# MYSA

## Quilts

Synthetic fibres

Cellulose fibres

Down/feathers

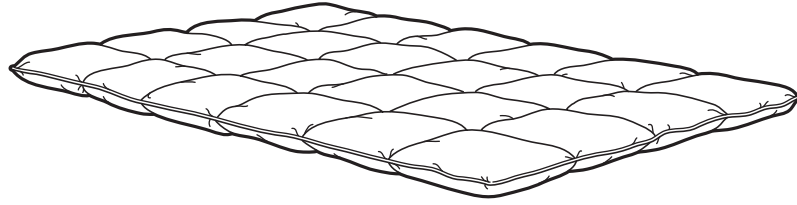

Temperature-regulating lining

Machine washable at 60°C

Tumble-dry

### Choose your bed temperature!

A comfortably warm quilt helps you sleep well and wake up feeling rested. The quilt that's just right for you depends on how warm you are, if you share it with someone else and the temperature of your bedroom. That's why each MYSA quilt has a warmth from 1–6, so you can find the one that helps you sleep best. And even if you sometimes feel too hot and sometimes feel too cold, MYSA offers a warmth rating 1+3, which gives you three quilts in one, so you're always covered.

# WHEN YOU'RE CHOOSING A QUILT IT'S A GOOD IDEA TO...

## ... think about this

Our quilts come in different warmth rates. From 1, which is coolest, to 6, which is warmest. We also have an all-season quilt which is two quilts with different warmth rates that can be used together or separately. So a good place to start is thinking about whether you feel cold or warm when you sleep.

## ... know about this

Within each warmth rating there are different filling materials – synthetic, cellulose and down/feathers, each with its own benefits. For children, it's best to choose a quilt that's cool, breathes well and is easy to wash. You can find quilts for babies at Children's IKEA.

## FILLING MATERIAL

### Synthetic fibres

Our synthetic quilts are very easy to care for. The fibres allow air to circulate and retain heat in the quilt. Synthetic quilts

can be washed often, which makes them a good choice for people with allergies. During the wash, the fibres are spread evenly throughout the quilt and regain their fluffiness – without the quilt losing its shape or its ability to retain heat. Another advantage of synthetic quilts is that they dry more quickly after being washed.

### Down/feathers

Down and feather fillings are good at absorbing perspiration and drawing it away. At the same time they retain the

heat so that you stay dry and warm. Down contributes fluffiness and warmth to a quilt, while feathers give the filling its resilience. This means that the more down a quilt contains, the softer and warmer it is.

### Cellulose fibres

Some of our synthetic quilts contain modal, Some of our synthetic quilts contain lyocell, a cellulose fibre derived from wood pulp. In

addition to sharing the same positive properties in the wash as synthetic quilts, lyocell breathes well and absorbs perspiration and draws it away. As a result, this combination of cellulose and synthetic fibres produces a fluffy, easy-to-care-for quilt, which keeps you dry and warm all night long.

### Temperature-regulating lining

In addition to its lyocell and synthetic fibre filling, IKEA 365+ MYSA quilt contains a temperature-regulating lining. It absorbs

and stores body heat when you're too hot and gives the heat back if you get cold. The temperature stays at a constant level and you can continue to sleep comfortably all night long.

# OUTER FABRIC

We cover our quilts filled with synthetic and lyocell fibres with an outer fabric made from 100 percent lyocell, or a blend of lyocell and cotton. Lyocell breathes efficiently and is effective in absorbing perspiration and drawing it away. The fabric stays wrinkle-free, but nevertheless feels soft and silky smooth against the skin.

The covers on our down/feather quilts are made of 100 percent cotton. Just like other natural materials, cotton breathes very well. Good air circulation means that if the pillow gets damp, it will dry quickly. Together with down and feathers, which also dry quickly, a cotton cover gives you a dry environment in which to sleep with an even temperature closest to your body.

# HOW TO CARE FOR YOUR QUILT

Mites thrive in warm, dark, humid environments like beds. That's why you should wash your quilt, as well as your sheets, quilt cover and pillowcases fairly often. All IKEA quilts can be washed at 60°C (the temperature at which mites die) and tumble-dried on normal heat.

Air out your quilt frequently so that it dries properly. That will keep it fresher for longer. It is a good idea, as well, to wait an hour or two each morning before covering your quilt with a bedspread.

Synthetic quilts are very easy to look after and can be washed time and time again. They also dry quickly.

Our quilts filled with a blend of synthetic fibres and cellulose fibres can be washed in the same manner as our synthetic quilts. These quilts also dry quickly and can be washed often.

When washing quilts with down/feather fillings you should use only one third of the normal amount of washing detergent. Place a couple of tennis balls together with the quilt in the tumble-dryer. This will help the filling to regain its fluffiness and dry more quickly after the wash. But be sure that none of the colour is transferred from the tennis balls to the quilt. The quilt should be completely dry before you use it. Do not vacuum or beat a quilt to clean it, as this can destroy the natural properties of down and feathers.

# QUILTS, WARMTH RATE 1, 2 OR 3

Do you usually wake up boiling hot with your quilt at the bottom of the bed? In that case choose a quilt with warmth rating 1, 2 or 3. If you like to get up in a warm bedroom, or are looking for thin cool summer quilts, these are also ideal.

## **MYSÄ VETE** quilt. Warmth rate 1.

Thin, lightweight quilt with a high share of down, which is soft, warmth-insulating and absorbs and transports moisture away – keeps you cool and dry all night.

Outer fabric: 100% cotton.  
Filling: 60% duck down/40% duck feathers.  
Filling weight: (150x200 cm) 350 g.

Single 150x200 cm	901.314.45	<b>RM169</b>
Queen 200x200 cm	101.314.54	<b>RM239</b>

## **MYSÄ VETE** quilt. Warmth rate 3.

Medium thick quilt with a high share of down, which is soft, warmth-insulating and absorbs and transports moisture away – keeps you cool and dry all night.

Outer fabric: 100% cotton.  
Filling: 60% duck down/40% duck feathers.
