Management CAS – Cloud App Governance and Control Device Compliance Policies for Conditional Access PAW DIAD	Microsoft security services enable control over and management of remote access (to applications and data) in support of security and compliance requirements.
PR.AC-4 Access permissions are managed, incorporating the principles of least privilege and separation of duties	12, 15	A.6.1.2, A.9.1.2, A.9.2.3, A.9.4.1, A.9.4.4	01.a, 01.b, 01.c, 01.e, 01.m, 01.p, 01.s, 01.v, 01.x, 02.g, 02.i, 05.i, 06.j, 07.a, 07.d, 08.i, 09.ac, 09.c, 09.j, 09.r, 09.w, 09.y, 09.z, 10.i	Just Enough Administration (PowerShell - White Paper and Resources) Just Enough Administration: Step by Step Windows Server: Dynamic Access Control Microsoft Azure: Role Based Access Control Azure AD Privileged Identity Management Privileged Access Management for AD Domain Services PAW DIAD ESAE	Microsoft offers the ability to define access control policies based on a just enough administration approach, role based access control and privileged access management for managing access permissions, incorporating the principles of least privilege and separation of duties.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>PR.AC-5</p> <p>Network integrity is protected, incorporating network segregation where appropriate</p>		<p>A.13.1.1, A.13.1.3, A.13.2.1</p>	<p>01.m, 01.n, 01.o, 01.w, 09.m, 09.w, 10.i</p>	<p>Microsoft Azure: Secure network with virtual appliances</p> <p>Microsoft Cloud Services and Network Security</p> <p>Azure Network Security Best Practices</p> <p>Azure Network Security Whitepaper</p> <p>PAW</p> <p>DIAD</p> <p>ESAE</p>	<p>Microsoft has spent several years establishing secure, isolated environments, credential management services and policies, and secure admin workstations to help protect mission-critical systems and services—including those used to manage cloud services, like Azure. And, Microsoft has a comprehensive approach to protect cloud infrastructure needed to run hyper-scale global services. Microsoft cloud infrastructure includes hardware, software, networks, and administrative and operations staff, in addition to the physical data centers.</p>

PR.AT: Awareness and Training

The organization's personnel and partners are provided cybersecurity awareness education and are adequately trained to perform their information security-related duties and responsibilities consistent with related policies, procedures, and agreements

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
PR.AT-1 All users are informed and trained	9	A.7.2.2	00.a, 01.f, 01.g, 01.p, 01.x, 01.y, 02.d, 02.e, 05.c, 07.c, 09.j, 09.s, 11.b, 11.c, 12.c, 12.d	ESAE	Cyber-attackers have been successful at rapidly gaining administrative access to corporate and government computing environments. At minimum, organizations must inform and train all users on cybersecurity. To help secure without impeding administrators, the Microsoft Enhanced Security Administrative Environment (ESAE) service utilizes advanced technologies and recommended practices to provide an administrative environment and workstations with enhanced security protection.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
PR.AT-2 Privileged users understand roles & responsibilities	9	A.6.1.1, A.7.2.2	00.a, 01.q, 02.d, 02.e, 05.c, 09.z	ESAE	Credential hygiene is the recommended practice of verifying that privileged accounts only log on to workstations and servers that are sufficiently trusted and do not perform high-risk activities. The Microsoft Enhanced Security Administrative Environment (ESAE) service enforces credential hygiene by separating administrative accounts from normal user accounts (for email and web browsing) and compartmentalizing logon access for each type of administrative account.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
PR.AT-3 Third-party stakeholders (e.g., suppliers, customers, partners) understand roles & responsibilities	9	A.6.1.1, A.7.2.2	00.a, 02.d, 05.i, 05.j, 05.k, 06.a, 09.e, 09.f, 09.g, 09.n, 09.t, 09.x, 10.a, 10.k, 10.l	<u>ESAE</u>	Third-party stakeholders must understand their roles and responsibilities regarding access to corporate resources and data. To help thwart a critical element of credential theft attacks—the inadvertent exposure of administrative credentials—the Microsoft Enhanced Security Administrative Environment (ESAE) service utilizes advanced technologies and recommended practices to provide an administrative environment and workstations with enhanced security protection.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>PR.AT-4</p> <p>Senior executives understand roles & responsibilities</p>	9	<p>A.6.1.1,</p> <p>A.7.2.2</p>	<p>00.a,</p> <p>02.d,</p> <p>02.e,</p> <p>05.a,</p> <p>05.c</p>	<p>ESAE</p>	<p>Senior executives, due to the overly sensitive nature of intellectual property and insider knowledge on corporate strategy and financial data they have at their disposal, are a highly valuable target for cyberattacks, and, particularly, credential theft attacks. This makes it imperative for them to understand their roles and responsibilities regarding access to corporate resources and data. To help thwart a critical element of credential theft attacks—the inadvertent exposure of administrative credentials—the Microsoft Enhanced Security Administrative Environment (ESAE) service utilizes advanced technologies and recommended practices to provide an administrative environment and workstations with enhanced security protection.</p>

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>PR.AT-5</p> <p>Physical and information security personnel understand roles & responsibilities</p>	9	A.6.1.1, A.7.2.2	00.a, 02.d, 02.e, 05.c, 11.a	ESAE	<p>Physical and information security personnel, based on their very roles, must understand and take very seriously their responsibilities related to protecting systems, applications and data. Credential theft attacks can be particularly concerning. To help thwart a critical element of credential theft attacks—the inadvertent exposure of administrative credentials—the Microsoft Enhanced Security Administrative Environment (ESAE) service utilizes advanced technologies and recommended practices to provide an administrative environment and workstations with enhanced security protection.</p>

PR.DS: Data Security

Information and records (data) are managed consistent with the organization's risk strategy to protect the confidentiality, integrity, and availability of information.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
PR.DS-1 Data-at-rest is protected	17	A.8.2.3	01.d, 01.j, 01.k, 01.v, 01.x, 01.y, 06.d, 08.j, 09.ac, 09.l, 09.o, 09.x, 09.y, 09.z, 10.f, 10.g, 10.i, 12.c	Windows Server 2016: Full disk Encryption with BitLocker Windows 10 Full disk encryption – BitLocker Shielded VMs in Windows Server 2016 Azure disk encryption for IaaS VMs Azure Storage Service Encryption for data at rest Azure Storage Security Guide SQL Server Encryption AIP – File Classification and Protection Windows Information Protection Encryption in Office 365 Azure Backup Data Encryption Microsoft Trust Center – Encryption Secure Mobile Devices with Microsoft Intune CAS – Govern Connected SaaS apps Azure SQL Transparent Data Encryption PAW ESAE DIAD AIP Full Volume Encryption – Windows BitLocker Drive Encryption	Microsoft offers encryption and data backup solutions within its on premise (e.g. Windows server, Windows 10 device) and cloud (e.g. Azure, Office 365) offerings and services to protect data-at-rest.

<p>DE.CM-2 The physical environment monitored to detect potential cybersecurity events</p>			<p>08.a, 08.b, 08.c, 09.ab</p>	<p>Azure Security and Compliance (See Infrastructure Protection section)</p>	<p>Azure runs in geographically distributed Microsoft facilities, each designed to run 24x7x365 and employs various measures to help protect operations from power failure, physical intrusion, and network outages. These datacenters comply with industry standards (such as ISO 27001) for physical security and availability and are managed, monitored, and administered by Microsoft operations personnel.</p>
<p>DE.CM-3 Personnel activity is monitored to detect potential cybersecurity events</p>		<p>A.12.4.1</p>	<p>01.b, 01.c, 06.b, 06.e, 08.c, 09.aa, 09.c</p>	<p>Microsoft CAS – Anomaly Detection – SaaS Apps Azure Events – Audit Logs O365 – Audit Logging Windows Security Audit Events</p>	<p>Microsoft Cloud App Security monitors anomalous personnel user activity related to cloud apps to detect potential cybersecurity events. For Azure, the Audit Logs provides a view of many of the events that occurred against the subscription (who has access, what kind of access, and who gained/lost access). For Office 365, the Audit logs can be used to search for event</p>

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>DE.CM-3 continued</p> <p>Personnel activity is monitored to detect potential cybersecurity events</p>		A.12.4.1	01.b, 01.c, 06.b, 06.e, 08.c, 09.aa, 09.c	<p>Microsoft CAS – Anomaly Detection – SaaS Apps</p> <p>Azure Events – Audit Logs</p> <p>O365 – Audit Logging</p> <p>Windows Security Audit Events</p>	<p>information (date and time when event occurred, device IP address, user who performed action that triggered the vent, user activity, item created or modified (if applicable) and detail) for investigation purposes. For Windows, the security and system logs can be used to record and store collected security events so that an administrator can track key system and network activities to monitor potentially harmful behaviors and to mitigate those risks.</p>
<p>DE.CM-4</p> <p>Malicious code is detected</p>	5	A.12.2.1	08.j, 09.ab, 09.j, 09.k, 10.l	<p>Office 365 Advanced Threat Protection (ATP)</p> <p>Windows Defender Advanced Threat Protection (ATP)</p> <p>Antimalware for Azure Services and VMs</p> <p>System Center – Endpoint Protection</p> <p>Microsoft Intune: Protecting Windows PCs against malware threats</p>	<p>Microsoft offers products and services for detection of unsafe attachments, malicious links, malware or unwanted software attempting to install or run on Azure systems. When System Center 2012 Endpoint Protection is used with Microsoft System Center 2012 Configuration Manager.</p>

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
DE.CM-4 continued Malicious code is detected	5	A.12.2.1	08.j, 09.ab, 09.j, 09.k, 10.I	Office 365 Advanced Threat Protection (ATP) Windows Defender Advanced Threat Protection (ATP) Antimalware for Azure Services and VMs System Center – Endpoint Protection Microsoft Intune: Protecting Windows PCs against malware threats	it provides a comprehensive enterprise management solution that lets an organization do several things, including configuring default and custom antimalware policies that apply to groups of computers. Microsoft Intune can help an organization quickly protect and monitor managed Windows PCs against malware threats.
DE.CM-5 Unauthorized mobile code is detected		A.12.5.1	09.k	Blacklisting/whitelisting apps for KNOX Blacklisting/whitelisting apps on iOS with Intune Compliant/noncompliant apps on Android with Intune	Microsoft offers blacklisting of mobile apps (blocking them on the device).
DE.CM-6 External service provider activity is monitored to detect potential cybersecurity events		A.14.2.7, A.15.2.1	05.k, 09.e, 09.f, 09.n, 09.z, 10.I	Azure Security Center for Incident Response	For Azure services, if during the investigation of a security event, Microsoft becomes aware that customer data has been accessed by an unlawful or unauthorized party, the security incident manager will immediately begin execution of the Customer Security Incident Notification Process.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>DE.CM-7</p> <p>Monitoring for unauthorized personnel, connections, devices, and software is performed</p>			<p>01.x, 06.g, 08.a, 08.b, 08.c, 09.ab, 09.n, 10.k</p>	<p>Microsoft Azure AD: Conditional Access</p> <p>Advanced Threat Analytics: Threats Detected</p> <p>Advanced Threat Analytics Implementation Services (ATAIS)</p> <p>AppLocker Overview – Application Auditing/Restrictions</p> <p>Windows Security Audit Events</p>	<p>Microsoft offers built-in capabilities for Azure AD, Advanced Threat Analytics and Windows to monitor for unauthorized personnel, connections, devices, and software (e.g. applications).</p>
<p>DE.CM-8</p> <p>Vulnerability scans are performed</p>		<p>A.12.6.1</p>	<p>06.h, 09.z, 10.b, 10.c, 10.m</p>	<p>Vulnerability Assessment in Azure Security Center</p> <p>SCCM Vulnerability Assessment</p> <p>Scan cloud application (Azure resources) for continuous assurance with AzSDK</p>	<p>The vulnerability assessment in Azure Security Center is part of the Security Center virtual machine (VM) recommendations. If Security Center doesn't find a vulnerability assessment solution installed on your VM, it recommends that you install one. SCCM Vulnerability Assessment allows scanning managed systems for common missing security updates and misconfigurations which might make client computers more vulnerable to attack. It is also possible to perform scanning of Azure workloads using Secure DevOps Kit for Azure.</p>

DE.DP: Detection Processes

Detection processes and procedures are maintained and tested to ensure timely and adequate awareness of anomalous events.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
DE.DP-1 Roles and responsibilities for detection are well defined to ensure accountability	5	A.6.1.1	02.a, 06.g, 06.i, 06.j		
DE.DP-2 Detection activities comply with all applicable requirements		A.18.1.4	06.i, 08.a, 08.b, 08.c, 09.ab		
DE.DP-3 Detection processes are tested		A.14.2.8	08.b, 09.ab	Microsoft Cloud – Red Teaming (Blog and link to whitepaper)	To help combat emerging threats, Microsoft employs an innovative Assume Breach strategy and leverages highly specialized groups of security experts, known as the Red Team, to strengthen threat detection, response and defense for its enterprise cloud services.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
<p>DE.DP-4</p> <p>Event detection information is communicated to appropriate parties</p>		A.16.1.2	<p>05.b,</p> <p>05.f,</p> <p>06.g,</p> <p>06.i,</p> <p>09.ab,</p> <p>09.ae,</p> <p>11.a</p>		
<p>DE.DP-5</p> <p>Detection processes are continuously improved</p>		A.16.1.6	<p>09.ab,</p> <p>10.m</p>	<p>Azure AD Identity Protection (See section on using machine learning for continuous improvement)</p> <p>Windows Defender ATP – using threat intel to improve detection</p>	<p>Microsoft Azure AD and Windows Defender ATP use machine learning to continuously learn of anomalies and suspicious incidents—thereby continuously improving detection.</p>

RS.RP: Response Planning

Response processes and procedures are executed and maintained, to ensure timely response to detected cybersecurity events.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
RS.RP-1 Response plan is executed during or after an event	18	A.16.1.5	11.a, 11.c, 11.d	Microsoft Azure Security Response in the Cloud Microsoft Incident Response and Shared Responsibility Incident Response Guide Responding to IT Security Incidents Azure AD role in Incident Response Azure Security Center for Incident Response Security Incident Management in Office 365	<p>Microsoft provides: built-in capabilities in Azure for security response, written guidance on shared responsibility between Microsoft and customer for incident response (IR), advice on responding to incidents, and shares Azure AD's role in IR, how to use Azure Security Center and Azure Log Analytics for IR, and how Microsoft handles security incidents in Office 365. An organization may benefit from using some of the Azure capabilities for its response plan.</p>

RS.CO: Communications

Response activities are coordinated with internal and external stakeholders, as appropriate, to include external support from law enforcement agencies.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
RS.CO-1 Personnel know their roles and order of operations when a response is needed		A.6.1.1, A.16.1.1	02.e, 11.a, 11.c, 12.c, 12.d, 12.e		
RS.CO-2 Events are reported consistent with established criteria		A.6.1.3, A.16.1.2	05.f, 09.ab, 10.c, 11.a, 11.b, 11.c		
RS.CO-3 Information is shared consistent with response plans		A.16.1.2	05.f, 05.g, 08.b, 09.ab, 10.m, 11.a, 11.c, 11.d		
RS.CO-4 Coordination with stakeholders occurs consistent with response plans			09.f, 11.c, 11.d, 12.c		

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
RS.CO-5 Voluntary information sharing occurs with external stakeholders to achieve broader cybersecurity situational awareness			03.b, 05.g, 06.a, 11.a, 11.c	Microsoft Active Protections Program	The Microsoft Active Protections Program (MAPP) is a program for security software providers that gives them early access to vulnerability information so that they can provide updated protections to customers faster.

RS.AN: Analysis

Analysis is conducted to ensure adequate response and support recovery activities.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
RS.AN-1 Notifications from detection systems are investigated		A.12.4.1, A.12.4.3, A.16.1.5	08.b, 09.ab, 09.ac, 11.d		
RS.AN-2 The impact of the incident is understood		A.16.1.6	11.d	Microsoft Incident Response and Recovery Process Services	Microsoft provides human-based assistance with incident response, to determine the impact of an incident, among other things.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
RS.AN-3 Forensics are performed		A.16.1.7	11.c, 11.d, 11.e	Azure Forensics Windows Security and Forensics	Microsoft provides guidance and help for Azure Forensics and Windows Forensics.
RS.AN-4 Incidents are categorized consistent with response plans		A.16.1.4	11.c		

RS.MI: Mitigation

Activities are performed to prevent expansion of an event, mitigate its effects, and eradicate the incident.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
RS.MI-1 Incidents are contained		A.16.1.5	01.b, 11.c, 11.d	Responding to IT Security Incidents Microsoft Incident Response and Recovery Process Services Windows Defender ATP – response actions	Microsoft provides advice on and human-based assistance with incident response. In addition, Windows Defender ATP offers controls to help quickly respond to detected attacks so that an organization can contain or reduce and prevent further damage caused by malicious attackers.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
RS.MI-2 Incidents are mitigated		A.12.2.1, A.16.1.5	01.b, 09.f, 10.a, 11.c, 11.d	Responding to IT Security Incidents Microsoft Incident Response and Recovery Process Services	Microsoft provides advice on and human-based assistance with incident response.
RS.MI-3 Newly identified vulnerabilities are mitigated or documented as accepted risks		A.12.6.1	03.a, 03.c, 06.h, 10.c, 10.m		

RS.IM: Improvements

Organizational response activities are improved by incorporating lessons learned from current and previous detection/response activities.

NIST CSF	CIS Controls	ISO/IEC 27001:2013	HITRUST CSF 9.2	Microsoft Cyber Offerings that Help	Explanation of Microsoft Offerings
RS.IM-1 Response plans incorporate lessons learned		A.16.1.6	11.c, 11.d		
RS.IM-2 Response strategies are updated			11.c, 11.d		

This document is a commentary on the NIST Cybersecurity Framework, as Microsoft interprets it, as of the date of publication. Microsoft has spent a lot of time implementing the framework and considering opportunities for Microsoft technology to help organizations with their cybersecurity capabilities, but cybersecurity is highly fact-specific and this paper addresses only generally applicable concepts and may not perfectly align with all of your organization's needs.
