UP - 7/94

FCC INTERFERENCE WARNING

The FCC requires that manuals pertaining to Class A computing devices must contain warnings about possible interference with local residential radio and TV reception. This warning reads as follows:

> Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

COMMERCIAL WARRANTY (STANDARD)

Motorola radio communications products (the "Product") is warranted to be free from defects in material and workmanship for a period of ONE (1) YEAR (except for crystals and channel elements which are warranted for a period of ten (10 years) from the date of shipment. Parts including crystals and channel elements, will be replaced free of charge for the full warranty period but the labor to replace defective parts will only be provided for One Hundred-Twenty (120) days from the date of shipment. Thereafter purchaser must pay for the labor involved in repairing the Product or replacing the parts at the prevailing rates together with any transportation charges to or from the place where warranty service is provided. This express warranty is extended by Motorola, 1301 E. Algonquin Road, Schaumburg, Illinois 60196 to the original end use purchaser only, and only to those purchasing for purpose of leasing or solely for commercial, industrial, or governmental use.

THIS WARRANTY IS GIVEN IN LIEU OF ALL OTHER WARRANTIES EXPRESS OR IMPLIED WHICH ARE SPECIFICALLY EXCLUDED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL MOTOROLA BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES TO THE FULL EXTENT SUCH MAY BE DISCLAIMED BY LAW.

In the event of a defect, malfunction or failure to conform to specifications established by Motorola, or if appropriate to specifications accepted by Motorola in writing, during the period shown, Motorola, at its option, will either repair or replace the product or refund the purchase price thereof. Repair at Motorola's option, may include the replacement of parts or boards with functionally equivalent reconditioned or new parts or boards. Replaced parts or boards are warranted for the balance of the original applicable warranty period. All replaced parts or product shall become the property of Motorola.

This express commercial warranty is extended by Motorola to the original end user purchaser or lessee only and is not assignable or transferable to any other party. This is the complete warranty for the Product manufactured by Motorola. Motorola assume no obligations or liability for additions or modifications to this warranty unless made in writing and signed by an officer of Motorola. Unless made in a separate agreement between Motorola and the original end user purchaser, Motorola does not warrant the installation, maintenance or service of the Products.

Motorola cannot be responsible in any way for any ancillary equipment not furnished by Motorola which is attached to or used in connection with the Product, or for operation of the Product with any ancillary equipment, and all such equipment is expressly excluded from this warranty. Because each system which may use Product is unique, Motorola disclaims liability for range, coverage, or operation of the system as a whole under this warranty.

This warranty does not cover:

a) Defects or damage resulting from use of the Product in other than its normal and customary manner.

b) Defects or damage from misuse, accident, water or neglect.

c) Defects or damage from improper testing, operation, maintenance installation, alteration, modification, or adjusting.

d) Breakage or damage to antennas unless caused directly by defects in material workmanship.

e) A Product subjected to unauthorized Product modifications, disassembly or repairs (including without limitation, the addition to the Product of non-Motorola supplied equipment) which adversely affect performance of the Product or interfere with Motorola's normal warranty inspection and testing of the Product to verify any warranty claim.

f) Product which has had the serial number removed or made illegible.

g) A Product which, due to illegal to unauthorized alteration of the software/firmware in the Product, does not function in accordance with Motorola's published specifications or the FCC type acceptance labeling in effect for the Product at the time the Product was initially distributed from Motorola.

This warranty sets forth the full extent of Motorola's responsibilities regarding the Product. Repair, replacement or refund of the purchase date, at Motorola's option is the exclusive remedy. IN NO EVENT SHALL MOTOROLA BE LIABLE FOR DAMAGES IN EXCESS OF THE PURCHASE PRICE OF THE PRODUCT, FOR ANY LOSS OF USE, LOSS OR TIME, INCONVENIENCE, COMMERCIAL LOSS, LOST PROFITS OR SAVINGS OR OTHER INCIDENTAL, SPECIAL OR CONSEQUENTIAL DAMAGE ARISING OUT OF THE USE OR INABILITY TO USE SUCH PRODUCT, TO THE FULL EXTENT SUCH MAY BE DISCLAIMED BY LAW.

SOFTWARE NOTICE/WARRANTY

Laws in the United States and other countries preserve for Motorola certain exclusive rights for copyrighted Motorola software such as the exclusive rights to reproduce in copies and distribute copies of such Motorola software. Motorola software may be used in only the Product in which the software was originally embodied and such software in such Product may not be replaced, copied, distributed, modified in any way, or used to produce any derivative thereof. No other use including without limitation alteration, modification, reproduction, distribution, or reverse engineering of such Motorola software or exercise of rights in such Motorola software is permitted. No license is granted by implication, estoppel or otherwise under Motorola patent rights or copyrights.

This warranty extends only to individual products: batteries are excluded, but carry their own separate limited warranty.

In order to obtain performance of this warranty, purchaser must contact its Motorola salesperson or Motorola at the address first above shown, attention Quality Assurance Department.

This warranty applies only within the fifty (50) United States and the District of Columbia.

MOTOROLA

instruction manual revision

GENERAL:

This revision outlines changes that have occurred since the printing of your instruction manual. Use this information to correct your manual.

INSTRUCTION MANUAL AFFECTED:

68P81092E05–O	*MSF 5000* Instruction Manual
68P81092E75–O	*MSF 5000* VHF Service Manual
68P81092E80–O	*MSF 5000* UHF Service Manual
68P81092E85–O	*MSF 5000* 800 MHz Service Manual
68P81092E90–O	*MSF 5000* 900 MHz Service Manual

REVISION DETAILS:

1. Refer to page 1–45 of the **ALIGNMENT** Section of your manual (Chapter 1, 68P81092E76–O) and make the following change. Under the heading **"High/Low End Adjustment"** on page 1–45, change step 2 to read as follows:

   - **2.** "With an audio generator, inject a 1 kHz tone at 100 mV into the MIC AUDIO input (J812–4) on the control connector or into TP8 on the SSCB."

NOTE

The same change above applies also to instruction manual 68P81092E05–O except, the **ALIGNMENT** section for this manual is Chapter 4 (68P81092E04–O). Make the change for step 2 (above) on page 4–45 of instruction manual 68P81092E05–O.

SECTION ***NUMBER***

Foreword

Maintenance Philosophy

The *MSF 5000* is comprised of many boards and assemblies. These boards and assemblies should be replaced with known good boards and assemblies whenever they are determined to be faulty. This Service Manual, in conjunction with the *MSF 5000* Instruction Manual, is used to return the station to normal operation as quickly as possible.

Due to the high percentage of surface mount components and multi-layer circuit boards, field repair of station boards and assemblies is discouraged.

Scope of Manual

This manual contains schematics, parts lists, and other detailed information for each board and assembly.

The information in this manual is accurate as of the printing date. Changes occurring after the printing date are temporarily incorporated into the manual through Standard Manual Revisions (SMRs). This manual will be revised on a periodic basis as SMRs and other engineering changes are made to the *MSF 5000* equipment.

General Safety Information

The United States Department of Labor, through the provisions of the Occupational Safety and Health Act of 1970 (OSHA), has established an electromagnetic energy safety standard which applies to the use of this equipment. Proper use of this radio results in exposure below the OSHA limit.

The following precautions are always recommended:

- ❒ DO NOT operate the transmitter of a fixed radio (base station, microwave and rural telephone RF equipment) or marine radio when someone is within two feet (0.6 meter) of the antenna.
- ❒ DO NOT operate the transmitter of any radio unless all RF connectors are secure and any open connectors are properly terminated.
- ❒ DO NOT operate this equipment near electrical caps or in an explosive atmosphere.
- ❒ All equipment must be properly grounded according to Motorola installation instructions for safe operation. Refer to the R56 Quality Standards FNE Installation manual.
- ❒ All equipment should be serviced only by a qualified technician.

Refer to the appropriate section of the installation manual for additional pertinent safety information.

WARNING

Possible electrical shock hazard. Before attempting removal or installation, make sure the primary power and batteries are disconnected.

CAUTION

This station contains CMOS devices. Proper troubleshooting and installation techniques require grounding precautions by personnel prior to handling equipment.

Service and Repairs

Motorola Service

Motorola's National Service Organization offers one of the finest nationwide installation and maintenance programs available. This organization includes approximately 900 authorized Motorola Service Stations (MSS) located throughout the United States. Each service station is manned by one or more trained FCC licensed technicians.

Each MSS is independently owned and operated. An MSS is selected by Motorola to service its customers. Motorola maintenance is available on a time and material basis or a periodic fixed fee arrangement.

The administrative staff of this organization consists of national, area and district service managers and district representatives, all of whom are Motorola employees. Their objective is to improve the service to our customers.

For additional information about purchasing a service contract for Motorola equipment, contact your Motorola Service Representative, or write to:

National Service Manager

Motorola Communications and Electronics, Inc.

1301 E. Algonquin Road SH4

Schaumburg, Illinois 60196

Replacement Parts

When ordering replacement parts or equipment information, include the station model number, option numbers (if applicable), and the replacement part number. This applies to all components, kits, and chassis. If the component part number is not known, include its chassis or kit number and a description of the component on the order.

Crystal and channel element orders should specify the crystal or channel element type number, crystal and carrier frequency, and the model number using the part.

Orders for active filters should specify type number and frequency, identify the owner/operator of the communications system to use these items, and any serial number stamped on the components being replaced.

Refer to the addresses and phone numbers listed on the following pages when ordering replacement parts.

Mail Orders

Send all written orders to the following addresses listed below:

Performance Specifications

About the Performance Specifications

This section contains performance specifications for the 900 MHz *MSF 5000* station. It contains General specifications, Transmit specifications, and Receive specifications.

900 MHz General

Description	Value or Range
Number of Channels	4 standard up to 15 frequencies optional on conventional stations. 1 standard on trunked stations
Input Voltage (AC)	96 - 132 Vac @ 60 Hz Optional 50 Hz, 110/220 Vac †
Operating Temperature	-30° C to +60° C
Dimensions (H x W x D): 75 Watts 150 Watts ††	 37.25" x 22" x 10" (95.0 x 56.0 x 25.4 cm) 46" x 21.75" x 10" (117 x 56 x 25.4 cm)
Weight: 75 Watts 150 Watts	 175 lbs. (80 kg) 340 lbs. (155 kg)
Input Power: (varies w/options) 75 Watts 150 Watts	Standby / Transmit 95 Watts / 440 Watts 115 Watts / 765 Watts
Metering	Optional interactive DMP provides 5 Watts audio, analog metering and status display of control signals Optional interactive RMP provides 5 Watts audio and analog metering
† Reduces power output on 150 Watt stations to 125 Watts †† Measurement does not include tip feet	

900 MHz Transmit

Description	Value or Range
Frequency	935 - 941 MHz
Transmit Bandwidth	6 MHz
RF Power Output Range: 75 Watts 150 Watts	 35 - 75 Watts 75 - 150 Watts
Output Impedance	50 Ω
Frequency Stability	±2 ppb from -30°C to +60°C
Isolation	-20 dBc @ ±25 kHz
Deviation Clear	±2.5 MHz for 100% @ 1 kHz
Audio Sensitivity: Conventional Trunked	 -35 dBm to +11 dBm variable -20 dBm to +11 dBm variable
Conducted Spurious & Harmonic Emissions	-90 dBc
FM Hum and Noise	-45 dB nominal for 300 to 3 kHz bandwidth (with 750 µ sec. pre-emphasis referenced to 1 kHz tone @ 1.5 kHz deviation)
Audio Response	+1, -3 dB from 6 dB per octave pre-emphasis 300 - 3 kHz referenced to 1 kHz at line input
Audio Distortion	Less than 2% @ 1 kHz (@ 3 kHz deviation)
FCC Designation: 75 Watts 150 Watts	Internal Reference / External Reference ABZ89FZ5655 / ABZ89FZ5656 ABZ89FZ5658 / ABZ89FZ5659

900 MHz Receive

Description	Value or Range
Frequency	896 - 902 MHz
Channel Spacing	12.5 kHz
Selectivity EIA SINAD	-80 dB
Receiver Bandwidth	5.0 MHz
Receiver Sensitivity	0.25 µV 12 dB SINAD
Off Channel Acceptance	±2 kHz minimum
Frequency Stability	±2 ppb from -30°C to +60°C
Intermodulation EIA SINAD	-80 dB
Spurious & Image Rejection	-100 dB
Audio Response	+1, -3 dB from 6 dB per octave de-emphasis from 400 Hz to 3 kHz bandwidth at line output
Audio Distortion	Less than 3% distortion at 1 kHz
FM Hum and Noise	-45 dB nominal for 300 to 3 kHz bandwidth (with 750 µ sec. pre-emphasis referenced to 1 kHz tone @ 1.5 kHz deviation)
RF Input Impedance	50 Ω
FCC Designation: Internal Reference External Reference	 ABZ89FR5655 ABZ89FR5656

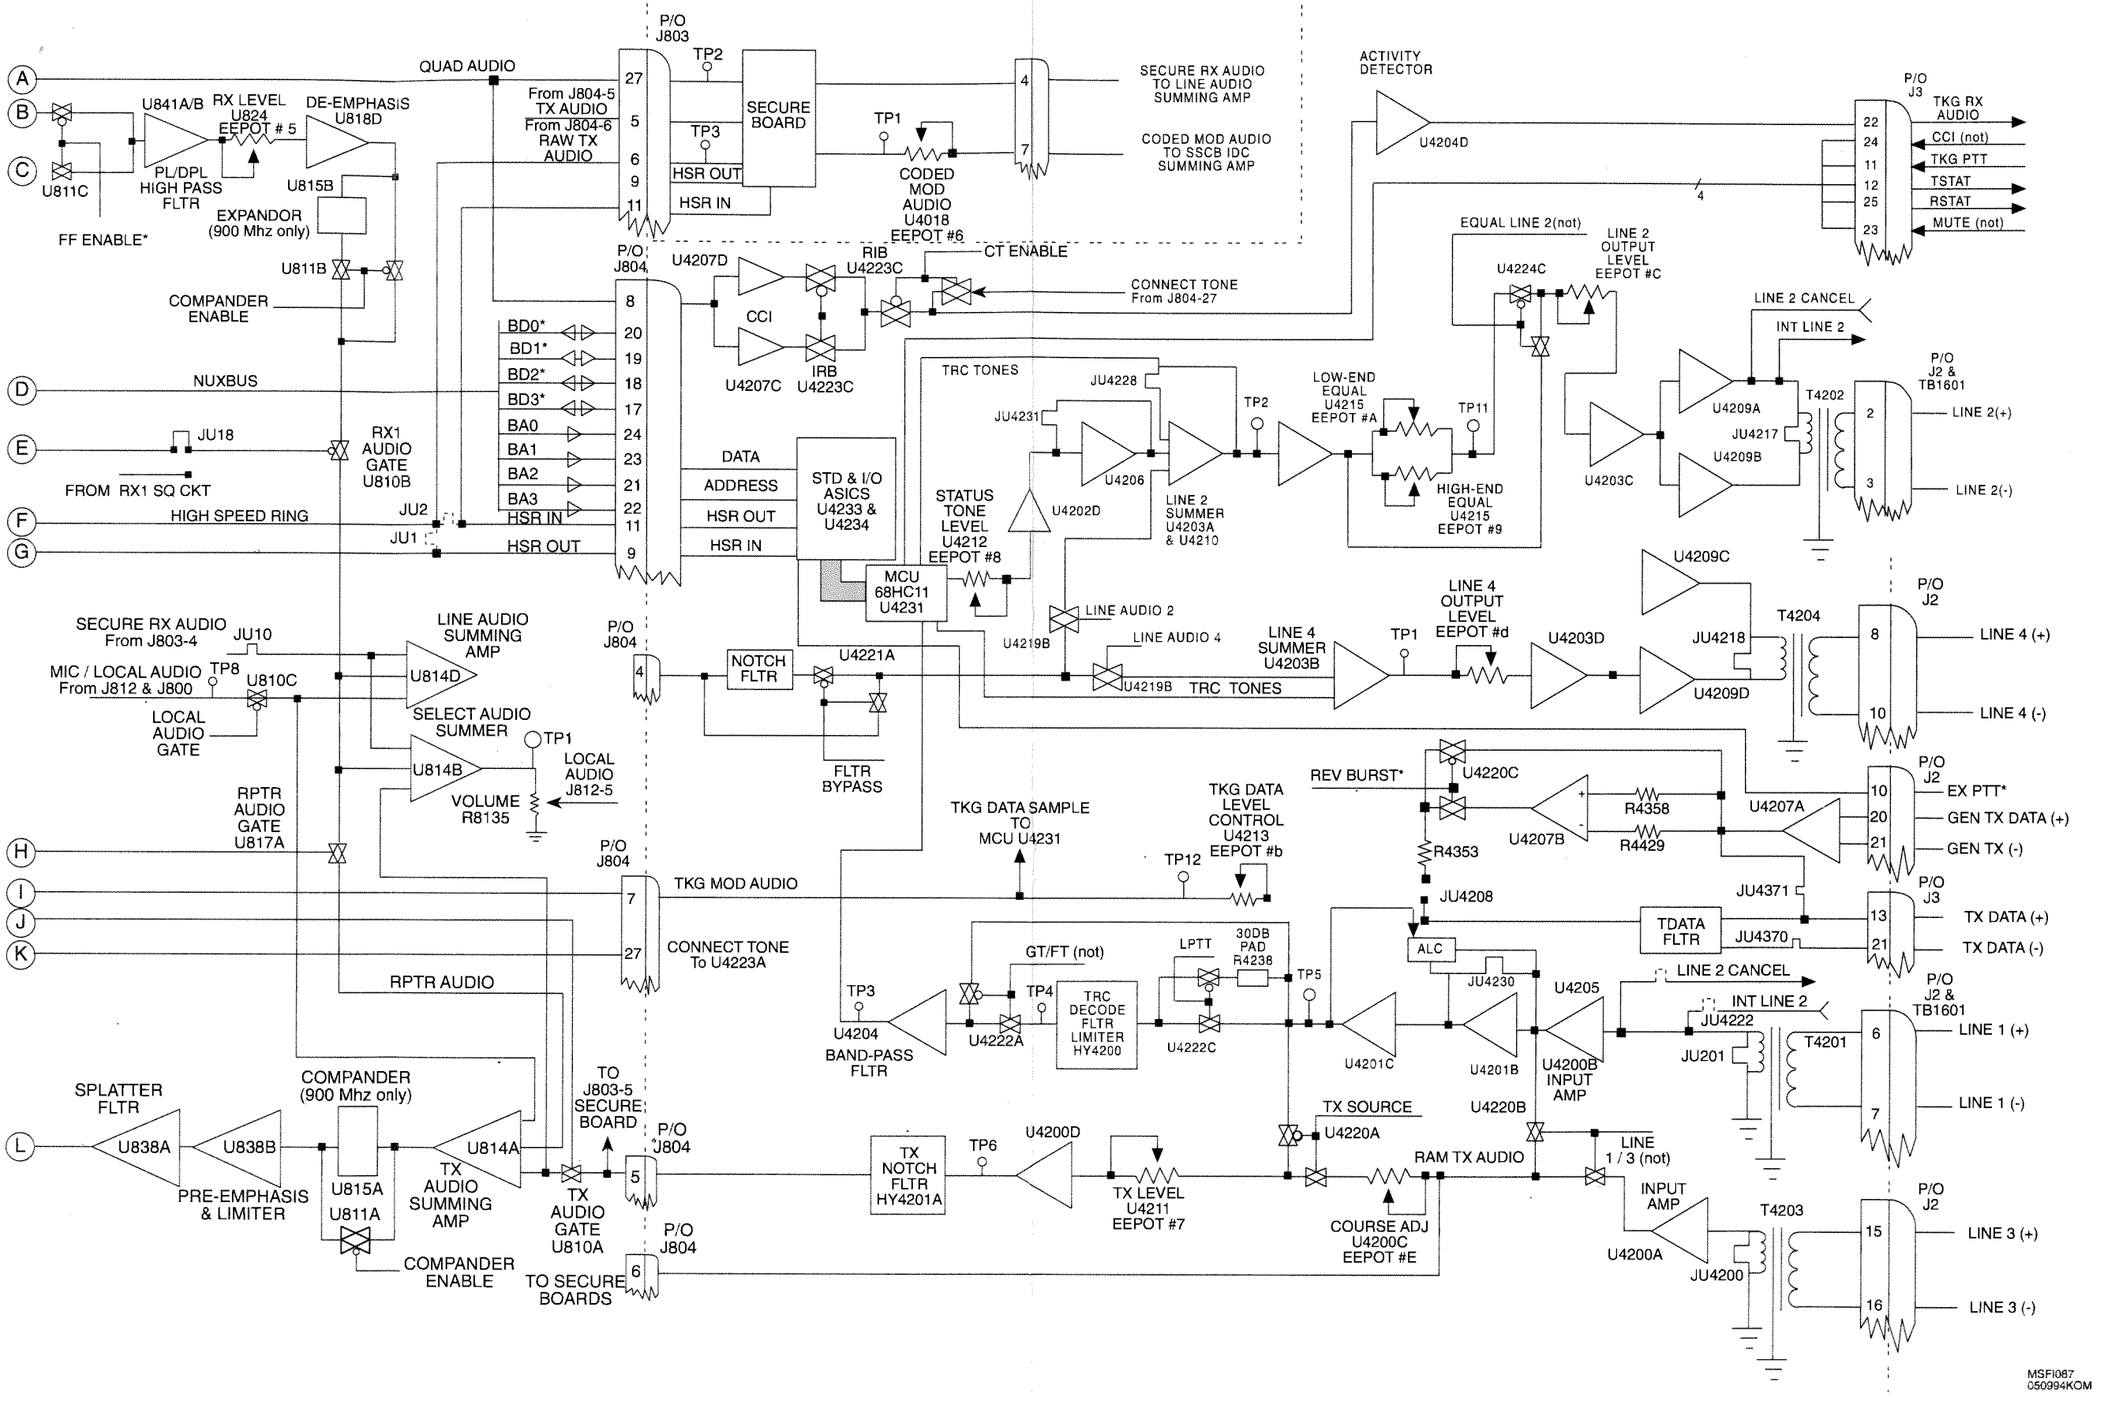
MSF 5000 Block Diagrams



Alignment

Chapter Overview

This chapter describes how to align an *MSF 5000* base station. The chapter contents are listed in Table 1-1.

Table 1-1 ***Chapter contents***

Section	Page	Description
Recommended Test Equipment	1-1	A list of recommended tools and test equipment needed to properly align an *MSF 5000* station.
General Guidelines	1-2	Things to consider before aligning a station.
Alignment Procedures	1-4	Detailed procedures for aligning a station.
Simulcast Receiver Adjustment	1-49	Procedures for aligning a simulcast station receiver.
Simulcast Deviation Adjustment	1-51	Procedures for aligning a simulcast station transmitter.

Recommended Test Equipment

The following test equipment is required to align the *MSF 5000* station:

- ❒ R2000 Service Monitor (or equivalent)
- ❒ Diagnostic Metering Panel or Radio Metering Panel (both are referred to as *metering panel*)
- ❒ HP3552A Transmission Test Set (or equivalent)
- ❒ 50 Ω RF terminating load (two times the rated power; dependent on transmitter output)
- ❒ Wattmeter (two times the rated power; dependent on transmitter output)
- ❒ Voltmeter
- ❒ Frequency measuring device
- ❒ Tuning tool kit (supplied with station)
- ❒ Torx driver

The following test equipment is optional:

- ❒ Radio Service Software (RSS)
- ❒ Service computer

General Guidelines

The following procedures require the service technician or installer to have a basic knowledge of the *MSF 5000* operation. Refer to the *MSF 5000* Instruction manual for additional information.

NOTE

Most of the following procedures apply to stations containing the *Simulcast Option (C777)*, however, Simulcast procedures are included at the end of this chapter. Refer to the trunked station dual path and digital path simulcast manual (68P81081E60) for system setup information using this option.

MSF 5000 Alignment Requirements

- ❒ Check all deviation levels by measuring the highest positive or negative peak deviation.
- ❒ Terminate all 600 Ω/900Ω wireline inputs and outputs with a 600 Ω/900Ω terminating load before taking measurements.
- ❒ *For trunking stations*, if the *MSF 5000* is connected to an operational Trunked Radio Central Controller, disable the station from the system only through the central controller.
- ❒ To activate/deactivate Muxbus bits, either use the DMP and RSS or the equivalent jumper settings provided throughout the procedure.
- ❒ Most adjustments in the alignment procedure are made from the tuning channel (channel 0/mode 0).

  Channel 0 is the tuning channel. This is the average of the highest and lowest programmed frequencies. The channel is displayed in the **Chan** digit (i.e., last digit on the left-hand side) of the **Status** display.

  Mode 0 disables PL/DPL and opens squelch. The mode is displayed in the **Mode** digit (center) of the **Status** display.
- ❒ If available, use RSS to determine the programmed receive and transmit frequencies for each channel.
- ❒ While tuning filters for a maximum or minimum reading, adjust the tuning screw an additional 1\2 turn to ensure a true maximum or minimum level.
- ❒ When using a frequency measuring device, ensure the accuracy rating is equal to at least 10 times that of the station stability.
- ❒ The typical maximum phone line input level is from 0 dBm to -10 dBm.
- ❒ The *MSF 5000* EEPOTs provide the functions listed in Table 1-2. Refer to the *MSF 5000* Instruction manual for additional information on adjusting EEPOTs.

Table 1-2 ***EEPOT Definitions***

EEPOT #	Function	EEPOT Location
0	coded RX level †	Secure board
1	*Flutter Fighter* level (900 MHz only)	SSCB
2	repeater squelch level	SSCB
3	receiver squelch level	SSCB
4	maximum deviation level	SSCB
5	RX level (for repeater deviation)	SSCB
6	coded deviation level	SSCB
7	TX audio level	TTRC board
8	status tone level	TTRC board
9	high-end equalization level	TTRC board
A	low-end equalization level	TTRC board
b	trunking data level	TTRC board
C	line 2 output level	TTRC board
d	line 4 output level	TTRC board
E	coarse line level adjust	TTRC board
F	SAM encoder level ‡	SAM

† Only with optional Secure board.
‡ Only with optional SAM board.

Alignment Procedures

Motorola recommends performing alignment procedures after installing the *MSF 5000*, six months after installation, and every twelve months thereafter. If the *MSF 5000* is equipped with the *Battery Revert Option (C28)*, verify its performance as well.

Always perform the procedures in the order presented. Some of the adjustments are presented for stations containing specific options. Perform only those procedures applying to the specific *MSF 5000* configuration.

Power Supply Voltage

The following procedure is only performed when a station is equipped with the *Battery Revert Option (C28)*. This procedure adjusts the voltage set potentiometer which sets the battery charge voltage at the Junction Box battery connection.

1. Verify the station is dekeyed.
2. On the Junction Box, disconnect the battery cable from the station.
3. Set the **FL** ↓**/EQ** ↑ switch (S650) to **FL** ↓ (Float).
   The **FL** ↓**/EQ** ↑ switch is located on the Power Supply board. Refer to Figure 1-1 for the location of this switch.

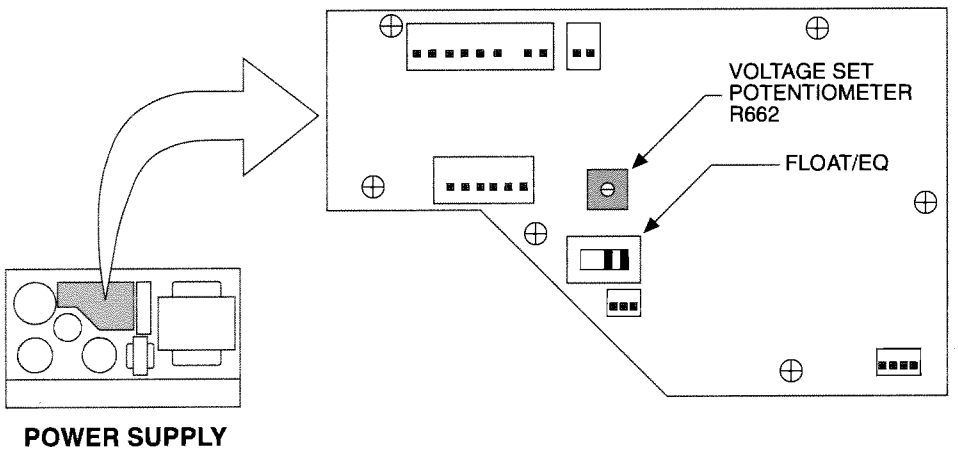


Figure 1-1 ***Power Supply Board (top View)***

4. Adjust the **VOLTAGE SET** potentiometer (R662) to set the battery charge voltage at the battery connector on the Junction Box.

   For optimum performance, set R662 to the manufacturer's recommended battery charging voltage listed in Table 1-3.

Table 1-3 ***Recommended Battery Charging Voltages***

Battery Type	Voltage
Lead Acid	13.25 Vdc (26.5 Vdc)
NI-CAD™	14.25 Vdc (28.5 Vdc)
GEL-CELL™	13.5 Vdc (27 Vdc)
No Batteries	14.25 Vdc (28.5 Vdc)

Note: Voltages represented in parenthesis ( ) are for *VHF stations* using the 24 Vdc output post. All voltages represented are at room temperature conditions.

NOTE

Only connect fully charged batteries to the station. Allow discharged batteries to charge for at least three hours before connecting them to the station. Keying the station without fully charged batteries reduces station performance.

NOTE

Motorola recommends periodically setting the **FL ↓/ EQ ↑** switch to **EQ ↑** (i.e., every 3 - 4 months or after heavy usage). Leave this switch in the **EQ ↑** (equalize) position until the batteries' cells are fully equalized.

5. Connect the batteries to the Junction Box. Observe polarity of the connector.

VCO Adjustments

The following procedure adjusts the Transmit and Receive Voltage Controlled Oscillators (VCOs). The VCOs are adjusted through the use of the **Rx Lock** and **Tx Lock** LEDs, the VCO locking cams, and a metering panel. This procedure does not apply to VHF stations since they do not require fine tuning for proper operation.

NOTE

The Transmit and Receive VCO adjustment should only be performed for *UHF, 800 MHz, and 900 MHz Analog Plus stations*. This procedure does not apply to *VHF stations*.

1. On the top of the RF Tray, rotate both VCO locking cams to **Transit**.

   The **Transit** position secures the VCOs in place while adjusting or moving the station. Refer to Figure 1-2 for the location and rotation of the VCO locking cams.

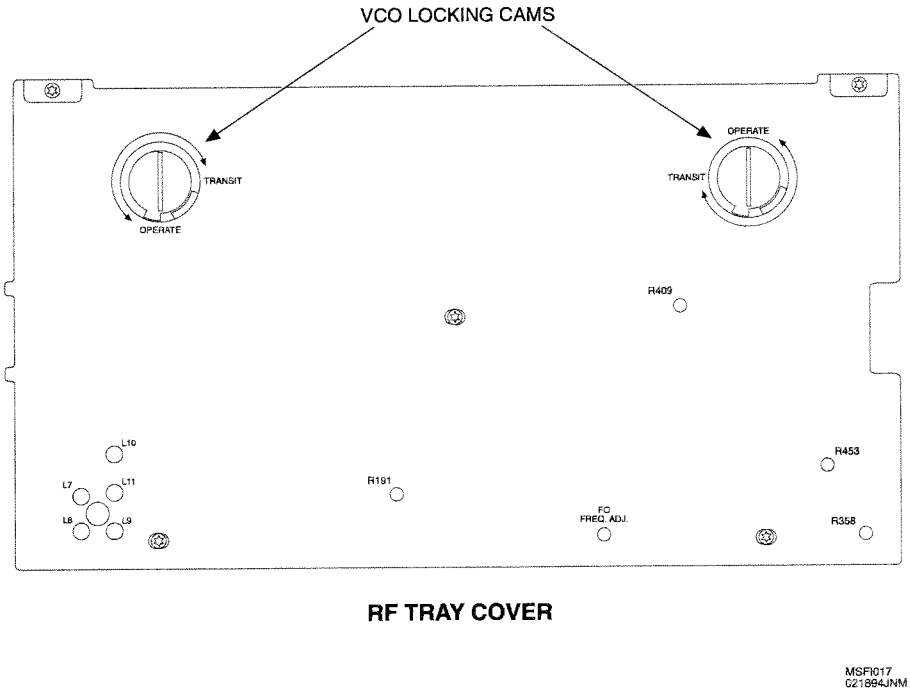

Figure 1-2 ***VCO Locking Cams***

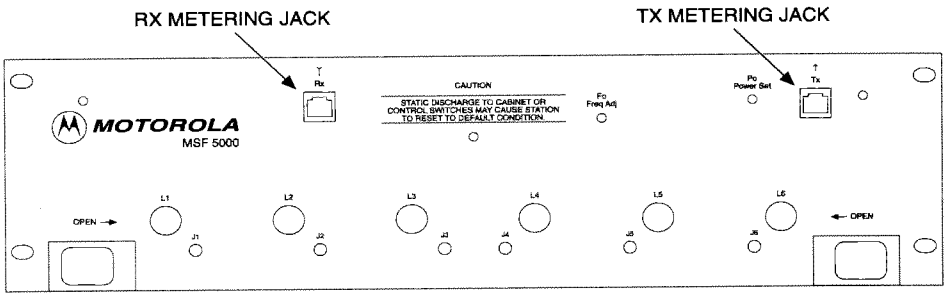
2. On the control tray, set the station to the channel with the highest programmed operating frequency.

   The channel is displayed in the **Chan** digit (i.e., last digit on the left-hand side) of the **Status** display.

Transmit VCO Adjustment

3. Connect a metering panel to the **Tx** metering jack located on the front right-hand side of the RF Tray using the metering cable.

   Refer to Figure 1-3 for the location of the RF Tray metering jacks.



RF TRAY FRONT PANEL

NOTE: L1 - L6, J1 - J6 and Fo Freq Adj are not found on VHF models.
Access requires the removal of the front panel.

MSFI013
021894JNM

Figure 1-3 ***Metering Jacks***

4. On the metering panel, set the Meter switch to 5 and set the reversing switch (±) to + (positive).

   Meter 5 should read 38 ±2 µA. If the meter indicates this value, proceed to the Receive VCO Adjustment.

5. Adjust the TX VCO tuning screw until the **Tx Lock** indicator on the control tray illuminates.

   Access the TX VCO tuning screw from the upper hole on the right-hand side of the RF Tray. Turning the TX VCO clockwise (CW) increases the level; turning it counter-clockwise (CCW) decreases the level. Refer to Figure 1-4 for the location and rotation of the VCOs.

6. Adjust the TX VCO tuning screw until Meter 5 on the metering panel indicates 38 ± 2 µA.

Receive VCO Adjustment

7. Connect a metering panel to the **Rx** metering jack on the front left-hand side of the RF Tray using the metering cable.

   Refer to Figure 1-3 for the location of the RF Tray metering jacks.

8. On the metering panel, verify Meter 5 is selected and the reversing switch (±) is set to + (positive).

   Meter 5 should read 38 ± 2 µA. If the meter indicates this value, proceed to step 11.

9. Adjust the RX VCO tuning screw until the **Rx Lock** indicator on the control tray illuminates.

   Access the RX VCO tuning screw from the upper hole on the left-hand side of the RF Tray. Turning the RX VCO clockwise (CW) increases the level; turning it counter-clockwise (CCW) decreases the level. Refer to Figure 1-5.

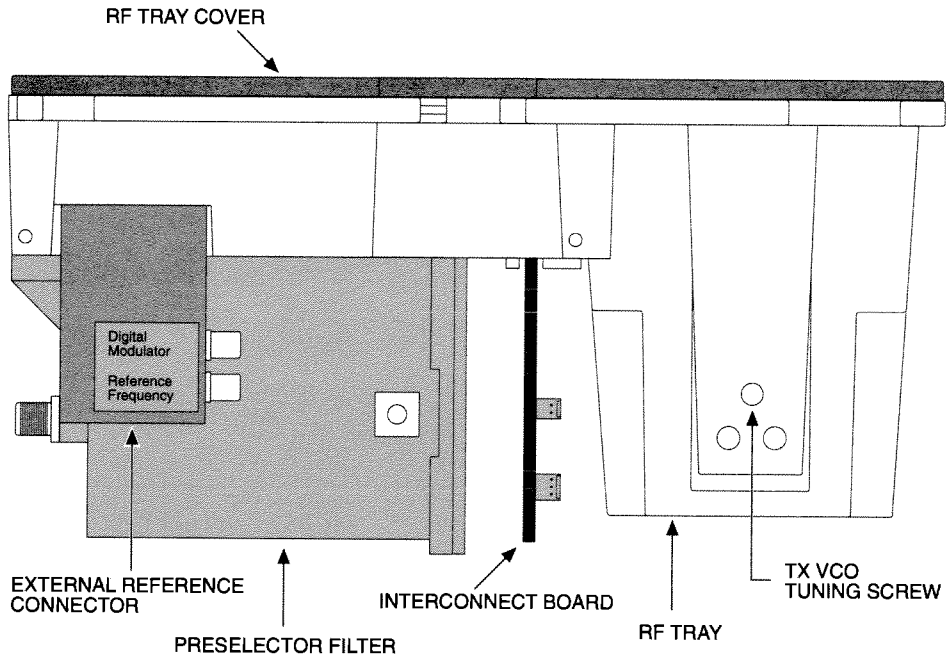


Figure 1-4 ***TX VCO Tuning Screw***

10. Adjust the RX VCO tuning screw until Meter 5 on the metering panel indicates 38 ± 2 µA.

11. Rotate both VCO locking cams to **Operate**.

Injection Filter Adjustment

The following procedure aligns the Injection Filter for the tuning channel frequency (channel 0/mode 0). By adjusting the Injection Filter to the tuning channel, the station is tuned for a all programmed frequencies.

The Injection Filter tuning screws are accessed through the RF Tray cover. The tuning screws are adjusted until a maximum reading is obtained on the metering panel.

1. Connect a metering panel to the **Rx** metering jack on the front left-hand side of the RF Tray using the metering cable.

2. On the metering panel, set the Meter switch to 3 and verify the reversing switch (±) is set to the + (positive).

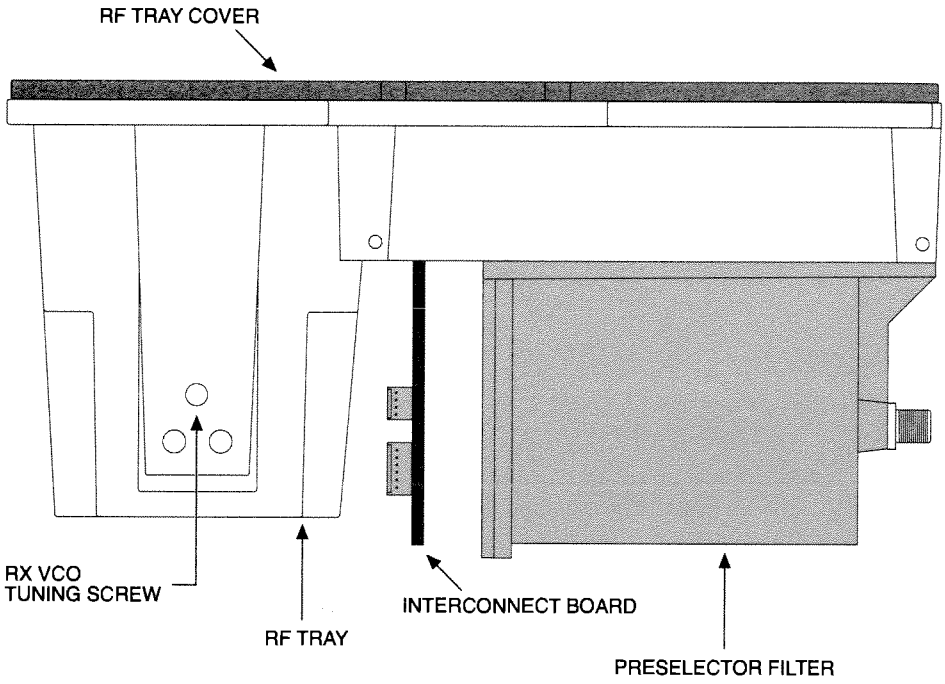

Figure 1-5 ***RX VCO Tuning Screw***

3. On the control tray, set the **Acc Dis/Reset** switch to **Acc Dis**.
4. Using the **Select/Set** switch, set the station to tuning channel.
5. Using a tuning screwdriver, adjust L7 until Meter 3 on the metering panel indicates a maximum level.

   Refer to Figure 1-6 for the location of the Injection Filter tuning screws.
6. Using a tuning screwdriver, adjust L8 until Meter 3 on the metering panel indicates a maximum level.
7. Using a tuning screwdriver, adjust L9 until Meter 3 on the metering panel indicates a maximum level.
8. Repeat steps 5 through 7 until a maximum level is obtained.

Preselector / Image Filter Adjustment

The following procedure aligns the Preselector and Image Filters for the tuning channel frequency (channel 0/mode 0). By adjusting the Preselector and Image Filters to the tuning channel, the station is tuned for all programmed frequencies.

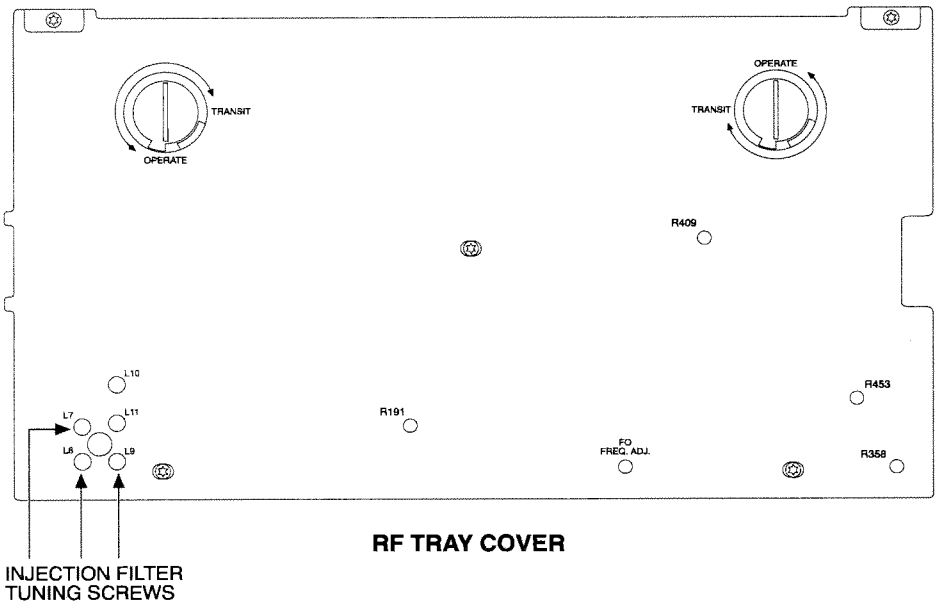

Figure 1-6 ***Injection Filter Tuning Screws (RF Tray Cover)***

The Preselector Filter tuning screws are accessed through the RF Tray front panel. There are a total of six Preselector tuning screws, except for VHF stations which contain only five tuning screws. For VHF stations, the RF Tray front panel must be removed. The Preselector Filter tuning screws are adjusted until the proper reading is obtained on the metering panel.

The Image Filter tuning screws are accessed from the top of the RF Tray cover. The Image Filter tuning screws are adjusted until the proper reading is obtained on the metering panel.

Typically, the Preselector and Image Filter require only a fine adjustment. However, if the station requires a major tuning adjustment, the coarse adjustment must be performed initially. Coarse adjustments are usually required after frequency changes, filter replacements, and servicing.

Coarse Adjustment

1. If adjusting a *VHF station*, remove the RF Tray front panel. Otherwise, proceed to step 2.

2. Using the **Select/Set** switch, set the station to the tuning channel.

3. Terminate the Preselector by connecting a 50 Ω load to the Preselector input.

   For non-duplex repeaters and base stations, connect the load to the receive antenna connection on the Junction Box.

NOTE

When tuning for a minimum or maximum reading on the meter, adjust the tuning screws an additional half-turn. This ensures that the true minimum or maximum level.

4. On the front of the RF Tray, adjust all the Preselector tuning screws CCW as indicated below. Refer to Figure 1-7.

   On *800 MHz stations*, adjust the tuning screws until they extend approximately 1/8" from the front panel.

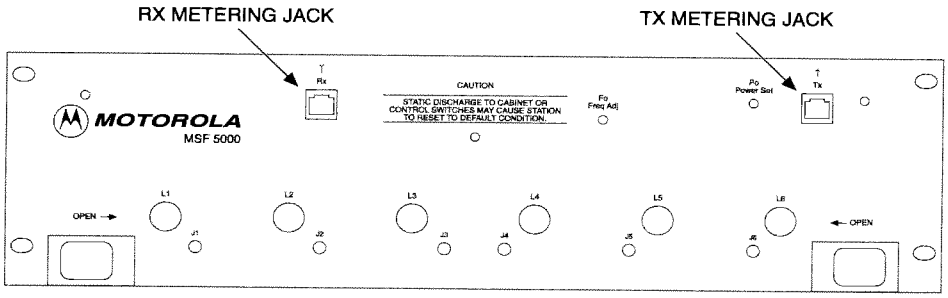
   On *UHF and 900 MHz Analog Plus stations*, adjust the tuning screws until they extend approximately 1/4" from the front panel.

   On *VHF stations* using *VHF Range 1 Option (C367)*, adjust the tuning screws until they extend approximately 3/4" from the tension nut.

   On *VHF stations* using *VHF Range 2*, adjust the tuning screws until they extend approximately 1/8" from the tension nut.

NOTE

On *VHF stations* at frequencies near 158 MHz (Range 1) or near 174 MHz (Range 2), the meter indication may not decrease after tuning for a maximum level. If this happens, stop adjusting the tuning screw.



RF TRAY FRONT PANEL

NOTE: L1 - L6, J1 - J6 and Fo Freq Adj are not found on VHF models. Access requires the removal of the front panel.

MSFI013
021894JNM

Figure 1-7 ***Preselector Filter Tuning Screws***

5. Connect the Preselector probe from the output of a signal generator to J1 of the Preselector located on the front panel of the RF Tray.

6. Set the signal generator to output a 1 mV on-channel signal.

7. On the metering panel, set the Meter switch to 2 and verify the reversing switch (±) is set to the + (positive).

   Verify a level between 25 and 35 µA on the metering panel. Adjust the signal generator output, as necessary, to meet the required level.

8. On the top of the RF Tray, adjust the Image Filter (L10 and L11) until Meter 2 indicates a maximum level.

   Refer to Figure 1-8 for the location of the Image Filter tuning screws.

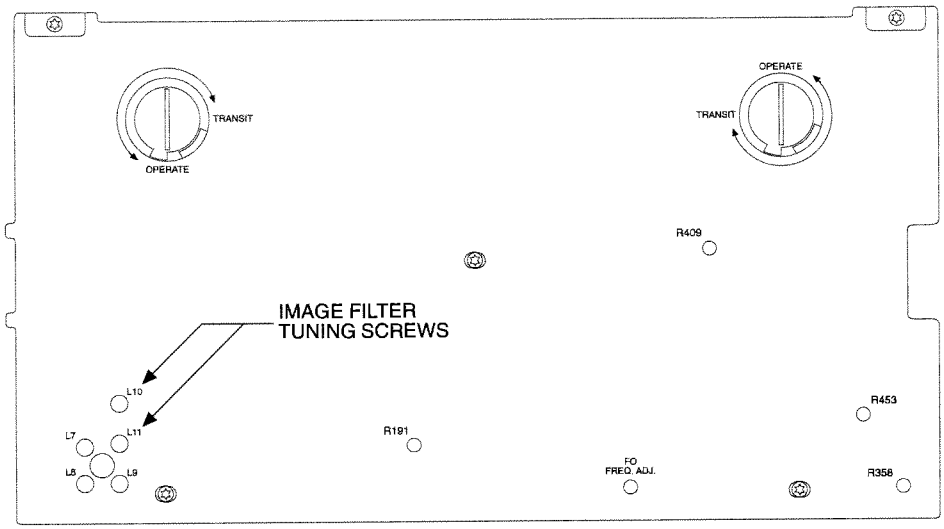


Figure 1-8 ***Image Filter Tuning Screws (top View of RF Tray)***

9. On the front of the RF Tray, adjust L1 on the Preselector until Meter 2 indicates a maximum level.

10. Adjust L2 on the Preselector until Meter 2 indicates a minimum level.

11. Move the probe to J2 and adjust L3 on the Preselector until Meter 2 indicates a minimum level.

12. Move the probe to J3 and adjust L4 on the Preselector until Meter 2 indicates a minimum level.

13. Move the probe to J4 and adjust L5 on the Preselector until Meter 2 indicates a minimum level.

NOTE

Perform step 14 only if aligning *UHF, 800 MHz, and 900 MHz Analog Plus stations*. Otherwise, proceed to Fine Adjustment.

14. For *UHF, 800 MHz, and 900 MHz Analog Plus stations,* move the probe to J5 and adjust L6 on the Preselector until Meter 2 indicates a minimum level.

Fine Adjustment

15. Using the **Select/Set** switch, set the station to the tuning channel.

16. Use a signal generator to inject a 1 mV on-channel signal into the receiver antenna connector on the Junction Box.

17. Alternately adjust L10 and L11 on the Image Filter until Meter 2 indicates a maximum level.

18. Alternately adjust L1 on the Preselector and L11 on the Image Filter until Meter 2 indicates a maximum level.

19. Adjust L6 on the Preselector (L5 for *VHF stations*) until Meter 2 indicates a maximum level.

NOTE

Perform step 20 only if aligning a *VHF station*. Otherwise, proceed to Adjusting the Transmit Filter (Duplexer).

20. On *VHF stations* only, reinstall the RF Tray front panel.

Adjusting the Transmit Filter (Duplexer)

The following procedure is only performed for *UHF stations* equipped with the *Duplex Filter Option (C597, C675, or C677)*. This procedure aligns the prefilter and postfilter of the Duplex Filter.

The prefilter and postfilter are aligned for the tuning channel frequency (channel 0/mode 0). By adjusting the prefilter and postfilter to the tuning channel, the station is tuned for all programmed frequencies.

The prefilter and postfilter tuning screws are easily accessed within the station cabinet. The tuning screws are adjusted until the proper reading is obtained on the metering panel.

CAUTION

Never attempt to adjust the Prefilter or Postfilter for the purpose of obtaining maximum station output power. Misalignment of other specifications may occur.

1. On the control tray, set the **Acc Dis/Reset** switch to **Acc Dis**.
2. Disconnect the PA input cable from the output of the Prefilter (J501). Refer to Figure 1-9 for the location of J501.

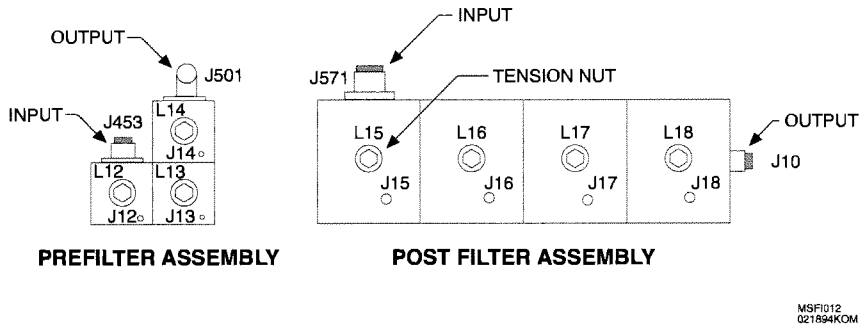

Figure 1-9 ***Duplexer Tuning Screws***

3. Connect a 50 Ω load to J501.
4. Set the signal generator to the transmitter tuning channel frequency.
5. Adjust the signal generator output to 0 dBm (225 mV).
   If the Preselector is properly aligned, connect the signal generator to the transmit antenna connector on the Junction Box. Otherwise, connect the signal generator to the Postfilter output (J10).
6. Detune the Postfilter by turning L15 through L17 CCW until they extend approximately 1/2" from the tension nut.
7. Connect the tuning probe to J18 on the Postfilter.
8. Adjust L18 for maximum indication on the millivoltmeter.
9. Adjust L17 for minimum indication on the millivoltmeter.
10. Move the tuning probe to J17 on the Postfilter.
11. Adjust L16 for minimum indication on the millivoltmeter.
12. Move the tuning probe to J16 on the Postfilter.
13. Adjust L15 for minimum indication on the millivoltmeter.

14. Remove the IPA output cable from the Prefilter input (J453).
15. Connect a signal generator to the Prefilter input (J453).
16. Detune the Prefilter by turning L13 and L14 CCW until they extend approximately 1/2" from the tension nut.
17. Move the tuning probe to J12 on the Prefilter.
18. Adjust L12 for maximum indication on the millivoltmeter.
19. Adjust L13 for minimum indication on the millivoltmeter.
20. Move the tuning probe to J13 on the Prefilter.
21. Adjust L14 for minimum indication on the millivoltmeter.
22. Disconnect all test equipment.
23. Connect the PA input cable to the Prefilter (J501).
24. Connect the IPA cable to the IPA (J453).
25. Set the **Acc Dis/Reset** switch to the center (normal) position.

Forward/Reflected Power Trip Point Set

The following procedure is only performed for *trunked stations* or *data stations*. This procedure adjusts the forward and reflected power trip points to a user specified level.

This procedure requires adjustment of the station output power level, setting the trip point, and then readjusting the station for the appropriate output power level. The trip point value appearing in the **Status** display is a relative value. This value cannot be converted to the actual power level adjustment.

CAUTION

Do not attempt to enter or adjust the forward and reflected power trip set mode if a wattmeter is not present in the station (i.e., it is a conventional station). The codeplug may be corrupted which causes constant alarms.

1. Connect the station transmit antenna connector on the Junction Box to a wattmeter terminated with a 50 Ω load.

   Use a wattmeter capable of handling the full-rated station power.

2. Key the station by setting the LOC PTT MUXbus bit (A1/D1).

   This may also be accomplished by grounding TP9 (or J812-4) on the SSCB.

3. Set and hold the **Select/Set** switch to **Set**.

   Be sure to hold this switch during step 4 and step 8.

4. Set the **PL Dis/Xmit** switch to **PL Dis**.

5. Set the **Acc Dis/Reset** switch to **Acc Dis**.

   The **Status** display indicates "**trP**".

6. Release the **Select/Set** switch.

7. Set the **PL Dis/Xmit** and **Acc Dis/Reset** switches to the center (normal) position.

   The first character of the **Status** display toggles between "**F**" (forward power) and "**r**" (reflected power), as shown in Figure 1-10.

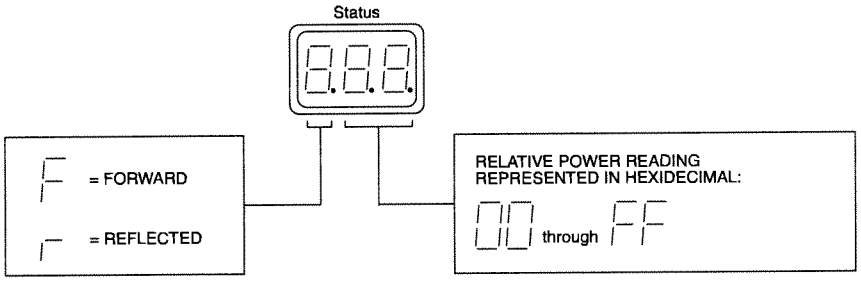

Figure 1-10 ***Forward/Reflected Power Status Display Definitions***

Forward Power Level Adjustment

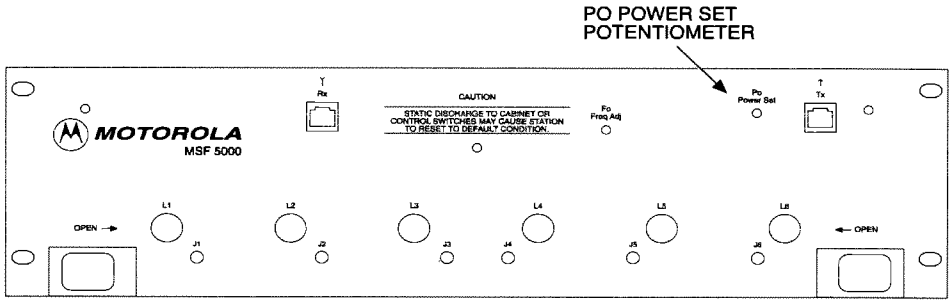
8. Use the tuning tool to set the power output to the desired forward power level trip point by adjusting **Po Power Set** potentiometer (R426).

   This is typically set to 35% of the rated station power level. Refer to Table 1-4 through Table 1-6.

   The **Po Power Set** potentiometer is part of the Uniboard and is accessed through the opening in the RF Tray front panel, refer to Figure 1-11. Turn the **Po Power Set** potentiometer CW to increase power out; turn it CCW to decrease power out.

9. With the transmitter keyed, set the **Select/Set** switch to **Select** when the first character of the **Status** display shows "**F**".

   The second and third digits indicate the forward power level trip point. This value is represented in hexadecimal.



RF TRAY FRONT PANEL

NOTE: L1 - L6, J1 - J6 and Fo Freq Adj are not found on VHF models.
Access to these requires the removal of the front panel.

MSFI015
021894JNM

Figure 1-11 ***Po Power Adjustment***

Reflected Power Level Adjustment

10. Use the tuning tool to set the power output to the desired reflected power level trip point by adjusting the **Po Power Set** potentiometer.

    The reflected power level trip point is typically set to 20% of the rated station power level. Refer to Table 1-4 through Table 1-7.

11. Toggle the **Select/Set** switch to **Select** when the first character of the **Status** display shows "**r**".

    The second and third digits indicate the reflected power level trip point. This value is represented in hexadecimal.

12. Set the **Select/Set** switch to **Set** to exit the power trip point mode.

13. Deactivate all activated MUXbus bits.

RF Power Output Adjustment

The following procedure is divided into three parts:

- ❒ Overdrive Control
- ❒ Power Set Control
- ❒ Battery Cutback Control

The Overdrive Control is only performed on high power stations (i.e., containing two Power Amplifiers). This procedure adjusts the power cut-back if the output power level exceeds a predetermined level set by the user. The Overdrive Control (R453) adjustment is located on the Uniboard, and is accessed from the top of the RF Tray cover.

Table 1-4 ***VHF Station Rated RF Power Levels***

Model	with Duplexer (C182)	with Single Circulator (C265)	with Duplexer & Single Circulator (C182/C265)	Standard
C23CXB	3.5	4.5	3.0	6
C43CXB	15	20	12	25
C63CXB	45	60	35	75
C73CXB	75	100	60	125
C93CXB	n/a	300 (360)	n/a	350 (390)
C93CXB with 220 Vac 50 Hz	n/a	260 (340)	n/a	300 (380)

Notes:
1. All RF power levels are listed in Watts.
2. All power levels are for 110 Vac/60 Hz stations, except where noted.
3. RF power levels in parenthesis are Overdrive Power Levels.

Table 1-5 ***UHF Station Rated RF Power Levels***

Model	with Option C675 or C182	with Option C597	with Option C676	with Option C677	Standard
C24CXB	4	3	3	3	6
C34CXB	10	8	9	8	15
C44CXB	30	22	25	20	40
C64CXB	55	40	45	40	75
C74CXB	85	60	70	55	110
C84CXB	140	n/a	n/a	n/a	225(285)
C84CXB with 220 Vac 50 Hz	125 (160)	n/a	n/a	n/a	200 (260)

Notes:
1. All RF power levels are listed in Watts.
2. All power levels are for 110 Vac/60 Hz stations, except where noted.
3. RF power levels in parenthesis are Overdrive Power Levels.

The Power Set Control (R426) adjusts the RF output power level of the station to the site specified level. The Power Set Control adjustment is located on the Uniboard, and is accessed from the RF Tray front panel.

The Battery Cutback Control (R409) adjusts the RF output power level of the station to 50% of the rated station output power level. This adjustment reduces the station output power level when the station reverts to battery back-up. The Battery Cutback Control adjustment is located on the Uniboard, and is accessed from the top of the RF Tray cover.

Table 1-6 ***800 MHz Station Rated RF Power Levels***

Model	with Duplexer (TDF9680A)	with Triple Circulator (C676)	with Duplexer & Triple Circulator (C676/ TDF9680A)	Standard
C45CXB	23	30	21	35
C65CXB	50	60	45	75
C85CXB	100 (150)	125 (180)	90 (130)	150 (220)
C85CXB with 220 Vac 50 Hz	85 (125)	110 (160)	75 (120)	125 (180)

Notes:
1. All RF power levels are listed in Watts.
2. All power levels are for 110 Vac/60 Hz, stations except where noted.
3. RF power levels in parenthesis are Overdrive Power Levels.

Table 1-7 ***900 MHz Analog Plus Station Rated RF Power Levels***

Model	with Duplexer (TDF6542A)	with Triple Circulator (C676)	with Duplexer & Triple Circulator (C676/ TDF6542A)	Standard
C65GFB	50	60	45	75
C85GFB	100 (150)	125 (180)	90 (130)	150 (220)
C85GFB with 220 Vac 50 Hz	80 (125)	110 (160)	75 (120)	125 (180)

Notes:
1. All RF power levels are listed in Watts.
2. All power levels are for 110 Vac/60 Hz, stations except where noted.
3. RF power levels in parenthesis are Overdrive Power Levels.

1. Connect the station transmit antenna connector on the Junction Box to a wattmeter terminated with a 50 Ω load.

   Use a load capable of handling two times the rated station power.

2. Using tuning tool, rotate the **Po Power Set** potentiometer (R426) fully CCW, then CW 1/8 turn.

   The **Po Power Set** potentiometer is accessed through the opening in the RF Tray front panel.

Overdrive Control

NOTE

Step 3 through step 8 only apply to *high power stations*, which contain two Power Amplifiers. Otherwise, proceed to Power Set Control.

3. Using the tuning tool, rotate the **Overdrive Control** potentiometer (**R453**) fully CW.

   R453 is part of the Uniboard. Refer to Figure 1-12 for the location of the Overdrive control.

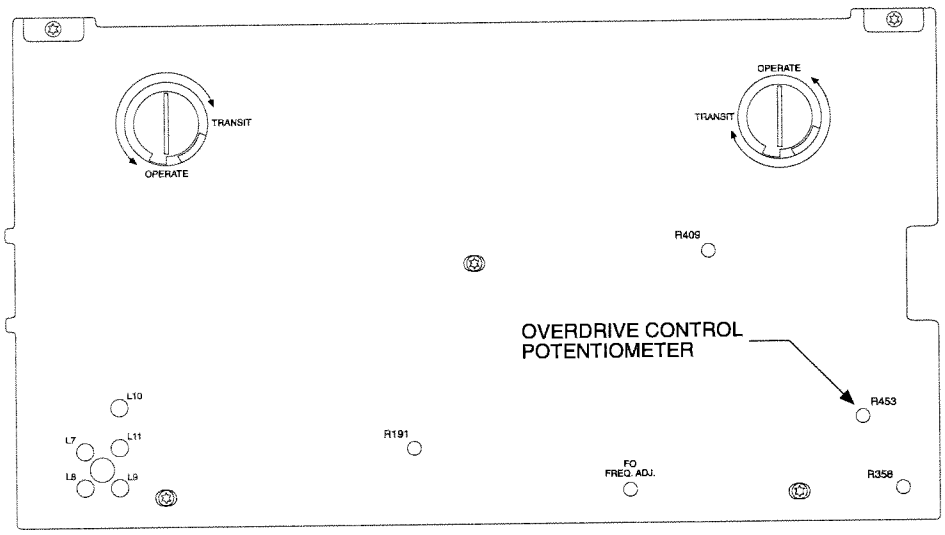


Figure 1-12 ***Overdrive Control Adjustment***

4. Key the station by setting the LOC PTT MUXbus bit (A1/D1) or by setting the **PL Dis/Xmit** switch to **Xmit**.

5. Using the tuning tool, adjust the **Po Power Set** control to obtain the overdrive power level.

   The overdrive power level is shown in Table 1-4 through Table 1-7.

6. Using the tuning tool, adjust the **Overdrive Control** slowly CCW until the **PA Full** LED just turns off.

7. Dekey the station by clearing the LOC PTT MUXbus bit (A1/D1).

8. Using the tuning tool, adjust the **Po Power Set** potentiometer fully CCW, then CW 1/8 turn.

Power Set Control

9. Key the station by setting the LOC PTT MUXbus bit (A1/D1) or by setting the **PL Dis/Xmit** switch to **Xmit**.

10. Using the tuning tool, adjust the **Po Power Set** control to obtain the lowest of either the rated RF Station Power Level, the maximum level allowed by the FCC license, or the site specific power level. Refer to Figure 1-12.

NOTE

The rated RF station power level may not be the recommended site output power level.

11. Dekey the station by clearing the LOC PTT MUXbus bit.

Battery Cutback Control

NOTE

If the station is not equipped with a *Battery Revert Option (C28)*, proceed to step 19. Also, cutback must be programmed to happen while in battery revert mode. Refer to the RSS manual for additional information.

12. Disconnect the AC power cord from the Junction Box.

    The station should continue to operate on battery backup.

13. Key the station by setting the LOC PTT MUXbus bit (A1/D1) or by setting the **PL Dis/Xmit** switch to **Xmit**.

14. Using the tuning tool, adjust the **CUTBACK** control to obtain 50% of the rated station power level.

    The **CUTBACK** control (R409) is part of the Uniboard. Refer to Figure 1-13 for the location of the cutback control. Table 1-4 through Table 1-7 lists the rated station power level for each band.

15. Deactivate all activated MUXbus bits and disconnect all test equipment.

16. Apply AC power by connecting the AC power cord to the Junction Box.

Transmit Frequency Adjustment

The following procedure adjusts the Fo Freq Adj to fine tune the transmit frequency. It is assumed the station is programmed with the correct frequencies and hardware. Allow sufficient time for the external reference to warm-up prior to performing this procedure.

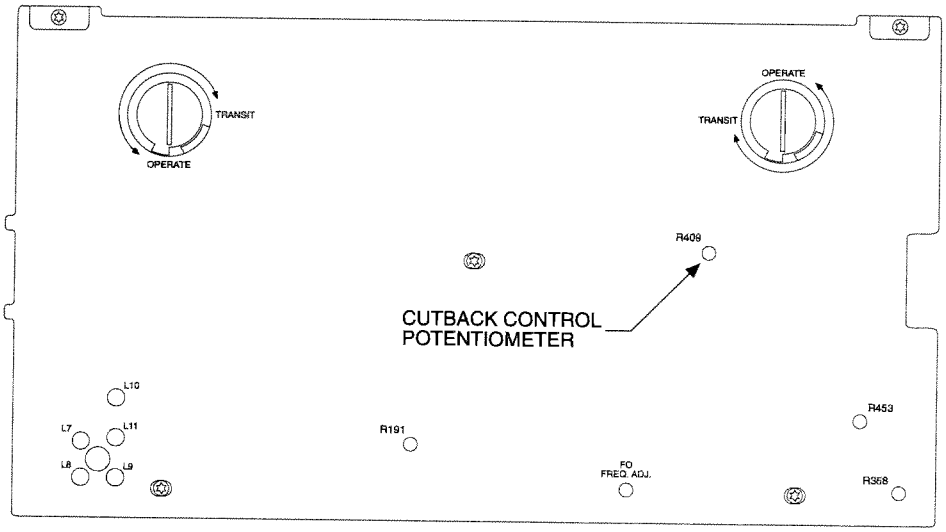

Figure 1-13 ***Cutback Control Adjustment***

For 900 MHz Analog Plus stations, an High Stability Oscillator (HSO) or an external reference is required. For all other bands, an HSO or an external reference is not required, but optional.

The Fo Freq Adj potentiometer is located on the Uniboard. For VHF stations, the Fo Freq Adj is accessed from the top of the RF Tray cover. For all other bands, the Fo Freq Adj is accessed from the RF Tray front panel.

NOTE

A minimum warmup time of 60 minutes is required if the station is a *900 MHz Analog Plus station* or if it is equipped with a *High Stability Oscillator Option (C573)*. Otherwise, ensure that the frequency reference device is fully warmed up.

1. On *900 MHz Trunking stations* or stations equipped with the *External Reference Option (C574)*, apply the site high stability 5 MHz reference signal to the external reference connector on the Junction Box.
2. Adjust U1 on the reference synthesizer board for 1.5 +/- 0.1 Volts at TP1.
3. Set the **Acc Dis/Reset** switch to **Acc Dis**.
4. If necessary, attenuate the transmitted RF signal from the station to the frequency measuring device.

5. Key the station by setting the LOC PTT MUXbus bit (A1/D1) or by setting the **PL Dis/Xmit** switch to **Xmit**.

6. Measure the transmitter carrier frequency.

> **NOTE**
>
> If the station contains an *External Reference Option (C574)* or a *High Stability Oscillator Option (C573)*, and the frequency is out of alignment, refer to the appropriate alignment procedure. Otherwise proceed to step 8.

7. If necessary, adjust the **Fo Freq Adj** warp control to set the measured transmit frequency to the nominal station transmit frequency.

   For UHF, 800 MHz, and 900 MHz Analog Plus stations, the **Fo Freq Adj** warp control is located on the RF Tray front panel. For VHF stations, the **Fo Freq Adj** warp control is accessed through the top cover of the RF Tray. Refer to Figure 1-14 for the location of the **Fo Freq Adj**.

8. Dekey the station by clearing the LOC PTT MUXbus bit (A1/D1).

9. Set the **Acc Dis/Reset** switch to the center (normal) position.

I-F AGC Threshold Adjustment

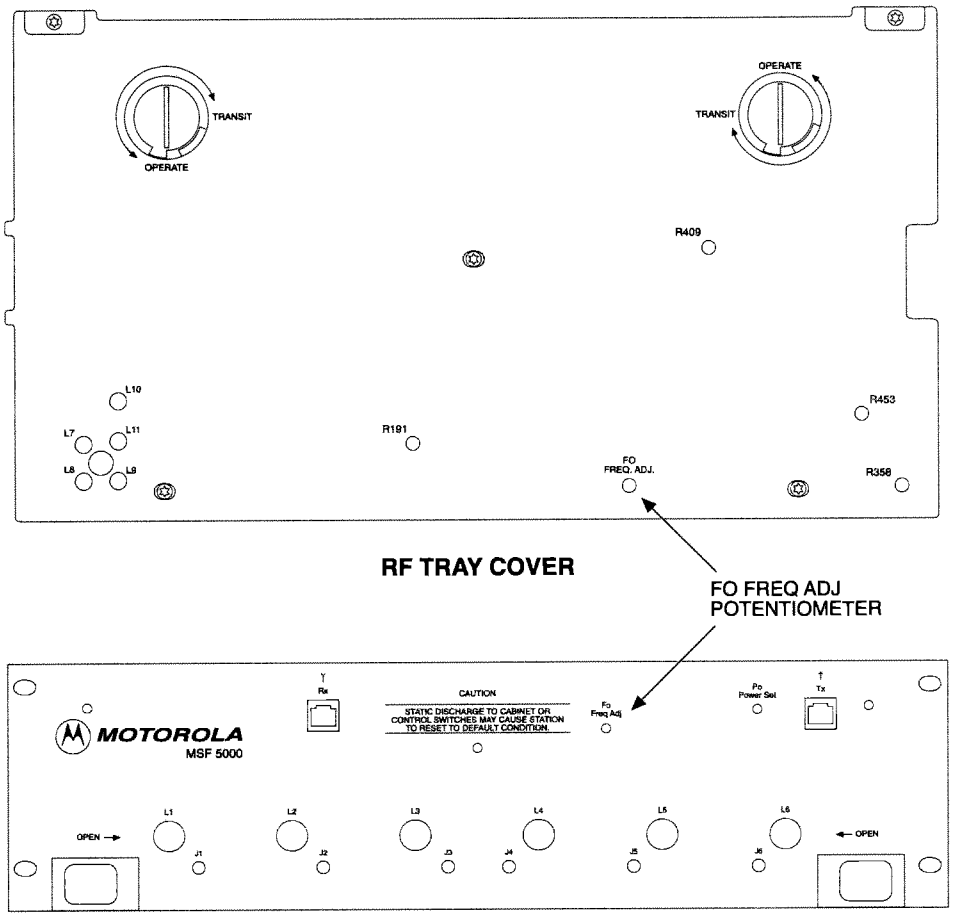
The following procedure is only performed on *800 MHz and 900 MHz Analog Plus stations*. This procedure adjusts the I-F AGC Threshold.

This adjustment is performed by the tuning channel frequency (channel 0/mode 0). This allows the station to be tuned for all programmed frequencies.

The I-F AGC Threshold adjustment (**R191**) is located on the Uniboard, and is accessed from the top of the RF Tray cover.

1. Set the **Acc Dis/Reset** switch to **Acc Dis**.

2. Using the **Select/Set** switch, set the station to the tuning channel.



NOTE: L1 - L6, J1 - J6 and Fo Freq Adj are not found on VHF models. Access to these requires the removal of the front panel.

NOTE: For UHF, 800 MHz and 900 MHz models, the Fo Freq Adj is accessed at the RF Tray Front Panel. For VHF models, the Fo Freq Adj is accessed at the RF Tray Cover.

MSFI016
021894JNM

Figure 1-14 ***Fo Freq Adj Control***

3. Inject an on-channel 1000 µV signal, modulated with a 1 kHz tone at 60% of full station deviation into the receiver connector on the Junction Box.

Station deviation settings are listed in Table 1-8.

Table 1-8 ***Deviation Settings***

	Frequency Range		
Deviation Adjustment	**VHF,UHF, and 800 MHz (kHz)**	**866-869 MHz (kHz)**	**900 MHz Analog Plus (kHz)**
100% Full Station Deviation	5	4	2.5
Maximum Station Deviation	4.6	3.7	2.3
60% Full Station Deviation	3	2.4	1.5
40% Full Station Deviation	2	1.6	1.0
Simulcast Data Deviation	0.85	0.7	0.5
Trunked Data Deviation	0.85	0.7	0.5
Failsoft Data Deviation	1	0.8	0.7
Coded Deviation (+/-) 200 Hz, using a 1 kHz square wave	3.9	2.3	N/A
Note: All deviation measurements and settings must be within +/- 100 Hz except where noted.			

4. Using a digital voltmeter, adjust **R191** for 0.60 Vdc between NORM ENV (TP13 or HY804-13 on the SSCB) and AGC REF (TP12 or HY804-10 on the SSCB).

   Refer to Figure 1-15 for the location of R191 on the Uniboard and Figure 1-16 for the location of NORM ENV and AGC REF on the SSCB.

5. Remove the injected signal from the receiver connector on the Junction Box.

6. Set the **Acc Dis/Reset** switch to the center (normal) position.

Modulation Compensation Adjustment

The following procedure adjusts the modulation compensation circuit on the Uniboard. This adjustment is performed by using the tuning channel frequency (channel 0/mode 0). This allows the station to be tuned for all programmed frequencies.

While in the tuning channel, a 10 Hz waveform should appear whenever the station is keyed via a local push-to-talk (LOC PTT). This gives the technician a

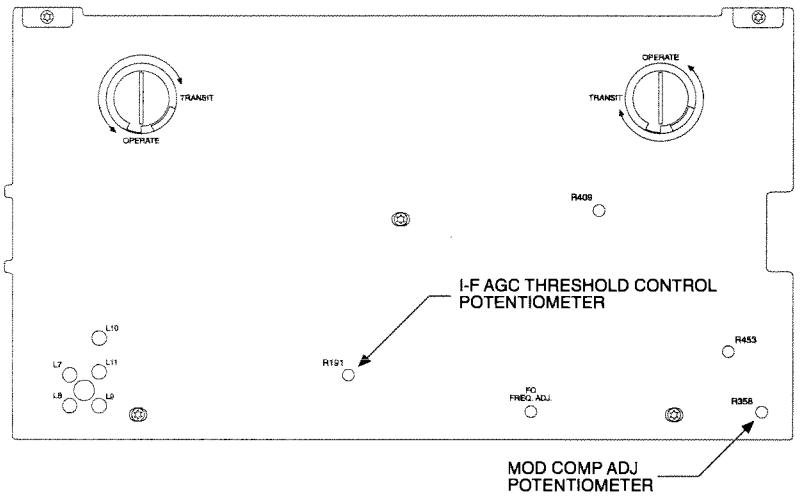


Figure 1-15 ***I-F AGC Threshold Control***

good reference waveform to use to tune and verify proper modulation compensation operation.

The modulation compensation adjustment (**R358**) is located on the Uniboard, and is accessed from the top of the RF Tray cover.

1. Set the **Acc Dis/Reset** switch to **Acc Dis**.
2. Using the **Select/Set** switch, set the station to the tuning channel.
3. Key the station by setting the LOC PTT MUXbus bit (A1/D1).
4. Monitor the transmitter waveform. The waveform should consist of a 10 Hz square wave, as shown in Figure 1-17.
5. Examine the waveform for straight long transitions, however, a slight slant is acceptable.

   If adjustment is required continue with step 6, otherwise, proceed to step 8.
6. Adjust **R358** for the best 10 Hz square wave.

   R358 is part of the Uniboard and is accessed through the RF Tray cover, as shown in Figure 1-15.
7. Dekey the station by clearing the LOC PTT MUXbus bit (A1/D1).
8. Set the **Acc Dis/Xmit** switch to the center (normal) position.

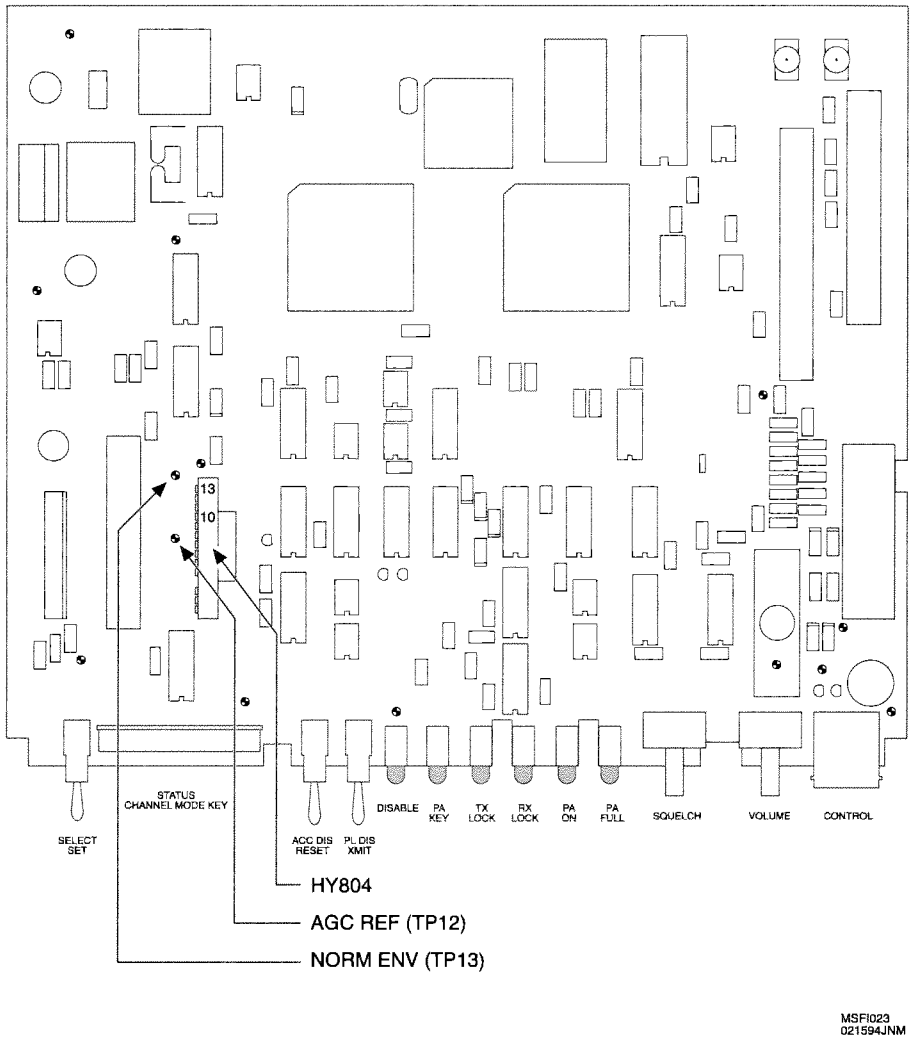

Figure 1-16 ***NORM ENV and AGC REF Measurement Points***

Trunked Data Deviation Adjustment

The following procedure is only performed for *trunked stations*. For optimum performance, perform this procedure with the Central Controller to allow the adjustment to be made with the disconnect word. The disconnect word is equal in deviation to TDATA. The station should not enter failsoft mode during this adjustment.

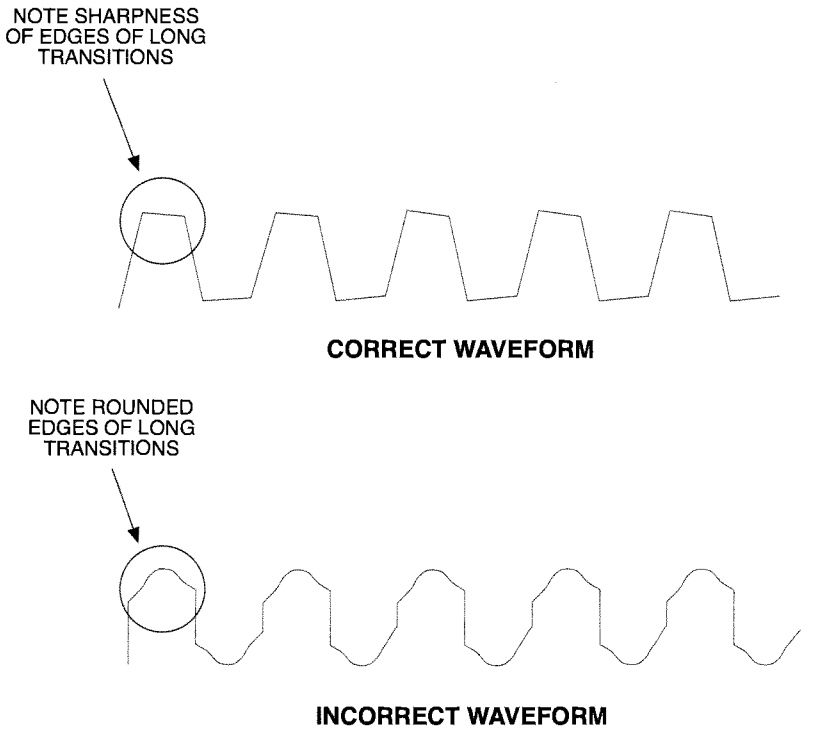

Figure 1-17 ***Modulation Compensation Waveform***

NOTE

Proceed to Transmitter Maximum Deviation Adjustment if this is not a *trunked station.*

1. If a Trunked Radio Central Controller is available proceed to step 3.

NOTE

Perform step 2 only when a Central Controller is not available (i.e., lab or depot). Once the station is installed back into the system, perform the entire procedure again for optimum performance.

2. Inject a 150 Hz tone at 0.9 Vrms (closed circuit level) with 600 Ω termination across pins 4 (-) and 12 (+) of the trunking connector J2901 on the TTRC board. Proceed to step 5.

   This simulates a trunking data (TDATA) signal to perform this alignment procedure. Refer to Figure 1-18 for the location of the trunking connector J2901.

   The **Fail Soft** LED should not be illuminated.

3. Connect an operational Trunked Radio Central Controller to the station.

   This allows the station that is being aligned to receive trunked data (TDATA) from the Trunked Radio Central Controller.

   The **Fail Soft** LED should not be illuminated.

4. Verify the station being aligned is disabled from the Trunked Radio Central Controller.

   This is accomplished by pressing the Transmit Interface Board (TIB) disable switch on the Trunked Radio Central Controller for the channel being adjusted.

5. Key the station by setting the LOC PTT MUXbus bit (A1/D1).

6. Monitor the transmitted deviation level.

7. Measure the Trunked Data Deviation level and compare it to the requirements of Table 1-8.

   If the level is out of adjustment, set it by adjusting EEPOT b. Refer to the Instruction manual for additional information on adjusting EEPOTs.

   If the station contains the *Simulcast Operation Option (C777)*, measure the simulcast data deviation. EEPOT b is used to adjust the simulcast deviation. Refer to the Simulcast procedure at the end of this chapter for additional information.

8. Dekey the station by clearing the LOC PTT MUXbus bit (A1/D1).

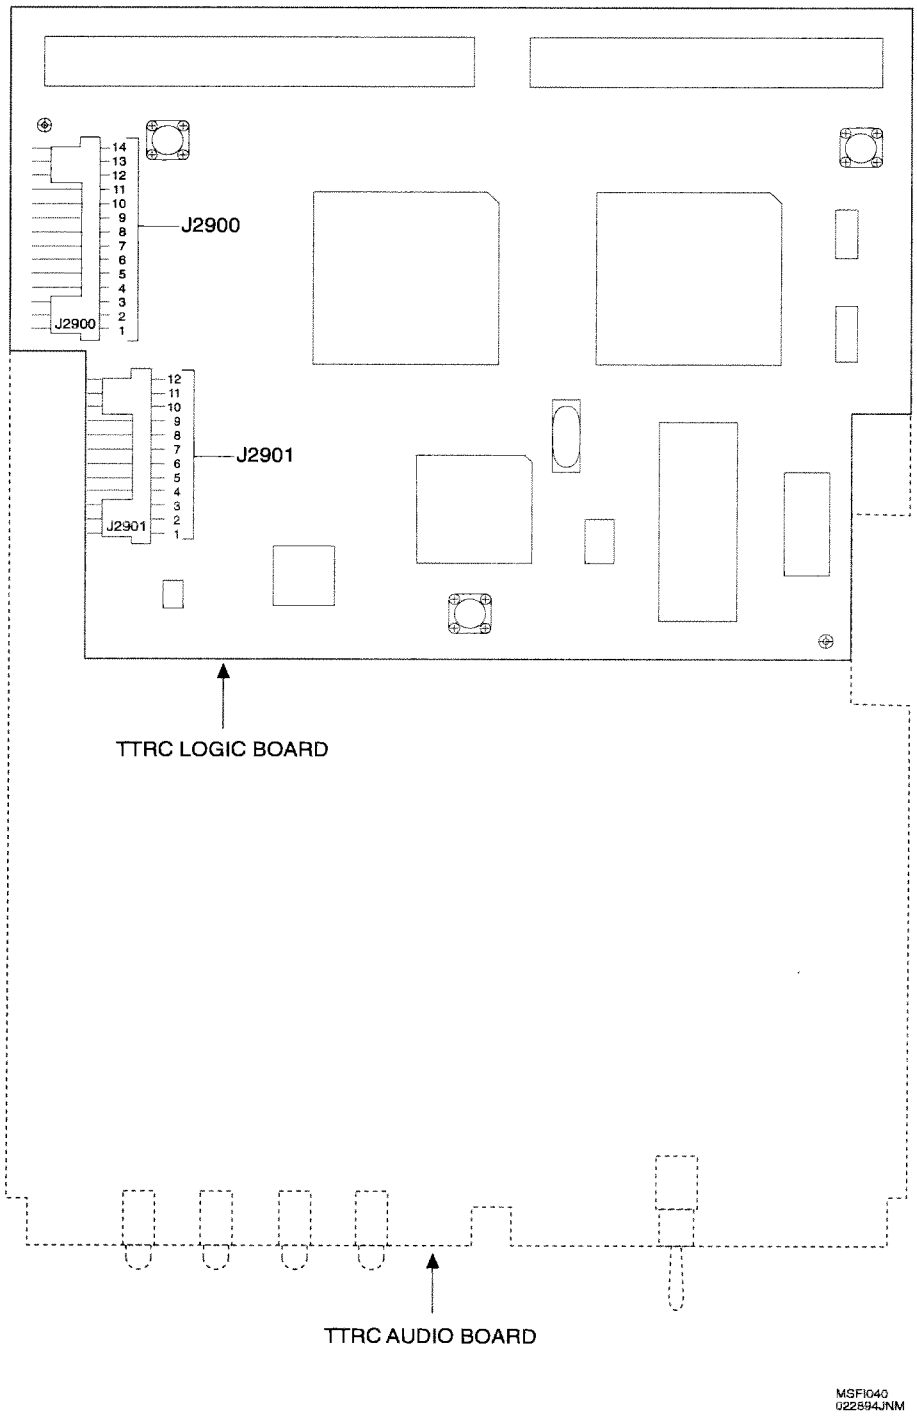

Figure 1-18 ***TTRC Logic Board Showing J2901***

NOTE

If the adjustments cannot be made within +/- 100 Hz, refer to the Troubleshooting chapter of the Instruction manual.

Transmitter Maximum Deviation Adjustment

The following procedure adjusts the maximum deviation for the transmitter. This adjustment is required to keep the station within local regulatory agency standards by preventing interference with adjacent channels.

To accurately perform this procedure, make sure all transmitted data is present (e.g., PL, DPL, Connect Tone, TDATA, etc.). Do not use the **Xmit** switch because it strips the PL and other transmitted data from the transmitted signal.

NOTE

Each channel must have the Maximum Deviation measured and set individually, since this level is channel slaved. It is not necessary to check the tuning channel deviation levels.

1. Inject a 1 kHz tone, at 1 Vrms closed circuit level, into the **MIC AUDIO** connector on the front panel or into TP8 on the SSCB. This is a 600 Ω input.

   Refer to Figure 1-19 for the location of TP8.

2. Set the **Acc Dis/Xmit** switch in **Acc Dis** to prevent the station from keying during this procedure.

3. Set the station to channel 1 if the station has multiple channels.

4. Key the station by setting the LOC PTT MUXbus bit (A1/D1).

NOTE

If this is a *trunked station* or if the station is equipped with PL or DPL coded squelch, the transmit signal consists of Mic Audio summed in with TDATA or the coded squelch signal. DO NOT use the **PL Dis/Xmit** switch to key the station; doing so strips the TDATA and coded squelch signals from the transmitted signal and gives a false deviation reading.

5. Measure the Maximum Station Deviation level and compare it to the requirements in Table 1-8.

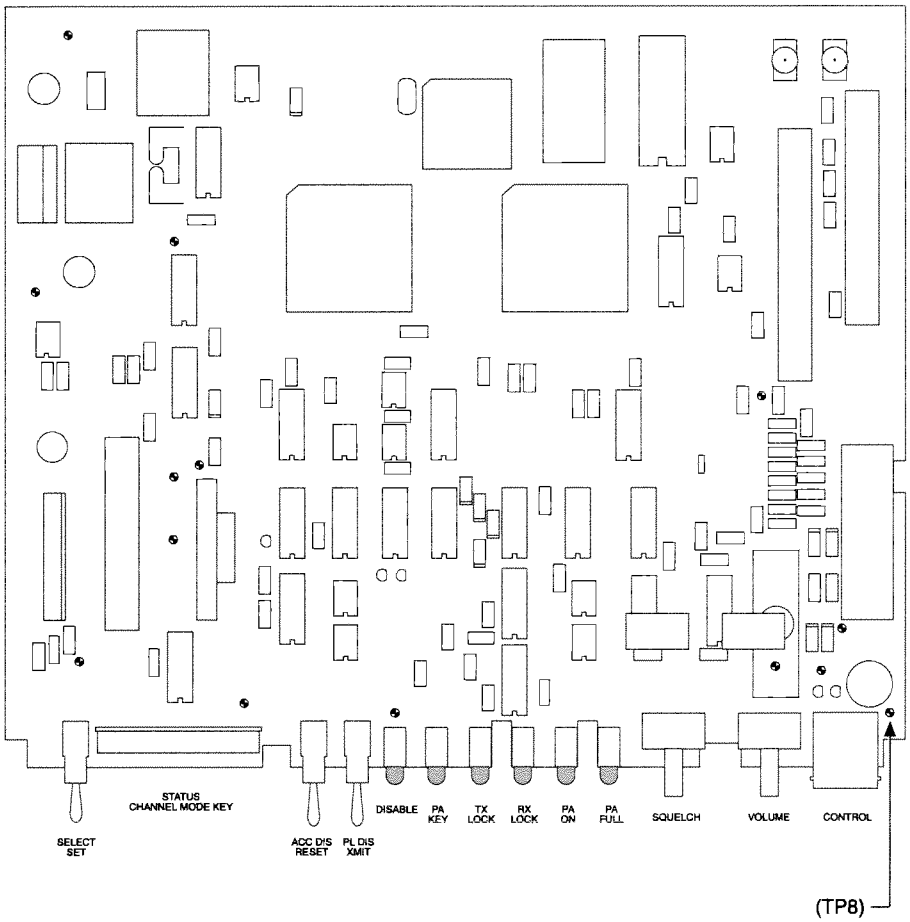

Figure 1-19 ***SSCB Showing TP8***

6. If the level is out of adjustment, set it by adjusting EEPOT 4.

   Refer to the Operation chapter of the Instruction manual for additional information on adjusting EEPOTs.

7. If the station has multiple channels (excluding channel 0) perform steps 4 through 6 for each one.

8. Dekey the station by clearing the LOC PTT MUXbus bit (A1/D1).

9. Set the **Acc Dis/Xmit** switch to the center (normal) position.

Transmitter Wireline Audio Adjustment

This procedure adjusts the transmitter wireline audio level. When performing this procedure for Tone Remote Control, there are two different paths the transmit audio can take via Line 1 (ALC path) or Line 3 (non-ALC path). For conventional stations, the default is Line 1. *For trunked stations,* the default is Line 3. The only path the audio can take via Line 3 is the non-ALC path. Refer to Figure 1-20 for a block diagram of the ALC circuitry.

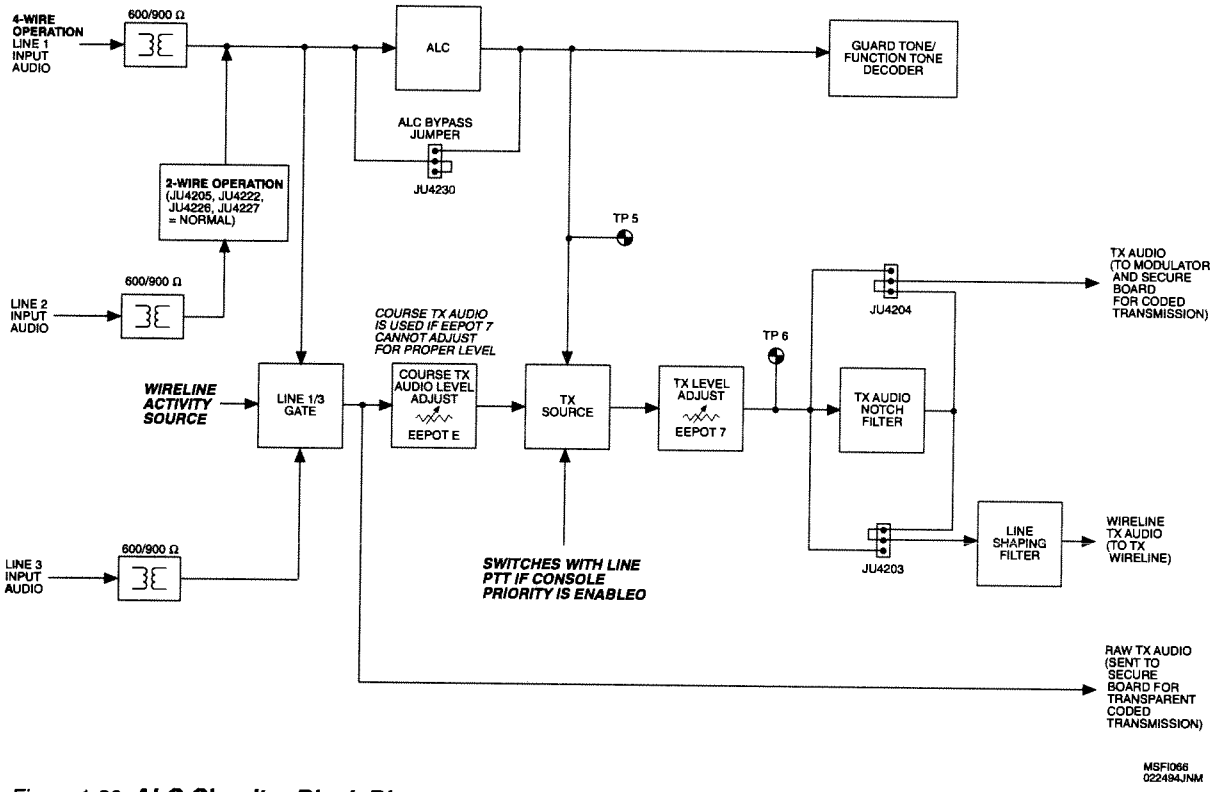

Figure 1-20 ***ALC Circuitry Block Diagram***

For adjusting transmit audio via the ALC path, the standard HLGT/FT/LLGT sequence should be followed for the ALC circuitry to adjust accordingly.

For adjusting transmit audio via the non-ALC path, a 1 kHz tone should be used. There is also a course level adjustment via EEPOT E which compensates for a higher or lower levels of audio. There are four different settings for this EEPOT. EEPOT E should only be used if the level for EEPOT 7 could not be met for audio through the non-ALC path.

For Console Priority Option (C115), the console is connected to Line 1 or Line 2 depending on the wireline setting. The trunking phone interconnect audio is connected to Line 3 and Line 4. The value of EEPOT 7 has two values, one for interconnect audio and one for console audio. EEPOT 7 must be aligned twice in this configuration.

For DC remote control, the audio is always routed through the non-ALC path.

When the TTRC Audio board is jumpered for a four-wire system, the transmit wireline interface is across Line 1 (+) and Line 1 (-) on the Junction Box screw terminal strip. The receive wireline interface is across Line2 (+) and Line2 (-).

When the TTRC Audio board is jumpered for a two-wire system, the transmit/receive wireline interface is across Line 2 (+) and Line 2 (-) on the Junction Box screw terminal strip.

For two and four-wire systems, these connections are 600 Ω balanced inputs, unless otherwise jumpered for 900 Ω balanced inputs.

NOTE

If the station is a *trunked station without the Console Priority Option (C115)* or is configured for *DC remote control,* proceed to the DC Remote Control/Trunking Adjustment.

If this is a *trunked station with the Console Priority Option (C115),* proceed to the Trunking/Console Priority Adjustment.

Tone Remote Control Adjustment

1. Using RSS, determine if the transmit audio is being routed to the modulator via the ALC circuit.
   - ○ **Transmit source = ALC** - Key the station using a High Level Guard Tone (HLGT)/Function Tone (FT) sequence. This allows the ALC circuit to be properly set. Proceed to step 2.
   - ○ **Transmit source = non-ALC** - Key the station via a LIN PTT (A1/D2). Proceed to step 4.
2. Set HLGT, FT, LLGT, and the 1 kHz tone to the levels expected from the console, in the following relative relationship:
   - ○ HLGT to 0 dBm
   - ○ FT to -10 dBm
   - ○ LLGT to -30 dBm
   - ○ Average audio (1 kHz tone @ -6 dBm)

NOTE

These recommended levels are intended for co-located consoles which do not have phone line loss. If other levels are required due to phone line loss, the same relative relationship of signal levels should be maintained.

CAUTION

Do not key the station via RSS or by setting the LIN PTT MUXbus bit since these methods do no set ALC correctly.

3. Inject an HLGT/FT sequence followed by a 1 kHz tone with LLGT across the appropriate transmit wireline terminals, using a console or service monitor.

   Line 1 +/- for four-wire systems or Line 2 +/- for two-wire systems.

   The station should be keyed. Proceed to step 6.

4. Inject a 1 kHz tone across the appropriate transmit wireline terminals at a level matching average audio (-6 dBm), or other levels relative to peak input level.

NOTE

The recommended level is intended for co-located consoles which do not have phone line loss. If other levels are required due to phone line loss, the same relative relationship of signal levels should be maintained.

5. Key the station by setting the LIN PTT MUXbus bit (A1/D2).

6. Set and hold the **PL Dis/Xmit** switch to **Xmit** during step 7.

   This strips any data from being summed with the transmit audio.

7. Adjust transmit audio level via EEPOT 7 until the transmitted deviation level reaches 60% full station deviation, as indicated in Table 1-8.

8. Adjust EEPOT E if the level cannot be set via EEPOT 7 alone.

9. Exit the EEPOT adjust mode.

   Refer to Operation chapter of the Instruction manual for additional information relating to the EEPOT adjust mode.

10. Remove the test tones.

DC Remote Control/Trunking Adjustment

NOTE

The following procedure applies only if the station is configured for *DC remote control* or is a configured as a *trunked station*. Otherwise, proceed to the Receiver Level Adjustment.

1. Inject a 1 kHz tone at the average audio (6 dB below peak audio) phone line level into the transmit wireline interface on the Junction Box.

   Line 1 +/- for four-wire systems or Line 2 +/- for 2 -wire systems.

2. If this is *not a trunked station*, gate the wireline audio to the transmitter by setting the LIN PTT MUXbus bit (A1/D2).

   For trunked stations, key the transmitter with a trunked PTT by disconnecting the trunking cable from connector J3 on the Junction Box.

   Key the transmitter by connecting a jumper wire jumper from J2901-8 (TKG PTT) to J2901-1 (LOGIC GND) on the TTRC logic board.

3. Enter the EEPOT adjust mode.

   Refer to the Operation chapter of the Instruction manual for additional information relating to the EEPOT adjust mode.

4. Set and hold the **PL Dis/Xmit** switch to **Xmit** for step 5.

   This strips any data from being summed with the transmit audio.

5. Adjust the TX Audio Level (EEPOT 7) until the transmitted deviation level reaches 60% full station deviation as indicated in Table 1-8.

6. Release the **PL Dis/Xmit** switch and remove all tones from the wireline.

7. Clear the LIN PTT MUXbus bit (A1/D2) or the trunked PTT jumper.

Trunking/Console Priority Adjustment

NOTE

The following procedure applies only to *a trunked station* with *the Console Priority Option (C115)*. Otherwise, proceed to the Receiver Level Adjustment.

1. Set HLGT, FT, LLGT, and the 1 kHz tone to the expected input levels:
   - ○ HLGT to 0 dBm.
   - ○ FT to -10 dBm

- LLGT to -30 dBm
- 1 kHz tone to -6 dBm (average audio)

NOTE

These recommended levels are intended for co-located consoles which do not have phone line loss. If other levels are required due to phone line loss, the same relative relationship of signal levels should be maintained.

CAUTION

Do not key the station via RSS or by setting the PTT MUXbus bit since these methods do no set ALC correctly.

2. Inject an HLGT/FT sequence followed by a 1 kHz tone with LLGT across the appropriate transmit wireline terminals, using a console or service monitor.

   Line 1 +/- for four-wire systems or Line 2 +/- for two-wire systems.

3. Set and hold the **PL Dis/Xmit** switch to **Xmit** during step 4.

   This strips any data from being summed with the transmit audio.

4. Adjust transmit audio level via EEPOT 7 until the transmitted deviation level reaches 60% full system deviation, as indicated in Table 1-8.

   Refer to Operation chapter of the Instruction manual for additional information relating to the EEPOT adjust mode.

5. Remove the LLGT and 1 kHz test tone.

6. Inject a 1 kHz tone at the average audio phone line level (i.e., 6 dB below peak audio) through the wireline into the Line 3 input on the system connector of the Junction Box.

7. If this is a *trunked station,* disconnect the trunking cable from Junction Box connector (J3).

8. Key the transmitter by connecting a jumper wire jumper from J2901-8 (TKG PTT) to J2901-1 (LOGIC GND) on the TTRC logic board.

9. Set and hold the **PL Dis/Xmit** switch to **Xmit** during step 11.

   This strips any data from being summed with the transmit audio.

10. Scroll completely through the EEPOT numbers once, and then back to EEPOT 7.

11. Adjust EEPOT 7 until the transmitted deviation level reaches 60% full system deviation as indicated in Table 1-8.

    If the deviation level could not be set, adjust EEPOT E to select the appropriate range (0 through 3) of EEPOT 7. Repeat step 11.

12. Remove the test tone.

13. Release the **PL Dis/Xmit** switch.

Receiver Level Adjustment

The following procedure adjusts the receiver level deviation for the repeater mode of operation. For stations configured as base stations, a relative level can be measured on the SSCB which is equivalent to the repeater deviation level. For stations containing the *Spectra-TAC/DIGITAC Encoder Option (C269)*, the receiver level should be adjusted during in-cabinet repeat operation.

1. Inject a 1mV RF receive signal, modulated with a 1 kHz tone at 40% full station deviation, as indicated in Table 1-8, into the receiver antenna connector on the Junction Box.

   Refer to Figure 1-21 for the antenna connector locations.

2. Set the R1 PL DT MUXbus bit (A3/D2).

NOTE

Steps 3 through step 9 apply only to stations configured as repeaters. If the station is configured as a base station (half-duplex with antenna relay or full-duplex base station) or is a *trunked station* with a *Spectra-TAC/DIGITAC Encoder Option (C269)*, proceed to step 10.

3. If this is a *trunked station*, disconnect the trunking cable from Junction Box connector (J3).

4. Key the transmitter by connecting a jumper wire jumper from J2901-8 (TKG PTT) to J2901-1 (LOGIC GND) on the TTRC logic board.

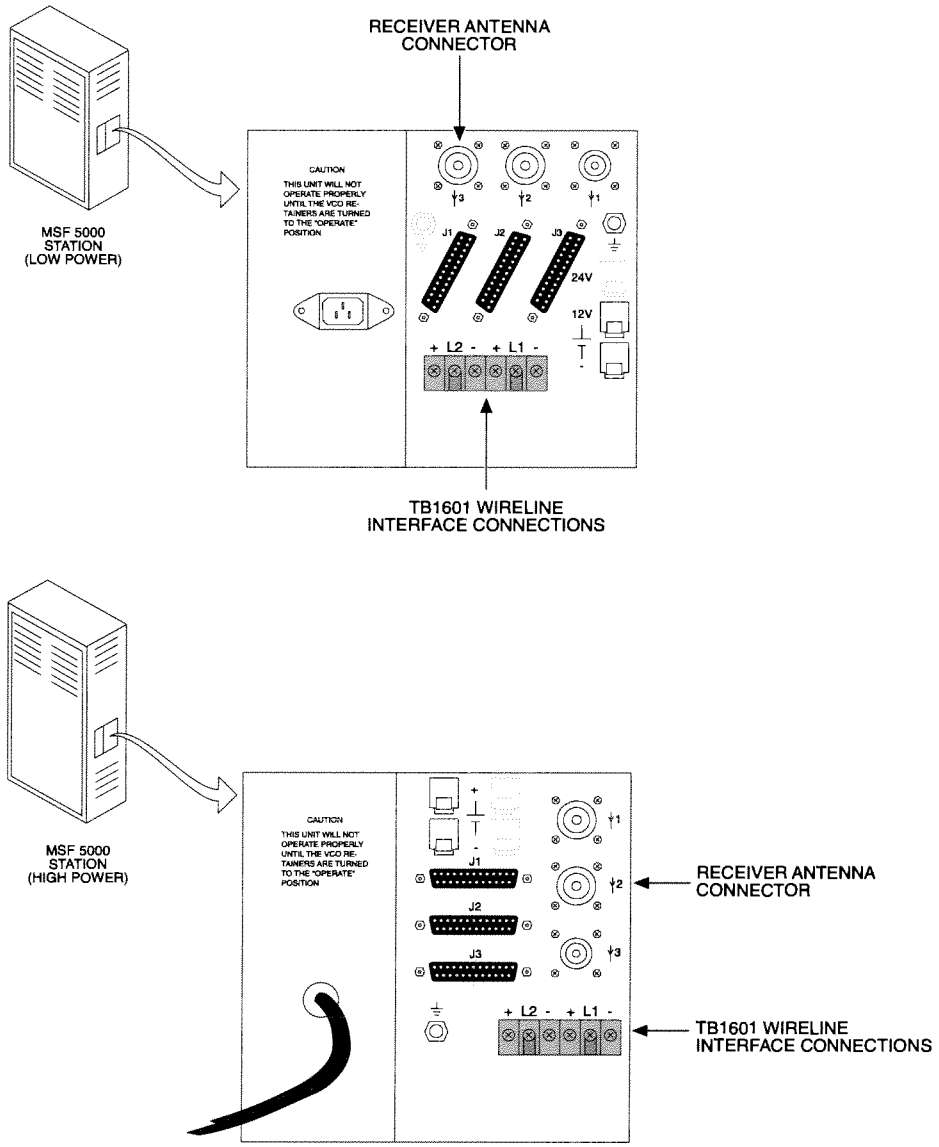
   Refer to Figure 1-22 for the connection locations.

5. Set and hold the **PL Dis/Xmit** switch to **Xmit** to strip off any TDATA or PL/DPL.

6. Verify the transmitted deviation level is at 60% full station deviation as indicated in Table 1-5.

   This setting provides +3.5 dB of repeater gain. If this level is out of adjustment, set it by adjusting EEPOT 5.

   If unity gain is desired, set for 40% full system deviation.



NOTE: Dashed components (24V connection and ground) are used on VHF models only.

MSFI044
022894KOM

Figure 1-21 ***Junction Box Antenna Connections***

NOTE

Step 7 through step 9 only apply to *900 MHz Analog Plus stations.*

7. Select EEPOT 1 to enable *Flutter Fighter.*

8. Set and hold the **PL Dis/Xmit** switch to **Xmit**.

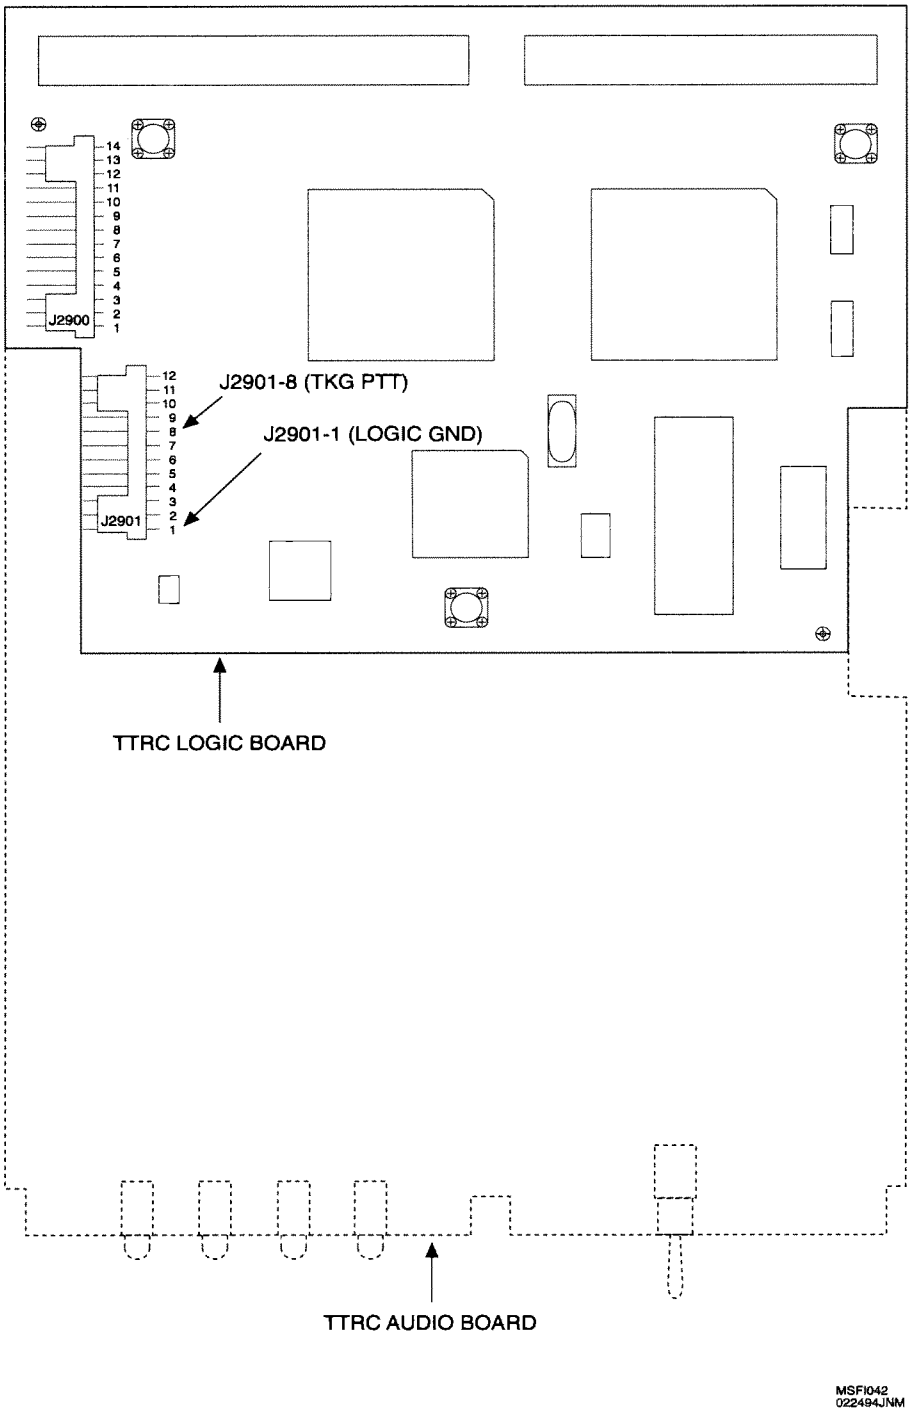


Figure 1-22 ***TTRC Logic Board***

9. Verify the transmit deviation level is at 60% full system deviation as indicated in Table 1-8. If not, adjust EEPOT 1.

NOTE

Perform step 10 only if the station is configured as a base station.

10. For base stations, verify 350±50 mVac is measured at TP1 on the SSCB, as shown in Figure 1-23. If not, adjust EEPOT 5.

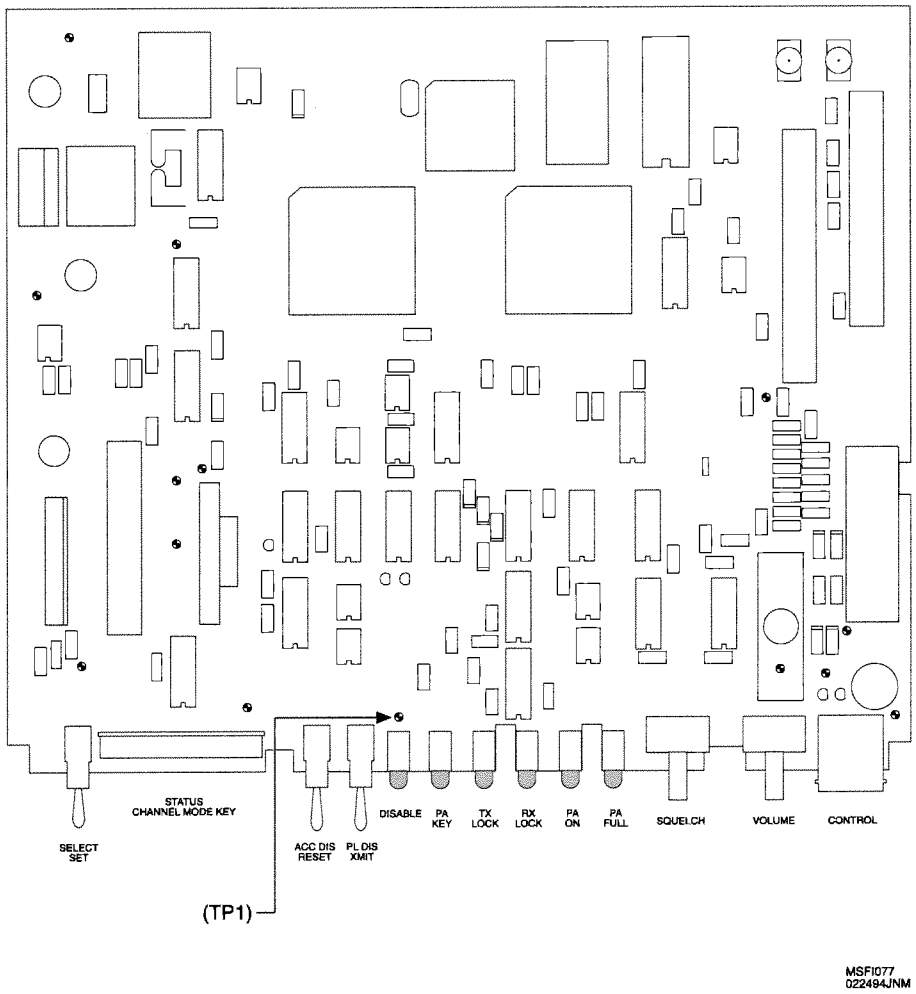

Figure 1-23 ***SSCB Showing TP1***

NOTE

Step 11 and step 12 only apply to *900 MHz Analog Plus stations* with the *Spectra-TAC/DIGITAC Encoder Option (C269) or an antenna relay.*

11. For *Analog Plus stations* equipped with a *Spectra-TAC/DIGITAC Encoder Option (C269)* or *an antenna relay,* select EEPOT 1 to enable the *Flutter Fighter.*

12. Verify the AC voltage at TP1, on the SSCB is 350±50 mVac as shown in Figure 1-23. If not, adjust EEPOT 1.

13. Dekey the station, deactivate any activated MUXbus bits, connect any disconnected cables, and remove any jumper wires that were installed.

Receiver Wireline Audio Adjustment

The following procedure adjusts the receiver wireline audio level for Line 2 and Line 4. The desired audio level is dependent upon the system configuration. If the station is configured for *Spectra-TAC/DIGITAC Encoder Option (C269).* Proceed directly to the High/Low End Adjustment to compensate for line loss.

NOTE

Perform this procedure only if the station is NOT equipped with a *Spectra-TAC/DIGITAC Encoder Option (C269)* to be used in a voting system. If voting will be used, proceed to the High/Low End Adjustment.

1. Inject a 1mV RF receive signal, modulated with a 1 kHz tone at 60% full station deviation into the receiver antenna connector on the Junction Box. Refer to Table 1-8.

2. Set the **PL Dis/Xmit** switch to **PL Dis**.

3. Verify the receive audio between Line 2 (+) and Line 2 (-) on the Junction Box screw terminal strip is at the desired phone line level.

   The typical phone line level is from 0 dBm to -10 dBm.

   If not, set it by adjusting EEPOT C.

NOTE

If the station is a *trunked station* with a *Console Priority Option (C115)* installed, continue with step 4. Otherwise, proceed to step 5.

4. Verify the receive audio at Line 4 on the system connector is at the desired phone line level.

   The typical phone line level is from 0 dBm to -10 dBm.

   If not, set the desired level by adjusting EEPOT d.

5. Deactivate all activated MUXbus bits.

6. Set the **PL Dis/Xmit** switch to the center (normal) position.

Decoded Receive Audio Adjustment

The following procedure adjusts the decoded receive audio level for stations containing the *Secure Encryption Option (C331, C388, C794, C795, or C797)*. Before performing this procedure, make sure the level of Line 2 is adjusted to the same relative level (0 dB) as the clear receive audio level.

NOTE

The Line 2 level must be adjusted before performing this procedure.

1. Inject a 1mV RF receive signal, modulated with a secure (digitally encrypted) 1 kHz tone at 3.9 kHz deviation into the receiver antenna connector on the Junction Box.

NOTE

The encryption source must be programmed with the same encryption key as the station. Refer to the Operation chapter of the Installation manual for additional information.

2. Verify the outbound receiver audio between Line 2 (+) and Line 2 (-) is 0 dB relative to the clear wireline audio level.

   The clear wireline audio level setting was set up in the Receive Wireline Audio Adjustment procedure or the maximum allowable phone line level, whichever is less. If not, adjust EEPOT 0.

3. Remove the RF signal from the antenna connector on the Junction Box.

Squelch Adjustment

The following procedure adjusts the repeater and receiver squelch levels. If the station is configured for *Spectra-TAC/DIGITAC Option (269)* or to generate status tone, proceed directly to the High/Low End Adjustment.

The repeater squelch level is typically set for an RF level corresponding to 15 dB SINAD. The receiver squelch level is typically set for an RF level corresponding to 12 dB SINAD (15 dB SINAD for *trunked stations*). The RF level is measured at the SPEAKER AUDIO on the front panel connector. Both squelch levels can be set to the levels corresponding to system requirements.

For trunked stations, the repeater squelch potentiometer (EEPOT 2) is set to 00.

NOTE

If the station is configured to generate status tone and is not used for voting purposes, proceed to Status Tone Adjustment.

If the station is used for voting purposes, proceed to High/Low End Adjustment.

1. Set the **PL Dis/Xmit** switch to **PL Dis**.

NOTE

EEPOT 2 and EEPOT 3 are set at the factory to the maximum level (99). This fully closes the squelch.

2. Set EEPOT 2 and EEPOT 3 to the minimum level (00) to fully open the squelch.
3. Inject an on channel RF signal, without modulation at the desired repeater squelch threshold level, into the receiver antenna connector on the Junction Box.

NOTE

If this is a *trunked station,* proceed to step 5.

4. Adjust the Repeater Squelch Level (EEPOT 2) to the desired level.
5. Adjust the Receive Squelch Level (EEPOT 3) to the desired level.
6. Set the **PL Dis/Xmit** switch to the center (normal) position.

High/Low End Adjustment

The following procedure is only performed when a station is configured voting purposes. This adjustment provides an increase in level at the high and low end frequency response of the receiver audio to compensate for phone line loss. All voting receivers must be equalized to provide proper voting.

This procedure requires a technician at the comparator end of the phone line and the station being aligned.

NOTE

Perform this procedure only if the station is equipped with a *Spectra-TAC/DIGITAC Encoder Option (C269)* and will be used for voting. Otherwise, proceed to the Status Tone Adjustment.

1. Adjust the STAC Encoder Level (EEPOT 8) to the minimum level (00) to cause a minimum wireline status tone output.
2. With an audio generator, inject a 1 kHz tone at 1 mV into the MIC AUDIO input (J812-4) on the control connector or into TP8 on the SSCB.

NOTE

The generator must remain at a constant output level from 400 Hz to 4 kHz.

3. Set the **Intercom** switch to **On**.
4. Monitor across Line 2 (+) and Line 2 (-) and adjust the Line 2 Output Level (EEPOT C) for -10 dB.
5. Measure and record the level at the input to the comparator (DIGITAC input).

   The difference between the -10 dBm input and measurement at the comparator is the phone line loss at 1 kHz.
6. Set the audio generator frequency to 3 kHz.
7. Adjust the STAC High End Equalization Level (EEPOT 9) so that the level measured at the comparator is the same level recorded in step 5.
8. Repeat steps 5 through 7 until the level difference between 1 kHz and 3 kHz is within +/- 1 dB. The 1 kHz reference level must remain at -10 dB.
9. Set the generator frequency to 400 Hz.

10. Adjust the STAC Low End Equalization Level (EEPOT A) so that the level measured at the comparator is the same level recorded in step 5. Do not readjust EEPOTS C or 9.

11. Adjust the STAC Low End Equalization Level (EEPOT A) to the same level recorded in step 5.

12. Deactivate all activated MUXbus bits.

13. Set the **Intercom** switch to **Off**.

14. Disconnect the audio generator from the MIC AUDIO input.

Status Tone Adjustment

The following procedure is performed when a station is configured to have status tone sent from the station. This adjustment also sets the receiver and repeater squelch EEPOTs.

When completed, the status tone EEPOT is set to provide the required status tone level to be sent down the wireline Line 2. If the station is configured to operate with *Spectra-TAC/DIGITAC Encoder Option (C269)*, the receiver and repeater squelch levels are also adjusted to provide the proper unsquelching level.

NOTE

Only perform this procedure if the station being aligned is configured to generate status tone.

1. Inject an on channel 1mV RF signal, modulated with a 1 kHz tone at 100% full station deviation (60% full station deviation for *trunked stations*), into the receiver antenna connector on the Junction Box.

   Refer to Table 1-8 for values of full station deviation.

2. Set the **PL Dis/Xmit** to **PL Dis**.

3. Monitor the receive audio across Line 2 (+) and Line 2 (-) and adjust the Line 2 Output Level (EEPOT C) for the maximum desired phone line level.

   This is typically in the range of 0 dBm through -10 dBm.

4. Measure and record the level at the input to the comparator or other equipment expecting status tone from the station.

5. Set the **PL Dis/Xmit** to the center (normal) position.

6. Remove the RF signal generator from the receiver and verify the receiver is squelched.

7. Monitor the TAC comparator input and adjust the status tone Level (EEPOT 8) for a 2175 Hz status tone level 13 dB (9 dB for *trunked stations*) below the level recorded in step 4.

NOTE

Perform this procedure only if the station is equipped with a *Spectra-TAC/DIGITAC Encoder Option (C269)*. Otherwise, proceed to the Coded Transmit Deviation Adjustment procedure.

8. Set EEPOT 2 and EEPOT 3 to the minimum level (00) to fully open the squelch.
9. Set the **PL Dis/Xmit** switch to **PL Dis**.
10. Measure and record the rms noise voltage level at the Line 2 output.
11. Inject an on channel 0.1 µV RF signal, without modulation into the receiver antenna connector on the Junction Box.
12. Increase the RF level until the Line 2 output level decreases 20 dB from the level recorded in step 10.

NOTE

The 20 dBQ level correlates to a 17 dB SINAD measurement.

13. Adjust the Receiver Squelch Level (EEPOT 3) until the R1 UN SQ MUXbus bit (A5/D0) is disabled.
14. Adjust the Repeater Squelch Level (EEPOT 2) until the RPT USQ MUXbus bit (A3/D0) is disabled.
15. Disconnect all test equipment and set the **PL Dis/Xmit** switch to the center (normal) position.

Coded Transmit Deviation Adjustment

The following procedure is only performed when a station is configured for the *Transparent Operation Option (C514)*. This procedure does not apply to any *900 MHz Analog Plus stations*, due to its incompatibility with secure operation.

When performing this procedure, the EEPOT mode (EEPOT 6) is entered to generate a 1 kHz tone. The station is then keyed via the Xmit switch and the deviation is adjusted.

NOTE

Perform this procedure only if the station is equipped with a *Transparent Operation Option (C514)* for secure operation. This option is not available on *900 MHz Analog Plus stations.*

1. Select EEPOT 6 on the **Status** display.

   After 5 seconds, an internal 1 kHz square wave generator is enabled in the station.

2. Key the station by holding the **PL Dis/Xmit** switch to **Xmit**.

3. With a modulation analyzer, measure the transmitter deviation level and compare it to the settings shown in Table 1-8.

   Adjust EEPOT 6 if required to reach the desired level.

4. Set the **PL Dis/Xmit** switch to the center (normal) position.

5. Reset the station by toggling the **Acc Dis/Reset** switch to **Reset**.

NOTE

If aligning a station that contains the Simulcast Option (C777), perform the Simulcast procedures at the end of this chapter.

6. This concludes the *MSF 5000* Alignment procedure.

Simulcast Receiver Adjustment

1. Adjust EEPOTs 6, 8, 9, A, and C to 00.

NOTE

Step 2 through step 8 require the audio generator to remain at a constant output level of 100 mV from 400 to 3000 Hz.

2. Use an audio generator and inject a 1 kHz tone at 100 mV, measured with and AC voltmeter, into the MIC AUDIO (J812-4) input on the front panel control jack; or via TP8 on the SSCB.
3. Set the front panel **Intercom** switch to **On** and activate the LOC PTT MUXbus bit.
4. Adjust EEPOT C to -10 dBm at Line 2 +/- on the Junction Box.
   This is a 600 Ω balanced output.
5. Set the generator frequency to 3 kHz and adjust EEPOT 9 to -10 dBm.
6. Repeat step 2 through step 5 until the difference is within +/- 1 dB.
   The 1 kHz level reference must remain at -10 dBm.
7. Set the generator frequency to 400 Hz.
8. Adjust EEPOT A to -10 dBm.
   Do not readjust EEPOT 9 or EEPOT C.
9. Deactivate the MUXbus bits.
10. Set the **Intercom** switch to **Off**.
11. Disconnect the audio generator from the MIC AUDIO input.
12. Set the **PL Dis/Xmit** switch to **PL Dis**.
13. Inject an on-channel 1 mV RF signal modulated with a 1 kHz tone at 100% full system deviation into the receiver port.
14. Adjust EEPOT 5 for -6 dBm at Line 2 +/-.

NOTE

Perform step 15 and step 16 if the station is equipped with the Secure Option C514, otherwise proceed to step 17.

15. Without changing the RF input level, inject a coded eye pattern (using the proper encryption algorithm) and adjust EEPOT C for -6 dBm at Line 2 +/-.

16. Repeat step 13 and step 14.

17. Set the **PL Dis/Xmit** switch to the center (off) position.

    Remove the RF signal from the receiver

18. Adjust EEPOT 8 for a status tone (2175 Hz) level of -19 dBm at line 2 +/-.

19. Adjust EEPOTs 2 and 3 to 00.

20. Set the **PL Dis/Xmit** switch to **PL Dis**.

    Measure and record the rms noise voltage level at Line 2.

21. Inject an on-channel 0.1 uV signal without modulation at the receive antenna port.

22. Increase the RF level until the Line 2 output level decreases by 20 dB from the level recorded in step 20 (20 dbQ).

    This correlates to 17 dB SINAD.

23. Adjust EEPOT 3 until the R1 UN SQ MUXbus bit turns off.

NOTE

Perform step 24 if the station is equipped with Secure Option C514 and codeplug option X20AZ_SP, otherwise proceed to step 25.

24. Without changing the RF input level, inject a coded eye pattern and adjust EEPOT 2 until the RPT UN SQ MUXbus bit turns off.

25. Disconnect all test equipment.

    Alignment is complete.

Simulcast Deviation Adjustment

1. Set EEPOTs 4 and 7 to 00.
   EEPOTs 4 and 7 have no effect in simulcast.
2. Inject a 1 kHz signal at -10 dBm into the Gen TX Data input to the station.
3. Key the station by activating the Loc PTT MUXbus bit.
4. Measure the transmit deviation level and use EEPOT B to set for 60% full system deviation.
5. Dekey the station and remove the test tone.
   The transmit alignment is complete.

TRN7142 Interconnect Board

RT4600 SENSES THE STATION AMBIENT TEMPERATURE.
THE FORWARD AND REFLECTED VOLTAGES PASS THROUGH AN ANALOG SUMMING NETWORK. IF THE MAGNITUDE OF THE REFLECTED VOLTAGE BECOMES TOO LARGE, CR4602 WILL BEGIN TO CONDUCT CURRENT. THIS CAUSES POWER CONTROL TO REDUCE THE STATION OUTPUT POWER BY APPROXIMATELY 10dB.

REVERSE POLARITY DIODE USED IN SATELLITE RECEIVER APPLICATIONS

TRN7142 Interconnect Board Parts List

Reference Symbol	Motorola Part No.	Description
		capacitor, fixed:
C4600	2311049A08	1 uF, +/-10%; 35 V
C4601	2113741B69	0.1 uF, +/-5%; 50 V
C4602	2313748G27	150 uF, +/-20%; 16V
C4603,4604	2113740B49	100 pF, +/-5%; 50 V
		diode: (see note)
CR4600	4813833D08	1A, 600V
CR4601 thru 4605	4813833C10	0.1A, 70V
		connector:
J500	2813922B03	HDR 3 POS RT .1 CTR GLD PLTD
J501	2813922B02	HDR 2 POS RT .1 CTR GLD PLTD
J502A	2813922B06	HDR 6 POS RT .1 CTR GLD PLTD
J596A	2813922B04	HDR 4 POS RT .1 CTR GLD PLTD
J603A	2882984N14	plug: 9-contact
J701A	2882984N13	plug: 6-contact
J901	2882505T02	plug: 16-contact
		connector:
P262B	0983111N02	receptacle: 14-contact
P322B	0983111N02	receptacle: 14-contact
P402B	0983111N02	receptacle: 14-contact
P801	2883290P13	plug: 26-contact
		resistor, fixed:
R4600	0611077A74	1K, +/-5%; 1/8 W
R4601	0611077G09	15K, +/-1%; 1/8 W
R4602	0611077F91	10K, +/-1%; 1/8 W
R4608	0611072A49	1K, +/-5%, 1/4W
R4609	0611077A90	4.7K, +/-5%; 1/8 W
R4610	0611077B23	100K, +/-5%; 1/8 W
R4611	0611077B11	33K, +/-5%; 1/8 W
R4612	0611077A76	1.2K, +/-5%; 1/8 W
R4614	0611077B23	100K, +/-5%; 1/8 W
R4615	0611077A76	1.2K, +/-5%; 1/8 W
R4618	0611045A49	1K, +/-5%; 1/2W
R4619	0611077B23	100K, +/-5%; 1/8 W
R4620	0611077A95	7.5K, +/-5%; 1/8W
R4621	0611077A98	10K, +/-5%; 1/8 W
R4622	0611077B02	13K, +/-5%; 1/8W
R4623	0611045A49	1K, +/-5%; 1/2W
R4624	0611077F53	4.02K, +/-1%; 1/8W
R4625	0611077F91	10K, +/-1%; 1/8 W
R4626	0611077A98	10K, +/-5%; 1/8 W
R4627	0611077A96	8.2K, +/-5%; 1/8 W
R4628 thru 4635	0611077A01	0 ohm, +/-5%; 0 W
		thermistor:
RT4600	0683600K05	100K, +/-10%; 2 MW
		integrated circuit: (see note)
U4600	5113816D01	5 V Positive Regulator
		non-referenced items:
	0210971A16	NUT, hex: 3 x0.5mm
	0310907A19	SCREW, machine: M3x0.5x8
	0484152B01	WASHER, shoulder
	0984728L01	Shorting Jumper: 2-contact (used with JU4601)
	0984728L01	Shorting Jumper: 2-contact (used with JU4602)
	1483820M02	INSULATOR, heat conductive
	2684012N01	HEAT SINK
	2880001R03	plug: 3-contact (used with JU4601)
	2880001R03	plug: 3-contact (used with JU4602)
	5483865R01	Label, bar code: 1/4" wide, white
	5484960T01	Label, bar code: 6.3 x 12.7MM, white

Note: For optimum performance, diodes and integrated circuits must be ordered by Motorola part number.

Control Tray

Chapter Overview

This chapter contains overlays, schematics, and parts lists for components of the Control Tray.

Table 3-1 ***Chapter Contents***

Secure Capable Station Control Board (SSCB)

The following information covers models TLN3384, TLN3385, TLN3386 and TLN3387 SSCBs. The TLN3182 and TLN3318 SSCBs have been replaced by TLN3384. The TLN3189 and TLN3319 SSCBs have been replaced by TLN3385. The TLN3204 and TLN33320 SSCBs have been replaced by TLN3386. The TLN3205 and TLN3342 SSCBs have been replaced by TLN3387.

Table 3-2 lists parts that may or may not be placed on all SSCB boards. Some boards may also use different values for the same component.

Table 3-2 ***SSCB Kit Component Values***

REFERENCE DESIGNATOR	TLN3384	TLN3385	TLN3386	TLN3387
C1554	.001uF	.01uF	.001uF	.001uF
C1556	.001uF	.01uF	.001uF	.001uF

NOTES:

1. Unless otherwise specified, all resistor values are in ohms and capacitor values in microfarads.
2. An asterisk (*) after or a line over a signal name indicates an active low level signal.
3. R8902/R808 [0 ohm chip resistors] are populated according to SRAM type:

   8K SRAM: R802 out, R808 in
   32K SRAM: R802 in, R808 out

4. These part values change depending on kit used. Please refer to Table 3-2 for correct part value:

C8219	2113741B69	0.1 uF, +/-5%; 50 V
C8220	2113740B73	1000 pF, +/-5%; 50 V
C8225	2113741B69	0.1 uF, +/-5%; 50 V
C8230	2113740B57	220 pF, +/-5%; 50 V
C8231	2113741B69	0.1 uF, +/-5%; 50 V
C8300 thru 8303	0811051A11	0.047 uF, +/-5%; 63V
C8304	2311049A19	10 uF, +/-10%; 25 V
C8305,8306	0811051A11	0.047 uF, +/-5%; 63V
C8307	2113740B36	30 pF, +/-5%; 50V
C8400	2113740B18	5.1 pF, +/-0.25 pF; 50V
C8401	2311049A19	10 uF, +/-10%; 25 V
C8402	0811051A15	0.22 uF, +/-5%; 63 V
C8403	2311049A19	10 uF, +/-10%; 25 V
		diode: (see note)
CR801,802	4813833C10	0.1A, 70V
CR803	4805129M41	Rectifier
CR804 thru 807	4813833C10	0.1A, 70V
CR808	4884349P01	Dual Rectifier
CR809	4813833C10	0.1A, 70V
CR1520 thru 1522	4805129M41	Rectifier
CR1523,1524	4813833C10	0.1A, 70V
CR1526,1527	4813833C10	0.1A, 70V
CR1528,1529	4805129M41	Rectifier
CR1530	4813833C10	0.1A, 70V
CR1531	4805129M41	Rectifier

TLN3384 SSCB Parts List

Reference Symbol	Motorola Part No.	Description
CR8100,8101	4883654H01	silicon
CR8102,8103	4813833C10	0.1A, 70V
CR8107	4813833C10	0.1A, 70V
CR8110	4805129M41	Rectifier
CR8112,8113	4805129M41	Rectifier
CR8115,8116	4883654H01	silicon
CR8200 thru 8203	4805129M41	Rectifierlight emitting diode: (see note)
DS800 thru 803	4888245C22	GRN
DS804	4888245C23	YEL
DS805	4888245C24	RED
DS8200 thru 8202	4882771L03	7-segment display (red)
		hybrid:
HY805	TRN7008A	Display Board
		connector:
J701	2882984N13	plug: 6-contact
J801	2882505T03	plug: 26-contact
J802	2813922A14	HDR 14 POS STR .1 CTR GLD PLTD
J803	2882505T05	plug: 40-contact
J804	2882505T04	plug: 34-contact
J805A	2883547T01	receptacle: 8-contact, right anle
J805B	2883547T01	receptacle: 8-contact, right anle
J806,807	0984231B03	receptacle: phono jack
J812	0983112N01	receptacle: 6-contact
		inductor:
L700	2484386T01	25 UH
L701	2484266T01	150 UH
L702	2484386T01	25 UH
L800	2411047A25	10 UH
L900	2411047A31	CHK RF MLD A/I 33UH
		transistor: (see note)
Q700	4884233T01	type MOSFET
Q705	4813824A17	PNP
Q800	4813824A17	PNP
Q801 thru 807	4813824A10	NPN
Q808	4813824A06	NPN
Q809 thru 811	4813824A10	NPN
Q813,814	4813824A10	NPN
Q816,817	4813824A10	NPN
Q820	4813824A10	NPN
Q821	4800869653	type JFET
Q822,823	4813824A10	NPN
Q1507 thru 1510	4813824A10	NPN
Q8100	4813824A10	NPN
Q8101,8102	4811043B42	TSTR 48R00869919 A/I
Q8200 thru 8207	4813824A17	PNP
Q8208 thru 8210	4813824A06	NPN
Q8211	4813824A10	NPN
Q8212	4813824A06	NPN
		resistor, fixed:
R700	0611077A98	10K, +/-5%; 1/8 W
R701	0611077A88	3.9K, +/-5%; 1/8 W

	0984728L01	Shorting Jumper: 2-contact (used with JU15)
	0984728L01	Shorting Jumper: 2-contact (used with JU16)
	0984728L01	Shorting Jumper: 2-contact (used with JU17)
	0984728L01	Shorting Jumper: 2-contact (used with JU18)
	0984728L01	Shorting Jumper: 2-contact (used with JU19)
	0984728L01	Shorting Jumper: 2-contact (used with JU20)
	0984728L01	Shorting Jumper: 2-contact (used with JU21)
	0984728L01	Shorting Jumper: 2-contact (used with JU22)
	1485334U01	Insulator (used w/ Y800)
	2683373P02	HEAT SINK, transistor
	2880001R03	plug: 3-contact (used with JU1)
	2880001R03	plug: 3-contact (used with JU2)
	2880001R03	plug: 3-contact (used with JU3)
	2880001R03	plug: 3-contact (used with JU4)
	2880001R03	plug: 3-contact (used with JU5)
	2880001R03	plug: 3-contact (used with JU6)
	2880001R03	plug: 3-contact (used with JU7)
	2880001R03	plug: 3-contact (used with JU8)
	2880001R03	plug: 3-contact (used with JU9)
	2880001R03	plug: 3-contact (used with JU10)
	2880001R03	plug: 3-contact (used with JU11)
	2880001R03	plug: 3-contact (used with JU12)
	2880001R03	plug: 3-contact (used with JU13)
	2880001R03	plug: 3-contact (used with JU14)
	2880001R03	plug: 3-contact (used with JU15)
	2880001R03	plug: 3-contact (used with JU16)
	2880001R03	plug: 3-contact (used with JU17)
	2880001R03	plug: 3-contact (used with JU18)
	2880001R03	plug: 3-contact (used with JU19)
	2880001R03	plug: 3-contact (used with JU20)
	2880001R03	plug: 3-contact (used with JU21)
	2880001R03	plug: 3-contact (used with JU22)
	2882296R34	plug: 40-contact (used with J800)
	4380054K02	SPACER, support (4 used)
	4884349P01	silicon
	5483865R01	Label, bar code: 1/4" wide, white (2 used)
	5484960T01	Label, bar code: 6.3 x 12.7MM, white (2 used)

Note: For optimum performance, diodes, transistors, integrated circuits, and crystals must be ordered by Motorola part number.

VR1531 thru 1534	4882479V02	DIODE ZENER 3.3V
		crystal: (see note)
Y800	4880113K04	7.948 MHZ
		non-referenced items:
	TTN4043A	UHF/VHF CNTRL BD
	0300140230	SCR TPG 4-40X5/16 STARPAN CHS (2 used with J800)
	0982449T01	SOCKET, IC: 52-contact (used with U800)
	0982449T03	SOCKET, IC: 84-contact (used with U801)

TLN3385 SSCB Parts List

Reference Symbol	Motorola Part No.	Description
	0982449T03	SOCKET, IC: 84-contact (used with U802)
	0982808R10	Socket, IC: 28-contact (used with U803)
	0983729M17	receptacle: 20-contact (2 used with J800)
	0984728L01	Shorting Jumper: 2-contact (used with JU1)
	0984728L01	Shorting Jumper: 2-contact (used with JU2)
	0984728L01	Shorting Jumper: 2-contact (used with JU3)
	0984728L01	Shorting Jumper: 2-contact (used with JU4)
	0984728L01	Shorting Jumper: 2-contact (used with JU5)
	0984728L01	Shorting Jumper: 2-contact (used with JU6)
	0984728L01	Shorting Jumper: 2-contact (used with JU7)
	0984728L01	Shorting Jumper: 2-contact (used with JU8)
	0984728L01	Shorting Jumper: 2-contact (used with JU9)
	0984728L01	Shorting Jumper: 2-contact (used with JU10)
	0984728L01	Shorting Jumper: 2-contact (used with JU11)
	0984728L01	Shorting Jumper: 2-contact (used with JU12)
	0984728L01	Shorting Jumper: 2-contact (used with JU13)
	0984728L01	Shorting Jumper: 2-contact (used with JU14)
	0984728L01	Shorting Jumper: 2-contact (used with JU15)
	0984728L01	Shorting Jumper: 2-contact (used with JU16)
	0984728L01	Shorting Jumper: 2-contact (used with JU17)
	0984728L01	Shorting Jumper: 2-contact (used with JU18)
	0984728L01	Shorting Jumper: 2-contact (used with JU19)
	0984728L01	Shorting Jumper: 2-contact (used with JU20)
	0984728L01	Shorting Jumper: 2-contact (used with JU21)
	0984728L01	Shorting Jumper: 2-contact (used with JU22)
	1485334U01	Insulator (used w/ Y800)
	2683373P02	HEAT SINK, transistor
	2880001R03	plug: 3-contact (used with JU1)
	2880001R03	plug: 3-contact (used with JU2)
	2880001R03	plug: 3-contact (used with JU3)
	2880001R03	plug: 3-contact (used with JU4)
	2880001R03	plug: 3-contact (used with JU5)
	2880001R03	plug: 3-contact (used with JU6)
	2880001R03	plug: 3-contact (used with JU7)
	2880001R03	plug: 3-contact (used with JU8)
	2880001R03	plug: 3-contact (used with JU9)
	2880001R03	plug: 3-contact (used with JU10)
	2880001R03	plug: 3-contact (used with JU11)
	2880001R03	plug: 3-contact (used with JU12)
	2880001R03	plug: 3-contact (used with JU13)
	2880001R03	plug: 3-contact (used with JU14)
	2880001R03	plug: 3-contact (used with JU15)
	2880001R03	plug: 3-contact (used with JU16)
	2880001R03	plug: 3-contact (used with JU17)
	2880001R03	plug: 3-contact (used with JU18)
	2880001R03	plug: 3-contact (used with JU19)
	2880001R03	plug: 3-contact (used with JU20)
	2880001R03	plug: 3-contact (used with JU21)
	2880001R03	plug: 3-contact (used with JU22)
	2882296R34	plug: 40-contact (used with J800)
	4380054K02	SPACER, support (4 used)
	4884349P01	silicon
	5483865R01	Label, bar code: 1/4" wide, white (2 used)
	5484960T01	Label, bar code: 6.3 x 12.7MM, white (2 used)

Reference Symbol	Motorola Part No.	Description

Note: For optimum performance, diodes, transistors, integrated circuits, and crystals must be ordered by Motorola part number.

TLN3386 SSCB Parts List

Reference Symbol	Motorola Part No.	Description
		capacitor, fixed:
C701	2113740B57	220 pF, +/-5%; 50 V
C702	2113740B71	820 pF, +/-5%; 50 V
C703	2113740B73	1000 pF, +/-5%; 50 V
C704	2113741B69	0.1 uF, +/-5%; 50 V
C705,706	2311049A19	10 uF, +/-10%; 25 V
C707	2113741B69	0.1 uF, +/-5%; 50 V
C708	2311049A19	10 uF, +/-10%; 25 V
C709	2311049A08	1 uF, +/-10%; 35 V
C710,711	2311049A22	33 uF, +/-10%; 16 V
C712	2311049A19	10 uF, +/-10%; 25 V
C713	2311049A08	1 uF, +/-10%; 35 V
C714	2311049A19	10 uF, +/-10%; 25 V
C715	2113740B49	100 pF, +/-5%; 50 V
C716	2311049A19	10 uF, +/-10%; 25 V
C717	2113741B69	0.1 uF, +/-5%; 50 V
C718	2313748G21	100 uF, +/-20%; 16V
C719	2311049A19	10 uF, +/-10%; 25 V
C720	2113741B69	0.1 uF, +/-5%; 50 V
C721	2311049A22	33 uF, +/-10%; 16 V
C722 thru 725	2113741B69	0.1 uF, +/-5%; 50 V
C800	2113741B45	0.01 uF, +/-5%; 50 V
C801	2113740B59	270 pF, +/-5%; 50V
C802 thru 808	2113741B69	0.1 uF, +/-5%; 50 V
C810	2113741B69	0.1 uF, +/-5%; 50 V
C812	2311049A19	10 uF, +/-10%; 25 V
C814,815	2113740B25	10 pF, +/-5%; 50 V
C817	2113740B65	470 pF, +/-5%; 50 V
C819	2113741B69	0.1 uF, +/-5%; 50 V
C820	2113741B45	0.01 uF, +/-5%; 50 V
C822	2311049A08	1 uF, +/-10%; 35 V
C823 thru 828	2113741B69	0.1 uF, +/-5%; 50 V
C829	2113740B49	100 pF, +/-5%; 50 V
C830	2113741B69	0.1 uF, +/-5%; 50 V
C1543	2113740B73	1000 pF, +/-5%; 50 V
C1544	0811051A13	0.1 uF, +/-5%; 63 V
C1545,1546	2113740B47	82 pF, +/-5%; 50V
C1547	0811017A08	0.01 uF, +/-5%; 50 V
C1548	2113740B76	1500 pF, +/-5 pF; 50V
C1549	2113740B57	220 pF, +/-5%; 50 V
C1551	0811017A05	3300 pF, +/-5%; 50V
C1552,1553	2311049A10	2.2 uF, +/-10%; 35V
C1554	0811017A08	0.01 uF, +/-5%; 50 V
C1555	2113740B34	24 pF, +/-5%; 50V
C1556,1557	0811017A08	0.01 uF, +/-5%; 50 V
C1558	2113740B76	1500 pF, +/-5 pF; 50V
C1559	2113740B73	1000 pF, +/-5%; 50 V
C1560	2113740B34	24 pF, +/-5%; 50V
C1561	0811017A05	3300 pF, +/-5%; 50V
C1562	2311049A10	2.2 uF, +/-10%; 35V
C1564	2113741B37	4700 pF, +/-5%; 50 V
C1579	2113740B57	220 pF, +/-5%; 50 V
C8100,8101	2113740B49	100 pF, +/-5%; 50 V
C8102	0811017A08	0.01 uF, +/-5%; 50 V
C8103	0811051A09	0.022 uF, +/-5%; 63 V
C8104	0811017A08	0.01 uF, +/-5%; 50 V
C8105	2313748G25	333 uF, +/-20%; 35V
C8106	0811051A13	0.1 uF, +/-5%; 63 V
C8107	0811051A09	0.022 uF, +/-5%; 63 V
C8108	0811017A08	0.01 uF, +/-5%; 50 V
C8109	2313748G25	333 uF, +/-20%; 35V
C8112	2311049A15	4.7 uF, +/-10%; 35V
C8113	2113740B49	100 pF, +/-5%; 50 V
C8114,8115	2113740B57	220 pF, +/-5%; 50 V
C8116	0811051A15	0.22 uF, +/-5%; 63 V
C8117	2311049A10	2.2 uF, +/-10%; 35V
C8118	2311049A08	1 uF, +/-10%; 35 V
C8119	0811017A05	3300 pF, +/-5%; 50V
C8120	0811017A08	0.01 uF, +/-5%; 50 V
C8121	2113740B57	220 pF, +/-5%; 50 V
C8122,8123	2311049A08	1 uF, +/-10%; 35 V
C8124	0811051A13	0.1 uF, +/-5%; 63 V
C8125	2311049A08	1 uF, +/-10%; 35 V
C8126,8127	2113740B49	100 pF, +/-5%; 50 V
C8128	2113740B76	1500 pF, +/-5 pF; 50V
C8129,8130	2113740B49	100 pF, +/-5%; 50 V
C8131 thru 8133	2113740B40	43 pF, +/-5%; 50V
C8134	2311049A08	1 uF, +/-10%; 35 V
C8135	0811051A15	0.22 uF, +/-5%; 63 V
C8136	2311049A19	10 uF, +/-10%; 25 V
C8137 thru 8140	0811051A15	0.22 uF, +/-5%; 63 V
C8141	2113741B45	0.01 uF, +/-5%; 50 V
C8142 thru 8150	2113741B69	0.1 uF, +/-5%; 50 V
C8151	2311049A15	4.7 uF, +/-10%; 35V
C8152	2113740B49	100 pF, +/-5%; 50 V
C8153	2113741B45	0.01 uF, +/-5%; 50 V
C8154	2113740B49	100 pF, +/-5%; 50 V
C8156	2113740B49	100 pF, +/-5%; 50 V
C8157	2113741B45	0.01 uF, +/-5%; 50 V
C8158	0811051A10	0.033 uF, +/-5%; 63V
C8159	0811051A12	0.068 uF, +/-5%; 83 V
C8160	2113740B49	100 pF, +/-5%; 50 V
C8161	0811017A05	3300 pF, +/-5%; 50V
C8162	0811051A13	0.1 uF, +/-5%; 63 V
C8163	2113740B74	1200 pF, +/-5%; 50V
C8164	2311049A08	1 uF, +/-10%; 35 V
C8165	2113740B76	1500 pF, +/-5 pF; 50V
C8169	2113740B40	43 pF, +/-5%; 50V
C8170	0811051A15	0.22 uF, +/-5%; 63 V
C8173	0811017A08	0.01 uF, +/-5%; 50 V
C8174	2113740B57	220 pF, +/-5%; 50 V
C8175,8176	2311049A08	1 uF, +/-10%; 35 V
C8177	2311049A10	2.2 uF, +/-10%; 35V
C8178	2311049A08	1 uF, +/-10%; 35 V
C8179 thru 8191	2113741B69	0.1 uF, +/-5%; 50 V
C8193	2113741B69	0.1 uF, +/-5%; 50 V
C8195 thru 8198	2113741B69	0.1 uF, +/-5%; 50 V
C8200	2113741B33	3300 pF, +/-5%; 50V
C8201	2113740B55	180 pF, +/-5%; 50V
C8202	2113741B45	0.01 uF, +/-5%; 50 V
C8203	2113741B37	4700 pF, +/-5%; 50 V
C8204	2113740B73	1000 pF, +/-5%; 50 V
C8205	0811051A15	0.22 uF, +/-5%; 63 V
C8207	2113740B73	1000 pF, +/-5%; 50 V
C8209 thru 8211	0811051A13	0.1 uF, +/-5%; 63 V
C8213	0811051A13	0.1 uF, +/-5%; 63 V
C8214	2113741B45	0.01 uF, +/-5%; 50 V
C8215,8216	2113741B69	0.1 uF, +/-5%; 50 V
C8218	0811051A15	0.22 uF, +/-5%; 63 V
C8219	2113741B69	0.1 uF, +/-5%; 50 V
C8220	2113740B73	1000 pF, +/-5%; 50 V
C8225	2113741B69	0.1 uF, +/-5%; 50 V
C8230	2113740B57	220 pF, +/-5%; 50 V
C8231	2113741B69	0.1 uF, +/-5%; 50 V
C8300 thru 8303	0811051A11	0.047 uF, +/-5%; 63V
C8304	2311049A19	10 uF, +/-10%; 25 V
C8305,8306	0811051A11	0.047 uF, +/-5%; 63V
C8307	2113740B36	30 pF, +/-5%; 50V
C8400	2113740B18	5.1 pF, +/-0.25 pF; 50V
C8401	2311049A19	10 uF, +/-10%; 25 V
C8402	0811051A15	0.22 uF, +/-5%; 63 V
C8403	2311049A19	10 uF, +/-10%; 25 V
		diode: (see note)
CR801,802	4813833C10	0.1A, 70V
CR803	4805129M41	Rectifier
CR804 thru 807	4813833C10	0.1A, 70V
CR808	4884349P01	Dual Rectifier
CR809	4813833C10	0.1A, 70V
CR1520 thru 1522	4805129M41	Rectifier
CR1523,1524	4813833C10	0.1A, 70V
CR1526,1527	4813833C10	0.1A, 70V
CR1528,1529	4805129M41	Rectifier
CR1530	4813833C10	0.1A, 70V

TLN3386 SSCB Parts List

Reference Symbol	Motorola Part No.	Description
CR1531	4805129M41	Rectifier
CR8100,8101	4883654H01	silicon
CR8102,8103	4813833C10	0.1A, 70V
CR8107	4813833C10	0.1A, 70V
CR8110	4805129M41	Rectifier
CR8112,8113	4805129M41	Rectifier
CR8115,8116	4883654H01	silicon
CR8200 thru 8203	4805129M41	Rectifier
		light emitting diode: (see note)
DS800 thru 803	4888245C22	GRN
DS804	4888245C23	YEL
DS805	4888245C24	RED
DS8200 thru 8202	4882771L03	7-segment display (red)
		hybrid:
HY805	TRN7008A	Display Board
		connector:
J701	2882984N13	plug: 6-contact
J801	2882505T03	plug: 26-contact
J802	2813922A14	HDR 14 POS STR .1 CTR GLD PLTD
J803	2882505T05	plug: 40-contact
J804	2882505T04	plug: 34-contact
J805A	2883547T01	receptacle: 8-contact, right anle
J805B	2883547T01	receptacle: 8-contact, right anle
J806,807	0984231B03	receptacle: phono jack
J812	0983112N01	receptacle: 6-contact
		inductor:
L700	2484386T01	25 UH
L701	2484266T01	150 UH
L702	2484386T01	25 UH
L800	2411047A25	10 UH
L900	2411047A31	CHK RF MLD A/I 33UH
		transistor: (see note)
Q700	4884233T01	type MOSFET
Q705	4813824A17	PNP
Q800	4813824A17	PNP
Q801 thru 807	4813824A10	NPN
Q808	4813824A06	NPN
Q809 thru 811	4813824A10	NPN
Q813,814	4813824A10	NPN
Q816,817	4813824A10	NPN
Q820	4813824A10	NPN
Q821	4800869653	type JFET
Q822,823	4813824A10	NPN
Q1507 thru 1510	4813824A10	NPN
Q8100	4813824A10	NPN
Q8101,8102	4811043B42	TSTR 48R00869919 A/I
Q8200 thru 8207	4813824A17	PNP
Q8208 thru 8210	4813824A06	NPN
Q8211	4813824A10	NPN
Q8212	4813824A06	NPN
		resistor, fixed:
R700	0611077A98	10K, +/-5%; 1/8 W
R701	0611077A88	3.9K, +/-5%; 1/8 W
R702	0611077A50	100 ohms, +/-5%; 1/8 W

	0984728L01	Shorting Jumper: 2-contact (used with JU19)
	0984728L01	Shorting Jumper: 2-contact (used with JU20)
	0984728L01	Shorting Jumper: 2-contact (used with JU21)
	0984728L01	Shorting Jumper: 2-contact (used with JU22)
	1485334U01	Insulator (used w/ Y800)
	2683373P02	HEAT SINK, transistor
	2880001R03	plug: 3-contact (used with JU1)
	2880001R03	plug: 3-contact (used with JU2)
	2880001R03	plug: 3-contact (used with JU3)
	2880001R03	plug: 3-contact (used with JU4)
	2880001R03	plug: 3-contact (used with JU5)
	2880001R03	plug: 3-contact (used with JU6)
	2880001R03	plug: 3-contact (used with JU7)
	2880001R03	plug: 3-contact (used with JU8)
	2880001R03	plug: 3-contact (used with JU9)
	2880001R03	plug: 3-contact (used with JU10)
	2880001R03	plug: 3-contact (used with JU11)
	2880001R03	plug: 3-contact (used with JU12)
	2880001R03	plug: 3-contact (used with JU13)
	2880001R03	plug: 3-contact (used with JU14)
	2880001R03	plug: 3-contact (used with JU15)
	2880001R03	plug: 3-contact (used with JU16)
	2880001R03	plug: 3-contact (used with JU17)
	2880001R03	plug: 3-contact (used with JU18)
	2880001R03	plug: 3-contact (used with JU19)
	2880001R03	plug: 3-contact (used with JU20)
	2880001R03	plug: 3-contact (used with JU21)
	2880001R03	plug: 3-contact (used with JU22)
	2882296R34	plug: 40-contact (used with J800)
	4380054K02	SPACER, support (4 used)
	4884349P01	silicon
	5483865R01	Label, bar code: 1/4" wide, white (2 used)
	5484960T01	Label, bar code: 6.3 x 12.7MM, white (2 used)

Note: For optimum performance, diodes, transistors, integrated circuits, and crystals must be ordered by Motorola part number.

Reference Symbol	Motorola Part No.	Description
		capacitor, fixed:
C701	2113740B57	220 pF, +/-5%; 50 V
C702	2113740B71	820 pF, +/-5%; 50 V
C703	2113740B73	1000 pF, +/-5%; 50 V
C704	2113741B69	0.1 uF, +/-5%; 50 V
C705,706	2311049A19	10 uF, +/-10%; 25 V
C707	2113741B69	0.1 uF, +/-5%; 50 V
C708	2311049A19	10 uF, +/-10%; 25 V
C709	2311049A08	1 uF, +/-10%; 35 V
C710,711	2311049A22	33 uF, +/-10%; 16 V
C712	2311049A19	10 uF, +/-10%; 25 V
C713	2311049A08	1 uF, +/-10%; 35 V
C714	2311049A19	10 uF, +/-10%; 25 V
C715	2113740B49	100 pF, +/-5%; 50 V
C716	2311049A19	10 uF, +/-10%; 25 V
C717	2113741B69	0.1 uF, +/-5%; 50 V
C718	2313748G21	100 uF, +/-20%; 16V
C719	2311049A19	10 uF, +/-10%; 25 V
C720	2113741B69	0.1 uF, +/-5%; 50 V
C721	2311049A22	33 uF, +/-10%; 16 V
C722 thru 725	2113741B69	0.1 uF, +/-5%; 50 V
C800	2113741B45	0.01 uF, +/-5%; 50 V
C801	2113740B59	270 pF, +/-5%; 50V
C802 thru 808	2113741B69	0.1 uF, +/-5%; 50 V
C810	2113741B69	0.1 uF, +/-5%; 50 V
C812	2311049A19	10 uF, +/-10%; 25 V
C814,815	2113740B25	10 pF, +/-5%; 50 V
C817	2113740B65	470 pF, +/-5%; 50 V
C819	2113741B69	0.1 uF, +/-5%; 50 V
C820	2113741B45	0.01 uF, +/-5%; 50 V
C822	2311049A08	1 uF, +/-10%; 35 V
C823 thru 828	2113741B69	0.1 uF, +/-5%; 50 V
C829	2113740B49	100 pF, +/-5%; 50 V
C830	2113741B69	0.1 uF, +/-5%; 50 V
C1543	2113740B73	1000 pF, +/-5%; 50 V
C1544	0811051A13	0.1 uF, +/-5%; 63 V
C1545,1546	2113740B47	82 pF, +/-5%; 50V
C1547	0811017A08	0.01 uF, +/-5%; 50 V
C1548	2113740B76	1500 pF, +/-5 pF; 50V
C1549	2113740B57	220 pF, +/-5%; 50 V
C1551	0811017A05	3300 pF, +/-5%; 50V
C1552,1553	2311049A10	2.2 uF, +/-10%; 35V
C1554	0811017A01	1000 pF, +/-5%; 50 V
C1555	2113740B34	24 pF, +/-5%; 50V
C1556	0811017A01	1000 pF, +/-5%; 50 V
C1557	0811017A08	0.01 uF, +/-5%; 50 V
C1558	2113740B76	1500 pF, +/-5 pF; 50V
C1559	2113740B73	1000 pF, +/-5%; 50 V
C1560	2113740B34	24 pF, +/-5%; 50V
C1561	0811017A05	3300 pF, +/-5%; 50V
C1562	2311049A10	2.2 uF, +/-10%; 35V
C1579	2113740B57	220 pF, +/-5%; 50 V
C8100,8101	2113740B49	100 pF, +/-5%; 50 V
C8102	0811017A08	0.01 uF, +/-5%; 50 V
C8103	0811051A09	0.022 uF, +/-5%; 63 V
C8104	0811017A08	0.01 uF, +/-5%; 50 V
C8105	2313748G25	333 uF, +/-20%; 35V
C8106	0811051A13	0.1 uF, +/-5%; 63 V
C8107	0811051A09	0.022 uF, +/-5%; 63 V
C8108	0811017A08	0.01 uF, +/-5%; 50 V
C8109	2313748G25	333 uF, +/-20%; 35V
C8112	2311049A15	4.7 uF, +/-10%; 35V
C8113	2113740B49	100 pF, +/-5%; 50 V
C8114,8115	2113740B57	220 pF, +/-5%; 50 V
C8116	0811051A15	0.22 uF, +/-5%; 63 V
C8117	2311049A10	2.2 uF, +/-10%; 35V
C8118	2311049A08	1 uF, +/-10%; 35 V
C8119	0811017A05	3300 pF, +/-5%; 50V
C8120	0811017A08	0.01 uF, +/-5%; 50 V
C8121	2113740B57	220 pF, +/-5%; 50 V
C8122,8123	2311049A08	1 uF, +/-10%; 35 V
C8124	0811051A13	0.1 uF, +/-5%; 63 V

Reference Symbol	Motorola Part No.	Description
C8125	2311049A08	1 uF, +/-10%; 35 V
C8126 thru 8130	2113740B49	100 pF, +/-5%; 50 V
C8131 thru 8133	2113740B40	43 pF, +/-5%; 50V

NOTES:

1. Unless otherwise specified, all resistor values are in ohms and capacitor values in microfarads.
2. An asterisk (*) after or a line over a signal name indicates an active low level signal.
3. Parts not included on standard kits, but it may be added for special applications.

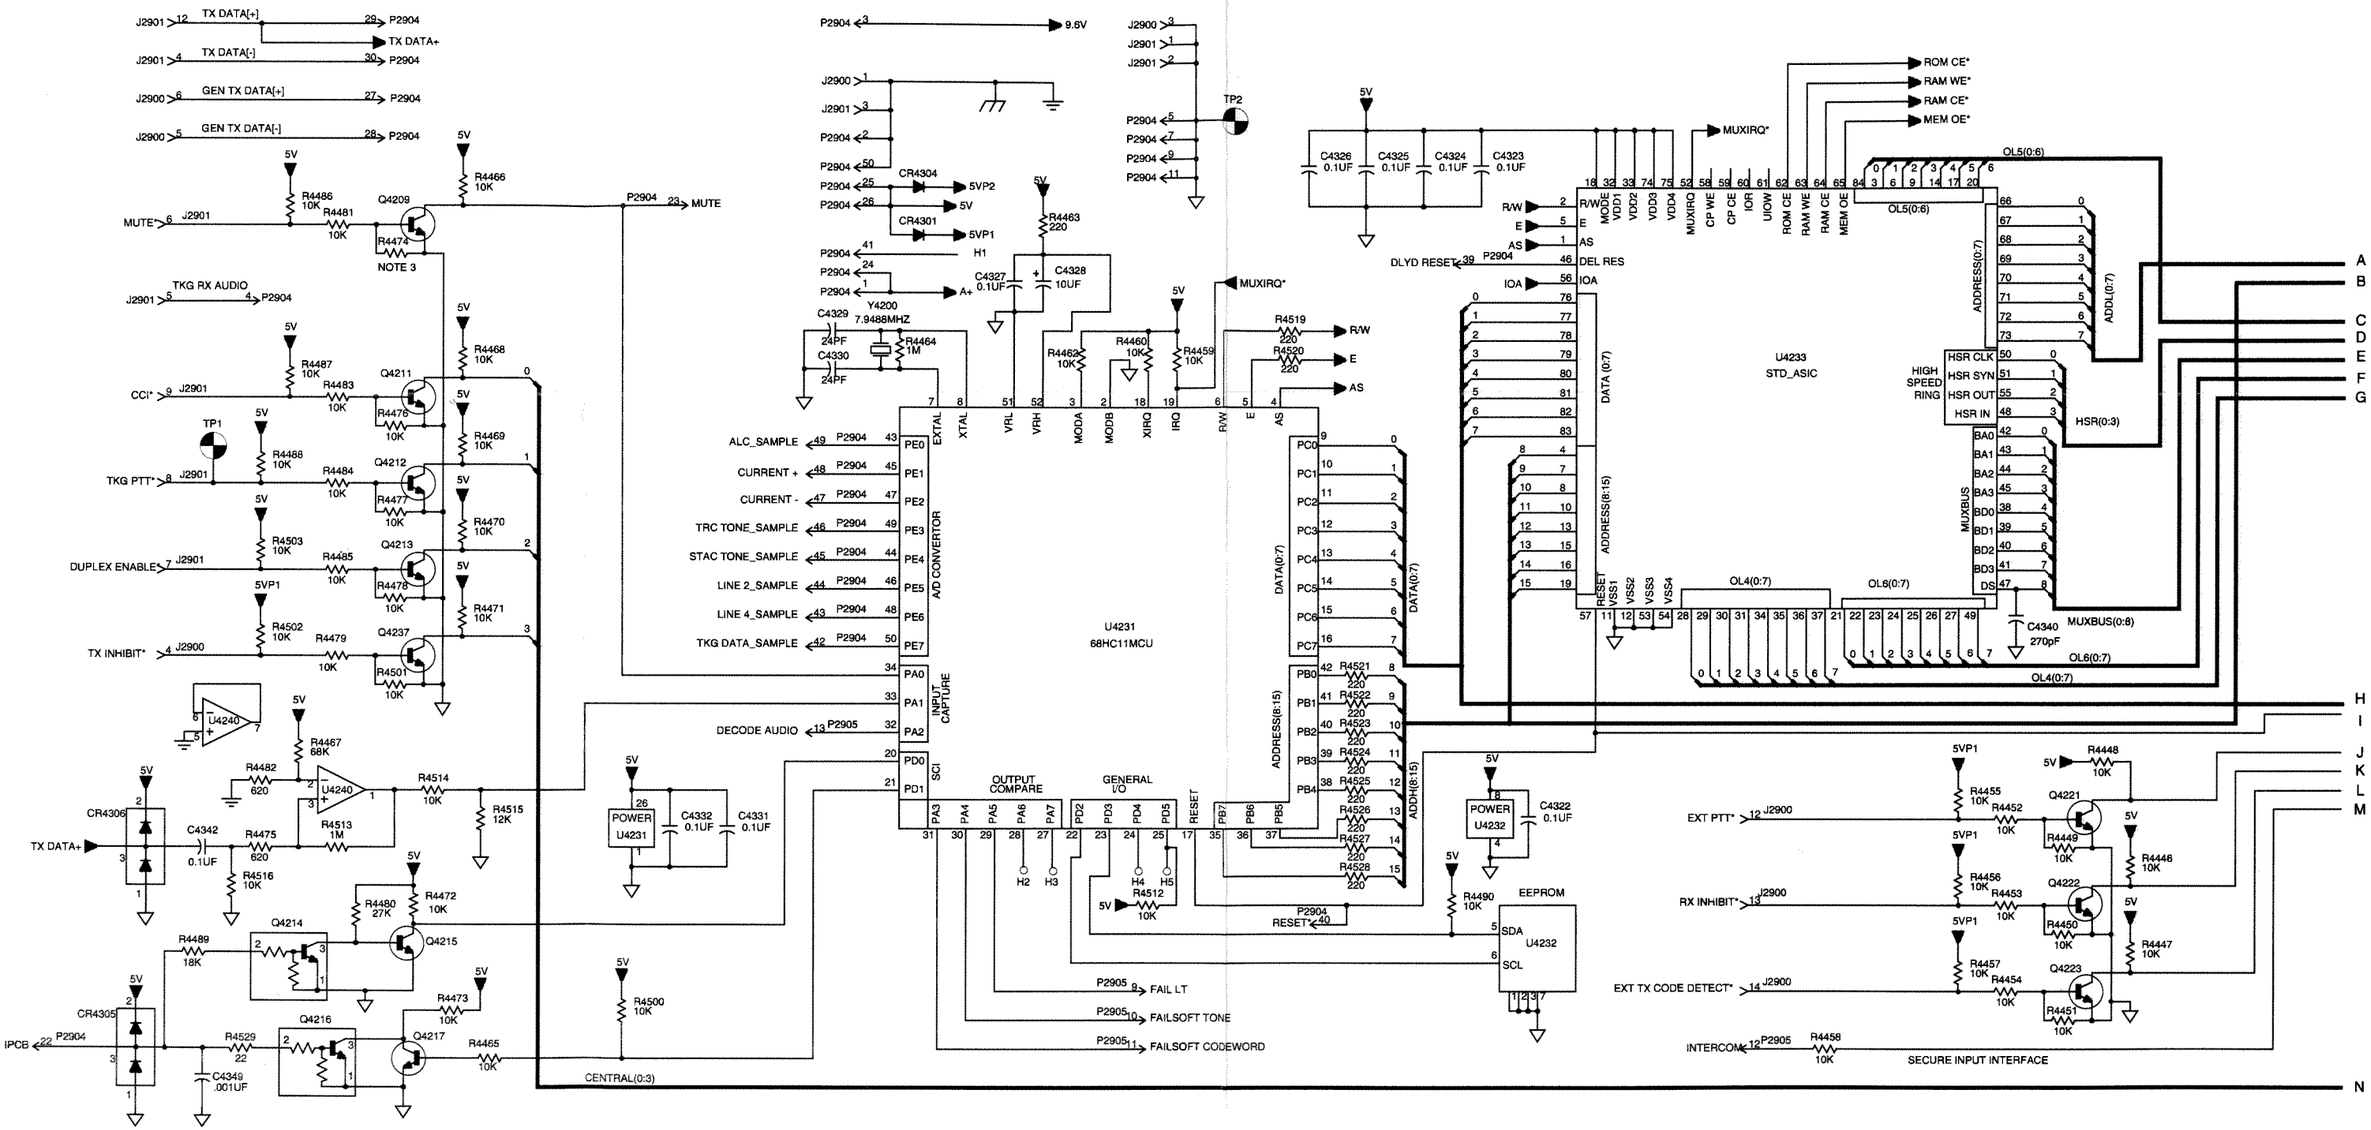
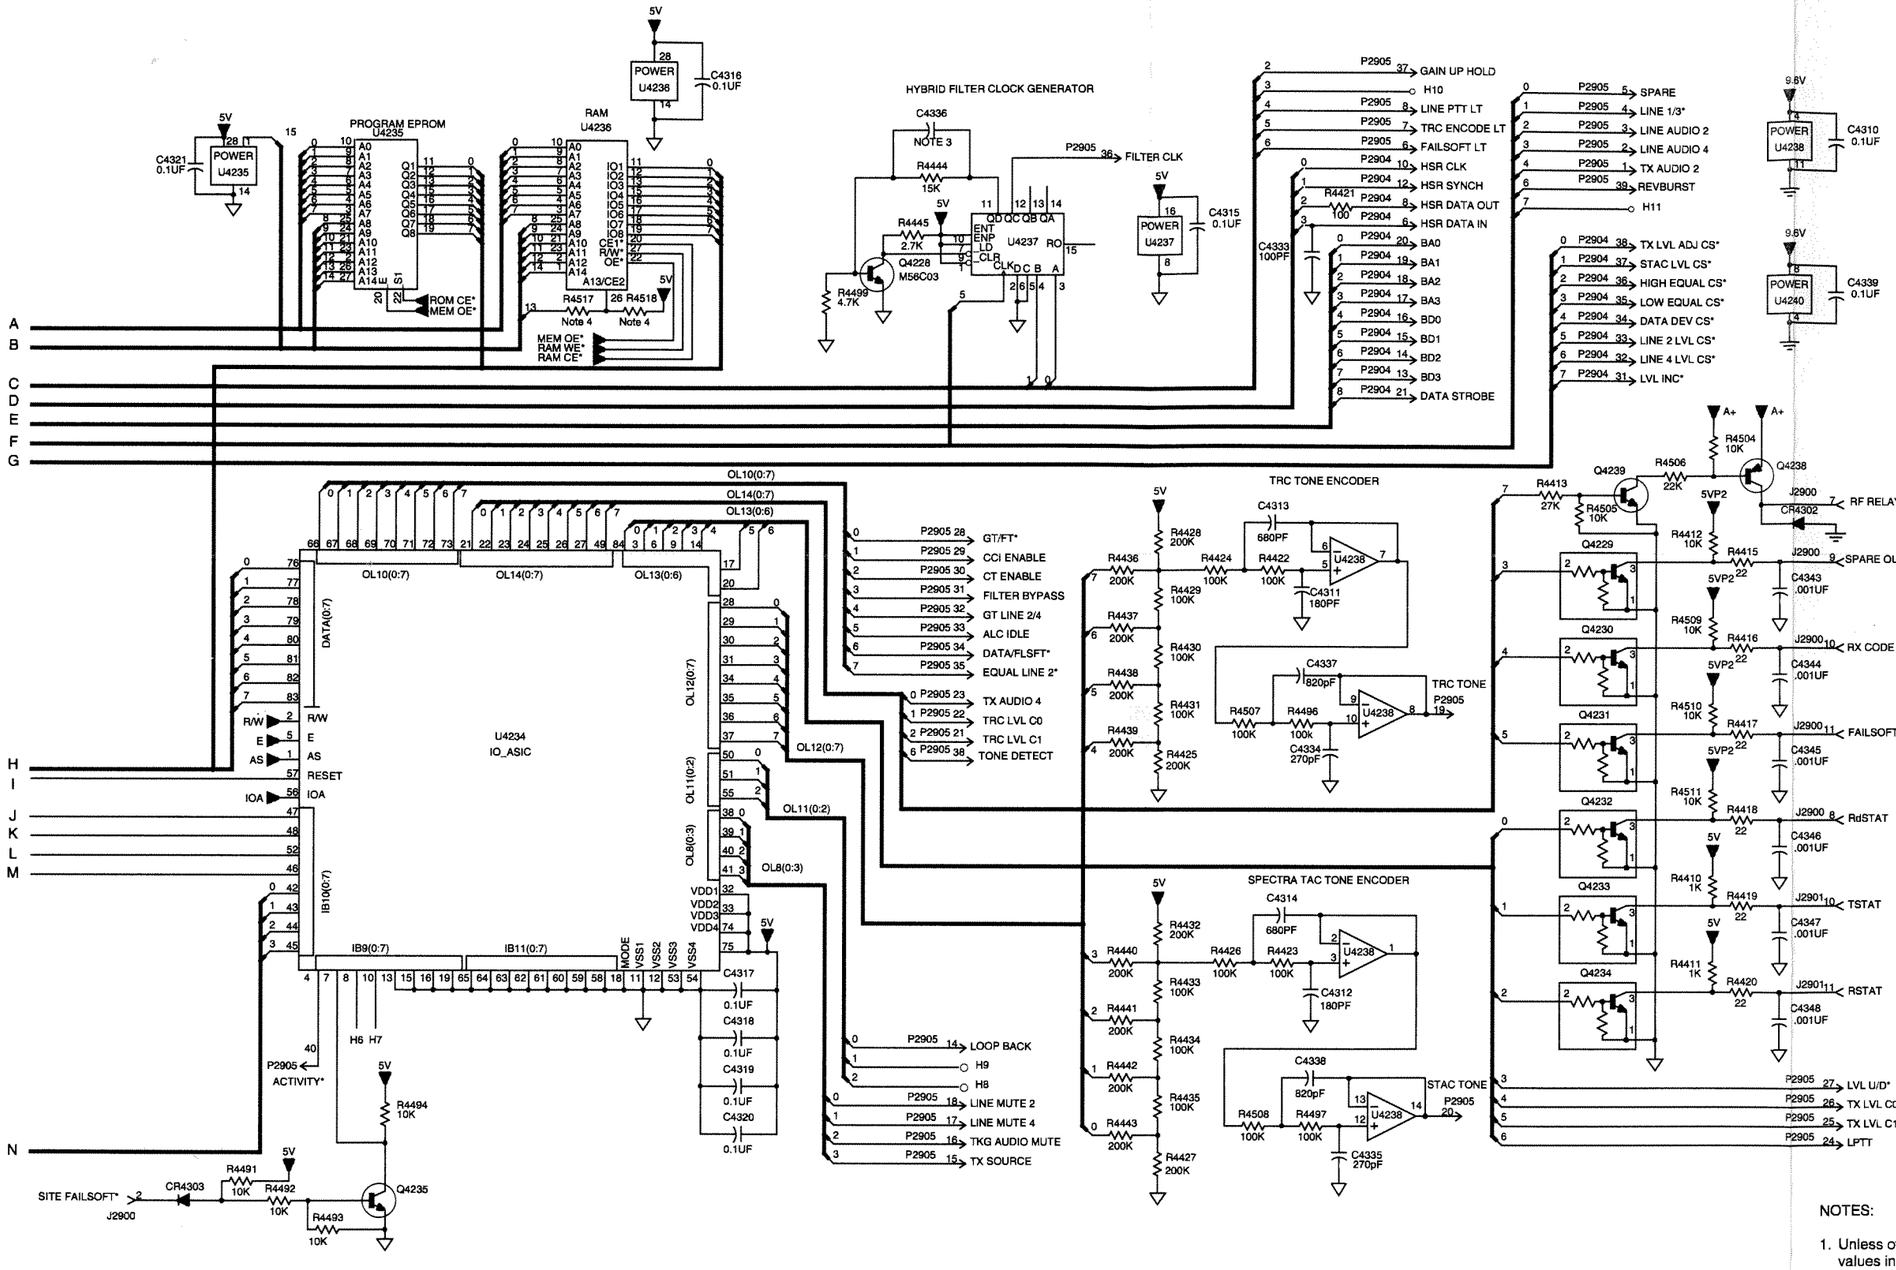
TLN7754 TTRC Logic Board





NOTES:

1. Unless otherwise specified, all resistor values are in ohms and capacitor values in microfarads.
2. An asterisk (*) after or a line over a signal name indicates an active low level signal.
3. Parts not included on standard kits, but it may be added for special applications.
4. R4517 installed and R4518 removed if 51-84064F78 (32k RAM) is installed. R4517 removed and R4518 installed if (8k RAM) is installed.

TLN7754 TTRC Logic Board Parts List

Reference Symbol	Motorola Part No.	Description
		capacitor, fixed:
C4310	2113741B69	0.1 uF, +/-5%; 50 V
C4311,4312	2113740A61	180 pF, +/-5%; 50V
C4313,4314	2113740A75	680 pF, +/-5%; 50V
C4315 thru 4319	2113741B69	0.1 uF, +/-5%; 50 V
C4320	2113740A75	680 pF, +/-5%; 50V
C4321 thru 4327	2113741B69	0.1 uF, +/-5%; 50 V
C4328	2311049A45	10 uF, +/-10%; 35V
C4329,4330	2113740B34	24 pF, +/-5%; 50V
C4331,4332	2113741B69	0.1 uF, +/-5%; 50 V
C4333	2113740A55	100 pF, +/-5%; 50V
C4334,4335	2113740A65	270 pF, +/-5%; 50V
C4336	2113741B69	0.1 uF, +/-5%; 50 V
C4337,4338	2113740A77	0.82 pF, +/-5%; 50V
C4339	2113741B69	0.1 uF, +/-5%; 50 V
C4340	2113740A65	270 pF, +/-5%; 50V
C4342	2113741B69	0.1 uF, +/-5%; 50 V
C4343 thru 4349	2113740A79	1000 pF, +/-5%; 50V
		diode: (see note)
CR4301 thru 4304	4813833C10	0.1A, 70V
CR4305,4306	4813833C05	dual 70V
		connector:
J2900	2813922B14	PLUG, Header; 14-contact
J2901	2813922B12	PLUG, Header; 12-contact
		connector:
P2904	3083139N48	CABLE, Ribbon; 50 pin
P2905	3083139N47	CABLE, Ribbon; 40 pin
		transistor: (see note)
Q4209	4813824A10	NPN

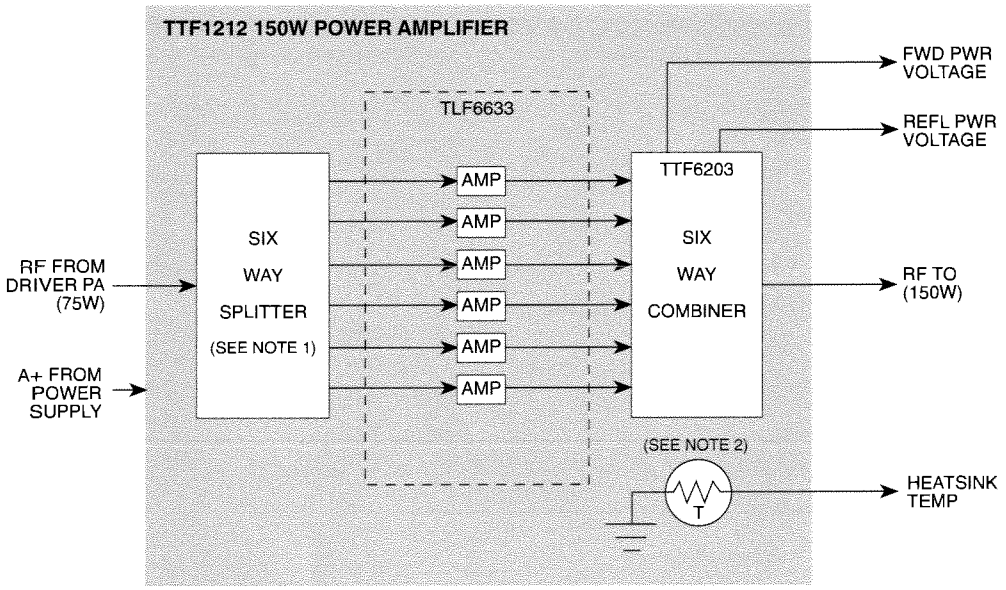
Note: For optimum performance,diodes, transistors, integrated circuits, and crystals must be ordered by Motorola part number.

Power Amplifier

Chapter Overview

This chapter contains block diagrams and replaceable components for the *MSF 5000* Power Amplifiers.

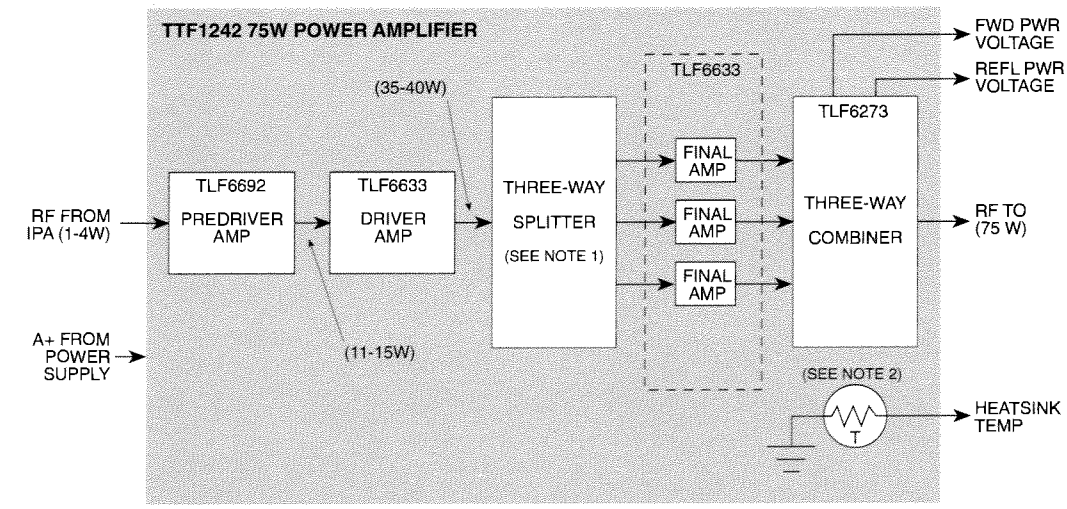
TTF1212 and TTF1242 Power Amplifier



Hardware Kit: TRN7173

NOTES:
1. Part of TRN7173.
2. Part of TRN9386.

MSFS115
050594KOM



Hardware Kit: TRN9840

NOTES:
1. Part of TRN9840.
2. Part of TRN9386.

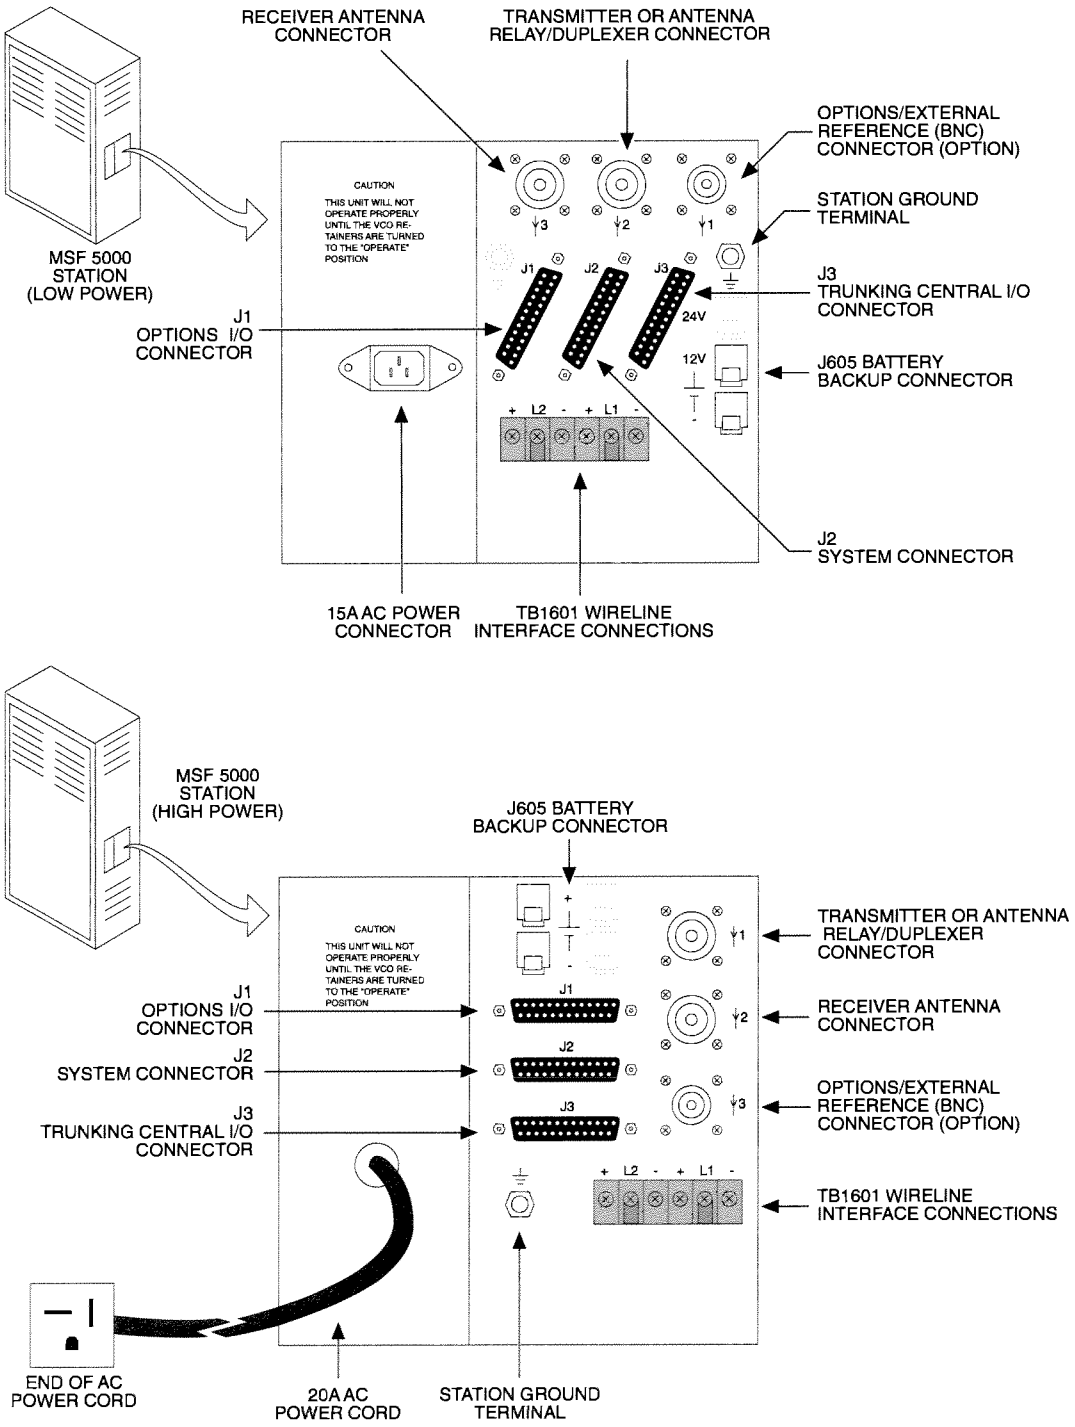
MSFS114
050594KOM

Junction Box

Chapter Overview

This chapter contains component locator and interconnect diagrams for components of the Junction Box.

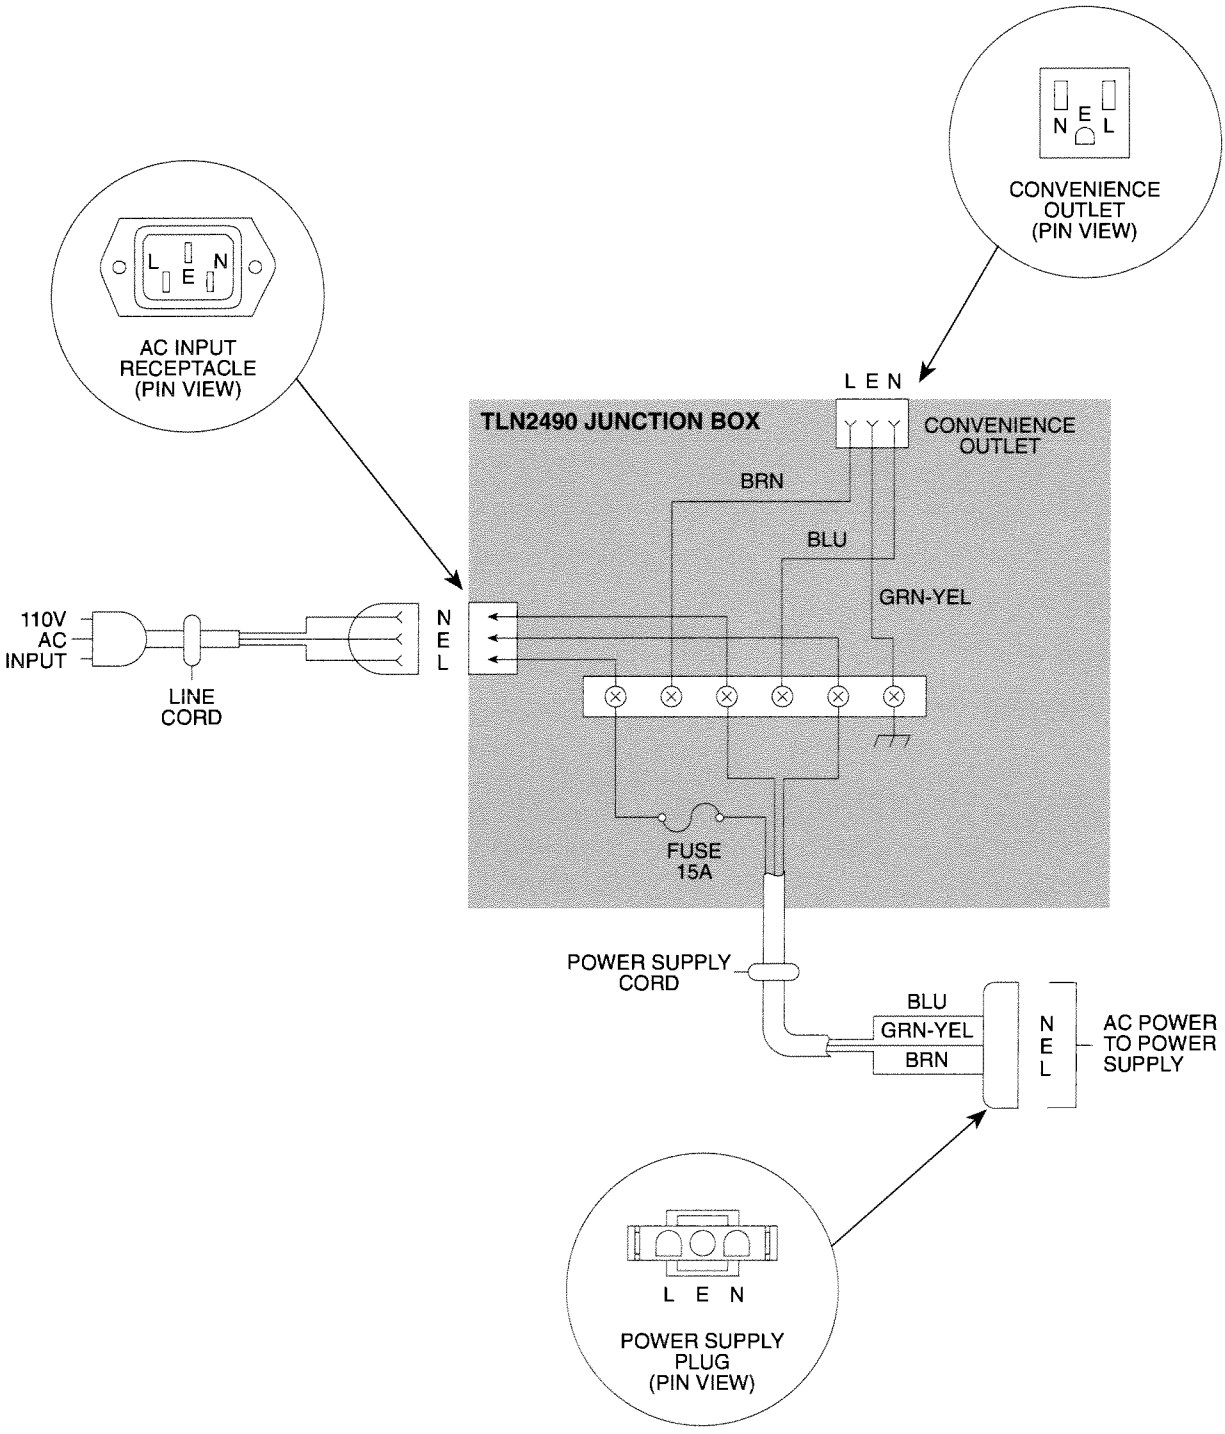
Junction Boxes



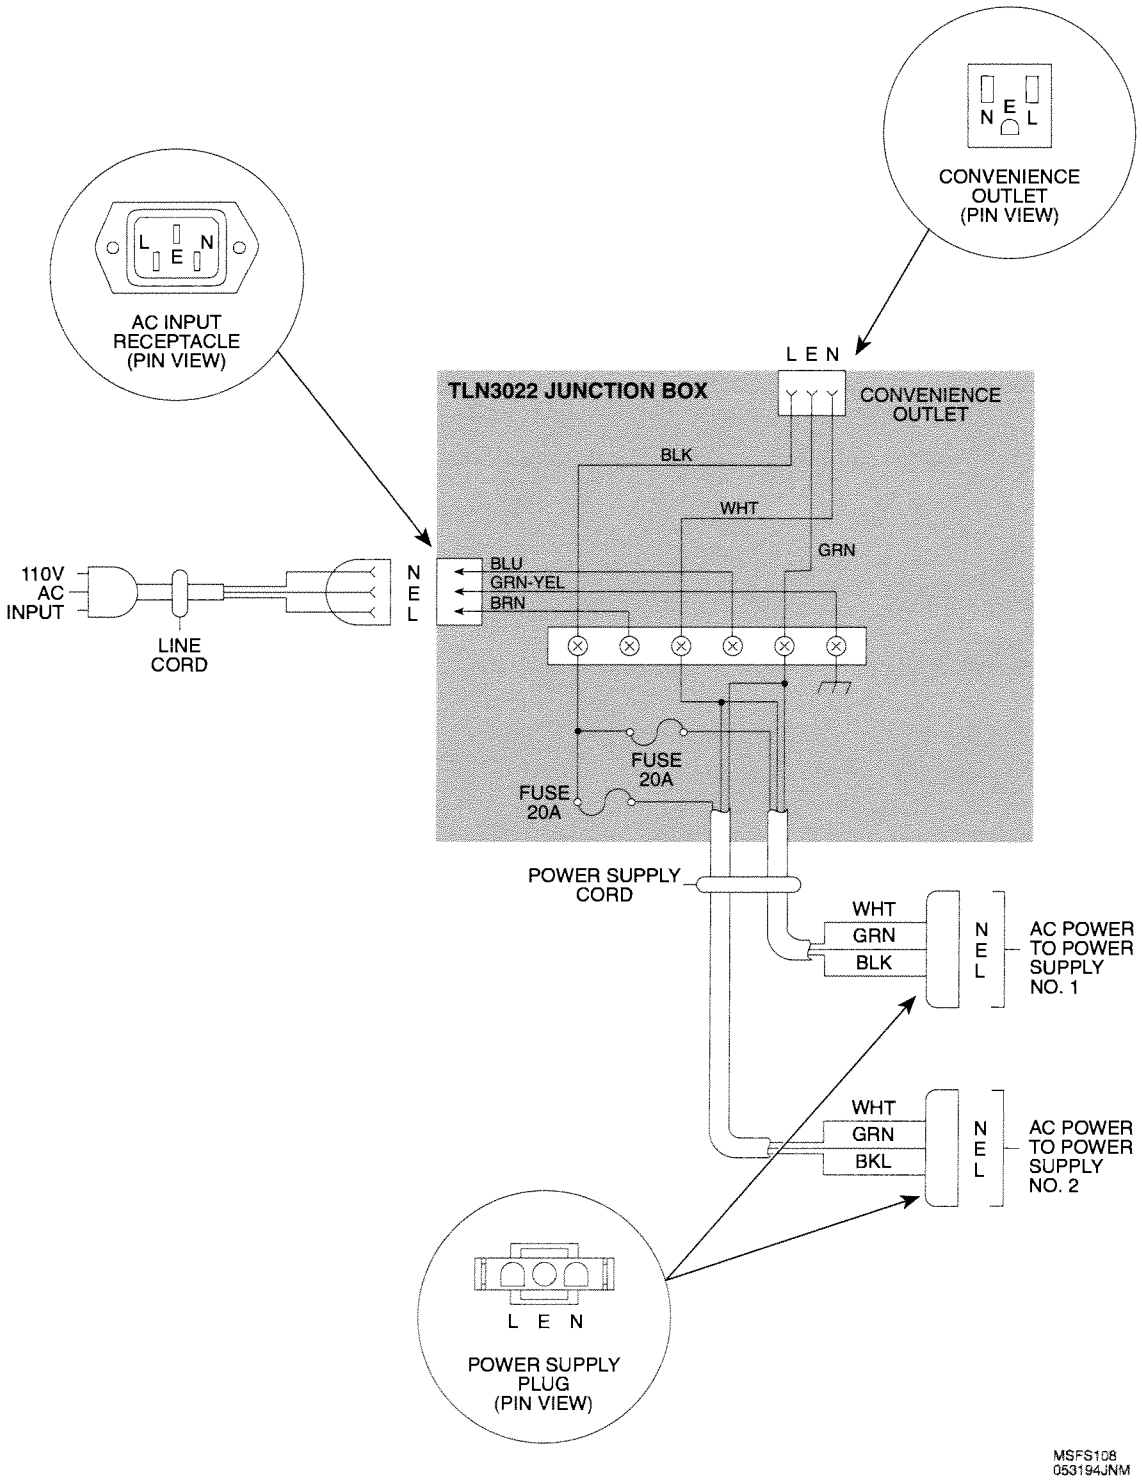
NOTE: Connectors may not be on all stations.
Dashed components (24V connection and ground) are used on VHF models only.

MSFS123
052394KOM

TLN2490 Low Power Junction Box



TLN3022 High Power Junction Box



Power Supply

Chapter Overview

This chapter contains information for power supplies that are available for the *MSF 5000*.

Kit No.	Power Rating (Watts)	Frequency (Hz)	Input Voltage (AC)	Information
TPN1185	500	60	110	Battery Revert
TPN1186	500	60	110	Battery Revert
TPN1200	500	60	110/220	Battery Revert
TPN1217	250	60	110/220	Battery Revert
TPN1218	250	60	110/220	Battery Revert
TPN1260	675	60	110	Dual Output
TPN1261	250	50	110/220	
TPN1263	500	60	110/220	Battery Revert
TPN1264	575	50	110/220	Dual Output
TPN1265	675	60	110/220	Dual Output
TPN1268	500	50	110/220	
TPN1269	500	50	110/220	Battery Revert
TPN1270	250	50	110/220	Battery Revert

TPN1272	575	50	110/220	Battery Revert/Dual Output
TPN1273	675	60	110/220	Battery Revert/Dual Output

Power Supply

The station Power Supply is mounted in the upper half of the cabinet behind the Power Amplifier (PA). The Standard Power Supply is a ferro-resonant type that operates from a nominal 110 volt, single-phase, 60 Hz AC power source. Options are available for 220 Vac, 50 Hz operation, as well as different power levels and DC supplies on selected models.

The Power Supply accepts an AC input voltage and generates DC voltages for the station. Each PA requires a dedicated Power Supply. Low power stations require one Power Supply and high power stations require two Power Supplies. A Battery Charger Power Supply is also available.

The following available power supply options are:

- ❒ 110 or 220 Vac inputs
- ❒ 50 or 60 Hz operating frequencies
- ❒ 250, 500, 575, or 675 watts
- ❒ various output voltages

Refer to the Power Supply manual for a more detailed explanation of power supplies and options.

Standard Power Supply

The Standard Power Supply receives AC power from the Junction Box via the line cord. Refer to Figure 6-1. The Standard Power Supply provides high current A+ (UHF, 800 MHz and 900 MHz Stations) or 28Vdc (VHF Stations) to the PA and two unfiltered +13.8 Vdc (A++) outputs to the station RF Tray.

The Standard Power Supply provides the following features:

- ❒ output regulation
- ❒ filtering
- ❒ short circuit protection
- ❒ current limiting
- ❒ overvoltage protection

Battery Charger Power Supply

The Battery Charger Power Supply receives AC power from the Junction Box via the line cord. Refer to Figure 6-2. The battery charger circuitry permits the station to operate from AC power normally, but provides continued operation from external batteries (emergency power) if the AC power should fail. The Power Supply provides high current A+ to the PA (if installed) and two +13.8 Vdc unfiltered outputs to the RF Tray.

In addition to the features of the standard Power Supply, the Battery Charger Power Supply provides:

- ❒ battery equalization
- ❒ AC line failure detection
- ❒ low voltage battery disconnect (option)

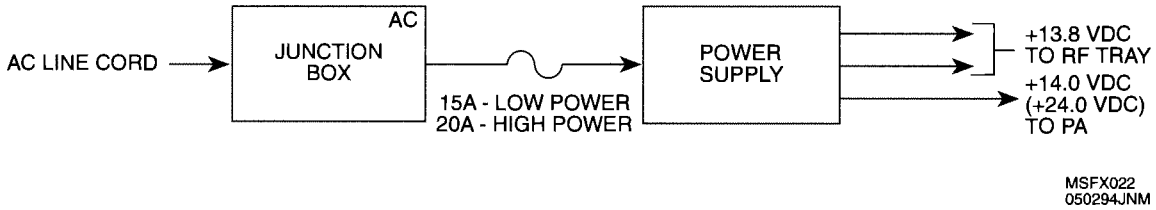

Figure 6-1 ***Standard Power Supply***

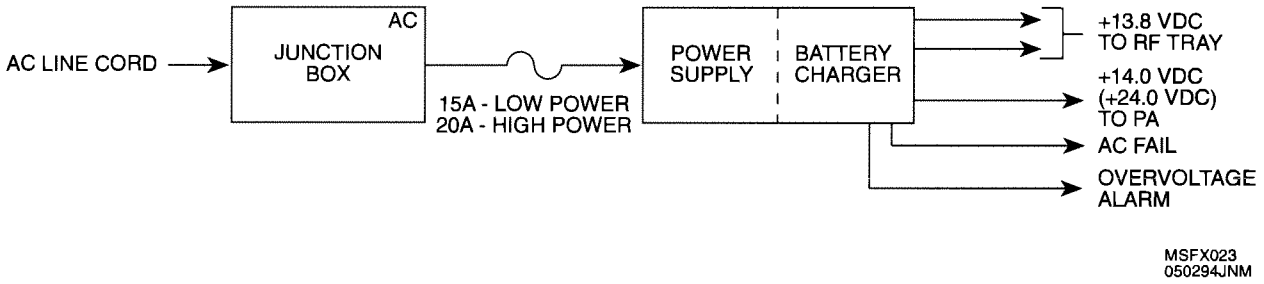

Figure 6-2 ***Battery Charger Power Supply***
