Design

Type S NEMA Contactors and Starters

NEMA Size	Rating (8903 only)
A	Size 00
B	Size 0
C	Size 1
D	Size 2
E	Size 3
F	Size 4
G	Size 5
H	Size 6
J	Size 7

Enclosure

A	NEMA 12 Industrial Use
F	NEMA 1 Flush Mounting General Purpose
G	NEMA 1 General Purpose Surface Mounting
H	NEMA 3R Rainproof
O	Open Style Device (no enclosure)
R	NEMA 7 & 9 Hazardous Environments, Spin Top™
T	NEMA 7 & 9 Hazardous Environments, Bolted
W	NEMA 4 Watertight, 4X Corrosion Resistant

Type S C G 3 V02

Form S

Numerals

Used to designate specific physical arrangements, such as the number of poles, fuse clip size, etc.; but the numbering varies with the Class of the equipment. Consult the Digest listings for the specific device numbers.

Voltage Code

AC operated devices without control transformer

Code	Voltage/Frequency
V01	24/60
V02	120/60 or 110/50
V06	480/60 or 440/50
V07	600/60 or 550/50
V08	208/60

V81: 480 V Primary, 120 V Secondary for units using a fused transformer control circuit (Form F4T)

This is only a partial listing. Consult the Digest page for each product for more options.

Common Forms (factory modifications)

A	Start-Stop pushbuttons in the enclosure cover
C	Hand-Off-Auto selector switch in the enclosure cover
E	Bimetallic overload relays
F4T	Fused transformer control circuit (primary fuses only)
FF4T	Fused transformer control circuit (primary & secondary fuses)
H	Solid-state overload relay (SSOLR)
P1	Red ON pilot light in the enclosure cover
P2	Green OFF pilot light in the enclosure cover
S	Separate control circuit
X01	One normally closed auxiliary contact N.C.
X10	One normally open auxiliary contact N.O.

Consult "Factory Modifications (Forms)" for additional Form designations. When more than one Form is applied to a single device, arrange the Forms in alphanumerical order.

See Motor Overload Protection—Factory Modifications (Forms), page 45 for additional Form designations and Solid-State Overload Relay Forms, page 49 for more information about Motor Logic SSOLRs.

Table 1 - Coil Voltage Codes

Voltage		Code
60 Hz	50 Hz	
24 ¹	—	V01
120	110	V02
208	—	V08
240	220	V03
480	440	V06
600	550	V07
Specify	Specify	V99

NOTE: These are the common voltages, more are available. Contact Schneider Electric at www.schneider-electric.com/us/ for information about other voltage codes.

Table 2 - How to Order

To Order Specify:	Catalog Number			
	Class	Type	Voltage Code	Form(s)
<ul style="list-style-type: none"> • Class Number • Type Number • Voltage Code • Form(s) 	8539	SCG44	V06	AH30P1X11

Description: NEMA Size 1 (10 hp) electronic motor circuit protector (MCP) combo starter in a NEMA 1 enclosure with a 480 V coil, start/stop push button (A), trip-class selectable SSOLR (H30), red pilot light (P1), and 1 N.O. and 1 N.C. auxiliary contact (X11).

Factory Modifications (Forms): Refer to Motor Overload Protection—Factory Modifications (Forms), page 45

Application Data: Refer to Application Data, page 32

Dimensions: Refer to Dimensions, page 55

Separate Enclosures (Class 9991): Refer to Catalog 9999CT9701

Replacement Parts (Class 9998): Refer to Catalog 9999CT9701

Type S Accessories (Class 9999): Refer to Catalog 9999CT9701

IMPORTANT: This information is intended for general interpretation of the catalog numbers. Do not use it to create catalog numbers for this product line.

For more ordering information, refer to the Product Selector at www.schneider-electric.com/us/.

NOTE: The terms *Class*, *Type*, and *Form* do not appear in the catalog number.

Devices are wired from the factory according to customer preference as follows:

- Common control
- Separate control (Form S)
- Control power transformer (CPT)

NOTE: TeSys™ T devices are unwired.

1. 24 V coils are not available on Sizes 4–7. On sizes 00–3, **Form S** (separate control) must be specified.

Class 8502 Type S AC Magnetic Contactors

General Information

Figure 1 - Type SCO2 Size 1, 3-Pole Contactor

Class 8502 Type S magnetic contactors are used to switch heating loads, capacitors, transformers, and electric motors where overload protection is separately provided. Class 8502 contactors are available in NEMA Sizes 00–7. Type S contactors are designed for operation at 600 Vac, 50–60 Hz.

Power Contact Ratings

All Type S contactors and starters are rated in accordance with NEMA standards. The ratings in the selection tables documented later in this documentation are for normal service. For complete data on power contact ratings, refer to Application Data per NEMA Standards ICS-1 and ICS-2, page 36.

Component Parts and Accessories

Holding Circuit Contact

A normally open holding circuit contact for three-wire control is provided on all contactors as standard.

- Sizes 00–2 contactors use a Class 9999 SX11 internal auxiliary contact as the holding circuit contact.
- Sizes 3–7 contactors use a Class 9999 SX6 external auxiliary contact as the holding circuit contact. See Class 9999 for the holding circuit contact electrical ratings.
- Size 00–1 single-phase contactors use a power pole as the holding circuit contact, and therefore has the same rating as the power contacts.

Enclosures

Class 8502 magnetic contactors and Class 8536 magnetic starters are available in the following enclosures:

- NEMA Type 1 General Purpose
- NEMA Type 4 & 4X Watertight and Dusttight Stainless Steel (stainless steel enclosures ship with hubs installed in the top and bottom of the enclosure)
- NEMA Type 4X Watertight, Dusttight, and Corrosion Resistant Glass—Polyester
- NEMA Type 12 Dusttight and Driptight for Industrial Use

The NEMA Type 4 & 4X stainless steel enclosure (Sizes 0-5) has a brushed finish.

Also, NEMA Type 12 devices can be modified for NEMA 3R applications by drilling a 1/8 in. diameter hole in the bottom of the enclosure and using the appropriate watertight conduit hubs.

Separate enclosures are available. See catalog 9999CT9701.

Coil Voltages

AC coils are available for application on 50–60 Hz.

- NEMA Sizes 00–5 contactors and starters are supplied with coils that are designed to operate satisfactorily on line voltages of 85–110% of rated voltage.
- NEMA Size 5–7 contactors and starters are supplied with a DC coil operated by a solid state rectifier circuit that is powered by an AC source and also operate on line voltages of 85%-110%.

Voltage Codes have not been added to the Type designations. You must include the Voltage Code when ordering contactors and starters. In addition, 24 Vac and 120 Vac control, polyphase contactors and starters will be wired for separate control (Form **S**).

Auxiliary Contacts

Additional auxiliary contacts can be added to Type S contactors and starters. See the table *Auxiliary Units—Class 8502 and 8536*, page 41 for maximum number of auxiliary units and table *Form Number of Additional Auxiliary Contacts*, page 42 for Form designations for factory installed auxiliary contacts.

Type S Accessories

Additional accessories such as power poles, pneumatic timer attachments, and cover mounted control stations are available as factory or field modifications.

Class 8536 Type S AC Magnetic Starters

General Information

Figure 2 - Type SCO2 Size 1, Three-Pole Starter with Motor Logic™ SSOLR

Type S magnetic starters are used for full-voltage starting and stopping of AC squirrel cage motors. Class 8536 Type S magnetic starters utilize a Class 8502 contactor design (see **General Information**, page 7 for more information) with direct mounted overload protection. Motor overload protection for three-phase starter applications can be provided through one of four options described in the follows sections.

Solid-State Overload Relay Protection (Motor Logic™ SSOLR)

These ambient-insensitive electronic overload relays are available on Sizes 00–6 and standard on size 7. They provide phase loss and phase unbalance protection. To order, add Form **H30** (for selectable trip class 10 or 20 protection). For more information about Motor Logic SSOLRs, see the overload relay section Solid-State Overload Relay Forms, page 49 or the *Digest*. (Catalog no. example: 8536SCO3V06H30).

Adapted Bimetallic or Solid-State Overload Relay (NEMA size 00-1)

The Adapted Bimetallic or Solid-State motor starter consists of a specially designed adapter that attaches with bus bars to the NEMA Type S contactor and holds the IEC Style overload relay: LRD/LR3D bimetallic or LR9D solid-state. This starter configuration is ordered by adding Form E (adapter only) to the standard catalog number. Based on the FLA of the motor, the LRD, LR3D, or LR9D overload relay can then be purchased separately and installed in the field to operate the starter. For more information, see *Adapted Bimetallic Overload Relay Forms*, page 49 or the *Digest*. (Catalog no. example: 8536SCO3V06E—without overload relay).

TeSys™ T Motor Management System (NEMA sizes 1-6)

TeSys T is a flexible system that integrates seamlessly into your automation system through five major communication protocols. TeSys T can predict what will happen in the process, as it accurately monitors current, voltage, and power over a wide range. For additional information about TeSys T Motor Management System, see the overload relay section TeSys™ T Factory Modifications (Forms), page 51 or the *Digest*.

Melting Alloy Type Thermal Overload Relays

Melting alloy type thermal overload blocks are installed as part of the starter, and thermal elements must be selected and installed separately to operate the starter. For a three-phase motor, three thermal units must be ordered using the Thermal Unit Selection tables in the *Digest*. The catalog number includes no Form number (for example, 8536SCO3V06).

Class 8536 Type S Starter Selection Tables

3-Pole Polyphase—Open or NEMA 1, 4, & 4X

Figure 3 - Type SCO3...S, Size 1, Three-Pole Starter with Motor Logic™ SSOLR

NOTE: In the table 3-Pole Polyphase—600 Vac Maximum—50–60 Hz, with Motor Logic™ SSOLR¹¹, page 17, replace ●●● with the voltage code shown in the table Coil Voltage Codes, page 6 .

For Form H30*, special lower-FLA factory-assembled starter combinations with Motor Logic SSOLR protection are available for certain sizes. See Solid-State Overload Relay Forms, page 49 for more information.

11. To order melting alloy overload relay, remove form "H30" from part number.

Class 8536 Types SB–SD Starters with Auxiliary Load Terminals

Figure 4 - Type SB–SD Starters

Capacitors are sometimes used in motor branch circuits to improve power factor. The Size 0–2 Type SB–SD starters listed in the table 3-Pole Polyphase—600 Vac Maximum—50–60 Hz (devices require three melting alloy thermal units), page 23 include three auxiliary terminals to allow easy connection of power factor correction capacitors. When capacitors are connected using these terminals, no adjustment to the selection of thermal units is necessary. The auxiliary terminals accept 12–16 AWG solid or stranded wire. NEMA Size 3 and 4 starters have provisions for auxiliary connections as a standard. You must supply lugs as necessary.

The Type S starters with auxiliary load terminals can also be used to control two motors simultaneously from a single starter. However, this application is tightly restricted by Section 430-53 of the National Electrical Code. Refer to the NEC for restrictions regarding overload protection, size of controller, and motor branch circuit protection.

3-Pole, Polyphase Starters

NOTE: In the table 3-Pole Polyphase—600 Vac Maximum—50–60 Hz (devices require three melting alloy thermal units), page 23, replace ●●● with the voltage code shown in the table Coil Voltage Codes, page 6 .

For thermal unit selection, refer to the *Digest*.

24. Uses a Size 3 overload relay.

Reversing Magnetic Contactors and Starters

Class 8702 Type S Reversing Contactors

General Information

Figure 5 - NEMA 00, 0, and 1 Reversing Contactor

Class 8702 Type S reversing magnetic contactors are used for starting, stopping, and reversing AC motors where overload protection is separately provided. Class 8702 reversing contactors are available in NEMA Sizes 00–7. Class 8702 reversing contactors consist of two Class 8502 contactors mechanically and electrically interlocked. Open type devices, Sizes 0–5 are available in either horizontal or vertical arrangements. Sizes 00, 6, and 7 are available as horizontal only. Enclosed devices, Size 00–7 use horizontally arranged components. Type S reversing contactors are designed for operation at 600 Vac, 50–60 Hz.

Component Parts and Accessories—Reversing

Enclosures—Reversing

Class 8702 and 8736 reversing magnetic contactors and starters are available in the following enclosures:

- NEMA 1 General Purpose Enclosure
- NEMA 4 and 4X Watertight and Dusttight Stainless Steel (stainless steel enclosures ship with hubs installed in the top and bottom of the enclosure)
- NEMA 12 Dusttight and Driptight for Industrial Use

The NEMA 4 and 4X stainless steel enclosure (Sizes 0–5) has a brushed finish. Sizes 6 and 7 are painted sheet steel and are rated NEMA 4 only.

Also, NEMA 12 devices can be modified for NEMA 3R applications by drilling a 1/8 in. diameter hole in the bottom of the enclosure and using appropriate watertight conduit hubs.

Separate enclosures are available. See catalog 9999CT9701.

File E78351
CCN NLDX

File LR60905
Class 3211-04

Holding Circuit Contact—Reversing

Two normally open holding circuit contacts are provided on all reversing contactors and starters as standard. Sizes 00–2 contactors use a 9999SX11 auxiliary contact as the holding circuit contact. Sizes 3–7 contactors use a 9999SX6 auxiliary contact as the holding circuit contact.

Additionally, two normally closed auxiliary contacts are provided as standard and wired to prevent energization of both coils at the same time. Sizes 00–2 use a 9999SX12 auxiliary contact while Sizes 3–7 use a 9999SX7 auxiliary contact for this purpose.

See catalog 9999CT9701 for the holding circuit contact electrical ratings.

Coil Voltages—Reversing

AC coils are available for application on 50–60 Hz. NEMA Sizes 00–5 are supplied with coils that are designed to operate satisfactorily on line voltages of 85%-110% of rated voltage. NEMA Size 6 and 7 contactors are supplied with a DC coil operated by a solid state rectifier circuit that is powered by an AC source and also operates on line voltages of 85%-110%.

NOTE: The voltage code must be included when ordering contactors and starters. Also, 24 V and 120 V polyphase reversing contactors and starters are wired for separate control.

Mechanical Interlocks—Reversing

Mechanical interlocks are available for replacement or field assembly of Type S reversing contactors and starters (Sizes 00-4 **only**). See catalog 9999CT9701 for additional information.

Auxiliary Contacts—Reversing

Additional auxiliary contacts can be added to Type S reversing contactors and starters. See the table Auxiliary Units — Class 8702 and 8736 Reversing, page 44 for maximum number of auxiliary units and table Form Designations for Factory-Installed Auxiliary Contacts, page 44 for Form designations for factory installed auxiliary contacts. See catalog 9999CT9701 for auxiliary contact kits for field installation.

Type S Accessories—Reversing

Additional accessories such as power poles and cover mounted control stations are available as factory or field modifications.

Class 8702 Type S Reversing Contactor Selection Table

600 Vac Maximum—50–60 Hz

NOTE: In the table 600 Vac Maximum—50–60 Hz, page 27, replace the three bullets (●●●) in the catalog number with the coil voltage code. Refer to the standard coil voltage codes listed in the table Coil Voltage Codes, page 6.

Table 15 - 600 Vac Maximum—50–60 Hz

Class 8736 Type S Reversing Starters

General Information

Figure 6 - NEMA Sizes 00, 0, and 1 Reversing Starter (Horizontal Type)

Figure 7 - NEMA Sizes 00, 0, and 1 Reversing Starter (Vertical Type)

Class 8736 Type S reversing magnetic starters are used for full-voltage starting, stopping, and reversing AC squirrel cage motors. Class 8736 starters consist of one Class 8502 contactor and one Class 8536 starter mechanically and electrically interlocked. Open type devices, Sizes 0–5, are available in either horizontal or vertical arrangements. Sizes 00, 6, and 7 are available as horizontal only. Enclosed devices use horizontally arranged components. Type S starters are designed for operation at up to 600 Vac, 50/60 Hz.

28. NEMA 4 and 4X stainless steel enclosures (sizes 0–5) have a brushed finish. Sizes 6 and 7 are painted sheet steel and are rated NEMA 4 only.
 29. NEMA 4 and 4X stainless steel enclosures are shipped with hubs installed in the top and bottom of the enclosure.
 30. NEMA 12 enclosures can be field modified for outdoor non-corrosive and non-service entrance rated applications. See Enclosures—Reversing, page 25 for more information.

Motor Overload Protection

Motor Logic™ Solid-State Overload Relay (SSOLR) Protection

These ambient-insensitive overload relays are available on three-phase devices, Sizes 00–6, and standard on Size 7. They provide phase loss and phase unbalance protection. To order, add Form **H30** (for selectable trip class 10 or 20 protection). For more information about Motor Logic solid-state overload relays (SSOLRs), see the overload relay section *Solid-State Overload Relay Forms*, page 49 or the *Digest*. (Catalog number example: 8736SCO8V06H30).

Adapted Bimetallic or Solid-State Overload Relay (NEMA Size 00–1)

The Adapted Bimetallic or Solid-State motor starter consists of a specially designed adapter that attaches with bus bars to the NEMA Type S contactor and holds the IEC Style overload relay: LRD/LR3D bimetallic or LR9D solid state. This starter configuration is ordered by adding Form E (adapter only) to the standard catalog number. Based on the FLA of the motor, the LRD, LR3D, or LR9D overload relay can then be purchased separately and installed in the field to operate the starter. For more information, see *Adapted Bimetallic Overload Relay Forms*, page 49 or the *Digest*. (Catalog number example: 8736SCO8V06E—without overload relay).

TeSys™ T Motor Management System (NEMA Sizes 1–6)

TeSys T is a flexible system that integrates seamlessly into your automation system through five major communication protocols. TeSys T can predict what will happen in the process, as it accurately monitors current, voltage, and power over a wide range. For additional information about the TeSys T Motor Management System, see the TeSys™ T Motor Management System section *TeSys™ T Factory Modifications (Forms)*, page 51 or the *Digest* (ordering example: 8736SCO8V06H616).

Melting Alloy Overload Relays

Melting alloy type thermal overload blocks are installed as part of the starter, and thermal elements must be selected and installed separately in order to operate the starter. For a three-phase motor, three thermal units must be ordered using the Thermal Unit Selection tables in the *Digest*. The catalog number includes no Form number (for example, 8736SCO8V06).

Class 8736 Type S Reversing Starters Selection Table

3-Pole Polyphase

NOTE: In the table 3-Pole Polyphase, 600 Vac Maximum, 50–60 Hz, with Motor Logic SSOLR³¹, page 30, replace the three bullets (●●●) in the catalog number with the coil voltage code. Refer to the standard coil voltage codes listed in the table Coil Voltage Codes, page 6.

For Form H30[•], special lower-FLA factory-assembled starter combinations with Motor Logic SSOLR protection are available for certain sizes. See Solid-State Overload Relay Forms, page 49 for more information.

31. To order melting alloy overload relay, remove form "H30" from part number.

32. NEMA 4 & 4X stainless steel enclosures are shipped with hubs installed in the top and bottom of the enclosure.

33. NEMA 12 enclosures can be field modified for outdoor non-corrosive and non-service entrance rated applications. See Enclosures—Reversing, page 25 for more information.

34. NEMA 4 & 4X stainless steel enclosures are shipped with hubs installed in the top and bottom of the enclosure.

35. NEMA 12 enclosures can be field modified for outdoor non-corrosive and non-service entrance rated applications. See Enclosures—Reversing, page 25 for more information.

36. Sizes 6 and 7 are painted sheet steel and are rated NEMA 4 only.

Application Data

Class 8502/8536 Type S Application Data

Replacement Control Transformers Size 6, Type SH and Size 7, Type SJ

**Figure 8 -
Size 6
Starter
8536 SH**

**Figure 9 -
Size 7
Starter
8536 SJ**

Size 6 Type SH and Size 7 Type SJ contactors and starters have a DC coil operated by a solid state rectifier circuit mounted on the device and powered from an AC source. The Size 6 and 7 are equipped as standard with a fused control circuit transformer (Form FF4T) rated 240/480-120 V 60 Hz, 220/440-110 V 50 Hz. The purpose of this transformer is to provide an isolated 120 V 60 Hz, 110 V 50 Hz supply for the control circuit. Size 6 and 7 devices can be ordered for other system voltages by specifying the voltage and frequency desired.

The tables Size 6, Type S Replacement Control Transformers, page 32 and Size 7, Type S Replacement Control Transformers, page 32 list the replacement transformers for Type S Sizes 6 and 7 contactors and starters. To change voltages on these devices, coils are not changed—instead transformers with the desired voltage are changed.

Table 17 - Size 6, Type S Replacement Control Transformers

Voltage		Class 9070 Type
60 Hz	50 Hz	
240/480-120	220/440-110	EO3S2A

240-120	220-110	EO19S2G

Field Conversion for Other System Voltages

Field conversion for other system voltages is accomplished by one of the following methods, **not by the usual practice of changing the coil**:

- If the factory wiring is indicated as being for 480 V 60 Hz, 440 V 50 Hz, conversion to 240 V 60 Hz, 220 V 50 Hz can be accomplished by reconnecting the control transformer as illustrated on the instruction sheet supplied with the controller. This is the same method used for Class 9070 control circuit transformers.

Conversion to any other voltage requires replacement of the control transformer. For other system voltages: i.e. 208, 277, 380, 600 V, a new transformer with single voltage primary must be selected from the tables Size

6, Type S Replacement Control Transformers, page 32 or Size 7, Type S Replacement Control Transformers, page 32. Control transformer connections are illustrated on the instruction sheet supplied with the controller.

- If the factory wiring is indicated as being for any voltage other than 480 V 60 Hz, 440 V 50 Hz, conversion to any other voltage requires replacement of the control transformer. Refer to Size 6, Type S Replacement Control Transformers, page 32 or Size 7, Type S Replacement Control Transformers, page 32.

NOTE:

- The standard transformer that was supplied can be used to power a maximum of five Class 9001 Type K illuminated operators powered with transformer type light modules. When extra capacity to power control relays or other inductive loads is required, a second transformer must be added. Extra capacity can be purchased as Form FF4T with additions in 100 VA increments.
- Standard controllers are wired for common control and can not be converted for operation of the control circuit from a separate source of supply voltage. Controllers designated Form S have special wiring designed for separate control. They are furnished with an isolating transformer, usually having a 120 V primary and 120 V secondary, that must not be bypassed. Form S controllers are not convertible for operation on common control.

Auxiliary Contacts—Type S Sizes 6 and 7

A normally open (N.O.) holding circuit contact and a normally closed (N.C.) auxiliary contact are provided as standard. The holding circuit contact may or may not be required for either 3-wire or 2-wire control. Size 6 and 7 devices have an additional N.C. auxiliary contact which is wired in the coil control circuit—**do not use this N.C. auxiliary contact.**

Maintenance of Equipment

Class 9998 Repair Parts Kits are available for all Class 8502 contactors and Class 8536 starters. Service bulletins with a complete list of replaceable parts are supplied with all enclosed devices. Separate bulletins can be ordered and are listed along with the appropriate contact parts kit.

	575	—	50	—	30	90	104	—	50	86	20	35	10	18	67

- 37. Ratings shown are for applications requiring repeated interruptions of stalled motor current or repeated closing of high transient currents encountered in rapid motor reversal, involving more than five openings or closings per minute and more than ten in a ten-minute period, such as plug-stop, plug-reverse or jogging duty. Ratings apply to single speed and multi-speed controllers.
- 38. Per NEMA Standards paragraph ICS 2-321.20, the service-limit current represents the maximum rms current, in Amperes, which the controller may be expected to carry for protracted periods in normal service. At service-limit current ratings, temperature rises may exceed those obtained by testing the controller at its continuous current rating. The ultimate trip current of over-current (overload) relays or other motor protective devices shall not exceed the service-limit current ratings of the controller.
- 39. **Fluorescent Lamp Loads—300 V and Less**—The characteristics of fluorescent lamps are such that it is not necessary to derate Class 8502 contactors below their normal continuous current rating. Class 8903 contactors may also be used with fluorescent lamp loads. For controlling tungsten and infrared lamp loads, and resistance heating loads, Class 8903 AC lighting contactors are recommended. These contactors are specifically designed for such loads and are applied at their full rating as listed in the Class 8903 (lighting contactors) section.
- 40. Ratings apply to contactors which are employed to switch the load at the utilization voltage of the heat producing element with a duty which requires continuous operation of not more than five openings per minute. Class 8903 Types L and S lighting contactors are rated for resistance heating loads.
- 41. When discharged, a capacitor has essentially zero impedance. For repetitive switching by a contactor, sufficient impedance should be connected in series to limit inrush current to not more than 6 times the contactor rated continuous current. In many installations, the impedance of connecting conductors may be sufficient for this purpose. When switching to connect additional banks, the banks already on the line may be charged and can supply additional available short-circuit current which should be considered when selecting the impedance to limit the current.

Table 20 - Application Data per NEMA Standards ICS-1 and ICS-2 (Continued)

	575	—	600	—	—	810	932	—	450	775	—	—	—	—	600

42. Ratings shown are for applications requiring repeated interruptions of stalled motor current or repeated closing of high transient currents encountered in rapid motor reversal, involving more than five openings or closings per minute and more than ten in a ten-minute period, such as plug-stop, plug-reverse or jogging duty. Ratings apply to single speed and multi-speed controllers.
43. Per NEMA Standards paragraph ICS 2-321.20, the service-limit current represents the maximum rms current, in Amperes, which the controller may be expected to carry for protracted periods in normal service. At service-limit current ratings, temperature rises may exceed those obtained by testing the controller at its continuous current rating. The ultimate trip current of over-current (overload) relays or other motor protective devices shall not exceed the service-limit current ratings of the controller.
44. **Fluorescent Lamp Loads—300 V and Less**—The characteristics of fluorescent lamps are such that it is not necessary to derate Class 8502 contactors below their normal continuous current rating. Class 8903 contactors may also be used with fluorescent lamp loads. For controlling tungsten and infrared lamp loads, and resistance heating loads, Class 8903 AC lighting contactors are recommended. These contactors are specifically designed for such loads and are applied at their full rating as listed in the Class 8903 (lighting contactors) section.
45. Ratings apply to contactors which are employed to switch the load at the utilization voltage of the heat producing element with a duty which requires continuous operation of not more than five openings per minute. Class 8903 Types L and S lighting contactors are rated for resistance heating loads.
46. When discharged, a capacitor has essentially zero impedance. For repetitive switching by a contactor, sufficient impedance should be connected in series to limit inrush current to not more than 6 times the contactor rated continuous current. In many installations, the impedance of connecting conductors may be sufficient for this purpose. When switching to connect additional banks, the banks already on the line may be charged and can supply additional available short-circuit current which should be considered when selecting the impedance to limit the current.
47. For NEMA Size 5 (series B), 6 and 7, the operation rate is as follows: Continuous operation rate is 3 operations per minute maximum; Jogging or Plugging Duty operation rate is 15 operations per minute for a maximum of three minutes.

Table 21 - Maximum Allowable Motor Code Letter

Motor Hp Rating	Maximum Allowable Motor Code Letter
1.5–2	L
3–5	K
7.5 and above	H

The motor ratings in Application Data, page 32 are NEMA standard ratings and apply only when the code letter of the motor is the same as or occurs earlier in the alphabet than what is shown in the table Maximum Allowable Motor Code Letter, page 38. Motors with code letters occurring later in the alphabet may require a larger controller. Consult the Customer Care Center at 1-888-778-2733.

The ratings for capacitor switching in Application Data, page 32 assume the following maximum available fault currents (rms symmetrical amperes):

- NEMA Size 00–3: 5,000 A
- NEMA Size 4–5: 10,000 A
- NEMA Size 6: 18,000 A
- NEMA Size 7: 30,000 A

If the available fault current is greater than these values, connect sufficient impedance in series.

Refer to the instruction material for the actual tested SCCR values.

NOTE: Tables and footnotes are taken from NEMA Standards.

Short Circuit Protection

According to the National Electrical Code branch circuit overcurrent protection must be provided for each contactor or starter. For starters, refer to the instructions provided with the thermal unit selection table. For contactors (Class 8502 or 8702), provide branch circuit overcurrent protection in accordance with the National Electrical Code, except do not exceed the maximum protective device ratings in the table Type S Contactor Maximum Component SCCR, page 38. Observe the size limits in the Circuit Breaker and Fuse columns.

NOTE: The table Type S Contactor Maximum Component SCCR, page 38 lists the maximum SCCR of the component when protected by any circuit-breaker or fuse. If the maximum component SCCR is 100 kA and a 25 kA rated circuit-breaker is used, then the system will be 25 kA, the SCCR rating of the circuit-breaker.

Table 22 - Type S Contactor Maximum Component SCCR

Catalog Number	Standard Motor Ratings, 3 Ø @ 50/60 Hz (hp)				Max. Resistive AC1 Current (A)	NEMA Size	Contactor Max. Component SCCR (kA) 48		Circuit Breakers @ 480 V 49		Fuses @ 600 V	
	200 V	230 V	460 V	575 V			Circuit Breakers @ 480 V 50	Fuses @ 600 V	Max. Breaker Size (A)	Max. SCCR (kA)	Max. Fuse Size (A)	Max. SCCR (kA)
8502SAO12	1.5	1.5	2	2	9	00	100	100 ⁵¹	70	100	60 ⁵²	100
8502SBO2	3	3	5	5	18	0	100	100 ⁵¹	70	100	60 ⁵²	100

53. Ratings apply to circuits with voltages no greater than those listed.

54. When protected by any circuit-breaker, including thermal-magnetic and magnetic-only.

55. When protected by any circuit-breaker, including thermal-magnetic and magnetic-only, meeting the limits in the circuit-breaker size column.

56. When protected by any Class RK5, RK1, T, or J fuse, meeting the limits in the fuse size column.

57. When protected by any Class RK5, RK1, T, or J fuse.

58. When protected by any Class T or J fuse, meeting the limits in the fuse size column.

59. When protected by any Class T or J fuse.

60. Melting Alloy starters are rated short-circuit with no branch protection only, sizes 00–3 rated @ 5kA, size 4–5 rated @ 10kA, size 6 rated @ 18kA, and size 7 rated @ 30kA.

61. When protected by any circuit breaker, including thermal-magnetic and magnetic-only.

62. When protected by any circuit-breaker, including thermal-magnetic and magnetic-only, meeting the limits in the circuit breaker size column.

63. When protected by any circuit-breaker. Refer to TeSys™ D Overload Relays in the *Digest* for ampacity restrictions.

64. When protected by any Class J or CC time-delay fuse. Refer to TeSys D Overload Relays in the *Digest* for ampacity restrictions.

Capacitor Switching

The kilovar ratings of enclosed, three-phase contactors used as switches for capacitor loads, when only one load appears on the secondary of a distribution system, are shown in the table Application Data per NEMA Standards ICS-1 and ICS-2, page 36.

Table 25 - Coil Burden (Mean Values)

NEMA Size	Series	Number of Poles	Inrush VA		Sealed VA		Sealed Watts	
			50 Hz	60 Hz	50 Hz	60 Hz	50 Hz	60 Hz
00	B	2-3	—	165	—	33	—	6

6 ⁶⁵	—	2-3	1495	1780	56	48	27	32
7 ⁶⁵	—	2-3	—	1960	—	59	—	36

Table 26 - Wiring⁶⁶

NEMA Size	Type	Power Terminals		Control Terminals	
		Type of Lug	Wire Range ⁶⁷	Type of Lug	Wire Range ⁶⁷
00, 0, 1	SA, SB, SC	Pressure Wire	14-8 AWG Cu	Pressure Wire	16-12 AWG
2	SD	Box Lug	14-4 AWG Cu	Pressure Wire	16-12 AWG
3	SE	Box Lug	14-0 AWG Cu	Pressure Wire	16-12 AWG
4	SF	Box Lug	8 AWG - 250 MCM Cu	Pressure Wire	16-12 AWG
5	SG	Box Lug	4 AWG - 500 MCM Cu	Pressure Wire	16-12 AWG
6	SH	Parallel Groove	One or two 250-500 MCM per phase Cu	Pressure Wire	16-12 AWG
7	SJ	Parallel Groove	One to four 250-500 MCM per phase Cu	Pressure Wire	16-12 AWG

65. Size 6 and 7 have a DC coil. The values shown are for the AC input to the DC power supply that provides power to the coil.

66. For wire smaller than 250 MCM order lug conversion kit 9999SCU7. The kit contains two lugs for number 2/0 AWG-300MCM (1 or 2 wires per lug).

67. Solid or stranded copper wire.

Auxiliary Units

Auxiliary contacts and power poles can be added by the factory or in the field on all Type S starters and contactors. The table *Auxiliary Units—Class 8502 and 8536*, page 41 shows the maximum number of auxiliary units (**in addition to the holding circuit contact**) that can be added to a given size starter or contactor. In addition, it is possible to add a second internal contact on NEMA Size 0, 1, and 2 contactors and starters.

Table 27 - Auxiliary Units—Class 8502 and 8536

NEMA Size	Type	Number of Poles— Basic Contactor	Maximum Number of External Auxiliary Units (in addition to holding circuit contact)
00	SA	2–3	Four single-circuit auxiliary contacts (N.O. or N.C.) if second internal auxiliary contact is not used.
0–2	SB–SD	1–3	Four single-circuit auxiliary contacts (N.O. or N.C.) ⁶⁸ Two single-circuit auxiliary contacts (N.O. or N.C.) plus one power pole adder (1 or 2 poles, N.O. or N.C.)
		4–5	Two single-circuit auxiliary contacts (N.O. or N.C.)
3–4	SE–SF	2–5	Three single-circuit auxiliary contacts (N.O. or N.C.)
5	SG	2–3	Two single-circuit auxiliary contacts (N.O. or N.C.) plus 1 NEMA Size 0–1 or Size 2 power pole adder (1 or 2 poles, N.O. or N.C.)
6–7	SH–SJ	2–3	Three single-circuit auxiliary contacts (N.O. or N.C.)
			Two single-circuit auxiliary contacts (N.O. or N.C.) plus one NEMA Size 0–1 or Size 2 power pole adder (1 or 2 poles, N.O. or N.C.)

68. When adding four external auxiliary contacts to one Size 0 or 1 contactor, remove one of the return springs.

Factory Installed Auxiliary Contacts

Additional auxiliary contacts can be factory or field added to any Type S contactor or starter. See the table *Auxiliary Units—Class 8502 and 8536*, page 41 for the maximum number of auxiliary units. The table *Form Number of Additional Auxiliary Contacts*, page 42 lists the Form designations for factory installed electrical contacts.

See the *Digest* for field modification kits.

When ordering factory installed auxiliary contacts, use the Form designations listed in the table *Form Number of Additional Auxiliary Contacts*, page 42.

Table 28 - Form Number of Additional Auxiliary Contacts

Number of N.O. Contacts	Number of N.C. Contacts	Form Number
0	1	X01
	2	X02
	3	X03
	4	X04
1	0	X10
	1	X11

Power Poles

Single or double-circuit power pole adders can be factory or field installed on 2- and 3-pole Type S contactors and starters. The table *Power Pole Forms*, page 43 lists the Form designation for factory installed power pole adders. Only one power pole adder may be installed per contactor.

Table 29 - Power Pole Forms

Type	NEMA Size	Class 9999 Type	Form Designation
1 N.O.	0, 1	SB6	Y428
	2	SB11	Y436
1 N.C.	0, 1	SB7	Y429
	2	SB12	Y437
1 N.O., 1 N.C.	0, 1	SB8	Y435
	2	SB13	Y440
2 N.O.	0, 1	SB9	Y430
	2	SB14	Y438
2 N.C.	0, 1	SB10	Y434
	2	SB15	Y439

Control Circuit Transformers

Class 9070 Type TF machine tool control transformers are normally used when it is necessary to provide a lower voltage to the control circuit. This transformer with fused protection can be ordered from the factory by specifying Form FF4T. The addition of a transformer often requires the use of a larger enclosure. The table *Control Transformer Selection*, page 43 shows the transformer selection for starters and contactors with or without auxiliary units.

Table 30 - Control Transformer Selection

NEMA Size	Starter Type	Standard Capacity (Form FF4T)	Additional Capacity		
			50 VA (Form FF4T10)	100 VA (Form FF4T11)	200 VA (Form FF4T12)
Class 9070 Type ⁶⁹					
0, 1	SB & SC	TF100	TF150	TF200	TF300 ^{70 71}
2	SD	TF100	TF150	TF200	TF300
3	SE	TF150	TF200	TF300	TF500
4	SF	TF300	TF300	TF500	T500
5	SG	TF100 and 8501XO20	TF100 and 8501XO20	TF150 and 8501XO20	TF300 and 8501XO20
6	SH	EO3S2 is standard	N/A	EO3FS2 and T100	EO3S2 and TF200
7	SJ	EO19S2 is standard	N/A	EO19S2 and TF100	EO3S2 and TF200

69. Complete the contactor or starter Class and Type with the voltage code. See the transformer section of the *Digest* for information.

70. Requires oversized enclosure. (Size 2 reversing enclosure.)

71. Available in standard enclosure with Mag-Gard™ circuit-breaker and non-fusible disconnect switch. Requires oversized enclosure with thermal-magnetic circuit-breakers and fusible disconnect switches. (Size 2 reversing enclosure.)

Class 8702 /8736 Type S Application Data—Reversing

Auxiliary Units—Reversing

The table Auxiliary Units — Class 8702 and 8736 Reversing, page 44 shows the maximum number of auxiliary units (**in addition to the holding circuit and interlocking contacts**) that can be added to either the forward or reverse contactor or starter.

Table 31 - Auxiliary Units — Class 8702 and 8736 Reversing

NEMA Size (Type)	Number of Poles of Basic Contactor	Maximum number of auxiliary units on each contactor, forward or reverse, (in addition to internal holding circuit and interlocking contacts).
00 (SA)	2 or 3	Two single-circuit auxiliary contacts (N.O. or N.C.)
0, 1 & 2 (SB, SC & SD)	2 or 3	Four single-circuit auxiliary contacts (N.O. or N.C.) When adding four external auxiliary contacts to one Size 0 or 1 contactor, remove one of the return springs.
	4	Two single-circuit auxiliary contacts (N.O. or N.C.)
3, 4, 5, 6, & 7 (SE, SF, SG, SH, SJ)	Any	Two single-circuit auxiliary contacts (N.O. or N.C.)

Factory Installed Auxiliary Contacts—Reversing

Additional auxiliary contacts may be factory or field added to any Type S contactor or starter. See the table Auxiliary Units — Class 8702 and 8736 Reversing, page 44 for maximum number of auxiliary units. The table Form Designations for Factory-Installed Auxiliary Contacts, page 44 lists the Form designations for factory installed auxiliary contacts. See Class 9999 for field modification kits.

Table 32 - Form Designations for Factory-Installed Auxiliary Contacts

		Additional Auxiliary Contacts on R.H. Contactor (Reverse Contactor)					
		Standard (No Additional Auxiliary Contacts)	1 N.O.	1 N.C.	2 N.O.	1 N.O.-1 N.C.	2 N.C.
Additional Auxiliary Contacts on L.H. Contactor (Forward Contactor)	Standard (No Additional Auxiliary Contacts)	—	X0010	X0001	X0020	X0011	X0002
	1 N.O.	X1000	X1010	X1001	X1020	X1011	X1002
	1 N.C.	X0100	X0110	X0101	X0120	X0111	X0102
	2 N.O.	X2000	X2010	X2001	X2020	X2011	X2002
	1 N.O.-1 N.C.	X1100	X1110	X1101	X1120	X1111	X1102
	2 N.C.	X0200	X0210	X0201	X0220	X0211	X0202

Auxiliary Contact Units

Additional auxiliary contact units can be added to the Size 4 and 5 reversing contactors in the field. A maximum of two units can be added to the Size 4; a maximum of one unit can be added to the Size 5. No additional units can be added to the Size 6, however, 1 N.O. (normally open) circuit and 1 N.C. (normally closed) circuit are available on each forward and reverse contactor for customer use.

Motor Overload Protection—Factory Modifications (Forms)

Full Voltage Starters

Factory installed modifications are available for the classes of control equipment listed in the respective tables. Kits are also available for many field modifications and normal parts replacement on most control items. Refer to Classes 9998 and 9999 for complete listings.

NOTE:

- Standard equipment dimensions and enclosure construction may not apply when certain special features are added. Such cases should contact the factory, with complete description, when precise dimensions are required.
- If a UL label is required, consult the Customer Care Center at 1-888-778-2733. Some Forms are not UL Listed.

Full Voltage Starters Forms

Table 33 - Full Voltage Starters Forms

Hand-Off-Auto	173, 4, 4X, 12	C	

72. All push-buttons are momentary contact unless specified otherwise.
 73. Selection of various Form combinations may force the use of a larger enclosure.
 74. Specify the appropriate Class 9001 Type K or SK operator required.
 75. Not available for Size 00.
 76. Specify the marking and/or the required Class 9001 Type KN or SKN operator required.
 77. Indicate the pilot light color as Form P1 (red), Form P2 (green) and so forth, as shown in the table Pilot Light Forms, page 46. Unless otherwise requested, standard practice is to wire a red pilot light to indicate that the device is energized. No additional auxiliary contact is required. In addition, standard practice is to wire a green pilot light to indicate that the device is de-energized. An additional normally closed auxiliary contact is supplied. A wiring diagram must be provided for other pilot light colors or arrangements.
 78. To determine the maximum number of auxiliary contacts that can be added to each Type S device, and for the appropriate X Form, refer to the table Auxiliary Units—Class 8502 and 8536, page 41 (for non-reversing single-speed devices) or the table Auxiliary Units — Class 8702 and 8736 Reversing, page 44 (for reversing or two-speed devices). For Class 8600 reduced voltage controllers, consult the Customer Care Center at 1-888-778-2733.

Selection of Control Circuit Transformers

The standard primary/secondary voltages for control circuit transformers are indicated in the table *Control Circuit Transformer Codes*, page 48.

To order, select the desired device with the appropriate transformer Form designation. Then convert the previously selected voltage code (V●●) to reflect the desired primary/secondary voltage for the transformer. The secondary voltage should equal the previously selected coil voltage of the device.

For Example:

You have selected 8536SDG1V02S. V02S means that you need a coil voltage of 120-60/110-50 wired for separate control. You want to add **Form FF4T**, with transformer voltages of 480 V primary, 120 V secondary, and solid-state overload

85. All combination style devices—such as Class 8538, 8539, 8738, and 8739—that use **Form S** should also use **Form Y74** (auxiliary contact installed on the disconnect switch) in accordance with NEC Article 430-74.
 86. Not available for Sizes 6 and 7.
 87. See *Selection of Control Circuit Transformers*, page 47.
 88. Single primary voltage must be specified.

relay protection with selectable Class 10/20 trip class—Form **H30**. (The Form designations needed are **FF4**, **H30**, and **T**.)

The new and complete Class, Type, voltage code, and Form number are shown in the following table:

Table 36 - Example of the Transformer Form Designation Results

Class	Type	Voltage Code	Form ⁸⁹
8536	SDG1	V81	FF4H30T

Marine Control Form

Table 37 - Marine Control Form

Class	Factory Modification	Enclosure Type	Form
8502 8536 8538 8539 8702 8736 8738 8739 8810 8941	Modification of standard device for use as marine control in accordance with UL508 ⁹⁰	12/3R 4/4X (stainless steel only)	M10

Control Circuit Transformer Codes

Table 38 - Control Circuit Transformer Codes

AC-Operated Devices With Control Transformers	
Voltage	Code
60 Hz (Primary–Secondary)	
120–12 ⁹¹	V88
120–24 ⁹¹	V89
208–120	V84
240–24 ⁹¹	V82
240–120	V80
277–120	V85
480–24 ⁹¹	V83
480–120	V81
480–240	V87
600–120	V86
Specify	V99

89. Specify Form numbers in alphabetical order. Each letter indicates the beginning of a new Form and may be followed by one or more numbers.

90. Not available for NEMA Sizes 0, 00, or 7. NEMA Sizes 00 and 0 cannot be used with marine controls.

91. 12 V coils are not available on Sizes 3–7. 24 V coils are not available on Sizes 4–7.

Solid-State Overload Relay Forms

The solid-state overload relay (SSOLR) is available on NEMA Size 00–7. For Class 8536, 8538, 8539, 8736, 8738, 8739 and 8810 devices.

Form Description

Special Factory-Assembled SSOLR/Contactor Size Combinations (When Applicable):

- (must be specified on Size 00 starter orders)
 Blank: Overload relay matched to the starter size (for example, Size 1 contactor and 9-27 A overload relay)
 0: 6–18 A overload relay on the starter size indicated by the starter catalog number
 1: 9–27 A overload relay on the starter size indicated by the starter catalog number
 2: 15–45 A overload relay on the starter size indicated by the starter catalog number
 3: 30–90 A overload relay on the starter size indicated by the starter catalog number
 4: 45–135 A overload relay on the starter size indicated by the starter catalog number
 8: 1.5–4.5 A overload relay on the starter size indicated by the starter catalog number (only offered on Feature Units)
 9: 3–9 A overload relay on the starter size indicated by the starter catalog number

Special note for Class 8810 devices:

You **must** specify two separate Form numbers to get Motor Logic overload relays on two-speed starters.

- The catalog number will be alphanumeric. Example:
- Open style, Size 4 two speed starter with Motor Logic SSOLRs
 - Single winding, 460 V, constant or variable torque
 - High speed FLA = 96 A
 - Low speed FLA = 27 A (use Size 2 overload relay)
- Catalog number to order: **8810SF01V02H30H302S**
 Where:
- Form H30 is a Size 4 contactor with a 45–135 A Motor Logic SSOLR for high speed
 - Form H302 is a 15–45 A Motor Logic SSOLR on the low speed contactor.

Size 7 comes standard with the Motor Logic SSOLR, Class 10/20 (Selectable). No Form designation is required.

Table 39 - Special Factory-Assembled Starter Combinations with Motor Logic SSOLR Protection

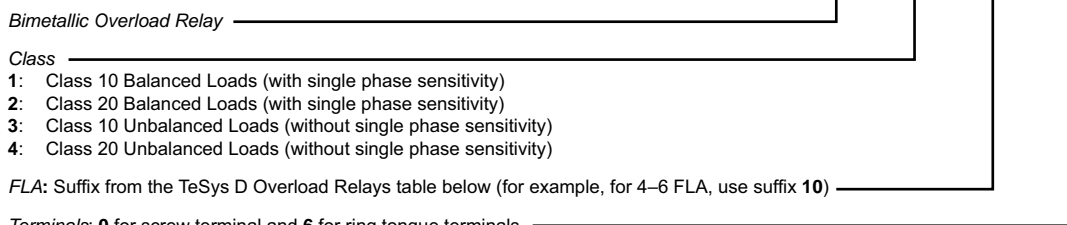

NEMA Contactor Size	SSOLR Size						
	00		0	1	2	3	4
	1.5–4.5 A	3–9 A	6–18 A	9–27 A	15–45 A	30–90 A	45–135 A
00	H308	H30	—	—	—	—	—
0	H308	H309	H30	—	—	—	—
1	H308	H309	H300	H30	—	—	—
2	—	H309	H300	H301	H30	—	—
3	—	—	—	—	—	H30	—
4	—	—	—	—	—	—	H30

Adapted Bimetallic Overload Relay Forms

Table 40 - Adapted Bimetallic Overload Relay for NEMA Type S Starter

This bimetallic overload relay is available on NEMA Sizes 00, 0, and 1 for Class 8536, 8538, 8539, 8736, 8738 and 8739 devices. To order a starter with the **adapter only**, add Form E to the catalog number (8536SBG2V02ES). When ordering with the adapter and bimetallic overload relay installed, use table TeSys D Overload Relays for Sizes 00–1 Type S Starters, page 50 as a guide.

Form Description

Sample catalog number: **8536SCO3V02E2160S**

NEMA Size 1 starter controlling a 7.5 hp motor (11 FLA)—Bimetallic overload relay is LRD16L (9–13 FLA)

Table 41 - TeSys D Overload Relays for Sizes 00–1 Type S Starters, Non-Reversing and Reversing, Classes 8536, 8538, 8539, 8736, 8738, and 8739

Current Setting Range Amperes	Class 20 with Single-Phase Sensitivity	Class 20 without Single-Phase Sensitivity	Class 20 with Single-Phase Sensitivity	Class 20 without Single-Phase Sensitivity	Factory Installed —Catalog Number Suffix (CP1 List)
	Screw Termination	Screw Termination	Ring Tongue Connector	Ring Tongue Connector	
0.40–0.63	LRD04L	LR3D04L	LRD04L6	LR3D04L6	04
0.63–1	LRD05L	LR3D05L	LRD05L6	LR3D05L6	05
1–1.6	LRD06L	LR3D06L	LRD06L6	LR3D06L6	06
1.6–2.5	LRD07L	LR3D07L	LRD07L6	LR3D07L6	07
2.5–4	LRD08L	LR3D08L	LRD08L6	LR3D08L6	08
4–6	LRD10L	LR3D10L	LRD10L6	LR3D10L6	10
5.5–8	LRD12L	LR3D12L	LRD12L6	LR3D12L6	12
7–10	LRD14L	LR3D14L	LRD14L6	LR3D14L6	14
9–13	LRD16L	LR3D16L	LRD16L6	LR3D16L6	16
12–18	LRD21L	LR3D21L	LRD21L6	LR3D21L6	21
17–24	LRD22L	LR3D22L	LRD22L6	LR3D22L6	22
23–32	LRD32L	LR3D32L	LRD32L6	LR3D32L6	32

NOTE: For tripping class 10:

- With screw termination, remove the **L** from the end of the above part number (for example, LRD32 is a class 10 bimetallic overload relay with a 23–32 A setting range).
- With a ring tongue connector, change the **L6** to **6** at the end of the above part number (for example, LRD326 is a class 10 bimetallic overload relay with a 23–32 A setting range).

Solid-State TeSys D Overload Relays for Type S Starters

Sizes 00–1, Non-Reversing (Classes 8536, 8538, 8539) and Reversing (Classes 8736, 8738 and 8739)

NOTE:

- **Field installed only:** The LR9D Overload Relay cannot be factory installed, it must be purchased separately and field installed.
- **Single-phase motor applications:** When using the LR9D with a single-phase motor, you must purchase the 3-pole starter to accommodate looping of the motor leads.

Current Setting	Overload Relay Catalog Number (sold separately)
Range Amperes	Trip Class 5/10/20/30 Dip Switch Selectable

	Ammeter and switch with two current transformers	1	G92	—	X	X	X	X	X	X	X
	Ammeter and switch with three current transformers	1	G93	—	X	X	X	X	X	X	X
	Voltmeter mounted	1	G94	—	X	X	X	X	X	X	X
	Voltmeter and switch mounted	1	G95	—	X	X	X	X	X	X	X
	Elapsed time meter	1, 12	G97	X	X	X	X	X	X	X	X
	Operation counter	1, 12	G99	X	X	X	X	X	X	X	X
Auxiliary Contacts	Additional starter (contactor) auxiliary contacts (Specify number of additional N.O. or N.C. contacts required per contactor.) Each will be X●● (for example, X01).	Any	X	X	X	X	X	X	X	X	X
	To determine the maximum number of auxiliary contacts that can be added to each Type S device, and for the appropriate X Form, refer to the tables in the Class 8536 section in <i>Auxiliary Units</i> , page 41 (for non-reversing single-speed devices). For Class 8600 Reduced Voltage controllers, consult Customer Care Center at 1-888-778-2733.										

94. If the controller has a control transformer, price that transformer with additional capacity for the relay provided.

95. Specify the control and line voltage.

96. The motor hp and voltage must be specified when placing an order. Meters are panel-mounted in NEMA 12 enclosures.

6 ¹⁰¹	8502, 8536	SHW	All	Form FF4T is supplied as standard. Refer to Replacement Control Transformers Size 6, Type SH and Size 7, Type SJ , page 32.							

101. Size 6 and 7 are sheet steel enclosures and are rated NEMA 4 only.

102. Stainless steel enclosures are shipped with hubs installed in the top and bottom of the enclosure.

General Information

Class 8502 Type W non-reversing vacuum contactors are used to switch capacitors, transformers and electric motors where overload protection is separately provided. Type W vacuum contactors are designed for operation at 600 V, 50/60 Hz.

By design, these contactors are well suited for heavy-duty applications in harsh environments. The power contacts are sealed in ceramic tubes, called vacuum interrupters or vacuum bottles, where the air has been evacuated. Arc quenchers are not required because any arc formed between opening contacts is not sustained due to the presence of the vacuum. The arc is extinguished when the current crosses zero after the contacts are opened, therefore the arc typically does not survive more than one half cycle. There is one vacuum interrupter or bottle per pole, therefore a three pole contactor has three vacuum interrupters or bottles. The power contacts are not affected by ambient conditions or contamination. This provides for long life and reliable operation in harsh applications.

Auxiliary Contacts - Vacuum Contactors

An auxiliary contact block, Class 9999 Type WX11, with one normally-open contact and normally-closed contact is used with the Size 4, 5, and 6 vacuum contactors.

115. Power terminal lugs are not supplied on Size 5 and 6 contactors. The values in the table reflect those for the Size 5 and 6 lug kits, Class 9999 Type LUW5 and LUW6 respectively.
 116. Solid or stranded copper wire.

Auxiliary Contact Units - Vacuum Contactors

Auxiliary contact units can be added in the field. Auxiliary Contact Units, page 77 shows the maximum number of units that may be added to a given size contactor (in addition to the coil auxiliary contact).

NOTE: In Class 8502—Full Voltage, 3–Pole Vacuum Contactors, page 78, replace the three bullets (●●●) in the catalog number with the coil voltage code. Refer to the standard coil voltage codes listed in Coil Voltage Codes, page 6.

Altitude

The vacuum contactor is designed to tolerate normal barometric pressure variances up to 6600 ft above sea level. If the contactor is to be used above 6600 ft above sea level, please consult the factory.

Termination Means

The Size 4 vacuum contactor is supplied with line and load side lugs. The Size 5 and 6 vacuum contactors are supplied without line and load side lugs. Class 9999 Type LUW5 and LUW6 lug kits are available for the Size 5 and 6 contactors. These kits include six lugs and the necessary mounting hardware.

Figure 29 - Class 8502 Type WF

Figure 30 - Class 8502 Type WG

Figure 31 - Class 8502 Type WH

Class 8502 Type V Vacuum Contactors

General Information

Figure 32 - Class 8502 Type VF

The Class 8502 Type V vacuum contactor is a 3-pole device rated 1500 V that meets UL508 (1.5 kV) and CSA standards. Vacuum technology offers long life and low maintenance in a compact, lightweight design. The contactor is suitable for contaminated atmospheres because the main contacts are sealed in vacuum bottles. In addition, since gravity is not used to assist contactor operation, the Class 8502 contactor can be mounted in any plane without special modifications. Type V vacuum contactors are designed for the control of inductive or non-inductive loads at voltages from 200–1500 Vac.

For How to Order Information, see Catalog Interpretation, Type S Starters, page 5.

NOTE: In Class 8502—Full Voltage 3 Pole Vacuum Contactors, page 81, replace the three bullets (●●●) in the catalog number with the coil voltage code. Refer to the standard coil voltage codes listed in Coil Voltage Codes, page 6.

Class 8536 Type W Vacuum Starters

General Information

Class 8536 Type W non-reversing vacuum starters are used to switch electric motors where overload protection is not separately provided.

Type W vacuum starters are designed for operation at 600 V, 50/60 Hz. Starters are available exclusively with Motor Logic™ solid-state overload relay (SSOLR), Class 10/20 selectable.

For How to Order Information, see Catalog Interpretation, Type S Starters, page 5 and How to Order, page 6.

NOTE:

In Class 8536—Full Voltage Vacuum Starters, page 84, replace the three bullets (●●●) in the catalog number with the coil voltage code. Refer to the standard coil voltage codes listed in Coil Voltage Codes, page 6.

Reversing Vacuum Contactors

Class 8702 Type W Vacuum Contactors

General Information

Figure 40 - Class 8702 Type W Reversing Vacuum Contactor

Class 8702 Type W reversing vacuum contactors are used to switch capacitors, transformers, and electric motors where overload protection is separately provided. Type W reversing vacuum contactors are designed for operation at 600 V, 50/60 Hz.

By design, these contactors are suited for heavy-duty applications in harsh environments. The power contacts are sealed in ceramic tubes, called vacuum interrupters or vacuum bottles, where the air has been evacuated. Arc quenchers are not required because any arc formed between opening contacts is not sustained due to the presence of the vacuum. The arc is extinguished when the current crosses zero after the contacts are opened. Therefore, the arc typically does not survive more than one half cycle. There is one vacuum interrupter or bottle per pole, so a 3-pole contactor has three vacuum interrupters or bottles. The power contacts are not affected by ambient conditions or contamination. This provides for long life and reliable operation in harsh applications.

Altitude—Reversing, Class 8702 Type W

The reversing vacuum contactor is designed to tolerate normal barometric pressure variances up to 6600 ft above sea level. If the contactor is to be used above 6600 ft above sea level, please consult the factory.

Termination Means—Reversing, Class 8702 Type W

The Size 4 reversing vacuum contactor is supplied with line and load side lugs. The Size 5 and 6 reversing vacuum contactors are supplied without line and load side lugs. Class 9999 Type LUW5 and LUW6 lug kits are available for the Size 5 and 6 contactors. These kits include six lugs and the necessary mounting hardware.

Auxiliary Contacts—Reversing, Class 8702 Type W

An auxiliary contact block, Class 9999 Type WX11 with one normally open contact and normally closed contact, is used with Size 4, 5, and 6 vacuum contactors.

Selection Tables—Full Voltage Reversing Vacuum Contactors

NOTE: In the table Class 8702 Full Voltage Reversing Vacuum Contactors (Horizontal Only) 3-Pole Polyphase—600 Vac Maximum—50–60 Hz, page 87, replace the three bullets (●●●) in the catalog number with the coil voltage code. Refer to the standard coil voltage codes listed in Coil Voltage Codes, page 6. Replacement coils are listed in Replacement Coils for Class 8702 Reversing Contactors, page 88.

Description	Voltage	Make	Break
9999WX11, 9999WXO1	120–600 Vac	7200 VA	720 VA
	72–120 Vac	60 A	720 VA
	28–72 Vac	60 A	10 A
	28–300 Vac	28 A	28 VA

Class 8702 Full Voltage Reversing Vacuum Contactors (Horizontal Only) 3-Pole Polyphase—600 Vac Maximum—50–60 Hz

In the table Class 8702 Full Voltage Reversing Vacuum Contactors (Horizontal Only) 3-Pole Polyphase—600 Vac Maximum—50–60 Hz, page 87, replace the three bullets (●●●) in the catalog number with the coil voltage code.

Refer to the standard coil voltage codes listed in Coil Voltage Codes, page 6. Replacement coils are listed in the table Replacement Coils for Class 8702 Reversing Contactors, page 88.

Table 83 - Class 8702 Full Voltage Reversing Vacuum Contactors (Horizontal Only) 3-Pole Polyphase—600 Vac Maximum—50–60 Hz

NEMA Size	Enclosed Ampere Rating	Motor Voltage	Maximum Horsepower	Open Style
				Type
4	135	200	40	WFO3●●●
		230	50	
		380	75

Replacement Coils for Class 8702 Reversing Contactors

Table 84 - Class 9998—Replacement Coils for Class 8702 Reversing Contactors

Size	Type	Poles	Class and Type	Suffix Number (Complete Coil Number Consists of Class and Type Followed by Suffix Number)			
				120 V 110 V	240 V 220 V	480 V 440 V	600 V 550 V
4	WF	All	9998WF	120	240	480	600
5	WG		9998WG	120	240	480	600
6	WH		9998WH	120	240	480	600

Vacuum Contactor Kits

Table 85 - Class 9999—Vacuum Contactor Kits

Use With		Kit Description	Catalog Number
Type	Size		
WF-WH	4-6	Auxiliary Contacts, Non-Convertible 1-N.O. and 1-N.C. Isolated Contacts	9999WX11
WF	4	Coil Circuit Auxiliary Contacts 1-N.O. and 1-N.C. Isolated Contacts, Delayed Break 1-N.C. Isolated Contact	9999WCX11
WG-WH	5-6		9999WLX01
WG	5	Lug Kits (6) lugs included	9999LUW5
WH	6		9999LUW6
