Updated PK-411 Series Programming Software Released

September 8, 2006
Document FLTB06-09-2

Dear Business Leader:

This bulletin is to advise you that FireLite has released the updated UL ninth edition versions of the 411UD and 411UDAC. When the PK-411 companion programming software for these products is used, it is imperative that customers use the latest version of programming software that is listed for use with the ninth edition versions. **Older versions of software are not compatible and may cause improper signals to be sent to central stations.** This software is now released as a separate program within Part Number PK-CD. This can now be ordered from customer service. However, a free upgrade of just the PK-411 programming tool may be downloaded from the following hidden link: http://www.firelite.com/pktools/PK411UD3.0_setup.zip. Unzip this using PKUNZIP to extract the file to a directory of your choice. Run the setup.exe and the program will install into your default program directory. The file is quite large (18MB) so a high speed connection is preferred.

Note: the new PK-CD software does not yet contain the latest version of PK-Tools for the new MS-9200UDLS. We are working hard to release this within the next two weeks. Please watch www.firelite.com for updated bulletin information concerning this release.

If you need additional information or assistance, please contact Firelite tech support at our Technical Service Department.

Hours: Monday through Friday 8:00AM - 5:00PM Eastern Standard Time
Phone: 1-800-627-3473 to speak to a technician

Sincerely,

Nick Martello
FireLite Marketing Director
