Section 1—Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Conflict Minerals Disclosure

In accordance with Rule 13p-1 promulgated under the Securities Exchange Act of 1934, as amended, and this Specialized Disclosure Report on Form SD (this “Form”), Juniper Networks, Inc. has filed a Conflict Minerals Report, which is attached as Exhibit 1.01. A copy of this Form and the Conflict Minerals Report are publicly available at <https://www.juniper.net/us/en/company/citizenship-sustainability/supply-chain/#tab=dtabs-4>.

The content of any website referred to in this Form, including any exhibit hereto, is included for general information only and is not incorporated by reference in this Form.

Item 1.02 Exhibit

The Conflict Minerals Report described in Item 1.01 is filed as Exhibit 1.01 to this Form SD.

Section 2—Exhibits

Item 2.01 Exhibits

Exhibit No.	Description
Exhibit 1.01	Conflict Minerals Report for the calendar year ended December 31, 2019.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Juniper Networks, Inc.
(Registrant)

By: /s/ Brian M. Martin
Name: Brian M. Martin
Title: Senior Vice President,
General Counsel and Secretary

Date: May 29, 2020

Juniper Networks, Inc.
Conflict Minerals Report For The Year Ended December 31, 2019

This Conflict Minerals Report (this “Report”) for Juniper Networks, Inc. (the “Company”, “Juniper”, “our” or “we”) covers the reporting period from January 1, 2019 to December 31, 2019, and is presented in accordance with Rule 13p-1 promulgated under the Securities Exchange Act of 1934, as amended, and Form SD (collectively, the “Rule”). The Rule imposes certain reporting obligations on U.S. Securities and Exchange Commission (“SEC”) registrants whose manufactured products contain conflict minerals that are necessary to the functionality or production of their products. The term “conflict minerals” is defined in the Rule as (A) cassiterite, columbite-tantalite (coltan), gold, wolframite, and their derivatives, tin, tantalum, tungsten, and gold (collectively, the “3TGs”); or (B) any other mineral or its derivatives determined by the Secretary of State to be financing conflict in the Democratic Republic of the Congo (“DRC”) or any adjoining country that shares an internationally recognized border with the DRC (collectively, the “Covered Countries”). The adjoining countries include: the Republic of the Congo, the Central African Republic, South Sudan, Rwanda, Uganda, Zambia, Burundi, Tanzania and Angola.

Throughout this Report, whenever a reference is made to any document, third-party material or website (including Juniper’s website), such reference does not incorporate information from such document, material or website into this Report, unless expressly incorporated by reference herein.

Overview

Company Overview

Juniper designs, develops and sells products and services for high-performance networks to enable customers to build scalable, reliable, secure and cost-effective networks for their businesses, while achieving agility and improved operating efficiency through automation.

Product Overview

The Company sells high-performance network products and service offerings across routing, switching, and security technologies to customers within its verticals: Cloud, Service Provider, and Enterprise.

Supply Chain Overview

Juniper manufacturing and operations manage relationships with our global supply chain, which includes our contract manufacturers, original design manufacturers, components suppliers, warehousing and logistics. Our contract manufacturers and original design manufacturers in all locations are responsible for all phases of manufacturing, from prototypes to full production and assist with activities such as material procurement. Given our downstream position in the supply chain, such that we do not have any direct relationships with the smelters or refiners in our supply chain, we rely on our first-tier suppliers to provide information about the sources of 3TG used in our products.

Industry Alignment Overview

Since 2011, Juniper has supported the development of industry tools and programs that provide a common means to report or collect due diligence information on the source and chain of custody of 3TG through our membership in the Responsible Minerals Initiative (the “RMI”). The RMI is a recognized industry coalition focused on addressing and advancing the responsible sourcing of 3TG in the supply chain. Through the RMI and its workgroups, the Due Diligence Practices Team, Sensing and Prioritization Team, Smelter Engagement Team and Blockchain Team, Juniper has been actively engaged and continues to work with industry peers in an effort to ensure that our reasonable country of origin inquiry (“RCOI”) and due diligence processes are aligned with industry approaches. The primary objective of this alignment is to help ensure that the 3TG in our in-scope products are sourced responsibly.

Through our participation in the RMI, we seek to maximize the efficiency and effectiveness of our efforts to identify 3TG smelters and refiners in our supply chain and to encourage their participation in the RMI's Responsible Minerals Assurance Process (the "RMAP"). The RMAP is a voluntary initiative in which an independent third-party validates smelter and refiner due diligence management systems, in line with the Organisation for Economic Cooperation and Development ("OECD") Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, Third Edition (the "Guidance"). As it is a standardized protocol, we, along with other participants in the electronics industry, rely on the RMAP or equivalent industry-wide programs for audits of 3TG smelters and refiners.

Additionally, through the RMI and its workgroups, Juniper monitors the social, health and safety, and human rights impacts of the industry's efforts to promote responsible sourcing in the Covered Countries and uses that information to inform our compliance program.

In order to avoid negative impact on the livelihoods of those in the mining communities in the Covered Countries, we do not embargo the sourcing of 3TG from the Covered Countries and encourage our suppliers to continue to responsibly source 3TG from the Covered Countries.

Products Covered by this Report

The Company determined that 3TGs were necessary to the functionality or production of products that we manufactured or contracted to be manufactured during the 2019 calendar year. We determined that only our routing, switching, and security hardware products that are being manufactured were in-scope of the Rule, based on the criteria that they contain components which may contain one or more of the 3TGs that are necessary to the functionality or production of the products.

For further information concerning our products, see the subheading "Products, Services and Technology" in "Item 1. Business" of our Annual Report on Form 10-K for the year ended December 31, 2019, filed with the SEC on February 20, 2020.

The products covered by this report, and the other information contained herein, do not include the hardware products from the Mist acquisition, which are excluded under the transition exemption in this rule.

Reasonable Country of Origin Inquiry

RCOI Overview and Process

Juniper was required to undertake a RCOI with respect to the necessary 3TG in its in-scope products that is reasonably designed to determine whether any of the necessary 3TG originated in any of the Covered Countries and whether they were not from recycled or scrap resources. Based on our RCOI design, we surveyed suppliers that provide physical components that become part of our end products or provide manufacturing services for our end products (collectively, "direct suppliers"), including those direct suppliers that are internally categorized as preferred or strategic. Preferred and strategic direct material suppliers are those that provide what are identified as the most critical technologies and can have a broad impact across Juniper. For the reporting period covered by this Report, the direct suppliers surveyed (the "Surveyed Suppliers") represented an aggregate of 99% of our total direct materials expenditures in 2019.

To determine whether necessary 3TG in our products originated in the Covered Countries, we retained Assent Compliance ("Assent"), our third-party service provider, to assist us in surveying our Surveyed Suppliers and provide an analysis of the resulting data. We utilized the then latest revision of the RMI's Conflict Minerals Reporting Template ("CMRT") to conduct a survey of all Surveyed Suppliers through Assent's platform. Some of our other compliance activities described in this Report were performed on our behalf by Assent.

We requested that all Surveyed Suppliers complete a CMRT, and we provided training and educational materials to assist such suppliers on best practices and the completion of the CMRT. The training program was intended to help ensure the quality and completeness of the CMRTs received from the Surveyed Suppliers. Assent monitored and tracked all communications via its data management platform. Both Juniper and Assent contacted Surveyed Suppliers that were initially unresponsive in completing a CMRT.

Automated data validation was performed on all submitted CMRTs. This helped to identify contradictory answers in CMRTs, informed our follow-up with Surveyed Suppliers and we believe ultimately increased the accuracy of submissions. Data validation was based on completion of questions in the CMRT and on an analysis of internal consistency among responses in the CMRT. Following the data validation process, CMRTs were accepted and classified as valid or invalid. Surveyed Suppliers that submitted an invalid CMRT, where contradictory or incomplete information was provided, were contacted and requested to resubmit a valid and complete form. Unresolved contradictory or incomplete information impacts the accuracy and completeness of Juniper's smelter and refiner list.

Based on data collected through May 8, 2020, 90% of the Surveyed Suppliers, representing approximately 90% of our total direct material expenditures in 2019, submitted a CMRT.

RCOI Results

Our RCOI identified 301 known smelters and refiners that appear on the lists maintained by the RMI that may have been in our 2019 supply chain. Based on Juniper's RCOI, we concluded that 143 of these smelters and refiners sourced 3TG entirely from outside of the Covered Countries, including from recycled or scrap sources. We determined that 13 of the identified smelters and refiners sourced 3TG in whole or in part from within the Covered Countries, but all 13 of these smelters and refiners were designated as "Conformant" by the RMAP (as defined on Appendix A). Juniper's conclusions concerning the origin of 3TG are based on information provided by the RMI to its members.

For the 2019 reporting period, Juniper was unable to determine the origin of at least a portion of the necessary 3TG in its in-scope products. None of the necessary 3TG contained in its in-scope products were determined to directly or indirectly finance or benefit armed groups in a Covered Country, and Juniper has never identified an instance of 3TG in its in-scope products financing or benefitting armed groups in a Covered Country. However, Juniper did not conclude that any of its in-scope products were "DRC conflict-free."

Based on the results of our RCOI, we conducted due diligence for 2019. These due diligence efforts are discussed below.

Due Diligence

Design of Due Diligence Program

We designed our due diligence measures to conform, in all material respects, with the framework in the Guidance, including the related Supplements for gold and tin, tantalum, and tungsten. The Guidance identifies five steps for due diligence that should be implemented and provides guidance as to how to achieve each step. We developed our due diligence process to address each of these five steps.

A description of certain activities undertaken by Juniper with respect to each of the due diligence-related steps of the Guidance is provided below.

Step 1: Establish Strong Company Management Systems

We have established management systems that conform to Step 1 of the Guidance and that include the following elements:

Conflict Minerals Policy: Juniper has published and communicated to our suppliers a company policy stating our commitment to responsible sourcing of 3TG and our ongoing effort with suppliers to achieve a conflict-free supply chain. This policy can be viewed on our website at <https://www.juniper.net/us/en/company/citizenship-sustainability/supply-chain/#tab=dtabs-4>. The policy is periodically reviewed by our internal conflict minerals operations team and has been approved by Juniper's conflict minerals executive champions, the Corporate Vice President of Supply Chain Operations and the Senior Vice President, General Counsel. It is also integrated into our Juniper Business Partner Code of Conduct (<https://www.juniper.net/assets/us/en/local/pdf/additional-resources/business-partner-code-of-conduct.pdf>), which requires suppliers to exercise due diligence on the source of 3TG and make this information available to Juniper upon request.

Through the Conflict Minerals Policy, Juniper demonstrates our commitment to proactive elimination of 3TG from sources that could support conflict from products and the supply chain, as well as our commitment to continue to source 3TG from Conformant smelters and refiners within the Covered Countries.

Governance structure to support due diligence activities: Juniper has established a conflict minerals governance structure that includes senior managerial responsibility for the program. Senior management with responsibility for the program and the conflict minerals operations team are comprised of individuals from Supply Chain Operations; Environmental, Health, Safety and Security; Engineering; Investor Relations; Finance; Internal Audit; Sales; Legal; Government Affairs; Compliance; and Corporate Communications. Members of the conflict minerals operations team are requested to support the program during different stages of the conflict minerals program based on their area of expertise and influence. The conflict minerals operations team as a whole, under the leadership and purview of Juniper's executive champions (Corporate Vice President of Supply Chain Operations and Senior Vice President, General Counsel), meets when there are significant changes to the development, implementation, or maintenance of Juniper's conflict minerals program. The executive champions establish the goals of the conflict minerals operations team, receive regular updates on the status of the program through the Corporate Social Responsibility Executive Committee meeting, and approve any significant changes to the program.

Juniper uses Assent to assist us with collecting and evaluating supply chain information regarding 3TGs, identifying potential risks, and in the development and implementation of additional due diligence steps with suppliers in regard to conflict minerals.

Juniper also is engaged in multi-stakeholder initiatives to address responsible sourcing of 3TG. Juniper is a member of the RMI and participates in its Smelter Engagement Team. Through its membership in the RMI, Juniper utilizes the RMI for public policy engagement relating to the responsible sourcing of 3TG and to advance initiatives to reduce the use of raw materials that may support conflict.

Control systems and transparency: Juniper expects all of our suppliers to exercise due diligence on the source and chain of custody of any 3TGs used in the production of the in-scope products, materials, or components sold to Juniper. These expectations are communicated to our suppliers through the supplier onboarding process and business reviews. Juniper seeks to strengthen our relationship with our suppliers by providing training and through our Business Partner Code of Conduct. If suppliers do not follow Juniper's policies or meet Juniper's performance expectations, we may escalate the matter, among other compliance and quality matters, in the supplier business review process and take the non-compliance into account in supplier performance scorecards. Supplier non-compliance and poor performance on scorecards may result in a determination to suspend, disengage or take other corrective actions with respect to the supplier.

We have taken steps to strengthen our due diligence efforts over time. For example, in 2018, Juniper implemented program improvements to mitigate risk, including (1) implementation of corporate social responsibility criteria in the direct supplier onboarding process to identify potential labor, environmental, health and safety, and ethics risks, including those associated with responsible minerals sourcing and (2) strengthening the supplier scorecard by adding three new metrics to assess a supplier's compliance with Juniper's conflict minerals requirements. These enhancements were implemented to provide more transparency in our expectations and evaluations, promote more granular responsible sourcing discussions with our suppliers, and drive initiatives that will support Juniper's goal of responsible minerals sourcing and a conflict-free supply chain, including supplier due diligence in accordance with the Guidance and sourcing from Conformant smelters. Further, in 2019, Juniper implemented certain improvements that were discussed in our Conflict Minerals Report for calendar year 2018. These improvements include the implementation of new scorecard metrics across all manufacturing partners and commodities that may contain 3TGs, which enables Juniper to better evaluate the maturity of suppliers compared to their peer group as well as across commodity categories. This data visibility allows Juniper to prioritize supplier and commodity manager engagement.

Supplier engagement: We engage with suppliers to request that they complete a valid CMRT for the in-scope products that they supply to us. Juniper has adopted engagement procedures that include steps of supplier engagement and escalation such as in-person meetings, business reviews, outreach conducted by commodity managers, sharing of best practices and training resources, and identification of corrective actions. When entering into or renewing supplier master purchase agreements, we include our Business Partner Code of Conduct. We provide all in-scope suppliers access to conflict minerals education and training resources through Assent's Learning Management System, Assent University. Additional training is provided to selected suppliers who report smelters or refiners of potential concern.

Suppliers who do not comply with Juniper’s conflict minerals policy, meet Juniper’s performance expectations or, if found to be the case, source minerals that finance or benefit armed groups are escalated to Juniper’s Corporate Vice President of Supply Chain Operations for evaluation of whether Juniper should suspend, disengage, or take other action with the supplier.

Grievance mechanisms: Employees, business partners, suppliers, and customers are encouraged to immediately alert Juniper to any events of questionable, fraudulent, or illegal nature that are, or may be, in violation of Juniper’s Worldwide Code of Business Conduct and Business Partner Code of Conduct, including any events relating to the source of 3TG in products supplied by our suppliers. Information may be submitted through email to integrity@juniper.net, by phone to the toll-free Juniper Integrity Hotline at +1-855-410-5445, online at integrity.juniper.net, or directly to Juniper’s Chief Compliance Officer. Information can be submitted anonymously and will be kept confidential to the fullest extent practicable and allowed by law.

Records maintenance: Juniper has implemented an electronic document retention policy to retain 3TG-related documents for a period of five years, including supplier responses to CMRTs.

Step 2: Identify and Assess Risk in the Supply Chain

We identify and assess risk in our supply chain in conformance with Step 2 of the Guidance. Our compliance steps include surveying our supply chain using the CMRT, aggregating and analyzing the responses, and following up with suppliers for clarification or with requests for further information when their responses trigger specified quality control flags.

The primary risk we identified with respect to the 2019 reporting period related to the nature of the responses received. 65% of the responses received provided data at a company level or did not specify the smelters or refiners that processed the 3TG in the products, materials or components supplied to Juniper. Additionally, 14% of the Surveyed Suppliers indicated that they received information regarding their supply chains from less than 100% of their suppliers and, therefore, they may not have provided a comprehensive list of all smelters and refiners in their supply chains.

Among other things, as part of our due diligence, we compared the smelters and refiners listed in the CMRTs received to the list of smelters and refiners maintained by the RMI. See Appendix A below for a list of these smelters and refiners furnished to us on CMRTs, along with their compliance status.

Each smelter or refiner is assigned a risk of high, medium, or low based on five factors, including: (1) its geographic proximity to the Covered Countries; (2) known mineral source country of origin; (3) its RMAP audit status; (4) credible evidence of unethical or conflict sourcing; and (5) finally, peer assessments conducted by third-party sources believed to be credible by Assent. In addition to the risk mitigation steps described below, suppliers that identify smelters or refiners that are categorized as high risk are requested to submit a product-level CMRT and are directed to educational resources on Assent’s website. If the supplier is not able to provide a product-level CMRT or confirm the high-risk smelter or refiner is not in Juniper’s supply chain, Juniper requests that the supplier provide a corrective action plan.

Additionally, suppliers’ CMRT responses are used to evaluate their program strength. The criteria used to evaluate the strength of the program include whether the supplier (1) has a conflict minerals sourcing policy, (2) has implemented 3TG due diligence measures, (3) reviews due diligence information received from suppliers against the expectations set forth in its policy and (4) has a corrective action process. Suppliers that meet or exceed these criteria (answer “Yes” to all four criteria) are deemed to have a “strong” program; otherwise their program is deemed to be “weak”. For 2019, seven percent of the Surveyed Suppliers that completed a CMRT were identified as having a “weak” program. In addition to the risk mitigation steps discussed below, if a supplier’s program is deemed to be weak, it is provided with further guidance and education through Assent’s learning tools.

Identifying and assessing the three risks of (1) information relevance, accuracy and comprehensiveness, (2) geographic proximity and (3) program strength are intended to help us to address Step 2 of the Guidance.

Step 3: Designing and Implementing a Strategy to Respond to Identified Risks

The results of our due diligence are shared with the executive champions (Corporate Vice President of Supply Chain Operations and Senior Vice President, General Counsel) through our Corporate Social Responsibility Executive Committee meetings, as well as with the Audit Committee of our Board of Directors, which, among other responsibilities, has oversight of risk management and financial reporting and compliance.

We address any risks identified through the process described in Step 2 on a case-by-case basis. For suppliers who do not respond to Assent's outreach, Juniper's conflict minerals and supply chain operations teams contact those suppliers directly, requesting that they submit a CMRT. Other actions contemplated by our corrective action framework include, depending upon the particular circumstances, requesting a product-level CMRT and that the supplier take corrective action to ensure that any high-risk smelters or refiners are not in Juniper's supply chain. We may also provide a supplier with further guidance and education on the Rule, the Guidance, and/or our compliance expectations.

Through our participation in the RMI and its Smelter Engagement Team, we also address smelter- and refiner-related risks and seek to exercise leverage over smelters and refiners to become Conformant. We provide the RMI with Juniper's lists of smelters and refiners that are not Conformant or Active and those entities disclosed by suppliers that are not listed as known smelters or refiners by the RMI, in order to assist the RMI with prioritizing (1) outreach to those known smelters and refiners that are not participating in the RMAP and (2) research of those commonly reported entities that are not identified as a smelter or a refiner.

Step 4: Carrying Out Independent Third-Party Audit of Supply Chain Due Diligence at Identified Points in the Supply Chain

We are a downstream supplier, many steps removed from the mining or processing of 3TG. Juniper does not purchase raw ore or refined 3TG, including from the Covered Countries.

Juniper supports independent third-party audits conducted by the RMAP through our financial support for the RMI. The RMAP is described earlier in this Report.

Juniper also actively supports the goal of increasing smelter and refiner participation in the RMAP through our participation in the RMI and its Smelter Engagement Team. We provide the RMI with Juniper's lists of smelters and refiners that were reported by our suppliers who are not Conformant or Active in order to assist the RMI with prioritizing outreach to those known smelters and refiners to encourage them to participate in the RMAP.

Step 5: Reporting on Supply Chain Due Diligence

A Form SD and this Report are filed annually with the SEC, and a copy of this Report and the Form SD are made publicly available on our website at <https://www.juniper.net/us/en/company/citizenship-sustainability/supply-chain/#tab=dtabs-4>.

Future Steps to Mitigate Risk

For 2020, we anticipate continuing to focus on collaborating with industry participants through our membership in the RMI to improve the systems of transparency and control in 3TG supply chains, which we believe mitigates the risk that 3TG contained in our in-scope products will finance or benefit armed groups in the Covered Countries.

In addition, as part of our ongoing efforts to mitigate the risk that the 3TG contained in our in-scope products finance or benefit armed groups in the Covered Countries, we intend to continue the implementation of the following efforts identified in last year's Conflict Minerals Report:

- Request that suppliers complete CMRTs on a product-specific basis, to enable us to determine which smelters and refiners actually process 3TG contained in our products.
- Encourage our suppliers that have not already done so to implement due diligence procedures, through targeted outreach that provides guidance and resources to improve program strength and increase rate of response (to achieve 100%) from their own suppliers.
- Encourage our suppliers to source only from Conformant smelters and refiners by (1) awarding higher supplier Compliance, Risk and Sustainability scores to those who only utilize Conformant smelters and refiners and (2) continuing to request facilities that are not listed as Conformant by the RMI to obtain an independent third-party audit. Supplier's Compliance, Risk and Sustainability score is an input in the supplier performance scorecard.
- Measure the overall performance improvement of the supply chain by tracking supplier performance against selected metrics, including data quality and completeness and the percentage of reported smelters and refiners that are Conformant, with the goal of identifying areas for further improvement and engagement with suppliers, the RMI and Assent.
- Assess opportunities to integrate additional risk data into our risk assessment process, such as through use of tools provided by the RMI, to further improve our risk assessment process.

Due Diligence Results

Survey Results

For the 2019 reporting year, Juniper received CMRTs from 90% of the Surveyed Suppliers. Juniper and Assent conducted outreach to request corrections to invalid data, three percent of the Surveyed Suppliers who submitted a CMRT did not correct the inaccuracies or gaps in the CMRT. Those CMRTs were therefore treated as invalid submissions.

Smelters and Refiners Potentially in Juniper's Supply Chain

Based on our RCOI and due diligence, we identified 301 known smelters and refiners of 3TGs that may be in our supply chain in 2019, as compared to 317 in 2018. See Appendix A below for a list of these smelters and refiners, along with their Conformance status. Appendix A does not include the names of entities received through our due diligence process that, as of May 8, 2020, were not listed on the RMI's list of known smelters and refiners.

A summary of the known smelters and refiners for each 3TG that may be in our supply chain and their RMAP Conformance status is provided below:

70% (154) of the known gold refiners that may be in our supply chain are listed as Conformant (107) or Active (1) (as defined on Appendix A).

100% (38) of the known tantalum smelters that may be in our supply chain are listed as Conformant.

83% (58) of the known tin smelters that may be in our supply chain are listed as Conformant (47) or Active (1).

94% (51) of the known tungsten smelters that may be in our supply chain are listed as Conformant (43) or Active (5).

Not all of the smelters and refiners listed on the CMRTs that we received may have processed the necessary 3TG contained in Juniper's in-scope products, since, as noted earlier in this Report, 65% of the Surveyed Suppliers reported their CMRT at a "company-level". In addition, Surveyed Suppliers may have also reported smelters and refiners that were not in Juniper's supply chain due to over-inclusiveness of the information received from their suppliers or for other reasons. Finally, the smelters and refiners reflected in Appendix A may not include all of the smelters and refiners in Juniper's supply chain, since 14% of the Surveyed Suppliers indicated that they received information regarding their supply chains from less than 100% of their suppliers, and therefore the Surveyed Suppliers may not have identified all smelters and refiners in their supply chains, and because 10% of the Surveyed Suppliers did not respond to Juniper's inquiries.

As of the date of this Report and for the reporting period covered by this Report, we have not identified a supplier, smelter or refiner that we have reason to believe is sourcing 3TG contained in our in-scope products that is directly or indirectly financing or benefiting an armed group. However, given that we have received insufficient information with respect to certain smelters and refiners that may have process 3TG in our products, we have not determined that any of our products are "DRC conflict-free."

Country of Origin Information and Efforts to Determine Mine Location

The identified countries of origin of the 3TG processed by the Conformant smelters and refiners listed in the table in Appendix A may have included the countries in the categories listed below, as well as other countries. The listed countries of origin are derived from information made available by the RMI to its members. Except for the DRC, the RMI does not indicate individual countries of origin of the 3TG processed by Conformant smelters and refiners. Instead, the RMI indicates country of origin by category: L1, L2 and CC. The categories are based on sourcing risk, as indicated below.

L1—Countries that are not identified as conflict regions or plausible areas of smuggling or export of 3TG from the Covered Countries. Countries of origin include: Argentina, Australia, Austria, Benin, Bolivia, Brazil, Chile, China, Colombia, Ecuador, Eritrea, Ethiopia, France, Guinea, India, Indonesia, Japan, Laos, Madagascar, Malaysia, Mali, Mauritania, Mongolia, Myanmar, Nicaragua, Niger, Nigeria, Peru, Portugal, Russian Federation, Sierra Leone, Somaliland, Spain, Swaziland, Taiwan, Thailand, Togo, United Kingdom of Great Britain and Northern Ireland, United States of America, Uzbekistan, Venezuela and Vietnam.

L2—Countries that are known or plausible countries for smuggling, export out of region or transit of materials containing 3TG. Countries of origin include: Mozambique and South Africa.

CC—The nine countries adjoining the DRC. Countries of origin include: Burundi, Rwanda, Tanzania, and Uganda.

Alternatively, or in addition, 74% of the known smelters and refiners listed in the table in Appendix A did source or may have sourced from recycled or scrap sources.

Because the RMI generally does not indicate individual countries of origin of the 3TG processed by Conformant smelters and refiners, Juniper was not able to determine the countries of origin of the 3TG processed by the listed Conformant smelters and refiners with greater specificity. In addition, for some of the listed Conformant smelters and refiners, origin information is not disclosed by the RMI. Juniper did not determine the countries of origin of the 3TG processed by other smelters and refiners listed on Appendix A.

Juniper endeavored to determine the mine or location of origin of the necessary 3TG contained in its in-scope products by conducting a supply-chain survey with suppliers using the CMRT and through the information made available by the RMI to its members, as well as the other measures described in this Report.

Forward-Looking Disclaimer

This Report, including the section entitled "Future Steps to Mitigate Risk", contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995 regarding our business, products and 3TG compliance efforts, including steps we intend to take to mitigate the risk that the 3TGs in our products benefit armed groups, and the industry's 3TG-related compliance efforts. Words such as "expects," "anticipates," "targets," "goals," "projects," "would," "could," "intends," "plans," "believes," "seeks," "estimates," variations of such words, and similar expressions are intended to identify such forward-looking statements. Forward-looking statements by their nature address matters that are, to different degrees, uncertain, and these forward-looking statements are only predictions and are subject to risks, uncertainties, and assumptions that are difficult to predict. While forward-looking statements in this Report are based on reasonable expectations of our management at the time that they are made, you should not rely on them. Forward-looking statements are inherently subject to risks and uncertainties and actual results and outcomes may differ materially from the results and outcomes discussed in or anticipated by the forward-looking statements. Factors that could cause or contribute to such differences in results and outcomes include, without limitation, the risk that information reported to us by our direct suppliers or industry information used by us may be inaccurate; the risk that smelters or refiners may not participate in the RMAP; political and regulatory developments, whether in the Covered Countries, the United States or elsewhere; as well as risks discussed under the heading "Risk Factors" in our most recent Annual Report on 10-K or subsequent Quarterly Report on Form 10-Q and in other reports we file with the Securities and Exchange Commission. Readers are urged not to place undue reliance on these forward-looking statements, which speak only as of the date of this Report. We undertake no obligation to revise or update any forward-looking statements in order to reflect any event or circumstance that may arise after the date of this Report.

Appendix A
Smelters and Refiners List

The below table lists the known smelters or refiners that were identified by the Surveyed Suppliers through their CMRTs and that are, as of May 8, 2020, listed on the RMI’s list of known smelters and refiners. This list includes the Metal, Standard Smelter Name, Smelter Facility Location, Smelter ID, and RMI Audit Status. As indicated in the Report to which this Appendix is attached, this list has been created based on Surveyed Supplier responses. Not all of the smelters and refiners listed on CMRTs that we received may have processed the necessary 3TG contained in Juniper’s in-scope products, since 65% of the Surveyed Suppliers reported their CMRT at a “company-level”. In addition, this list may include reported smelters and refiners that were not in Juniper’s supply chain due to over-inclusiveness of the information received from Surveyed Suppliers or for other reasons. The smelters and refiners listed below may not include all of the smelters and refiners in Juniper’s supply chain, since 14% of the Surveyed Suppliers indicated that they received information regarding their supply chains from less than 100% of their suppliers and therefore the Surveyed Suppliers may not have identified all smelters or refiners in their supply chain, and because 10% of Surveyed Suppliers did not respond to Juniper’s inquiries. To address these gaps, Juniper intends to implement the actions discussed in the “Future Steps to Mitigate Risk” section.

* RMI Audit Status is as of May 8, 2020. For purposes of this table, “Conformant” denotes that the smelter or refiner participates in and has been listed as “conformant” by the RMAP, including those indicated as “re-audit in progress,” and “Active” denotes that the smelter or refiner is a participant in the RMAP and has committed to undergo an RMAP assessment. “Not Enrolled” means that the smelter or refiner is listed on the Smelter Look-up tab of the CMRT but is not Conformant or Active. Smelter and refiner status reflected in this Appendix is based solely on information made publicly available by the RMI, without independent verification by Juniper.
