TEACHER REVIEW FROM TOPPSTA.COM
ON DKFINDOUT! FOREST

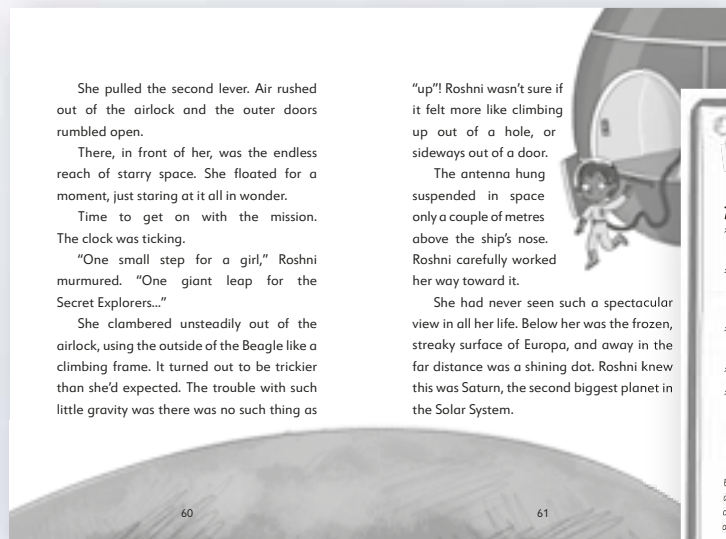

The Secret Explorers

7-9 Years / KS2 / 200 x 135mm / 128pp / PB

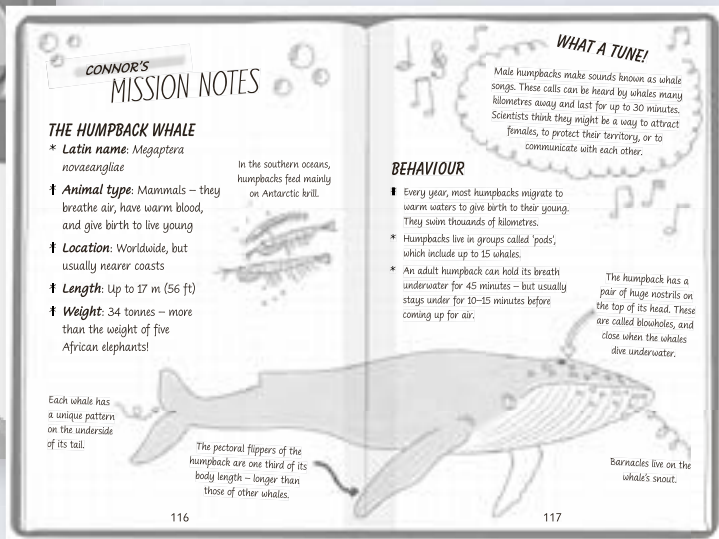

Blast off into space, dive into the depths of the ocean and head back to the prehistoric world with a secret team of kid experts in this brand-new fiction series for 7 to 9 year olds.

These character driven adventures are highly engaging and will help to build reading confidence and enjoyment for beginner and reluctant readers. Reference material contextualises each narrative, including timelines, quizzes, maps, and glossaries.

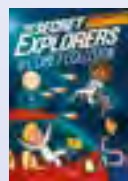

Audiobooks are also available, narrated by actor Alfred Enoch.

A Children's Encyclopedia Series

9-12 Years / KS2 / 276 x 216mm / 256pp / 304pp* / 240pp** / 208pp*** / HB

These encyclopedias are treasure troves of facts and information, the perfect companion to extra-curricular subjects and any extra curricular projects for school-aged children.

Glorious full-page images, timelines, charts, maps, and diagrams bring every chapter vividly to life.

Can I know that you're thinking?

We have access to our own private thoughts and minds, but we don't have the same access to the thoughts and minds of others. Because of this, how can we be sure other people have thoughts and minds at all? In philosophy, this question is known as the problem of other minds.

The French philosopher René Descartes wrote about the problem of other minds in his Meditations, published in 1641. Descartes wrote that his thoughts were known to him from within, but he had no way of knowing for sure whether other people or the stones had minds like his. They might simply be meaningless, non-feeling machines made of flesh and bone. This idea can be taken even further – if all you know, other people might not have minds at all. This is a form of scepticism, which is the view that we can't know things with any certainty. With no direct evidence for the existence of other people's minds, you might even go so far as to conclude that you are the only thinking person in the world.

THE PROBLEM OF OTHER MINDS
 Some philosophers who came after Descartes have entertained similar ideas. The modern American philosopher Frank Thicke wrote that we have no 'experience' of other people's minds, but we have no 'experience' of our own. We can be certain of our own experience, as we can feel our own emotions, desires, and pains, but when it comes to other people and how they think, there is no direct evidence for the existence of other people's minds. You might even go so far as to conclude that you are the only thinking person in the world.

Philosophy

This has turned out to be my favourite book... eye-opening and informative regarding the diversity of the world we live in and helps bring out and understand the spirit of internationalism. Great book from DK as always."

NAOMI NYORO, PRIMARY LIBRARIAN, BRAEBURN GROUP OF INTERNATIONAL SCHOOLS, KENYA, ON PEOPLE & PLACES A CHILDREN'S ENCYCLOPEDIA

Mary Wollstonecraft

PIONEERING WRITER ABOUT WOMEN'S RIGHTS
 An inspirational writer and thinker who was ahead of her time, Mary Wollstonecraft dedicated her short life to the improvement of women's rights and to the promotion of free education for everybody. She is regarded as one of the earliest feminist philosophers.

Born in 1759 in London, England, Wollstonecraft had an abusive father, which caused her to leave home at the age of 16. At the age of 20, she set up a small school for girls with her two sisters and a friend. Although it closed after a year, it helped to form her ideas on female education.

In 1790, Wollstonecraft briefly went to be a governess (teacher) in Ireland. On her return to London, she met a group of French thinkers, including radical publisher Joseph Johnson, who published her first book, *Dignity of the Female Sex* (1792). This work suggested that the education system should be reformulated so that girls could receive the same education as boys. Wollstonecraft's most important work, *A Vindication of the Rights of Women* (1792), was written at a time when women in Britain either worked in poorly paid jobs or were expected to stay at home being wives and mothers. She argued that both women and men had

EDUCATING GIRLS
 Wollstonecraft's passionate ideas and radical proposals helped promote female education around the world. Her ideas on girls are being rediscovered today.

THINK FOR YOURSELF
 Imagine a school that is all-rounder, you might experience some of the same ideas as Mary Wollstonecraft. But for you, it's not a school, it's a life.

THE RIGHT TO EDUCATION
 Wollstonecraft argued that women should have the same rights as men to education and to work.

THE RIGHT TO EDUCATION
 Wollstonecraft argued that women should have the same rights as men to education and to work.

I do not wish them [women] to have power over men; but over themselves.

PLANTS AND THEIR POLLINATORS

While some plants have thorns and poisonous leaves to stop animals eating them, other plants do what they can to attract particular animals called **POLLINATORS**. Pollinators are animals that visit plants and move pollen from flower to flower. This important job is called **POLLINATION** and plants need it to grow seeds.

HOW DO ANIMALS POLLINATE FLOWERS?

- 1.** Pollinators, such as this **orchid bee**, look for flowers because they get their food from among the colourful petals. This food is **nectar**.
- 2.** While drinking the nectar, pollen gets stuck to their faces or bodies. The orange powder is **pollen**. Pollen comes off a part of the flower called the **stamen**.
- 3.** When they go to the next flower, the pollen rubs off the pollinator's body onto the flower. A bee's tongue is called a **proboscis**. It is very long so that it can reach into flowers for nectar.
- 4.** After pollen has been moved from flower to flower, the plant can grow a **seed**. This will eventually grow into a whole new plant when it reaches the ground.

MEET THE POLLINATORS

Flowers come in all different shapes, sizes, colours, and even smells. This attracts different kinds of pollinators.

COLOURFUL FLOWERS

attract insects and birds that look for nectar in the day.

The **hermit hummingbird** has a long, curved beak that reaches into **heliconia flowers**.....

..... The **female orchid bee** pollinates **Brazil nut tree flowers**. Any pollinators of this plant must be strong enough to push open the flowers' tightly closed petals to reach the nectar.

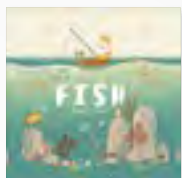

Butterflies love to visit the **monkey brush vine**, as it has lots of stamens. The many stamens brush pollen onto visitors.

WHITE FLOWERS

stand out in the dark to attract nocturnal pollinators such as bats.

BIGGER FLOWERS are visited by larger pollinators such as mammals and birds. The **kinkajou** is a nocturnal mammal that pollinates **balsa tree flowers**.

Earth's Incredible Oceans

What's The Weather

DK Eyewitness

9-12 Years / KS2 / 280 x 216mm / 72pp / PB

The original "museum in a book" series has been refreshed with a modern look that continues to captivate kids with a thirst for knowledge.

Superb, dramatic photography and eye-catching design help to introduce young readers to a subject in a clear, user-friendly way.

These books are ideal homework support for students, as well as a study aid for teachers and parents.

Speed king

The cheetah is the fastest land animal in the world. Unlike other cats, which are all leaping cats (pp. 10-11), the cheetah is called a running cat because it hunts fast-running animals. For this reason it is in a different group from all other cats and has a different Latin name, *Acinonyx jubatus*. The cheetah stalks its prey in the usual way, but then, at very high speed, it will chase after the gazelle or antelope and kill it with a sharp bite to the neck. It also preys on hares, guinea fowl, and even ostriches. The female cheetah lives alone, allowing males near only when she comes on heat (p. 24). Male cheetahs often live in small groups, but only the dominant male will mate with a female.

EYEWITNESS
Indian take-away
 In the past, cheetahs were often trained to help hunters kill antelope and gazelle. Indian paintings of the 16th century show the cheetahs' role. They were sent to knock down prey that they would wait for their owners to complete the kill.

Wandering ways
 The female hides her cubs in long grass while they are very young. She does not have a permanent den but moves the cubs around every few days.

No contest
 The acceleration of a cheetah is comparable to the powerful Ferrari, although the animal can only keep up its speed for about 170 m (558 ft).

Small head with short, rounded ears

Supple muscular back

Powerful hindquarters

Narrow, dog-like paws

No cover up
 The cheetah needs to have extended claws when running to help it grip the ground. So, unlike other cats, the cheetah does not have a protective sheath over each claw.

All furred up
 Cheetahs have thicker fur on the neck and shoulders. It forms a sort of "mane" that can be seen in cubs, but not in adults.

Animals

Hailstorms

Balls of ice called hailstones are produced inside a thundercloud. The strong air currents force lumps of ice up and down the cloud. With each upward movement the hailstones collect another layer of ice, until they are too big to be lifted again by the up-currents. The stronger the up-current, the heavier a hailstone can become. Heavy hailstones can be life-threatening, but any hailstorm can cause damage. One of the worst storms was in Munich, Germany, in July 1984, with financial losses around €625 million (\$1 billion).

A storm in Munich, Germany, in July 1984, caused financial losses of around €625 million (\$1 billion).

Heavy storm
 Hailstones are usually about the size of a pea. They bounce when they hit a hard surface and tend to settle on the ground. But hailstones vary in size, and storms in severity. In the USA alone, a hailstorm can cause property damage of more than €300 million (\$500 million), and crop damage of €185 million (\$300 million).

Dangerous driving
 Driving through a hailstorm is hazardous: vehicles slid on the hard, icy stones. The damage caused by falling hail depends on the wind speed during a storm. Hailstones with a diameter of 10 cm (4 in.) travel at speeds of up to 170 kph (106 mph).

Hail Alley
 A belt of land in the USA, spanning from Texas to Montana, is known as "Hail Alley" and regularly experiences severe hailstorms. Little has been done in the USA to explore methods of crop protection, though.

Cloud bursting
 To ease droughts, the Chinese fire chemical substances into thunderclouds to seed clouds for making rain. This helps combatting the country's increasingly severe droughts and also prevents hailstorms that could destroy crops.

Ice pack
 Hailstones are made up of layers - a bit like onions. Each layer represents one journey through the cloud in which it formed. This hailstone - one of the largest ever found - had a diameter of 19 cm (7.5 in.) and a mass of 786 g (1.67 lb).

Big chill
 Large hailstones usually fall from "supercooled" thunderclouds, which typically have a very strong up-draft. This 10 cm (4-in.) diameter hailstone fell in Colorado, USA, in May 1978. This hailstone is the size of a grapefruit.

Heavy crop destroyed by a severe hailstorm

Timelines of Everyone

“

The concise information and attractive presentation of Dorling Kindersley books make them easy for the primary students and teachers to use for research and projects. But above all, we love that DK is addressing important issues such as diversity, inclusion, and climate change with their new books.”

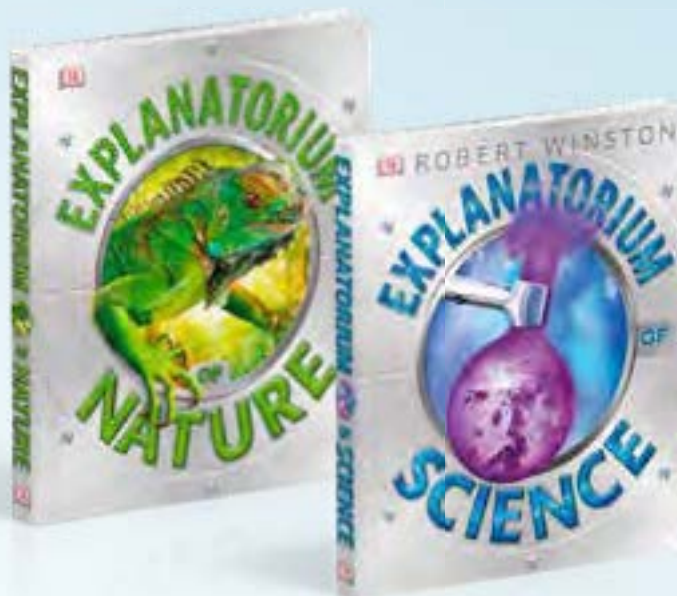

VENUS JAHANPOUR, PRINCIPAL OF BRILLIANT STARS INTERNATIONAL SCHOOL, BRATISLAVA, SLOVAKIA

Explanatorium Series

9-12 Years / KS2 / 301 x 252mm / 360pp / 320pp* / HB

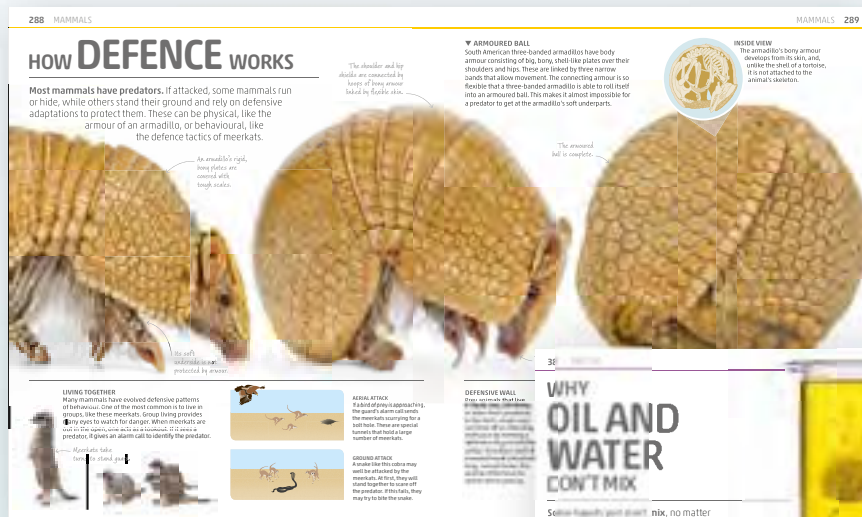

This series is the perfect tool to find out how things work, why they exist, and what they mean, inspiring young minds through the depiction and explanation of the living world around us.

With newly commissioned photography, including X-ray and ultraviolet images, the in-depth information throughout alongside annotations and concise captions will keep children fascinated and engaged.

Big Ideas Series

12+ Years / KS3 - KS4 / 233 x 195mm / 336pp / HB

The globally best-selling *Big Ideas* series brings a range of complex subjects to life, and makes them jargon-free through a combination of accessible text and innovative flow charts and infographics.

254 THE RIGHT TO REMAIN SILENT
MIRANDA V. ARIZONA (1966)

IN CONTEXT
FOCUS Constitutional law
BEFORE 1970 The Fifth Amendment makes it clear that no one should be compelled to be a witness against himself.
1911 American magazine *The Atlantic* comments that US legal processes are based in fear of criminals.
1914 The exclusionary rule upholds the rights of all citizens to be "secure" against evidence obtained during an illegal search or seizure.
AFTER 2000 The Supreme Court rules in *Dubois v. Florida* that states that "Miranda warnings are constitutionally required".
2010 The Supreme Court's ruling in *Burgess v. Thompson* asserts that any suspect under interrogation must actively assert his or her right to silence or actively waive it.

Complainers mount about US law enforcement using questioning methods with interrogating suspects.
Others often overlook the Fifth Amendment which gives defendants the right not to self-incriminate.

Despite claims that states are determined, the Miranda decision helps to guard against police misconduct.
The Miranda decision upholds the right to silence and to a lawyer.

The Fifth Amendment
The central tenet of the Miranda decision went beyond the Fifth Amendment's assertion that "No person shall be compelled in any criminal case to be a witness against himself". Instead it made it clear that any suspect in police custody must be explicitly informed not only of their right to remain silent but also of their right to refuse to answer questions. At the same time, as allowed for under the Sixth Amendment, any representation" North Carolina Democrat senator Sam J. Ervin complained that "self-confessed criminals are trained lies because the arresting officer failed to tell the criminal something he already knew". New York Democrat senator Robert Kennedy concurred with the opinion, "You think that additional warnings in some way indelicate upon effective law enforcement?"

Later developments
The notion of "adversarial training" was rejected. In all but name, the suspects were described as men of "limited education" who were unlikely to have been aware of their rights under either the Fifth or Sixth Amendments. In addition, police interrogations were often hostile and deceptively threatening. Although a later Supreme Court judgment in 2000, *Dubois v. Florida* (United States, emphatically upheld the Miranda decision, that of *Burgess v. Thompson* in 2010 significantly weakened it, ruling that the right to silence be held only if the suspect explicitly invoked it.

Ernesto Miranda
Born in Mesa, Arizona, in 1941, Ernesto Miranda was almost the archetypal father. Even as a young teenager his life was given over to petty crime followed by inevitable incarceration in various penal institutions. He arrived in 1963 via another in a theory of such runs with the law, and he didn't deny his guilt. In fact, it was precisely because he confessed under interrogation without having been made aware of his right to silence and to legal representation that the Supreme Court overturned the conviction, despite the Arizona supreme court having supported the original decision to find him guilty.

A NEW INTERNATIONAL ORDER 255

See also: The US Constitution and Bill of Rights 110-17 • The Declaration of the Rights of Man 118 • The restoration 198-97

Richard Nixon, when raising his president in 1970, seemed to crack down on crime. Central to his bid was a new to reverse the Miranda decision which he vehemently opposed.

suspect's right to a lawyer was affirmed, the lawyer to be provided at public expense if necessary. The Miranda warning has since become a routine introduction to all police questioning of suspects.

Background and decision
The decision's name comes from the case of Ernesto Miranda, a negotiator with a long history of criminal offenses. He had been arrested in Phoenix in 1963 on charges of rape and kidnapping. Three other cases were also considered by the Supreme Court. In each of them, the suspects, all tried and convicted, had not been explicitly advised of their rights under the Fifth Amendment. The ruling, a majority decision, with five judges in favor and four against, spelled instant controversy. Many people saw it as a charter for criminals, with the obviously guilty being freed essentially on a technicality. Supreme Court Justice Justice Brandeis, who opposed the ruling, claimed, for example, that it amounted to a "technical
