1 Important document information

1.1 Document function

The document is part of the Operating Instructions and serves as a reference for parameters, providing a detailed explanation of each individual parameter of the operating menu.

1.2 Symbols

1.2.1 Symbols for certain types of information

Symbol	Meaning
	Tip Indicates additional information.
	Reference to documentation
	Reference to page
	Reference to graphic
	Operation via local display
	Operation via operating tool
	Write-protected parameter

1.2.2 Symbols in graphics

Symbol	Meaning	Symbol	Meaning
1, 2, 3 ...	Item numbers	A, B, C, ...	Views
A-A, B-B, C-C, ...	Sections		

2 Overview of the operating menu

- The following table lists all parameters the "Expert" menu may contain. The page number refers to where a description of the parameter can be found.
- Depending on the device version and parametrization some parameters will not be available in a given situation. For details on the conditions refer to the "Prerequisite" category in the description of the respective parameter.
- The representation essentially corresponds to the menu seen when using an operating tool (e.g. FieldCare). On the local display there may be minor differences in the menu structure. Details are mentioned in the description of the respective submenu.

3.2 Description of parameters

Navigation

  Expert

Direct access

Navigation	 Expert → Direct access (0106)
Description	Enter the access code of a parameter in order to access this parameter directly (i.e. without navigation).
User entry	0 to 65 535
Factory setting	0
Additional information	<p>The direct access code consists of a five digit number and an optional channel code, which specifies an input or output channel, e.g. 00353-2</p> <ul style="list-style-type: none"> ▪ Leading zeros need not to be entered. Example: You may enter "353" instead of "00353" ▪ If the channel code is not entered, channel 1 is automatically selected. Example: By entering "353" you access the following parameter: Curr.output 1 → Current span (0353-1) ▪ In order to access a different channel: Enter the direct access code with the channel code. Example: By entering "353-2" you access the following parameter: Curr.output 2 → Current span (0353-2) <p> In this document, the direct access code is added in brackets after the parameter name in the <i>Navigation</i> category.</p>

Locking status

Navigation	  Expert → Locking status (0004)
-------------------	--

Description	Indicates the write protection with the highest priority that is currently active.
--------------------	--

User interface	<ul style="list-style-type: none"> ▪ Hardware locked ▪ SIL locked ▪ WHG locked ▪ Temporarily locked
-----------------------	---

Additional information**Meaning and priorities of the types of write protection****▪ Hardware locked (priority 1)**

The DIP switch for hardware locking is activated on the main electronics module. This locks write access to the parameters.

▪ SIL locked (priority 2)

The SIL mode is activated. Writing access to the relevant parameters is denied.

▪ WHG locked (priority 3)

The WHG mode is activated. Writing access to the relevant parameters is denied.

▪ Temporarily locked (priority 4)

Write access to the parameters is temporarily locked on account of internal processes in progress in the device (e.g. data upload/download, reset etc.). The parameters can be modified as soon as the processes are complete.

 On the display module, the -symbol appears in front of parameters that cannot be modified since they are write-protected.

Access status display

Navigation

  Expert → Access stat.disp (0091)

Prerequisite

The device has a local display.

Description

Indicates access authorization to parameters via local display.

User interface

- Operator
- Maintenance
- Service

Additional information

 If a  symbol appears in front of a parameter, the parameter cannot be changed via the local display with the current access authorization.

 The access authorization can be changed via the **Enter access code** parameter (→  25).

 If additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the **Locking status** parameter (→  23).

Access status tooling

Navigation

 Expert → Access stat.tool (0005)

Description

Indicates access authorization to parameters via operating tool (e.g. FieldCare).

User interface

- Operator
- Maintenance
- Service

Additional information

The access authorization can be changed via the **Enter access code** parameter (→ 25).

If additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the **Locking status** parameter (→ 23).

Enter access code

Navigation

Expert → Ent. access code (0003)

Description

Enter access code to disable write protection of parameters.

User entry

0 to 9 999

Additional information

- For local operation, the customer-specific access code, which has been defined in the **Define access code** parameter (→ 41), has to be entered.
- If an incorrect access code is entered, the user retains his current access authorization.
- The write protection affects all parameters marked with the -symbol in this document. On the local display, the -symbol in front of a parameter indicates that the parameter is write-protected.
- If no key is pressed for 10 min, or the user switches from the navigation and editing mode back to the measured value display mode, the device automatically locks the write-protected parameters after another 60 s.

Please contact your Endress+Hauser Sales Center if you lose your access code.

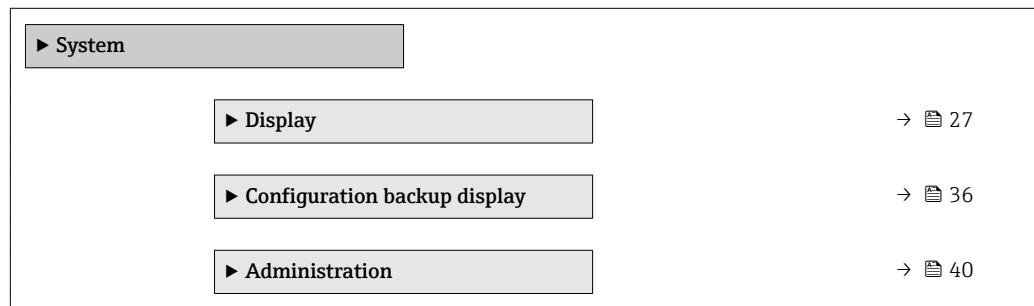

3.3 "System" submenu

The **System** submenu contains all general parameters which affect neither the measurement nor the measured value communication.

3.3.1 Structure of the submenu

Navigation

☰ ☰ Expert → System

3.3.2 "Display" submenu

The **Display** submenu is used to configure the representation of measured values on the local display module. Up to four measured values can be allocated to the local display module. Additionally, display characteristics such as the format of numbers, the associated texts or the display contrast can be configured.

 This submenu is only visible if a display module is connected to the device.

- Analog output adv. diagnostics 2
- Area of incoupling

Factory setting

- Value 1 display: Level linearized
- Value 2 display: None
- Value 3 display: None
- Value 4 display: None

Decimal places 1 to 4**Navigation**

Expert → System → Display → Decimal places 1 to 4 (0095–1 to 4)

Description

Select the number of decimal places for the display value.

Selection

- X
- X.X
- X.XX
- X.XXX
- X.XXXX

Factory setting

X.XX

Additional information

The setting does not affect the measuring or computational accuracy of the device.

Display interval**Navigation**

Expert → System → Display → Display interval (0096)

Description

Set time measured values are shown on display if display alternates between values.

2) can not be selected for the "Value 1 display" parameter.

3) "Visibility depends on order options or device settings"

User entry	1 to 10 s
Factory setting	5 s
Additional information	This parameter is only relevant if the number of selected measuring values exceeds the number of values the selected display format can display simultaneously.

Display damping

Navigation Expert → System → Display → Display damping (0094)

Description Define display reaction time to fluctuations in the measured value.

User entry 0.0 to 999.9 s

Factory setting 0.0 s

Header

Navigation Expert → System → Display → Header (0097)

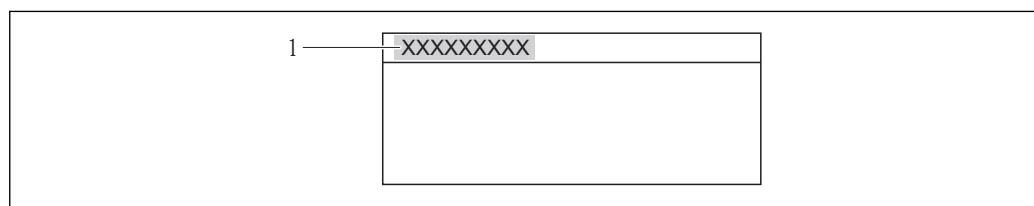

Description Select header contents on local display.

Selection

- Device tag
- Free text

Factory setting Device tag

Additional information

A0013375

1 Position of the header text on the display

*Meaning of the options***■ Device tag**

Is defined in the **Device tag** parameter.

■ Free text

Is defined in the **Header text** parameter (→ 32).

Header text

Navigation	Expert → System → Display → Header text (0112)
Prerequisite	Header (→ 31) = Free text
Description	Enter display header text.
Factory setting	-----
Additional information	The number of characters which can be displayed depends on the characters used.

Separator

Navigation	Expert → System → Display → Separator (0101)
Description	Select decimal separator for displaying numerical values.
Selection	. ,
Factory setting	.

Number format

Navigation	Expert → System → Display → Number format (0099)
Description	Choose number format for the display.
Selection	Decimal ft-in-1/16"
Factory setting	Decimal
Additional information	The ft-in-1/16" option is only valid for distance units.

Decimal places menu

Navigation	Expert → System → Display → Dec. places menu (0573)
Description	Select number of decimal places for the representation of numbers within the operating menu.

Selection	<ul style="list-style-type: none"> ■ X ■ X.X ■ X.XX ■ X.XXX ■ X.XXXX
Factory setting	X.XXXX
Additional information	<ul style="list-style-type: none"> ■ Is only valid for numbers in the operating menu (e.g. Empty calibration, Full calibration), but not for the measured value display. The number of decimal places for the measured value display is defined in the Decimal places 1 to 4 →  30 parameters. ■ The setting does not affect the accuracy of the measurement or the calculations.

Contrast display

Navigation	  Expert → System → Display → Contrast display (0105)
Description	Adjust local display contrast setting to ambient conditions (e.g. lighting or reading angle).
User entry	20 to 80 %
Factory setting	Dependent on the display.
Additional information	 Setting the contrast via push-buttons: <ul style="list-style-type: none"> ■ Darker: press the  and  buttons simultaneously. ■ Brighter: press the  and  buttons simultaneously.

Backlight

Navigation	  Expert → System → Display → Backlight (0111)
Prerequisite	The device has the SD03 local display (with optical keys).
Description	Switch the local display backlight on and off.
Selection	<ul style="list-style-type: none"> ■ Disable ■ Enable
Factory setting	Disable
Additional information	<p>Meaning of the options</p> <ul style="list-style-type: none"> ■ Disable Switches the backlight off. ■ Enable Switches the backlight on.  Regardless of the setting in this parameter the backlight may be automatically switched off by the device if the supply voltage is too low.

Access status display

Navigation

  Expert → System → Display → Access stat.disp (0091)

Prerequisite

The device has a local display.

Description

Indicates access authorization to parameters via local display.

User interface

- Operator
- Maintenance
- Service

Additional information

 If a  symbol appears in front of a parameter, the parameter cannot be changed via the local display with the current access authorization.

 The access authorization can be changed via the **Enter access code** parameter (→  25).

 If additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the **Locking status** parameter (→  23).

3.3.3 "Configuration backup display" submenu

 This submenu is only visible if a display module is connected to the device.

All software configurations are initially stored in a memory module (HistoROM) in the housing and are thus permanently connected with the device. As an additional option, the display module contains a backup memory for the device configuration. The transmission of configuration data between these two memory modules is controlled by the **Configuration management** parameter (→ 37). It provides the following options:

- **Execute backup**

Saves the current device configuration in the display module.

- **Restore**

This option can be used to restore a configuration back into the device which has previously been saved in the display module.

- **Duplicate**

If the configuration has been saved into the display module, the module can be connected to a different device and the configuration can be duplicated to this device. This allows to efficiently configure a number of devices in the same way.

- **Compare**

The comparison result indicates whether the device configuration has been changed since the last backup.

 If an existing backup is restored to a different device using the **Restore** option, it may occur that some device functionalities are no longer available. Even a reset to the delivery state won't restore the original state in some cases.

In order to transfer the configuration to a different device only the **Duplicate** option should be used.

Structure of the submenu

Navigation

☰ ☰ Expert → System → Conf.backup disp

Description of parameters

Navigation

  Expert → System → Conf.backup disp

Operating time

Navigation	  Expert → System → Conf.backup disp → Operating time (0652)
Description	Indicates how long the device has been in operation.
User interface	Days (d), hours (h), minutes (m), seconds (s)
Additional information	<i>Maximum time</i> 9 999 d (≈ 27 years)

Last backup

Navigation	  Expert → System → Conf.backup disp → Last backup (0102)
Description	Indicates when the last data backup was saved to the display module.
User interface	Days (d), hours (h), minutes (m), seconds (s)

Configuration management

Navigation	  Expert → System → Conf.backup disp → Config. managem. (0100)
Description	Select action for managing the device data in the display module.
Selection	<ul style="list-style-type: none"> ■ Cancel ■ Execute backup ■ Restore ■ Duplicate ■ Compare ■ Clear backup data
Factory setting	Cancel
Additional information	Meaning of the options <ul style="list-style-type: none"> ■ Cancel No action is executed and the user exits the parameter. ■ Execute backup A backup copy of the current device configuration in the HistoROM (built-in in the device) is saved to the display module of the device. ■ Restore The last backup copy of the device configuration is copied from the display module to the HistoROM of the device.

■ Duplicate

The transmitter configuration is duplicated to another device using the transmitter display module. The following parameters, which characterize the individual measuring point are **not** included in the transmitted configuration:

Medium type

■ Compare

The device configuration saved in the display module is compared to the current device configuration of the HistoROM. The result of this comparison is displayed in the **Comparison result** parameter (→ 38).

■ Clear backup data

The backup copy of the device configuration is deleted from the display module of the device.

i While this action is in progress, the configuration cannot be edited via the local display and a message on the processing status appears on the display.

i If an existing backup is restored to a different device using the **Restore** option, it may occur that some device functionalities are no longer available. In some cases even a device reset will not restore the original status.

In order to transmit a configuration to a different device, the **Duplicate** option should always be used.

Backup state

Navigation

 Expert → System → Conf.backup disp → Backup state (0121)

Description

Displays which backup action is currently in progress.

Comparison result

Navigation

  Expert → System → Conf.backup disp → Compar. result (0103)

Description

Displays the comparison result between the device and the display.

Additional information**Meaning of the display options****■ Settings identical**

The current device configuration of the HistoROM is identical to the backup copy in the display module.

■ Settings not identical

The current device configuration of the HistoROM is not identical to the backup copy in the display module.

■ No backup available

There is no backup copy of the device configuration of the HistoROM in the display module.

■ Backup settings corrupt

The current device configuration of the HistoROM is corrupt or not compatible with the backup copy in the display module.

■ Check not done

The device configuration of the HistoROM has not yet been compared to the backup copy in the display module.

■ Dataset incompatible

The data sets are incompatible and can not be compared.

 To start the comparison, set **Configuration management** (→ 37) = **Compare**.

 If the transmitter configuration has been duplicated from a different device by **Configuration management** (→ 37) = **Duplicate**, the new device configuration in the HistoROM is only partially identical to the configuration stored in the display module: Sensor specific properties (e.g. the mapping curve) are not duplicated. Thus, the result of the comparison will be **Settings not identical**.

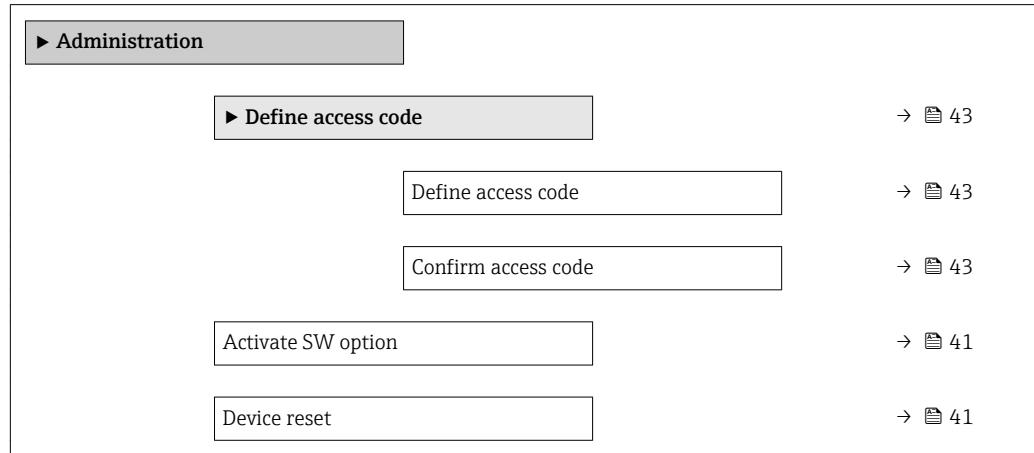

3.3.4 "Administration" submenu

The **Administration** submenu contains all parameters for the management of the device. Its structure depends on the user interface:

Structure of the submenu on the local display

Navigation

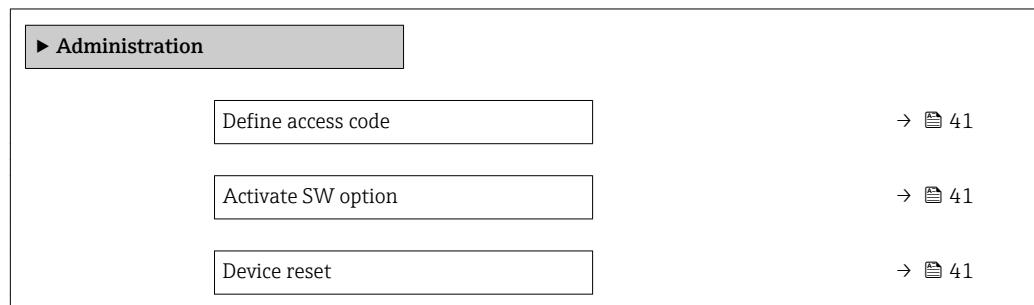

☰ Expert → System → Administration

Structure of the submenu in an operating tool

Navigation

☰ Expert → System → Administration

Description of parameters

Navigation

Expert → System → Administration

Define access code

Navigation

Expert → System → Administration → Def. access code (0093)

Description

Define release code for write access to parameters.

User entry

0 to 9 999

Factory setting

0

Additional information

- If the factory setting is not changed or 0 is defined as the access code, the parameters are not write-protected and the configuration data of the device can then always be modified. The user is logged on in the *Maintenance* role.
- The write protection affects all parameters marked with the symbol in this document. On the local display, the symbol in front of a parameter indicates that the parameter is write-protected.
- Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the **Enter access code** parameter (→ 25).
- Please contact your Endress+Hauser Sales Center if you lose your access code.
- For display operation: The new access code is only valid after it has been confirmed in the **Confirm access code** parameter (→ 43).

Activate SW option

Navigation

Expert → System → Administration → Activate SW opt. (0029)

Description

Enter code to unlock specific software options.

User entry

Positive integer

Factory setting

0

Device reset

Navigation

Expert → System → Administration → Device reset (0000)

Description

Select to which state the device is to be reset.

Selection

- Cancel
- To factory defaults
- To delivery settings

- Of customer settings
- To transducer defaults
- Restart device

Factory setting

Cancel

Additional information**Meaning of the options**

- **Cancel**
No action
- **To factory defaults**
All parameters are reset to the order-code specific factory setting.
- **To delivery settings**
All parameters are reset to the delivery setting. The delivery setting may differ from the factory default if customer specific settings have been ordered.
This option is only visible if customer specific settings have been ordered.
- **Of customer settings**
All customer parameters are reset to their factory setting. Service parameters, however, remain unchanged.
- **To transducer defaults**
Every measurement-related parameter is reset to its factory setting. Service parameters and communication-related parameters, however, remain unchanged.
- **Restart device**
The restart resets every parameter which is stored in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.

"Define access code" wizard*Navigation*

3.4.2 Description of parameters

Navigation

  Expert → Sensor

Distance unit

Navigation   Expert → Sensor → Distance unit (0551)

Description Select distance unit.

Selection	<i>SI units</i>	<i>US units</i>
	<input checked="" type="checkbox"/> mm	<input checked="" type="checkbox"/> ft
	<input checked="" type="checkbox"/> m	<input checked="" type="checkbox"/> in

Factory setting m

Temperature unit

Navigation   Expert → Sensor → Temperature unit (0557)

Description Select temperature unit.

Selection	<i>SI units</i>	<i>US units</i>
	<input checked="" type="checkbox"/> °C	<input checked="" type="checkbox"/> °F
	<input checked="" type="checkbox"/> K	<input checked="" type="checkbox"/> °R

Factory setting °C

Tank type

Navigation   Expert → Sensor → Tank type (1175)

Prerequisite Medium type (→  52) = Liquid

Description Select tank type.

Selection

- Bypass / pipe
- Stilling well
- Workbench test
- Open channel
- Sphere
- Storage vessel
- Process vessel standard
- Process vessel with agitator
- Wave guide antenna

Factory setting	Depending on the antenna
Additional information	Depending on the antenna some of the options mentioned above may not be available or there may be additional options.

Tube diameter

Navigation	Expert → Sensor → Tube diameter (1117)
Prerequisite	Tank type (→ 46) = Bypass / pipe
Description	Specify diameter of bypass or stilling well.
User entry	0 to 9.999 m
Factory setting	0 m

Bin type

Navigation	Expert → Sensor → Bin type (1176)
Prerequisite	Medium type (→ 52) = Solid
Description	Specify bin type.
Selection	<ul style="list-style-type: none"> ■ Buffer silo (fast) ■ Bin / Pile ■ Crusher / belt ■ Silo ■ Workbench test
Factory setting	Silo

Max. filling speed liquid

Navigation	Expert → Sensor → Max. fill liquid (1212)
Prerequisite	Medium type (→ 52) = Liquid
Description	Select expected maximum filling speed.
Selection	<ul style="list-style-type: none"> ■ Slow < 1cm (0,4in) /min ■ Medium < 10cm (4in) /min ■ Standard < 1m (40in) /min

- Fast < 2m (80in) /min
- Very fast > 2m (80in) /min
- No filter / test

Factory setting

Depending on the **Tank type** parameter (→ [46](#))

Additional information

Max. filling speed liquid is preset by **Tank type** (→ [46](#)). It can, however, be adjusted to the process in the vessel at any time. If **Tank type** (→ [46](#)) is changed again at a later point of time, it may be necessary to repeat the fine adjustment.

Max. draining speed liquid **Navigation**

  Expert → Sensor → Max drain liquid (1202)

Prerequisite

Medium type (→ [52](#)) = **Liquid**

Description

Select expected maximum draining speed.

Selection

- Slow < 1cm (0,4in) /min
- Medium < 10cm (4in) /min
- Standard < 1m (40in) /min
- Fast < 2m (80in) /min
- Very fast > 2m (80in) /min
- No filter / test

Factory setting

Depending on the **Tank type** parameter (→ [46](#))

Additional information

Max. draining speed liquid (→ [48](#)) is preset by **Tank type** (→ [46](#)). It can, however, be adjusted to the process in the vessel at any time. If **Tank type** (→ [46](#)) is changed again at a later point of time, it may be necessary to repeat the fine adjustment.

Max. filling speed solid **Navigation**

  Expert → Sensor → Max. fill. solid (1214)

Prerequisite

Medium type (→ [52](#)) = **Solid**

Description

Select expected maximum filling speed.

Selection

- Very slow < 0,5m (1,6ft) /h
- Slow < 1m (3,3ft) /h
- Standard < 2m (6,5ft) /h
- Medium < 4m (13ft) /h
- Fast < 8m (26ft) /h
- Very fast > 8m (26ft) /h
- No filter / test

Factory setting

Standard < 2m (6,5ft) /h

Additional information	It is strongly recommended to adjust this parameter to the actual maximum filling speed of the process.
-------------------------------	---

Max. draining speed solid

Navigation Expert → Sensor → Max.drain solid (1213)

Prerequisite **Medium type (→ 52) = Solid**

Description Select expected maximum draining speed.

- Selection**
- Very slow < 0,5m (1,6ft) /h
 - Slow < 1m (3,3ft) /h
 - Standard < 2m (6,5ft) /h
 - Medium < 4m (13ft) /h
 - Fast < 8m (26ft) /h
 - Very fast > 8m (26ft) /h
 - No filter / test

Factory setting Standard < 2m (6,5ft) /h

Additional information	It is strongly recommended to adjust this parameter to the actual maximum draining speed of the process.
-------------------------------	--

Advanced process conditions

Navigation Expert → Sensor → Adv. conditions (1177)

Description Specify additional process conditions (if required).

- Selection**
- Foam (>5cm/0,16ft)
 - Changing DC values
 - Many obstacles
 - Small tanks (< 1m/3ft)
 - Weak signal

Factory setting None

Additional information "Foam (>5cm/0,16ft)" option

This option makes sure that no tank history is used which has been recorded while foam was present at the surface and thus is no reliable map of the tank property. To achieve this, the setting **Evaluation mode (→ 129) = Long time history** is deactivated.

The **Foam (>5cm/0,16ft)** option is only available for liquid applications (FMR50, FMR51, FMR52, FMR53, FMR54).

"Changing DC values" option

A tank history which has been recorded with **Evaluation mode (→ 129) = Long time history** is only valid for a fixed dielectric constant. The **Changing DC values** option

disables the setting **Evaluation mode** (→ [129](#)) = **Long time history** and thus avoids wrong measuring values in the case of a changing dielectric constant.

i The **Changing DC values** option is only available for liquid applications (FMR50, FMR51, FMR52, FMR53, FMR54).

"Many obstacles" option

This option optimizes the signal evaluation for bulk solid applications with a large measuring range where obstacles generate many interference echos. With this selection the last echo in the envelope curve will always be evaluated. For strongly damping media this is always the level echo.

i The **Many obstacles** option is only available for bulk solid applications (FMR56, FMR57).

i Preconditions for the application of the "Many obstacles" option

- **Medium type** (→ [52](#)) = **Solid**
- Strongly damping medium (e.g. flour, wheat, cereals, ...)
- No multiple echos if the tank is full
- Interference echo suppression only in the near field (ringing area)
- Expert → Sensor → Echo tracking → Evaluation mode (1112) = Short time history

"Small tanks (< 1m/3ft)" option

This option provides a simple possibility to reduce the echo width of the sensor module. This enables an improved detection of superimposed echos - especially in the near field. Internally, all parameters related to the echo width are adjusted by this option.

i The **Small tanks (< 1m/3ft)** option is only available for liquid measurements with 26 GHz HF module (FMR50, FMR51, FMR52).

"Weak signal" option

This option improves the detectability of small level echos in bulk solid applications with very weak signal amplitudes.

i The **Weak signal** option is only available for bulk solid measurements (FMR56, FMR57).

Application parameter

Navigation

 Expert → Sensor → Applicat. param. (1126)

Description

Indicates whether settings depending on the application parameters (e.g. **Advanced process conditions** (→ [49](#)), **Tank type** (→ [46](#)) and **Tube diameter** (→ [47](#))) have been changed after the basic setup.

User interface

- Changed
- Not changed

Additional information

Meaning of the options

▪ **Changed**

Parameters have been changed. The device is no longer in the state defined by the application parameters.

▪ **Not changed**

There have been no changes. The device is still in the state defined by the application parameters.

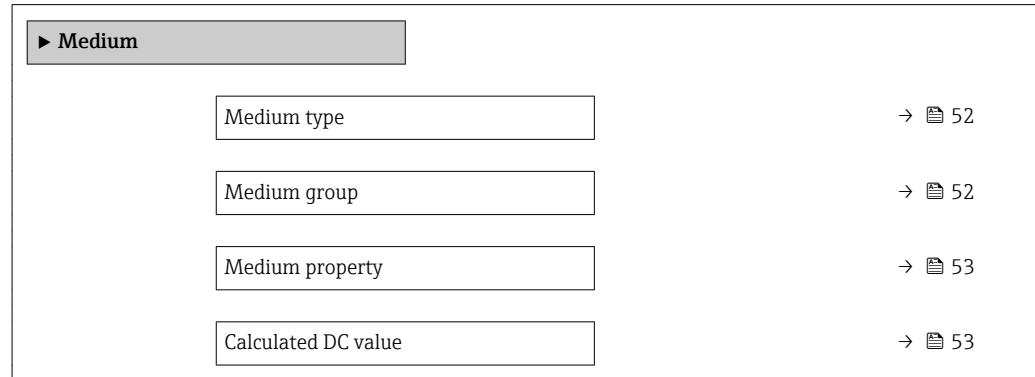

3.4.3 "Medium" submenu

The **Medium** submenu is used to specify the relevant properties of the measured medium, especially the dielectric constant (DC).

Structure of the submenu

Navigation

Diagram Expert → Sensor → Medium

Description of parameters

Navigation

Expert → Sensor → Medium

Medium type

Navigation

Expert → Sensor → Medium → Medium type (1049)

Description

Specify type of medium.

User interface

- Liquid
- Solid

Factory setting

- FMR50, FMR51, FMR52, FMR53, FMR54: **Liquid**
- FMR56, FMR57: **Solid**

Additional information

 This parameter determines the value of several other parameters and strongly influences the complete signal evaluation. Therefore, it is strongly recommended **not to change** the factory setting.

Medium group

Navigation

Expert → Sensor → Medium → Medium group (1208)

Prerequisite

Medium type (→ [52](#)) = **Liquid**

Description

Select medium group.

Selection

- Others
- Water based (DC >= 4)

Factory setting

Others

Additional information

This parameter roughly specifies the dielectric constant (DC) of the medium. For a more detailed definition of the DC use the **Medium property** parameter (→ [53](#)).

The **Medium group** parameter presets the **Medium property** parameter (→ [53](#)) as follows:

Medium group	Medium property (→ 53)
Others	Unknown
Water based (DC >= 4)	DC 4 ... 7

 The **Medium property** parameter can be changed at a later point of time. However, when doing so, the **Medium group** parameter retains its value. Only the **Medium property** parameter is relevant for the signal evaluation.

 The measuring range may be reduced for small dielectric constants. For details refer to the Technical Information (TI) of the respective device.

Medium property**Navigation**

Expert → Sensor → Medium → Medium property (1165)

Description

Specify relative dielectric constant ϵ_r of the medium.

Selection

- Unknown
- DC 1.4 ... 1.6
- DC 1.6 ... 1.9
- DC 1.9 ... 2.5
- DC 2.5 ... 4
- DC 4 ... 7
- DC 7 ... 15
- DC > 15

Factory setting

Dependent on **Medium type** (→ 52) and **Medium group** (→ 52).

Additional information

Dependency on "Medium type" and "Medium group"

Medium type (→ 52)	Medium group (→ 52)	Medium property
Solid		Unknown
Liquid	Water based (DC \geq 4)	DC 4 ... 7
	Others	Unknown

For dielectric constants (DC values) of many media commonly used in various industries refer to:

- the Endress+Hauser DC manual (CP01076F)
- the Endress+Hauser "DC Values App" (available for Android and iOS)

Calculated DC value**Navigation**

Expert → Sensor → Medium → Calc. DC value (1118)

Description

Displays the dielectric constant calculated by the device.

User interface

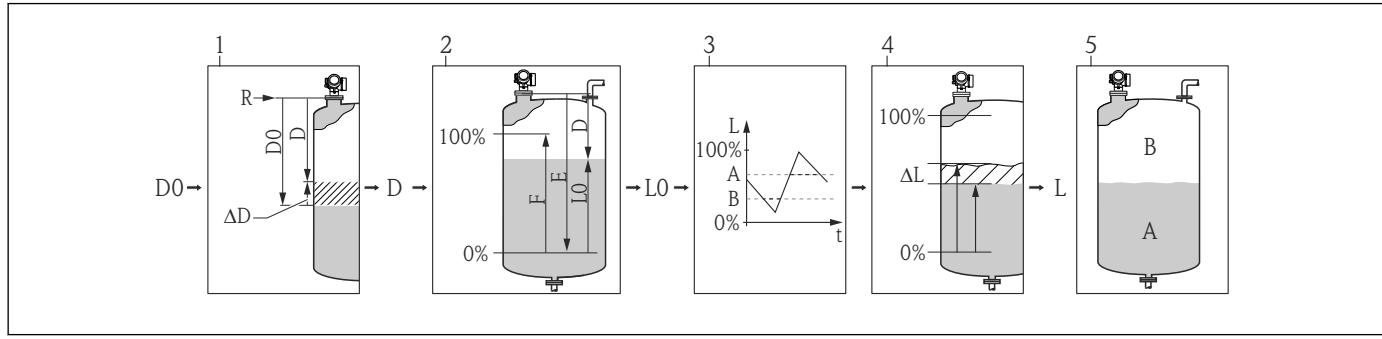

1.0 to 100.0

Additional information

The calculation is only possible for small DC values as it requires the tank bottom signal.

3.4.4 "Level" submenu

The **Level** submenu (→ 55) is used to configure the calculation of the level from the measured distance.

A0016141

6 Calculation of the level from the measured distance

- 1 Correction of the measured distance
- 2 Level calculation
- 3 Level limitation
- 4 Correction of the level
- 5 Definition of the output value: Level (A) or Ullage (B)

Structure of the submenu*Navigation* Expert → Sensor → Level

► Level	
Distance offset	→  56
Distance	→  57
Empty calibration	→  57
Full calibration	→  58
Level unit	→  59
Level limit mode	→  60
High limit	→  60
Low limit	→  61

Level	→  62
Level linearized	→  63
Tank/silo height	→  63

Description of parameters

Navigation

Expert → Sensor → Level

Distance offset

Navigation

Expert → Sensor → Level → Distance offset (2309)

Description

Specify distance offset.

User entry

-200 to 200 m

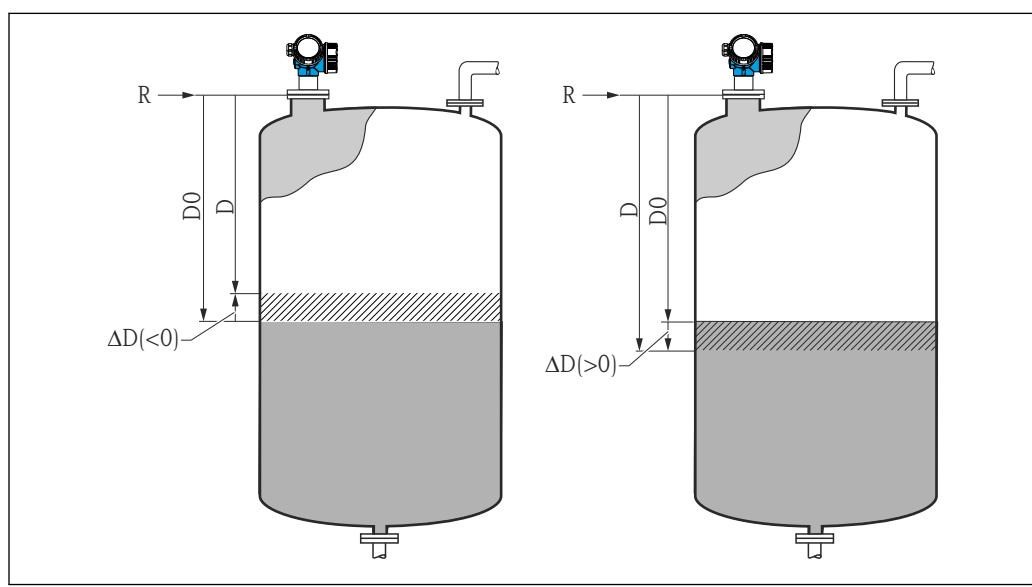

Factory setting

0 m

Additional information

The value specified in this parameter is added to the measured distance between the reference point of the measurement and the level echo.

- Positive values increase the distance and thus decrease the level.
- Negative values decrease the distance and thus increase the level.

7 Effect of "Distance offset" (→ 56)"

ΔD Distance offset

D_0 Measured distance

D Corrected distance (is used to calculate the level)

R Reference point

- The value entered in this parameter changes the distance input into the level block and thus influences the measured level.
- The distance without offset is displayed in the following parameters:
 - Setup → Distance (1124)
 - Expert → Sensor → Distance → Distance (1124)
 - Expert → Sensor → Mapping → Distance (1124)
- The distance with offset is displayed in the following parameters:
 - Expert → Sensor → Level → Distance (2231)

Distance

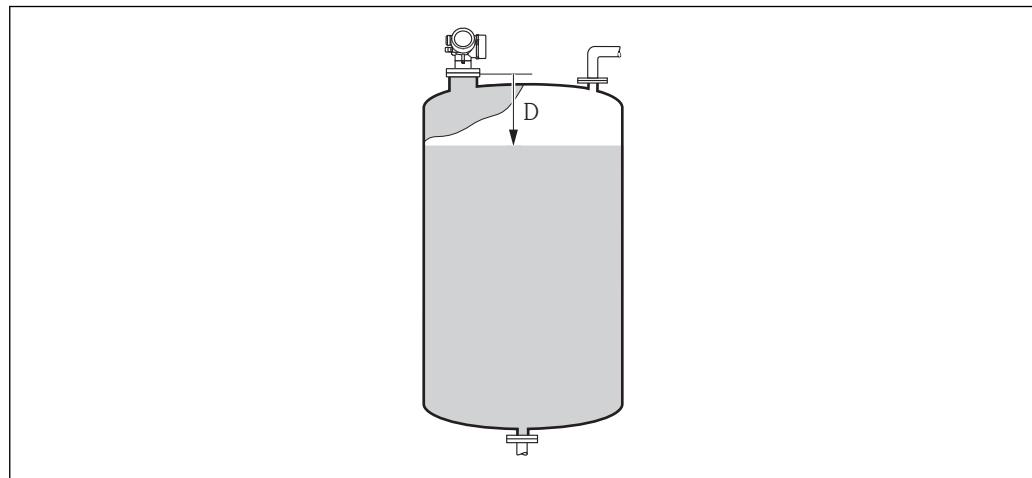

Navigation

  Expert → Sensor → Level → Distance (2231)

Description

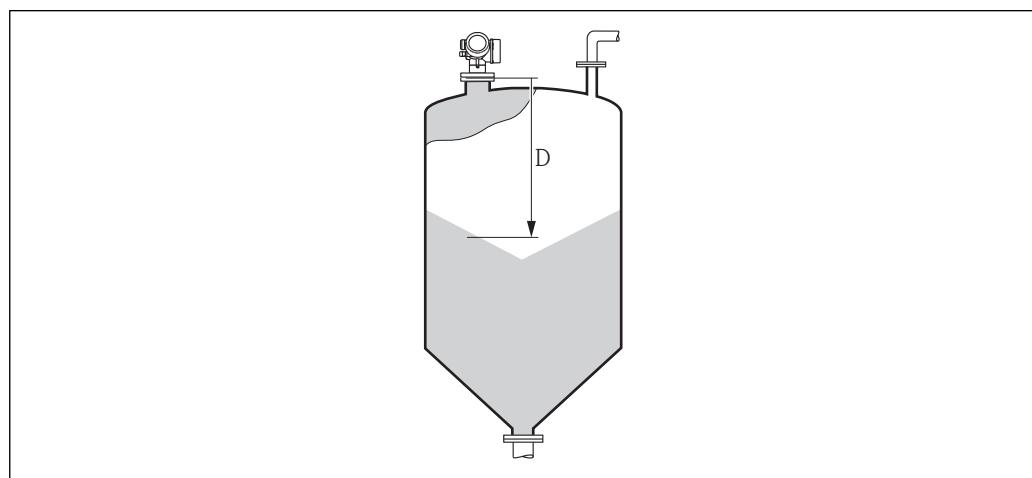

Displays the measured distance D from the reference point (lower edge of the flange or threaded connection) to the level. The **Distance offset** parameter (→  56) is included in the displayed value.

Additional information

A0019483

 8 Distance for level measurements

A0019485

 9 Distance for bulk solid measurements

 The unit is defined by the **Distance unit** parameter (→  46).

Empty calibration

Navigation

  Expert → Sensor → Level → Empty calibr. (2343)

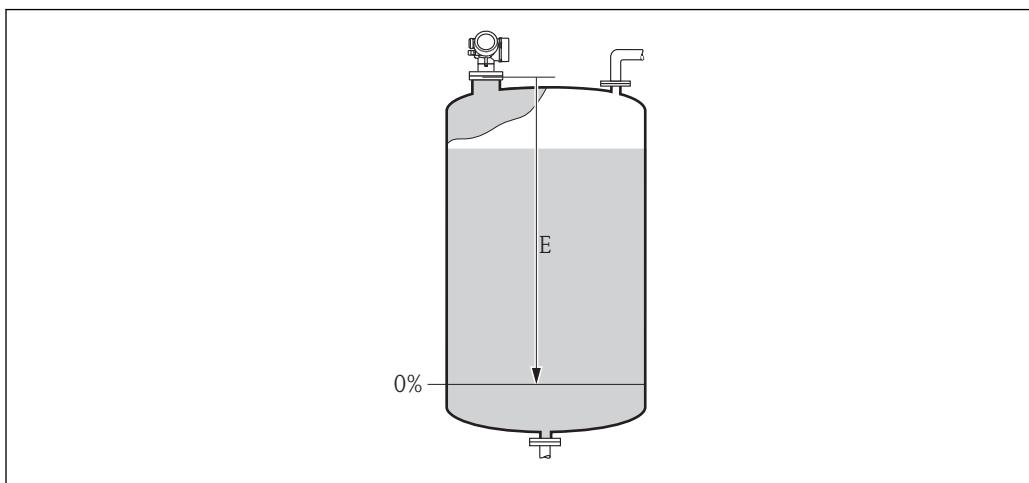

Description

Specify the distance E between the process connection and the minimum level (0%). This defines the starting point of the measuring range.

User entry Depending on the antenna

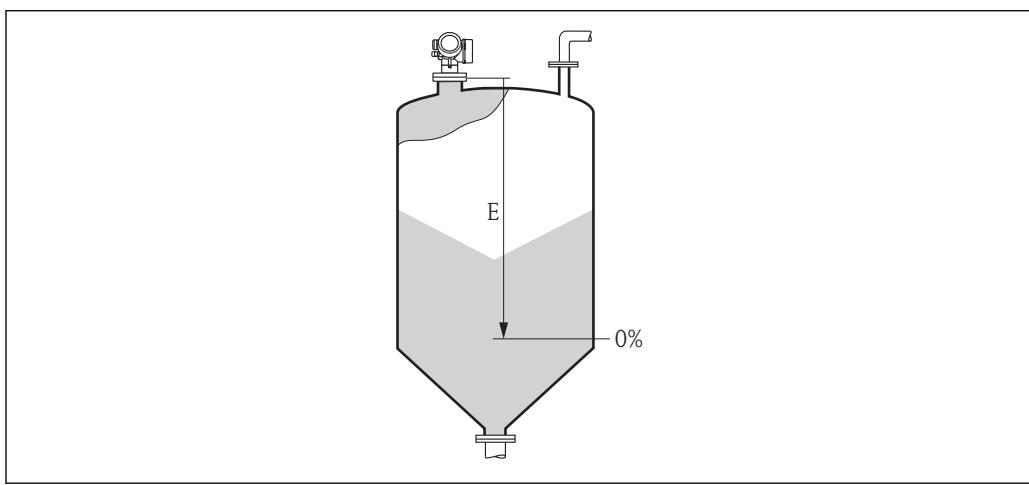

Factory setting Depending on the antenna

Additional information

A0019486

■ 10 Empty calibration (E) for level measurements in liquids

A0019488

■ 11 Empty calibration (E) for level measurements in bulk solids.

The measuring range starts at the point at which the radar beam hits the tank or silo bottom. In the case of dished boiler ends or conical outlets levels below this point can not be measured.

Full calibration

Navigation

■ ■ Expert → Sensor → Level → Full calibr. (2308)

Description

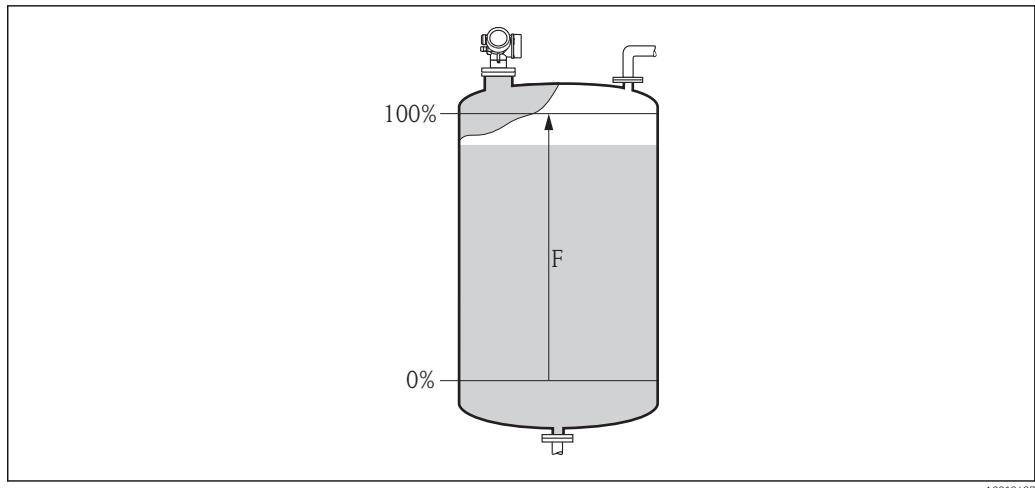

Specify the distance F between the minimum level (0%) and the maximum level (100%).

User entry

Depending on the antenna

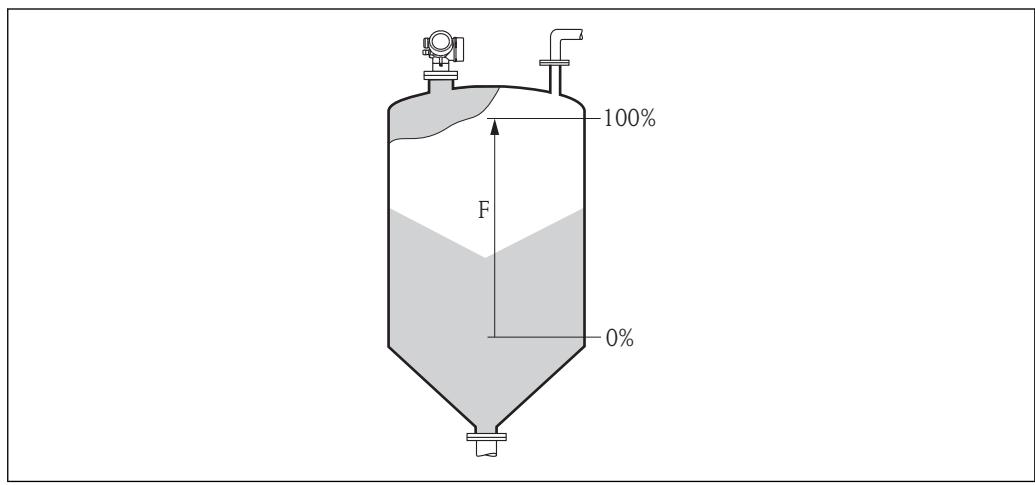

Factory setting

Depending on the antenna

Additional information

A0019487

图 12 Full calibration (F) for level measurements in liquids

A0019489

Level unit**Navigation**

图 12 Expert → Sensor → Level → Level unit (0576)

Description

Select level unit.

Selection*SI units*

- %
- m
- mm

US units

- ft
- in

Factory setting

%

Additional information

The level unit may differ from the distance unit defined in the **Distance unit** parameter (→ 图 46):

- The unit defined in the **Distance unit** parameter is used for the basic calibration (**Empty calibration** (→ 图 57) and **Full calibration** (→ 图 58)).
- The unit defined in the **Level unit** parameter is used to display the (unlinearized) level.

Level limit mode**Navigation**

Expert → Sensor → Level → Level limit mode (2314)

Description

Select the type of level limitation.

Selection

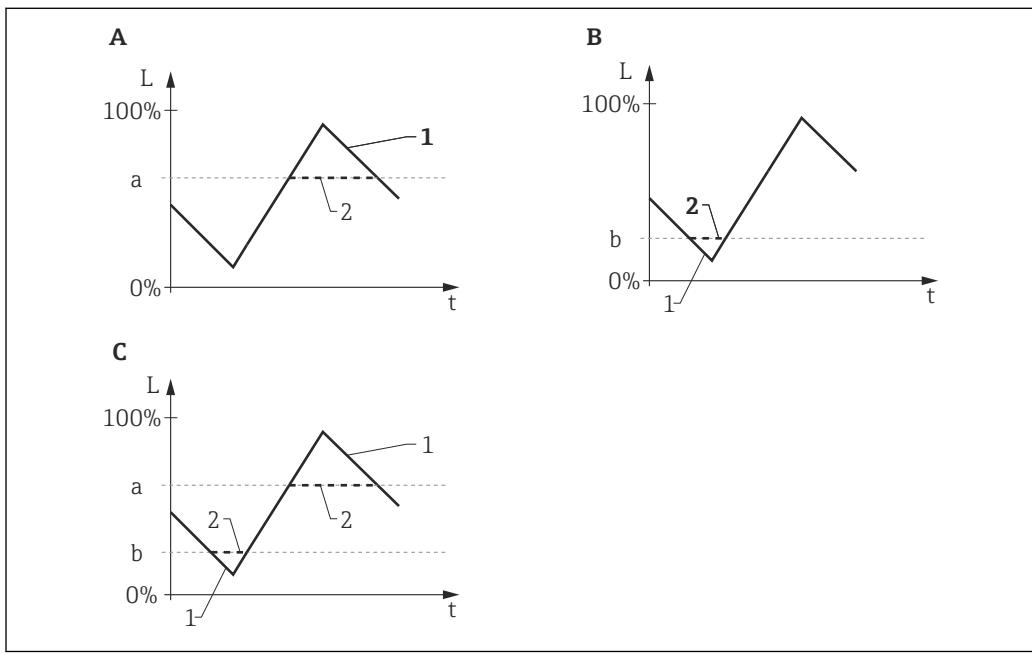

- Off
- Low limit
- High limit
- Low and High Limit

Factory setting

Low limit

Additional information

The parameter determines to which direction the level is limited. The exact limits are defined in the **High limit** (→ [60](#)) und **Low limit** (→ [61](#)) parameters.

14 Effect of the "Level limit mode", "High limit" and "Low limit" parameters

- | | |
|---|---|
| A | "Level limit mode" = "High limit" |
| B | "Level limit mode" = "Low limit" |
| C | "Level limit mode" = "Low and High Limit" |
| a | "High limit" |
| b | "Low limit" |
| 1 | Level before limitation |
| 2 | Level after limitation |

High limit**Navigation**

Expert → Sensor → Level → High limit (2312)

Prerequisite

Level limit mode (→ [60](#)) = **High limit** or **Low and High Limit**

Description

Specify upper limit.

User entry	Signed floating-point number
Factory setting	0 %
Additional information	Levels exceeding the value specified in this parameter will be ignored. Instead, the device uses the maximum level specified in this parameter (for measured value transformation and output).

Low limit

Navigation	Expert → Sensor → Level → Low limit (2313)
Prerequisite	Level limit mode (→ 60) = Low limit or Low and High Limit
Description	Specify lower level limit.
User entry	-200 000.0 to 200 000.0 %
Factory setting	0.0 %
Additional information	Levels falling below the value specified in this parameter will be ignored. Instead, the device uses the minimum level specified in this parameter (for measured value transformation and output).

Level correction

Navigation	Expert → Sensor → Level → Level correction (2325)
Description	Specify level correction (if required).
User entry	-200 000.0 to 200 000.0 %
Factory setting	0.0 %
Additional information	The value specified in this parameter is added to the measured level (before linearization).

Output mode

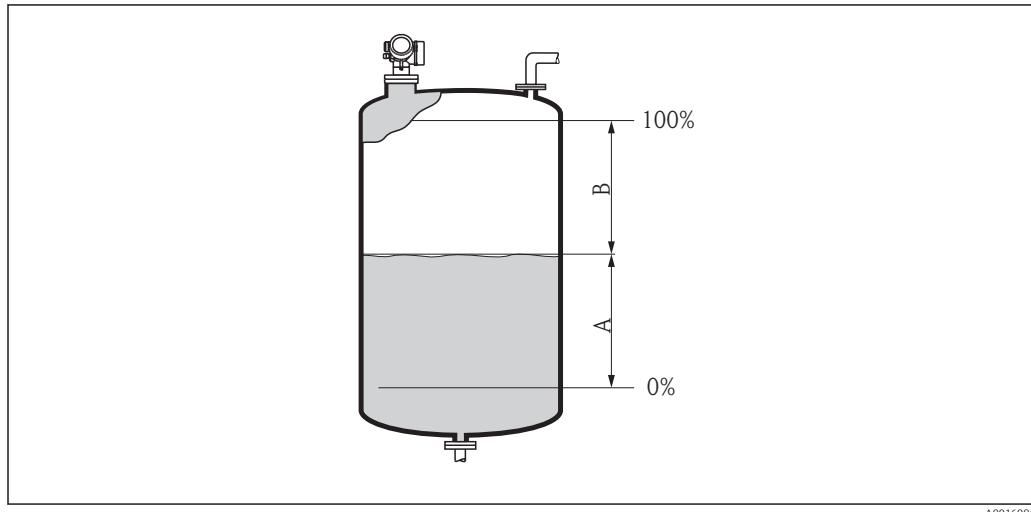

Navigation	Expert → Sensor → Level → Output mode (2317)
Description	Select output mode.
Selection	<ul style="list-style-type: none"> ▪ Ullage ▪ Level linearized
Factory setting	Level linearized

Additional information**Meaning of the options****▪ Ullage**

The remaining space in the tank or silo is indicated.

▪ Level linearized

The level is indicated (more precisely: the linearized value if a linearization has been activated).

15 Definition of the "Output mode (→ 61)" parameter

A Level linearized

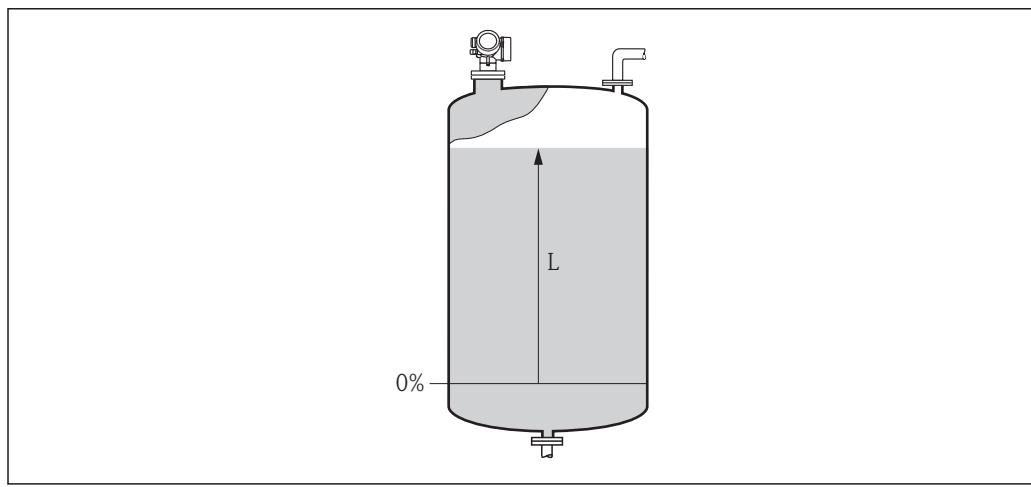

B Ullage

Level**Navigation**

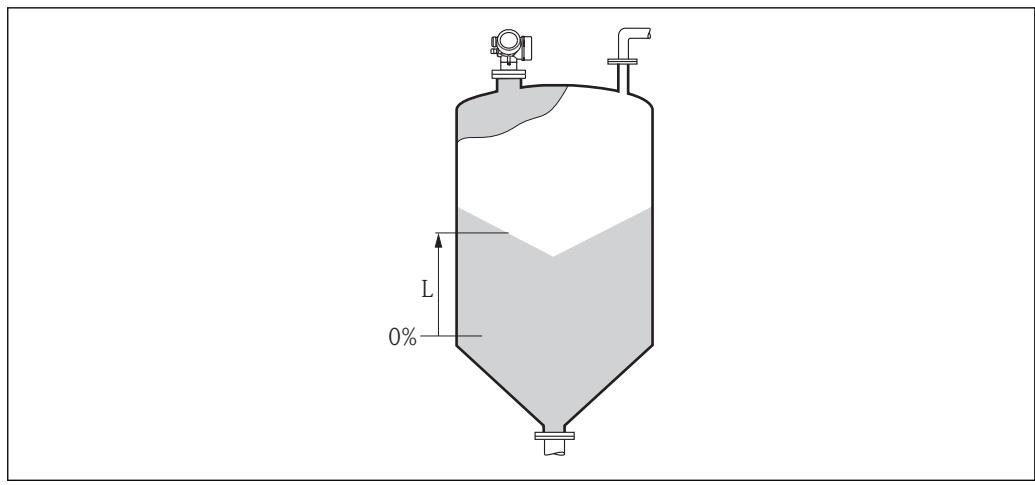

Expert → Sensor → Level → Level (2319)

Description

Displays measured level L (before linearization).

Additional information

16 Level in case of liquid measurements

17 Level in case of bulk solid measurements

The unit is defined in the **Level unit** parameter (→ [59](#)).

Level linearized

Navigation Expert → Sensor → Level → Level linearized (2318)

Description Displays linearized level.

Additional information The unit is defined by the **Unit after linearization** parameter → [69](#).

Tank/silo height

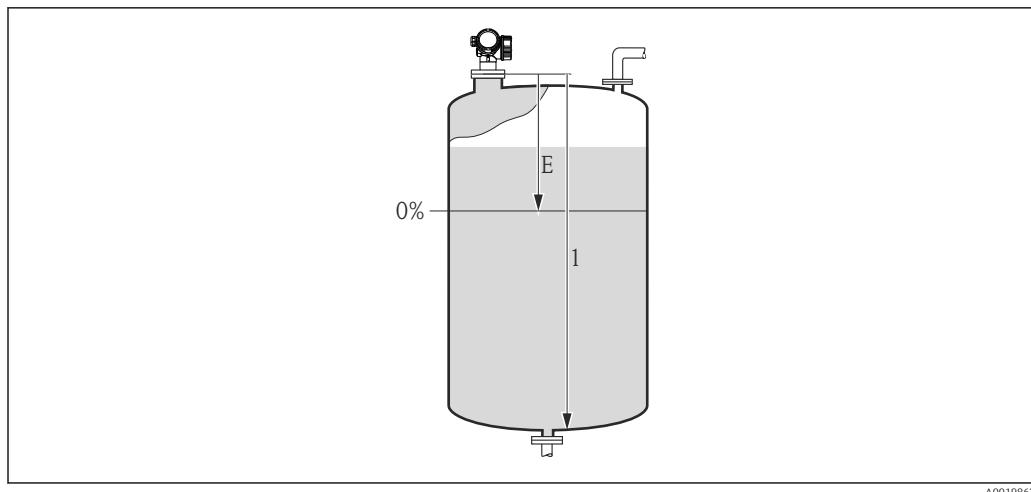

Navigation Expert → Sensor → Level → Tank/silo height (1148)

Description Specify total height of the tank or silo as measured from the process connection.

User entry -999.9999 to 999.9999 m

Factory setting [Empty calibration \(→ 57\)](#)

Additional information If the parametrized measuring range ([Empty calibration \(→ 57\)](#)) differs significantly from the tank or silo height, it is recommended to enter the tank or silo height. Example: Continuous level monitoring in the upper third of a tank or silo.

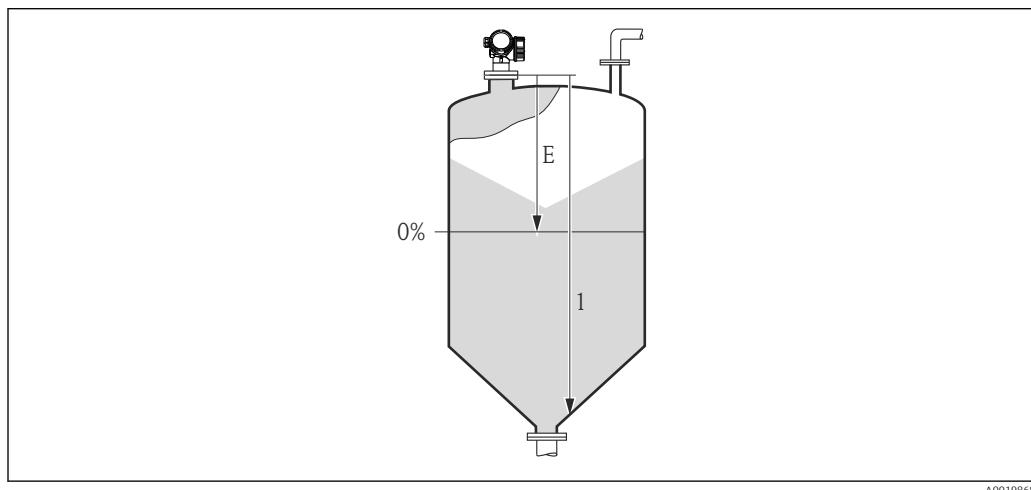

A0019867

■ 18 "Tank/silo height" parameter (→ ■ 63)'for measurements in liquids

E Empty calibration (→ ■ 57)

1 Tank/silo height (→ ■ 63)

A0019868

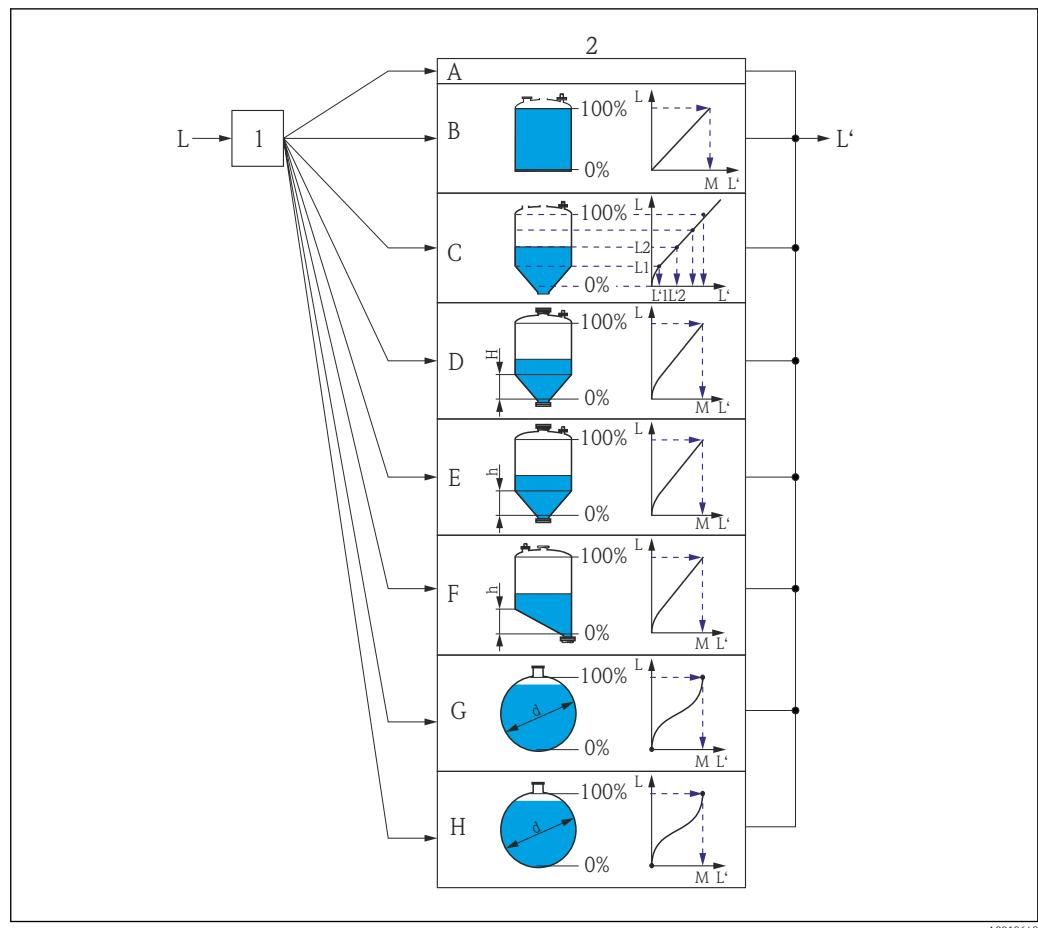

■ 19 "Tank/silo height" parameter (→ ■ 63)'for measurements in bulk solids

E Empty calibration (→ ■ 57)

1 Tank/silo height (→ ■ 63)

i For tanks with conical outlet, **Tank/silo height** should not be changed as in this type of applications **Empty calibration** (→ ■ 57) is usually **not** << the tank or silo height.

3.4.5 "Linearization" submenu

Additional information

A0021476

21 Linearization types

- A None
- B Table
- C Pyramid bottom
- D Conical bottom
- E Angled bottom
- F Sphere
- G Horizontal cylinder

Meaning of the options

- **None**

The level is transmitted in the level unit without linearization.

- **Linear**

The output value (volume/weight) is directly proportional to the level L. This is valid, for example, for vertical cylinders. The following additional parameters have to be specified:

- **Unit after linearization** (→ [69](#))
- **Maximum value** (→ [71](#)): Maximum volume or weight

- **Table**

The relationship between the measured level L and the output value (volume/weight) is given by a linearization table consisting of up to 32 pairs of values "level - volume" or "level - weight", respectively. The following additional parameters have to be specified:

- **Unit after linearization** (→ [69](#))
- **Table mode** (→ [72](#))
- For each table point: **Level** (→ [73](#))
- For each table point: **Customer value** (→ [74](#))
- **Activate table** (→ [74](#))

- **Pyramid bottom**

The output value corresponds to the volume or weight in a silo with pyramid bottom. The following additional parameters have to be specified:

- **Unit after linearization** (→ [69](#))
- **Maximum value** (→ [71](#)): Maximum volume or weight
- **Intermediate height** (→ [71](#)): The height of the pyramid

- **Conical bottom**

The output value corresponds to the volume or weight in a tank with conical bottom. The following additional parameters have to be specified:

- **Unit after linearization** (→ [69](#))
- **Maximum value** (→ [71](#)): Maximum volume or weight
- **Intermediate height** (→ [71](#)): The height of the conical part of the tank

- **Angled bottom**

The output value corresponds to the volume or weight in a silo with an angled bottom. The following additional parameters have to be specified:

- **Unit after linearization** (→ [69](#))
- **Maximum value** (→ [71](#)): Maximum volume or weight
- **Intermediate height** (→ [71](#)): Height of the angled bottom

- **Horizontal cylinder**

The output value corresponds to the volume or weight in a horizontal cylinder. The following additional parameters have to be specified:

- **Unit after linearization** (→ [69](#))
- **Maximum value** (→ [71](#)): Maximum volume or weight
- **Diameter** (→ [71](#))

- **Sphere**

The output value corresponds to the volume or weight in a spherical tank. The following additional parameters have to be specified:

- **Unit after linearization** (→ [69](#))
- **Maximum value** (→ [71](#)): Maximum volume or weight
- **Diameter** (→ [71](#))

Unit after linearization

Navigation

Expert → Sensor → Linearization → Unit lineariz. (2340)

Prerequisite

Linearization type (→ [68](#)) ≠ None

Description

Select unit of the linearized value.

Selection	<i>SI units</i>	<i>US units</i>	<i>Imperial units</i>
	■ STon	■ lb	impGal
	■ t	■ UsGal	
	■ kg	■ ft ³	
	■ cm ³		
	■ dm ³		
	■ m ³		
	■ hl

	■ %		
	<i>Custom-specific units</i>		
	Free text		
Factory setting	%		
Additional information		The selected unit is only used to be indicated on the display. The measured value is not transformed according to the selected unit.	
	 It is also possible to configure a distance-to-distance linearization, i.e. a transformation from the level unit to a different distance unit. To do so, select the Linear linearization mode. In order to define the new level unit, select the Free text option in the Unit after linearization parameter and enter the required unit into the Free text parameter (→ 70).		

Free text	
Navigation	 Expert → Sensor → Linearization → Free text (2341)
Prerequisite	Unit after linearization (→ 69) = Free text
Description	Enter unit symbol.
User entry	Up to 32 alphanumerical characters (letters, numbers, special characters)
Factory setting	Free text

Level linearized	
Navigation	 Expert → Sensor → Linearization → Level linearized (2318)
Description	Displays linearized level.
Additional information	 The unit is defined by the Unit after linearization parameter → 69.

Maximum value

Navigation Expert → Sensor → Linearization → Maximum value (2315)

Prerequisite **Linearization type** (→ [68](#)) has one of the following values:

- Linear
- Pyramid bottom
- Conical bottom
- Angled bottom
- Horizontal cylinder
- Sphere

Description Specify the maximum content of the vessel (100%) measured in the units after linearization.

User entry -50 000.0 to 50 000.0 %

Factory setting 100.0 %

Diameter

Navigation Expert → Sensor → Linearization → Diameter (2342)

Prerequisite **Linearization type** (→ [68](#)) has one of the following values:

- Horizontal cylinder
- Sphere

Description Specify tank diameter.

User entry 0 to 9 999.999 m

Factory setting 2 m

Additional information The unit is defined in the **Distance unit** parameter (→ [46](#)).

Intermediate height

Navigation Expert → Sensor → Linearization → Intermed. height (2310)

Prerequisite **Linearization type** (→ [68](#)) has one of the following values:

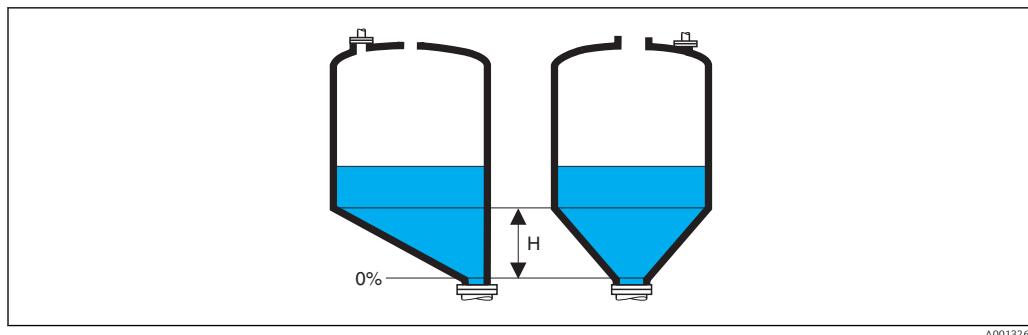

- Pyramid bottom
- Conical bottom
- Angled bottom

Description Specify intermediate height H.

User entry 0 to 200 m

Factory setting 0 m

Additional information

A0013264

H Intermediate height

The unit is defined in the **Distance unit** parameter (→ 46).

Table mode

Navigation

Expert → Sensor → Linearization → Table mode (2303)

Prerequisite

Linearization type (→ 68) = Table

Description

Select editing mode of the linearization table.

Selection

- Manual
- Semiautomatic⁴⁾
- Clear table
- Sort table

Factory setting

Manual

Additional information

Meaning of the options

▪ Manual

The level and the associated linearized value are entered manually for each linearization point.

▪ Semiautomatic

The level is measured by the device for each linearization point. The associated linearized value is entered manually.

▪ Clear table

Deletes the existing linearization table.

▪ Sort table

Rearranges the linerization points into an ascending order.

4) Visibility depends on order options or device settings

Conditions the linearization table must meet:

- The table may consist of up to 32 pairs of values "Level - Linearized Value".
- The table must be monotonic (monotonically increasing or decreasing).
- The first linearization point must refer to the minimum level.
- The last linearization point must refer to the maximum level.

 Before entering a linearization table, the values for **Empty calibration** (→ 57) and **Full calibration** (→ 58) must be set correctly.

If values of the table need to be changed after the full or empty calibration have been changed, a correct evaluation is only ensured if the existing table is deleted and the complete table is entered again. To do so delete the existing table (**Table mode** (→ 72) = **Clear table**). Then enter a new table.

How to enter the table

- Via FieldCare

The table points can be entered via the **Table number** (→ 73), **Level** (→ 73) and **Customer value** (→ 74) parameters. As an alternative, the graphic table editor may be used: Device Operation → Device Functions → Additional Functions → Linearization (Online/Offline)

- Via local display

Select the **Edit table** submenu to call up the graphic table editor. The table is displayed and can be edited line by line.

 The factory setting for the level unit is "%". If you want to enter the linearization table in physical units, you must select the appropriate unit in the **Level unit** parameter (→ 59) beforehand.

Table number

Navigation  Expert → Sensor → Linearization → Table number (2370)

Prerequisite **Linearization type** (→ 68) = **Table**

Description Select table point you are going to enter or change.

User entry 1 to 32

Factory setting 1

Level (Manual)

Navigation  Expert → Sensor → Linearization → Level (2383)

Prerequisite

- **Linearization type** (→ 68) = **Table**
- **Table mode** (→ 72) = **Manual**

Description Enter level value of the table point (value before linearization).

User entry Signed floating-point number

Factory setting 0 %

Level (Semiautomatic)

Navigation	Expert → Sensor → Linearization → Level (2389)
Prerequisite	<ul style="list-style-type: none"> ▪ Linearization type (→ 68) = Table ▪ Table mode (→ 72) = Semiautomatic
Description	Displays measured level (value before linearization). This value is transmitted to the table.

Customer value

Navigation	Expert → Sensor → Linearization → Customer value (2384)
Prerequisite	Linearization type (→ 68) = Table
Description	Enter linearized value for the table point.
User entry	Signed floating-point number
Factory setting	0 %

Activate table

Navigation	Expert → Sensor → Linearization → Activate table (2304)
Prerequisite	Linearization type (→ 68) = Table
Description	Activate (enable) or deactivate (disable) the linearization table.
Selection	<ul style="list-style-type: none"> ▪ Disable ▪ Enable
Factory setting	Disable
Additional information	<p>Meaning of the options</p> <ul style="list-style-type: none"> ▪ Disable The measured level is not linearized. If Linearization type (→ 68) = Table at the same time, the device issues error message F435. ▪ Enable The measured level is linearized according to the table. <p> When editing the table, the Activate table parameter is automatically reset to Disable and must be reset to Enable after the table has been entered.</p>

3.4.6 "Information" submenu

The **Information** submenu comprises all display parameters which give information about the current state of the measurement.

Structure of the submenu

Navigation

Diagram Expert → Sensor → Information

► Information	
Signal quality	→ 76
Absolute echo amplitude	→ 76
Relative echo amplitude	→ 77
Tank bottom echo amplitude	→ 78
Found echoes	→ 78
Used calculation	→ 78
Tank trace state	→ 79
Measurement frequency	→ 79
Electronic temperature	→ 79

Description of parameters

Navigation

Expert → Sensor → Information

Signal quality

Navigation

Expert → Sensor → Information → Signal quality (1047)

Description

Displays the signal quality of the level echo.

Additional information

Meaning of the display options

■ **Strong**

The evaluated echo exceeds the threshold by at least 10 dB.

■ **Medium**

The evaluated echo exceeds the threshold by at least 5 dB.

■ **Weak**

The evaluated echo exceeds the threshold by less than 5 dB.

■ **No signal**

The device does not find a usable echo.

The signal quality indicated in this parameter always refers to the currently evaluated echo: either the level echo or the tank bottom echo. To differentiate between these two, the quality of the tank bottom echo echo is always displayed in brackets.

In case of a lost echo (**Signal quality = No signal**) the device generates the following error message:

■ F941, for **Output echo lost** (→ [104](#)) = Alarm.

■ S941, if another option has been selected in **Output echo lost** (→ [104](#)).

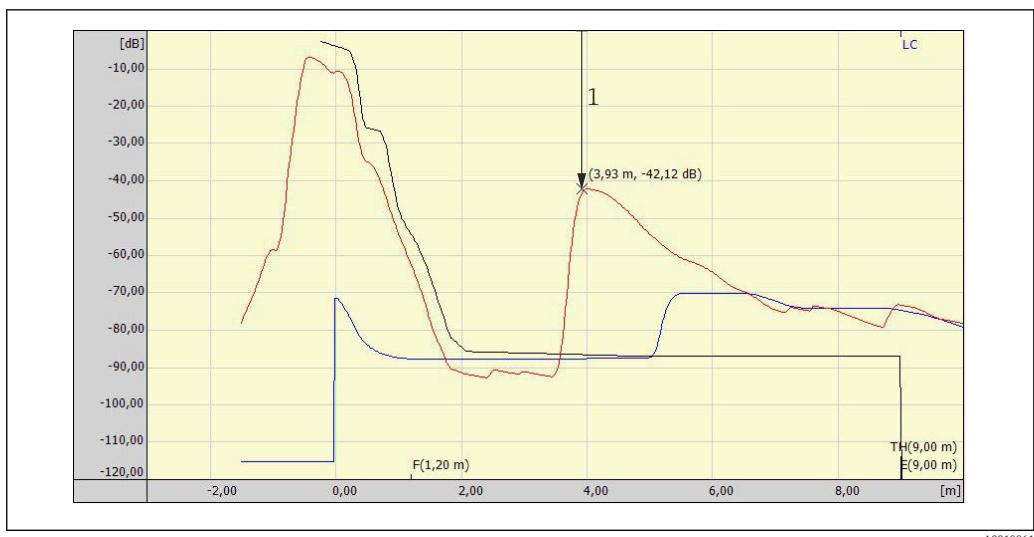

Absolute echo amplitude

Navigation

Expert → Sensor → Information → Abs. echo ampl. (1127)

Description

Displays the absolute amplitude of the level echo in the envelope curve.

Additional information

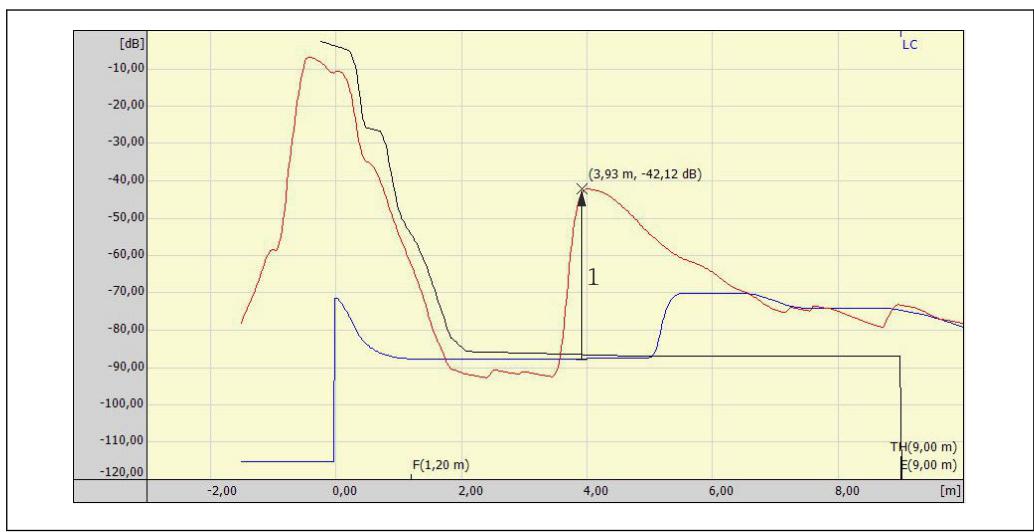

1 Absolute echo amplitude in the envelope curve, measured in dB

Relative echo amplitude**Navigation**

Expert → Sensor → Information → Relat.echo ampl. (1089)

Description

Displays the relative amplitude of the level echo, i.e. the distance between the level echo and the weighting curve.

Additional information

1 The relative echo amplitude is the difference between the weighting curve (blue) and the peak in the envelope curve (red).

In the envelope curve display of FieldCare, the absolute echo amplitude is indicated instead of the relative amplitude (see the number on the top right of the echo peak in the example).

Tank bottom echo amplitude

Navigation   Expert → Sensor → Information → Tank bottom ampl (1128)**Description** Indicates the amplitude of the tank bottom echo.**Additional information** The tank bottom echo amplitude is only evaluated for media with a small DC value.**Found echoes**

Navigation   Expert → Sensor → Information → Found echoes (1068)**Description** Indicates which echoes have been found.**User interface**

- None
- Level
- Level and TB
- EOP
- EOP (TT)
- EOP (LN)
- Level and EOP
- Multiple echo (TT)

Used calculation

Navigation   Expert → Sensor → Information → Used calculation (1115)**Description** Indicates which echoes are used for the calculation of the measured value.**Additional information** **Meaning of the options**

- **None**
The measured value is not calculated (e.g. due to a lost echo)
- **Level**
The level is calculated from the direct level echo.
- **Tank bottom**
The level is calculated from the tank bottom echo.
- **TB (TT)**
The level is calculated from the tank bottom echo taking into account the tank table (TT).
- **Multiple echo (TT)**
The level is calculated from the multiple echo, taking into account the tank table (TT).
- **Level and TB**
The level is calculated from the direct level echo. Its plausibility is checked by the tank bottom echo.

Tank trace state

Navigation  Expert → Sensor → Information → Tank trace state (1206)

Description Indicates the current state of the tank trace.

Additional information

Meaning of the options

- **Not active**
A valid tank trace is not available.
- **EOP (TT)**
A valid EOP tank trace is available.
- **Multiple echo (TT)**
A valid multiple echo tank trace is available.
- **EOP + Multiple echo (TT)**
A valid EOP and multiple echo tank trace are available.

Measurement frequency

Navigation  Expert → Sensor → Information → Measurm. freq. (1180)

Description Displays the current measurement frequency (number of pulses per second).

Electronic temperature

Navigation  Expert → Sensor → Information → Electronic temp. (1062)

Description Displays the current temperature of the electronics.

Additional information The unit is defined in the **Temperature unit** parameter (→  46).

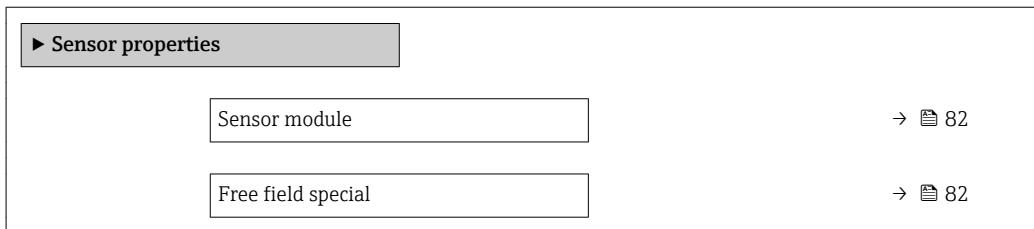

3.4.7 "Sensor properties" submenu

The **Sensor properties** submenu comprises all parameters which describe the measurement-related properties of the probe and the envelope curve.

Structure of the submenu

Navigation

Diagram Expert → Sensor → Sensor prop.

Description of parameters*Navigation* Expert → Sensor → Sensor prop.

Sensor module**Navigation** Expert → Sensor → Sensor prop. → Sensor module (1101)**Description**

Displays the type of sensor module.

Free field special**Navigation** Expert → Sensor → Sensor prop. → Free field spec. (1150)**Prerequisite****Sensor module (→ 82) = SMR26L or SMR26S****Description**

Switch the free field option on or off.

Selection

- No
- Yes

Factory setting

No

Additional information

This parameter can be switched on for free field applications (e.g. below bridges).

3.4.8 "Distance" submenu

The **Distance** submenu contains all parameters which control the filtering of the raw distance D1. The resulting distance D0 is used for the subsequent calculation of the level.

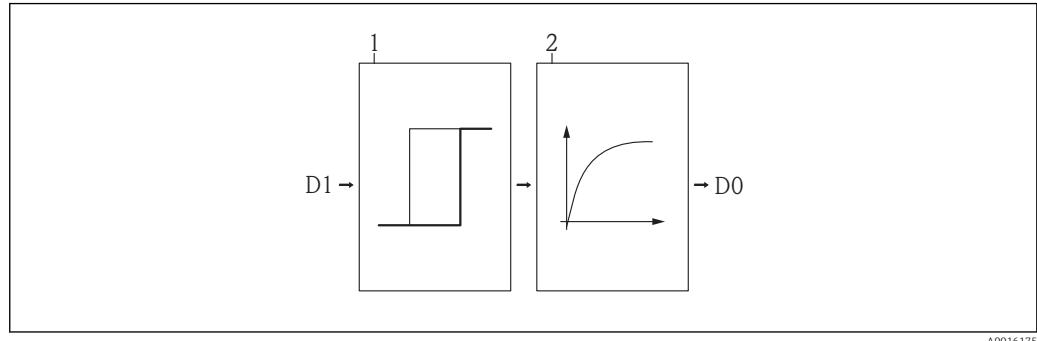

图 22 The configurable distance filters

- 1 Dead time (→ 图 86)
- 2 Integration time (→ 图 87) (low pass filter)

Low pass filter

The low pass filter dampens the distance signal with a user defined integration time τ (**Integration time** parameter (→ 图 87)). After a sudden change of the level, it takes about $5 \times \tau$, until the new measured value is obtained.

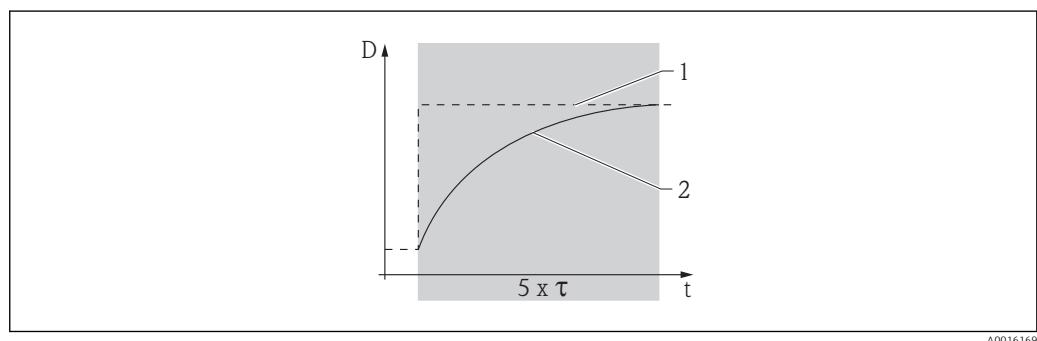

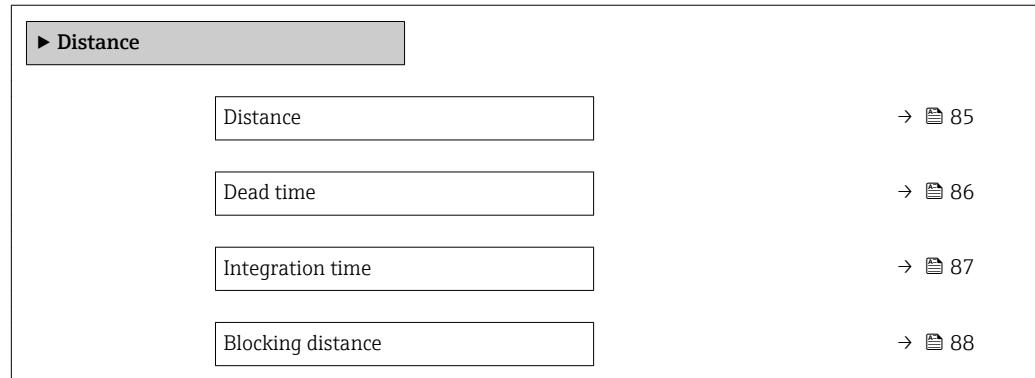

图 23 Low pass filter

- 1 Signal before the low pass filter
- 2 Signal after the low pass filter

Dead time**Navigation**

Expert → Sensor → Distance → Dead time (1199)

Description

Define the dead time (in seconds).

User entry

0 to 600 s

Factory setting

Dependent on the following parameters:

- Medium type (→ [52](#))
- Max. filling speed liquid (→ [47](#)) bzw. Max. filling speed solid (→ [48](#))
- Max. draining speed liquid (→ [48](#)) bzw. Max. draining speed solid (→ [49](#))

Additional information*Factory setting for "Medium type" = "Liquid"*

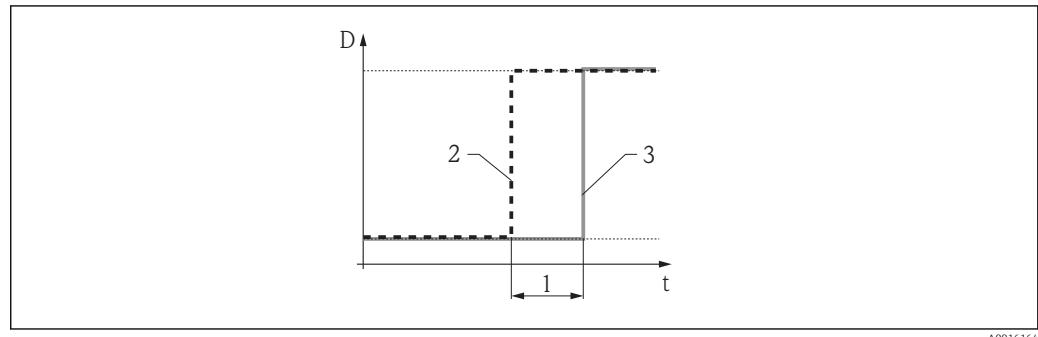

Max. filling speed liquid (→ 47)	Max. draining speed liquid (→ 48)					
	Slow < 1cm (0,4in) /min	Medium < 10cm (4in) /min	Standard < 1m (40in) /min	Fast < 2m (80in) /min	Very fast > 2m (80in) /min	No filter / test
Slow < 1cm (0,4in) /min	8 s	6 s	4 s	2 s	0 s	0 s
Medium < 10cm (4in) /min	6 s	6 s	4 s	2 s	0 s	0 s
Standard < 1m (40in) /min	4 s	4 s	4 s	2 s	0 s	0 s
Fast < 2m (80in) /min	2 s	2 s	2 s	2 s	0 s	0 s
Very fast > 2m (80in) /min	0 s	0 s	0 s	0 s	0 s	0 s
No filter / test	0 s	0 s	0 s	0 s	0 s	0 s

Factory setting for "Medium type" = "Solid"

Max. filling speed solid (→ 48)	Max. draining speed solid (→ 49)						
	Very slow < 0,5m (1,6ft) /h	Slow < 1m (3,3ft) /h	Standard < 2m (6,5ft) /h	Medium < 4m (13ft) /h	Fast < 8m (26ft) /h	Very fast > 8m (26ft) /h	No filter / test
Very slow < 0,5m (1,6ft) /h	180 s	180 s	120 s	60 s	40 s	0 s	0 s
Slow < 1m (3,3ft) /h	180 s	180 s	120 s	60 s	40 s	0 s	0 s
Standard < 2m (6,5ft) /h	120 s	120 s	60 s	60 s	40 s	0 s	0 s
Medium < 4m (13ft) /h	60 s	60 s	60 s	40 s	40 s	0 s	0 s
Fast < 8m (26ft) /h	40 s	40 s	40 s	40 s	20 s	0 s	0 s
Very fast > 8m (26ft) /h	0 s	0 s	0 s	0 s	0 s	0 s	0 s
No filter / test	0 s	0 s	0 s	0 s	0 s	0 s	0 s

Application

Sudden changes of the measured distance are ignored during the time span defined in this parameter. In this way it is possible to prevent short-term interferences from disturbing the output signal.

26 Effect of the dead time

- 1 Dead time
- 2 Signal before the dead time filter
- 3 Signal after the dead time filter

Disadvantages

- The device slows down.
- Fast level changes are registered with a delay.

Integration time

Navigation Expert → Sensor → Distance → Integration time (1092)

Description Define the integration time (in seconds).

User entry 0.0 to 200 000.0 s

Factory setting Dependent on the following parameters:

- Medium type (→ 52)
- Max. filling speed liquid (→ 47) bzw. Max. filling speed solid (→ 48)
- Max. draining speed liquid (→ 48) bzw. Max. draining speed solid (→ 49)

Additional information

Factory setting for "Medium type" = "Liquid"

Max. filling speed liquid ($\rightarrow \text{图 47}$)	Max. draining speed liquid ($\rightarrow \text{图 48}$)					
	Slow < 1cm (0,4in) /min	Medium < 10cm (4in) /min	Standard < 1m (40in) /min	Fast < 2m (80in) /min	Very fast > 2m (80in) /min	No filter / test

3.4.9 "Gas phase compensation" submenu

Einfluss der Gasphase

High pressures reduce the propagation velocity of the measuring signals in the gas/vapor above the fluid. This effect depends on the kind of gas/vapor and of its temperature. This results in a systematic measuring error that gets bigger as the distance increases between the reference point of the measurement (flange) and the product surface.

The following table illustrates this measured error for a few typical gases/vapors (with regard to distance; a positive value means that too large a distance is being measured):

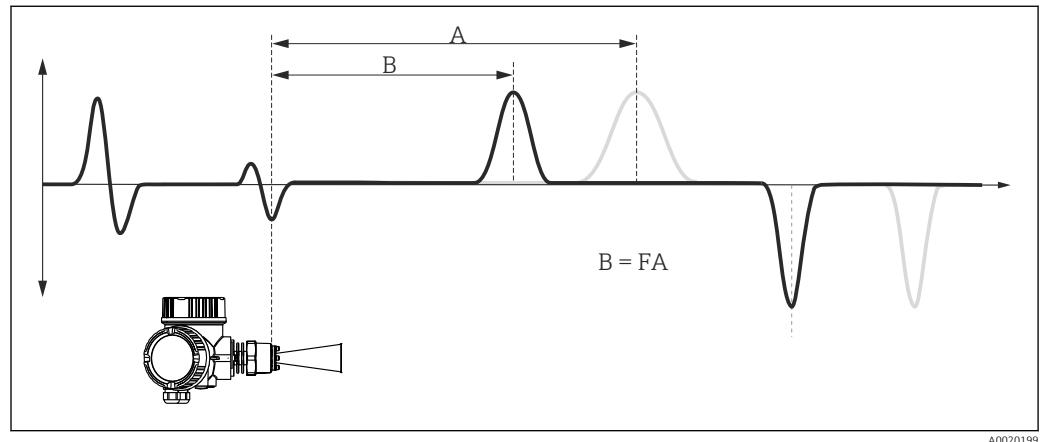

Gas layer	Temperature		Pressure				
	°C	°F	1 bar (14.5 psi)	10 bar (145 psi)	50 bar (725 psi)	100 bar (1 450 psi)	160 bar (2 320 psi)
Air/ nitrogen	20	68	0.00 %	0.22 %	1.2 %	2.4 %	3.89 %
	200	392	-0.01 %	0.13 %	0.74 %	1.5 %	2.42 %
	400	752	-0.02 %	0.08 %	0.52 %	1.1 %	1.70 %
Hydrogen	20	68	-0.01 %	0.10 %	0.61 %	1.2 %	2.00 %
	200	392	-0.02 %	0.05 %	0.37 %	0.76 %	1.23 %
	400	752	-0.02 %	0.03 %	0.25 %	0.53 %	0.86 %
Water (saturated steam)	100	212	0.02 %	-	-	-	-
	180	356	-	2.1 %	-	-	-
	263	505.4	-	-	8.6 %	-	-
	310	590	-	-	-	22 %	-
	364	687	-	-	-	-	41.8 %

Gas phase compensation with reference signal

This type of gas phase compensation requires a reference signal at a defined distance from the process connection which must be above the maximum level. The current speed of propagation is determined from the shift of this reference signal. The envelope curve can be scaled accordingly.

Constant gas phase compensation factor

If the properties of the gas phase (pressure, temperature, composition) do not change over the time and are known, a gas phase compensation can also be performed without a reference signal. Instead, a constant, user-defined correction factor is applied in this case. This factor is used to scale the envelope curve (and thus the measured echo distance).

■ 29 Gas phase compensation with a constant correction factor F

- A Position of the level echo in the original envelope curve
B Position of the level echo in the corrected envelope curve.

Select gas phase compensation mode.

Selection

- Off
- On
- Without correction
- External correction⁵⁾
- Const. GPC factor

Factory setting

Off

Additional information**Meaning of the options****▪ Off**

The gas phase compensation is deactivated.

▪ On

This option can only be selected for probes with reference echo. The gas phase compensation is calculated from the position of this reference echo. In FieldCare, the displayed envelope curve does already contain the correction.

▪ Without correction

The correction factor is calculated from the reference echo but not applied to the measurement. In FieldCare, the envelope curve is displayed without the correction. This option is only used for diagnostic purposes and should not be selected in normal applications.

▪ External correctionThe device receives the externally measured pressure through an AO block and uses it together with the gas phase compensation factor F to calculate the gas phase compensation. The displayed envelope curve does already contain the correction.**▪ Const. GPC factor**

The correction factor is a constant defined by the user. A reference echo is not needed. In FieldCare, the displayed envelope curve does already contain the correction.

External pressure selector**Navigation** Expert → Sensor → Gas phase comp. → Ext. press.input (1073)**Prerequisite****GPC mode (→  94) = External correction****Description**

Allocate an AO block to the gas phase compensation. The externally measured pressure is read via this AO block.

------------------	--

Factory setting	None
------------------------	------

External pressure

Navigation	  Expert → Sensor → Gas phase comp. → External press. (1233)
Prerequisite	GPC mode (→  94) = External correction
Description	Indicates the measured pressure which is currently used for the gas phase compensation.

Gas phase compensation factor

Navigation	  Expert → Sensor → Gas phase comp. → Gas comp. factor (1209)
Prerequisite	GPC mode (→  94) = External correction
Description	Define gas phase compensation factor F .
User entry	Signed floating-point number
Factory setting	0
Additional information	Suitable value for saturated steam in the temperature range 100 to 350 °C (212 to 662 °F): $F = 0.00505 / \text{bar}$

Present reference distance

Navigation	  Expert → Sensor → Gas phase comp. → Pres. ref. dist. (1076)
Prerequisite	GPC mode (→  94) = On or Without correction
Description	Displays the currently measured distance of the reference echo.

Reference distance

Navigation Expert → Sensor → Gas phase comp. → Reference dist. (1033)

Prerequisite **GPC mode (→ 94) = On or Without correction**

Description Enter actual distance of the reference echo.

User entry 0 to 200 m

Factory setting 0.3 m

Additional information The distance of the artificially generated reference echo has to be entered into this parameter. The reference echo must always be in the gas phase; the level must never rise above the reference echo.

Reference echo threshold

Navigation Expert → Sensor → Gas phase comp. → Ref. echo thresh (1168)

Prerequisite **GPC mode (→ 94) = On or Without correction**

Description Define threshold for the reference echo.

User entry -999.0 to 999.0 dB

Factory setting -80 dB

Additional information Only echoes exceeding the defined threshold are accepted as reference echo.

Const. GPC factor

Navigation Expert → Sensor → Gas phase comp. → Const.GPC factor (1217)

Prerequisite **GPC mode (→ 94) = Const. GPC factor**

Description Specify constant correction factor for the measured distance.

User entry 0.5 to 1.5

Factory setting 1

3.4.10 "Sensor diagnostics" submenu

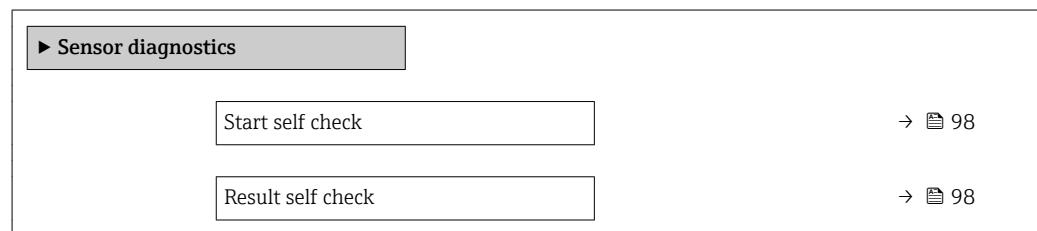

The **Sensor diagnostics** submenu is used for the proof-test which is required for SIL applications in regular intervals. For details refer to the description of the test procedure C in the Functional Safety Manual, SD01087F.

For the self check, a test signal is generated in the sensor module and fed onto the analog signal path. The device software checks whether this test signal is within the admissible amplitude and distance ranges. The result of the self check is displayed in the **Result self check** parameter (→ 98).

Structure of the submenu

Navigation

Expert → Sensor → Sensor diag.

Description of parameters

Navigation

Expert → Sensor → Sensor diag.

Start self check

Navigation

Expert → Sensor → Sensor diag. → Start self check (1133)

Description

Start a self check of the device.

Selection

- No
- Yes

Factory setting

No

Additional information

For the self check, a test signal is generated in the sensor module and fed onto the analog signal path. The device software checks whether this test signal is within the admissible amplitude and distance ranges. The result of the self check is displayed in the **Result self check** parameter (→ 98).

 The self check is used for the proof-test which is required for SIL applications in regular intervals. For details refer to the description of the test procedure C in the Functional Safety Manual SD01087F.

Result self check

Navigation

Expert → Sensor → Sensor diag. → Result selfcheck (1134)

Description

Displays the result of the self check.

Additional information

Meaning of the options

- **Ok**
The self check has been passed.
- **Not ok**
The self check failed.
- **Check not done**
A self check has not been performed.

3.4.11 "Safety settings" submenu

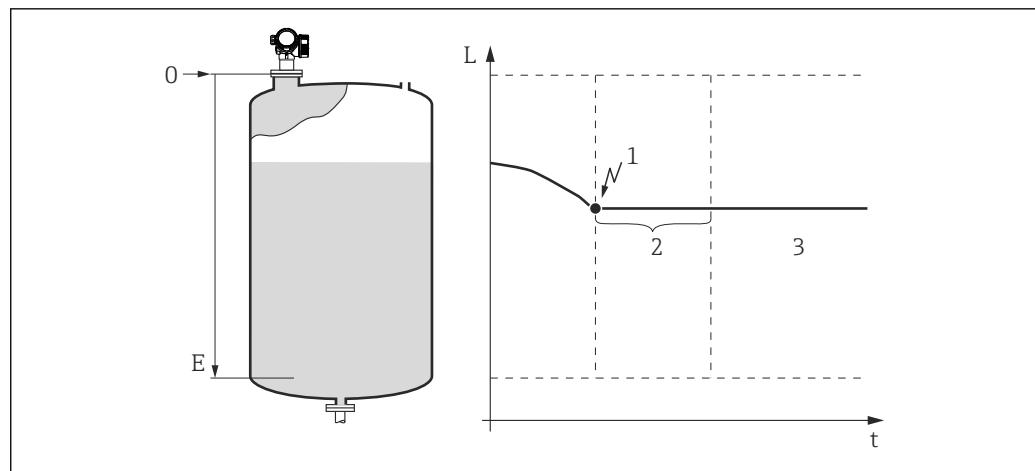

The **Safety settings** submenu contains all parameters which determine the behavior of the device in critical situations such as an echo loss or an undershooting of a user defined safety distance.

Behavior in the case of an echo loss

The behavior in case of an echo loss is defined in the **Output echo lost** parameter (→ 104). Depending on the selected option, suitable values must be selected in a number of additional parameters:

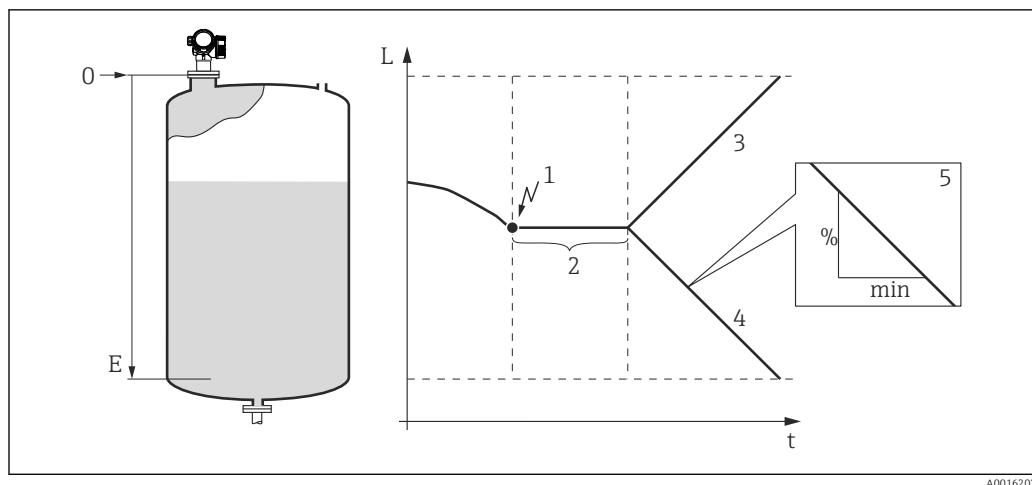

Option selected in in "Output echo lost" (→ 104)"	Required additional parameters
Last valid value	Delay time echo lost (→ 106)
Ramp at echo lost	<ul style="list-style-type: none"> ▪ Ramp at echo lost (→ 106) ▪ Delay time echo lost (→ 106)
Value echo lost	<ul style="list-style-type: none"> ▪ Value echo lost (→ 104) ▪ Delay time echo lost (→ 106)
Alarm	1)

- 1) The alarm behavior is defined in the submenus "Current output" (HART) or "Analog input" (PROFIBUS PA, FOUNDATION Fieldbus).

104 "Output echo lost (→ 104)" = "Last valid value"

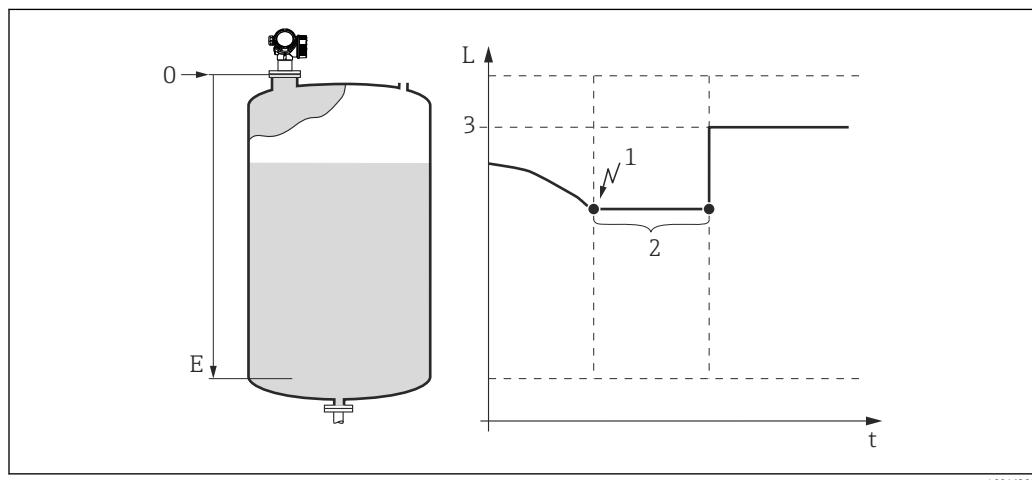

- 1 Echo loss
- 2 Delay time echo lost (→ 106)
- 3 The last valid measured value is held.

A0016207

31 "Output echo lost (\rightarrow 104)" = "Ramp at echo lost"

- 1 Echo loss
- 2 Delay time echo lost (\rightarrow 106)"
- 3 For a positive ramp: The measured value is increased with a constant rate until it reaches the maximum value (100%).
- 4 For a negative ramp: The measured value is decreased with a constant rate until it reaches the minimum value (0%).
- 5 The ramp is specified as "percentage of the defined measuring span per minute".

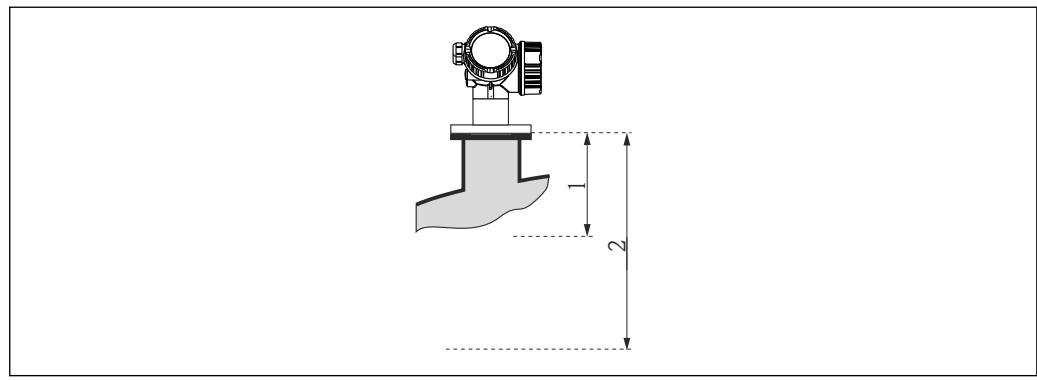

A0016208

32 "Output echo lost (\rightarrow 104)" = "Value echo lost"

- 1 Echo loss
- 2 Delay time echo lost (\rightarrow 106)
- 3 Value echo lost (\rightarrow 104)

Safety distance

In order to get a warning message if the level rises into the proximity of the upper blocking distance, a safety distance can be defined in the **Safety distance** parameter (→ 107).

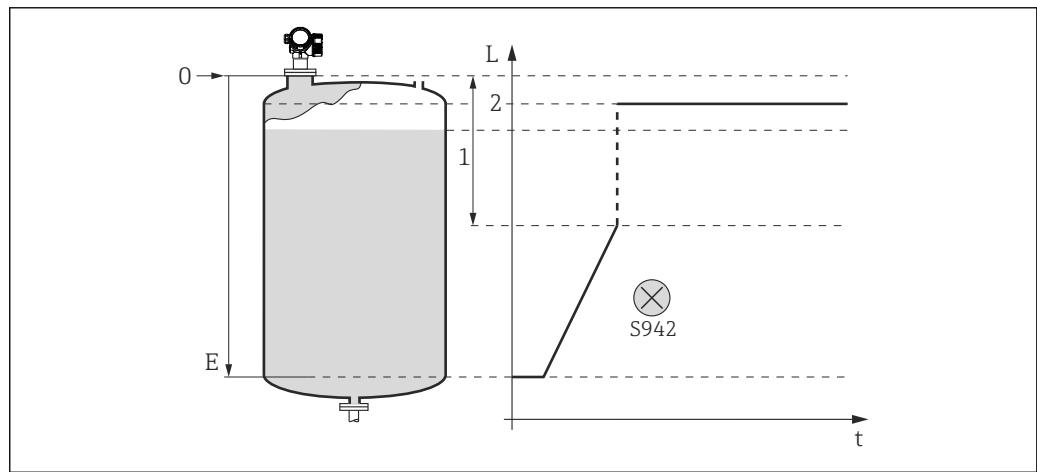

A0016210

33 Definition of the safety distance

- 1 Blocking distance (→ 88)
- 2 Safety distance (→ 107)

The behavior of the device in case the level rises into the safety distance is defined in the following parameters:

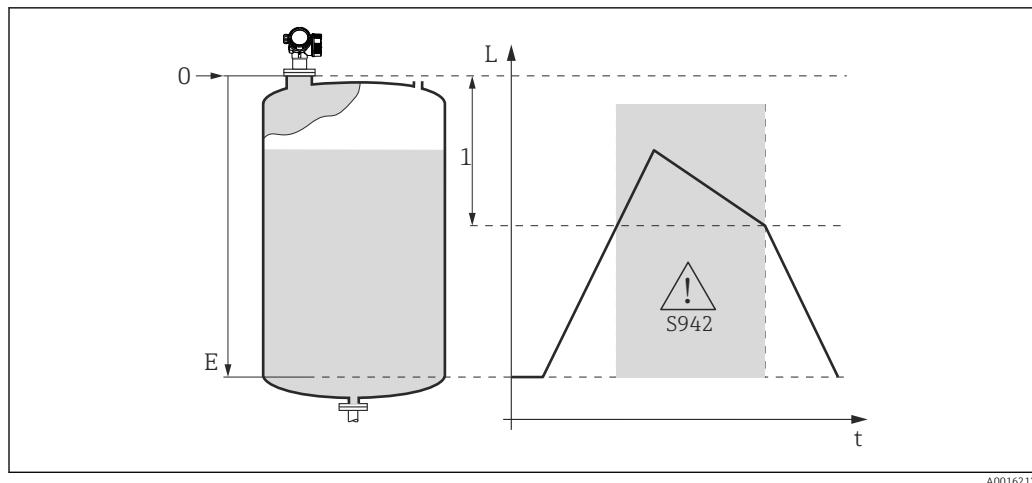

- In safety distance (→ 107)
- Acknowledge alarm (→ 108)

A0016211

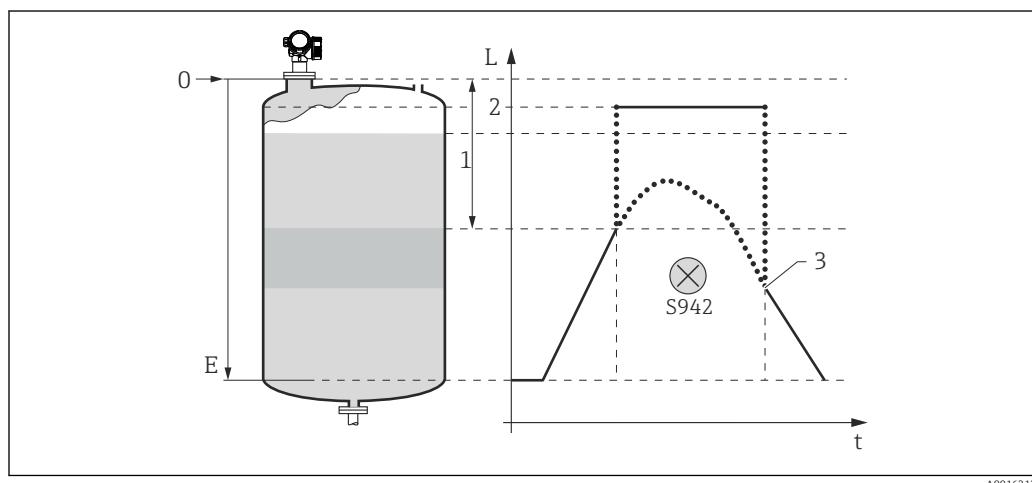

34 "In safety distance" = "Alarm": If the safety distance is undershot, the device generates an alarm.

- 1 Safety distance (→ 107)
- 2 Value defined in "Failure mode"

35 "In safety distance" = "Warning": If the safety distance is undershot, the device continues measuring but nevertheless generates a warning.

1 Safety distance (→ 107)

36 "In safety distance" = "Self holding": If the safety distance is undershot, the device generates an alarm. The measurement is not resumed until this alarm has been acknowledged by the user.

- 1 Safety distance (→ 107)
- 2 Value defined in "Failure mode"
- 3 Acknowledge alarm (→ 108)

Structure of the submenu

Description of parameters*Navigation* Expert → Sensor → Safety sett.**Output echo lost****Navigation** Expert → Sensor → Safety sett. → Output echo lost (2307)**Description**

Define the behavior of the output signal in case of a lost echo.

Selection

- Last valid value
- Ramp at echo lost
- Value echo lost
- Alarm

Factory setting

Last valid value

Additional information**Meaning of the options****■ Last valid value**

The last valid value is kept in the case of a lost echo.

■ Ramp at echo lostIn the case of a lost echo the output value is continuously shifted towards 0% or 100%.
The slope of the ramp is defined in the **Ramp at echo lost** parameter (→  106).**■ Value echo lost**In the case of a lost echo the output assumes the value defined in the **Value echo lost** parameter (→  104).**■ Alarm**In the case of a lost echo the device generates an alarm; see the **Failure mode** parameter**Value echo lost****Navigation** Expert → Sensor → Safety sett. → Value echo lost (2316)**Prerequisite****Output echo lost (→  104) = Value echo lost****Description**

Define output value in case of a lost echo.

User entry

0 to 200 000.0 %

Factory setting

0.0 %

Additional information

Use the unit which has been defined for the measured value output:

- without linearization: **Level unit** (→  59)
- with linearization: **Unit after linearization** (→  69)

Diagnostics echo lost

Navigation  Expert → Sensor → Safety sett. → Diagn. echo lost (1401)

Description Define diagnostic category in case of a lost echo.

- Selection**
- Off
 - Maintenance required
 - Maintenance demanded
 - Maintenance alarm
 - Invalid process condition

Factory setting Invalid process condition

Additional information The diagnostic category (diagnostic bit) is not contained in the cyclic data telegram. The PLC, however, can be parametrized in a way such that it requests the diagnostic bit every time the status has changed. For details refer to "PROFIBUS Profile for Process Control Devices, Version 3.02".

Status echo lost

Navigation  Expert → Sensor → Safety sett. → Status echo lost (1416)

Description Define status in case of a lost echo.

- Selection**
- Good
 - Good: Maintenance required (M)
 - Good: Maintenance demanded (M)
 - Uncertain: Maintenance demanded (M)
 - Bad: Maintenance alarm (F)
 - Uncertain: Process related/no maint. (S)
 - Bad: Process related/no maintenance (F)

Factory setting Depending on the **Output echo lost** parameter (→  104)

Additional information *Dependence on the "Output echo lost" parameter*

Output echo lost (→  104)	Status echo lost (→  105)
Last valid value	Uncertain: Process related/no maint. (S)
Ramp at echo lost	Uncertain: Process related/no maint. (S)
Value echo lost	Uncertain: Process related/no maint. (S)
Alarm	Bad: Process related/no maintenance (F)

The status is transmitted to the PLC as a part of the cyclic data telegram. For details refer to "PROFIBUS Profile for Process Control Devices, Version 3.02".

Ramp at echo lost**Navigation**

Expert → Sensor → Safety sett. → Ramp echo lost (2323)

Prerequisite

Output echo lost (→ [104](#)) = **Ramp at echo lost**

Description

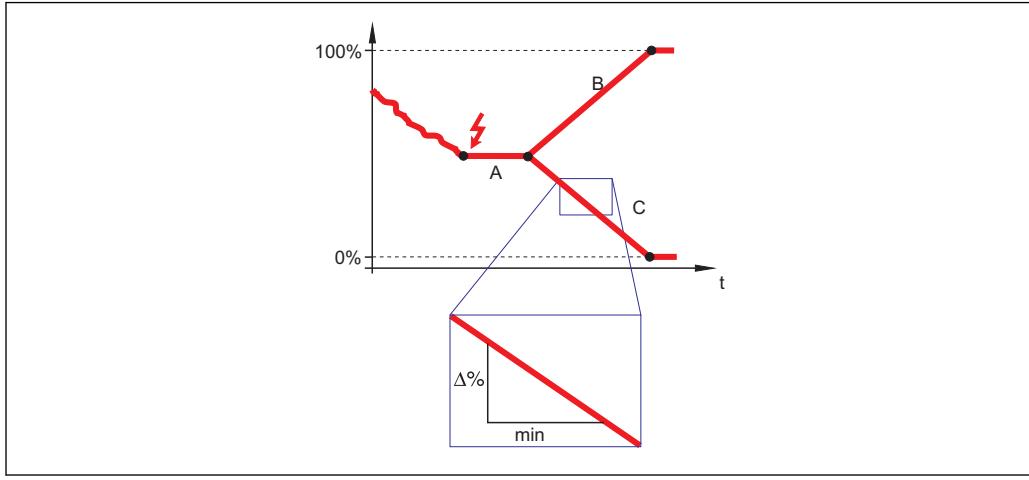

Define the slope of the ramp in the case of a lost echo.

User entry

Signed floating-point number

Factory setting

0.0 %/min

Additional information

A0013269

- A *Delay time echo lost* (→ [106](#))
- B *Ramp at echo lost* (→ [106](#)) (positive value)
- C *Ramp at echo lost* (→ [106](#)) (negative value)

- The unit for the slope of the ramp is "percentage of the measuring range per minute" (%/min).
- For a negative slope of the ramp: The measured value is continuously decreased until it reaches 0%.
- For a positive slope of the ramp: The measured value is continuously increased until it reaches 100%.

Delay time echo lost**Navigation**

Expert → Sensor → Safety sett. → Delay echo lost (1193)

Description

Define the delay in the case of an echo loss.

User entry

0 to 99 999.9 s

Factory setting

60.0 s

Additional information

After an echo loss, the device waits for the time specified in this parameter before reacting as specified in the **Output echo lost** parameter (→ [104](#)). This helps to avoid interruptions of the measurement by short-term interferences.

Safety distance

Navigation	Expert → Sensor → Safety sett. → Safety distance (1093)
Description	Define safety distance.
User entry	-200 to 200 m
Factory setting	0 m
Additional information	The safety distance is measured from the reference point of the measurement (lower edge of the flange or threaded connection). The safety distance can be used to generate a warning before the level rises into the blocking distance. The In safety distance parameter (→ 107) defines the reaction of the device if the level rises into the safety distance.

In safety distance

Navigation	Expert → Sensor → Safety sett. → In safety dist. (1018)
Description	Define reaction if the level rises into the safety distance.
Selection	<ul style="list-style-type: none"> ■ Off ■ Alarm ■ Warning ■ Self holding
Factory setting	Warning
Additional information	<p>Meaning of the options</p> <ul style="list-style-type: none"> ■ Off No reaction if the level rises into the safety distance ■ Alarm The device assumes the alarm state and generates the diagnostic message In safety distance. ■ Warning The device assumes the warning state and generates the diagnostic message In safety distance. ■ Self holding The device assumes the defined alarm state. Additionally, the diagnostic message In safety distance is generated. If the level drops out of the safety distance, the alarm remains active. The measurement is continued only after a reset of the self holding via the Acknowledge alarm parameter (→ 108).

Diagnostic in safety distance

Navigation	Expert → Sensor → Safety sett. → Diag.safety dist (1415)
Description	Define the diagnostic category in case the safety distance is undershot.

Selection

- Off
- Maintenance required
- Maintenance demanded
- Maintenance alarm
- Invalid process condition

Factory setting

Invalid process condition

Additional information

The diagnostic category (diagnostic bit) is not contained in the cyclic data telegram. The PLC, however, can be parametrized in a way such that it requests the diagnostic bit every time the status has changed. For details refer to "PROFIBUS Profile for Process Control Devices, Version 3.02".

Status in safety distance**Navigation**

Expert → Sensor → Safety sett. → Stat.safety dist (1417)

Description

Define status in case the safety distance is undershot.

Selection

- Good
- Good: Maintenance required (M)
- Good: Maintenance demanded (M)
- Uncertain: Maintenance demanded (M)
- Bad: Maintenance alarm (F)
- Uncertain: Process related/no maint. (S)

Factory setting

Dependent on the **In safety distance** parameter (→ 107)

Additional information

In safety distance (→ 107)	Status in safety distance (→ 108)
Off	-
Alarm	Bad: Process related/no maintenance (F)
Warning	Uncertain: Process related/no maint. (S)
Self holding	p Bad: Process related/no maintenance (F)

The status is transmitted to the PLC as a part of the cyclic data telegram. For details refer to "PROFIBUS Profile for Process Control Devices, Version 3.02".

Acknowledge alarm**Navigation**

Expert → Sensor → Safety sett. → Acknowl. alarm (1130)

Prerequisite

In safety distance (→ 107) = **Self holding**

Description

Reset the self holding alarm of the device.

Selection	<ul style="list-style-type: none">■ No■ Yes
Factory setting	No
Additional information	Meaning of the options <ul style="list-style-type: none">■ No The alarm is not reset.■ Yes The alarm is reset. The measurement is resumed.

3.4.12 "Envelope curve" submenu

i The **Envelope curve** submenu is only available on the display module (not in FieldCare). It is used to display the envelope curve on the display module. When operating via FieldCare, the envelope curve can be displayed in the envelope curve editor (**Device Operation** → **Device Functions** → **Additional Functions** → **Envelope Curve**).

Description of parameters

Navigation

Diagram Expert → Sensor → Env. curve

Envelope curve

Navigation

Diagram Expert → Sensor → Env. curve → Env. curve (1207)

Description

Define which curves are included in the envelope curve display on the display module.

Selection

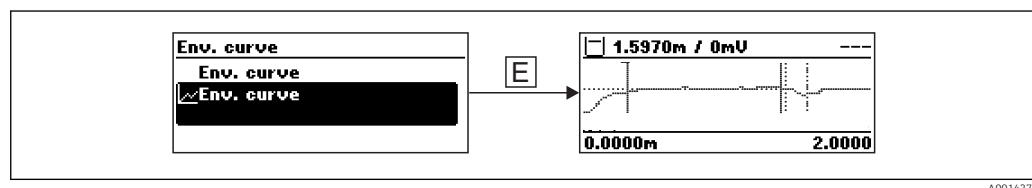

- Envelope curve
- Envelope + Map
- Envelope + Ref.
- Raw envelope curve
- Envelope + EWC

Factory setting

Envelope curve

Additional information

The display of the selected curve is called up as follows:

A0014279

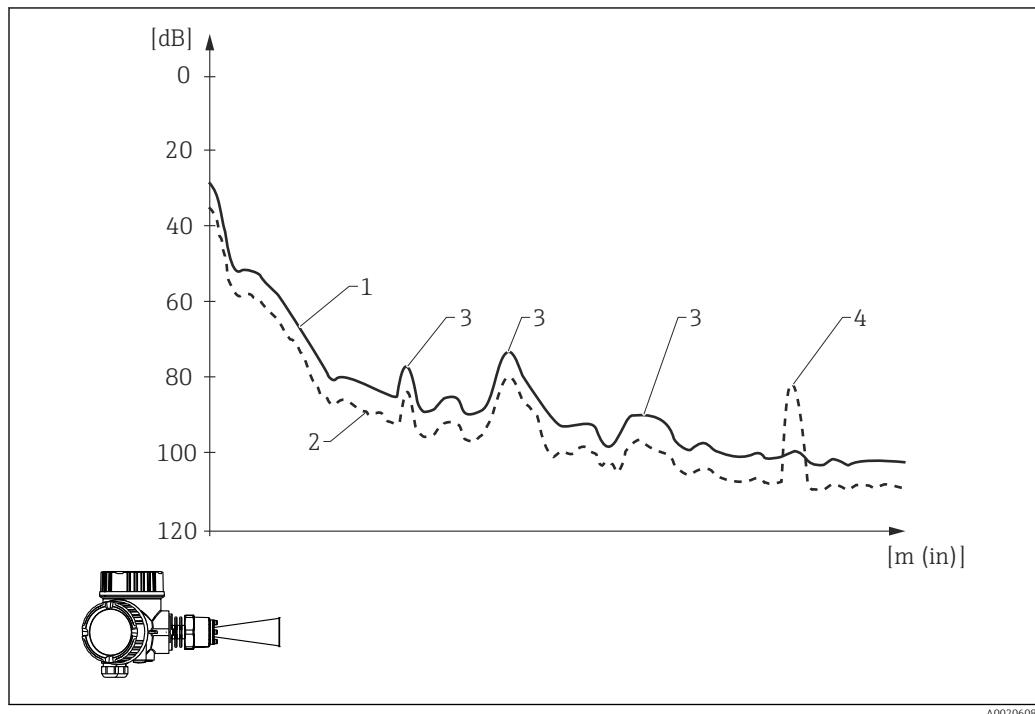

To quit the envelope curve display, press the "+" and "-" keys simultaneously.

When operating via FieldCare, the envelope curve can be displayed in the envelope curve editor (**Device Operation → Device Functions → Additional Functions → Envelope Curve**).

3.4.13 "Mapping" submenu

The mapping is used to suppress static interference signals which may be generated by internal tank or silo fittings. A **mapping curve**, representing the **envelope curve** of an empty tank or silo as precisely as possible, is used for the mapping.

In the case of a **static envelope curve evaluation**⁶⁾ all echos below the mapping curve are ignored in the signal evaluation.

- 1 Mapping curve
- 2 Envelope curve
- 3 Interference echos; covered by the mapping curve
- 4 Level echo; exceeds the envelope curve

In the case of a **dynamic envelope curve evaluation**⁶⁾ echoes from below the map can also be taken into account. In this case the static envelope curve evaluation serves as a starting point as long as enough history information is not yet available.

6) For the difference between static and dynamic envelope curve evaluation refer to the "Expert → Sensor → Echo tracking" submenu.

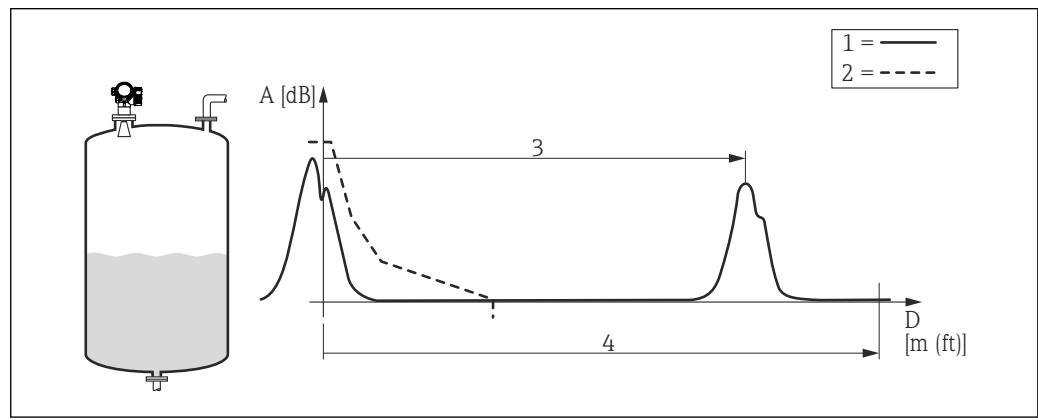

Recording the mapping curve

There are different methods of recording the mapping curve:

- Factory map
- Overlay map
- Record new map

Factory map

The factory map is adapted to the individual antenna and is therefore permanently stored in the device and not recorded by the user. It covers the near field of the antenna (ringing area).

- 1 Envelope curve
- 2 Factory map
- 3 Level distance
- 4 Empty distance

If a new mapping is recorded, the factory map nevertheless remains in the device and can be reactivated when required by selecting the **Factory map** option in the **Confirm distance** parameter (→ 120).

Overlaying the map

In this case the existing mapping curve (i.e. the factory map or a previously recorded map) initially remains valid.

The envelope curve is observed during the defined **Mapping overlay time**. At each position the highest value reached during the mapping overlay time is used for the new mapping curve. Depending on the circumstances this may be the amplitude of the old mapping curve or an amplitude obtained during the **Mapping overlay time**.

With the help of the overlay mapping it is possible to map not only static but also dynamic signals (e.g. from an agitator).

Map overlaying will be used if one of the options **Distance ok** or **Tank empty** has been selected in the **Confirm distance** parameter (→ 120).

New recording of the mapping curve

In this case the existing map is deleted and a new map is recorded.

In contrast to the overlaying, only the current envelope curve is used here and there is no mapping overlay time. Therefore the new recording is faster than the overlaying. However, dynamic interference echoes can not be suppressed in this way.

A new recording of the map is started in the following way:

1. Go to the **Confirm distance** parameter (→ 120) and select the **Manual map** option.

2. Go to the **Record map** parameter (→ 122) and select the **Record map** option.

Partial mapping / Deleting a map partially

The overlaying or new recording of the map does not necessarily cover the complete measuring range. Instead a partial mapping can be performed.

- The mapping starts at -0.25 m (-0.8 ft), i.e. above the reference point.
- The end point of the mapping range can be defined in the **Mapping end point** parameter (→ 121).

After these settings, the recording of the mapping curve is started as described above.

The map can also be partially deleted. This is performed as follows:

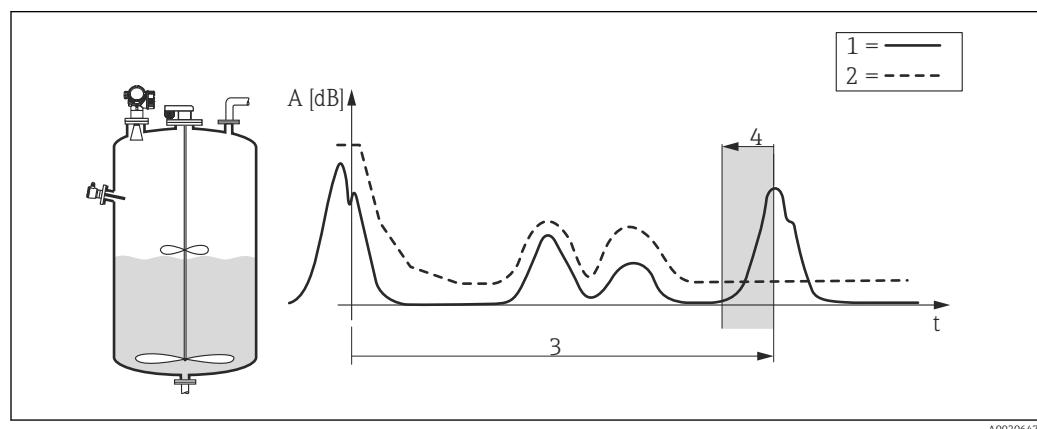

1. Enter the end point of the area to be deleted into the **Mapping end point** parameter (→ 121).
2. Go to the **Record map** parameter (→ 122) and select the **Delete partial map** option.

Mapping in the tank bottom area

Irrespective of the defined mapping range, no mapping is recorded near the end of the measuring range (defined in the **Tank/silo height** parameter (→ 63)). In this gap the map assumes a constant value as defined by the **End of mapping** (→ 122) and **End map. ampl.** (→ 122) parameters.

"End of mapping" = "Last map value"

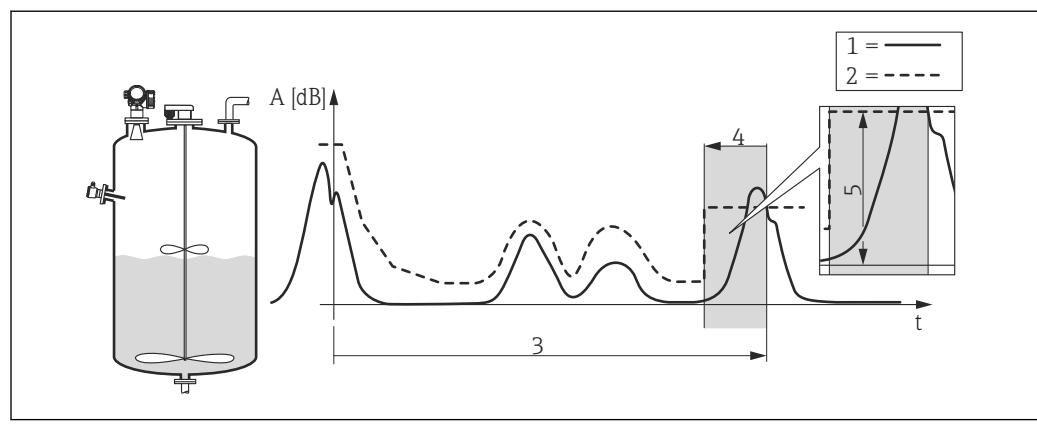

With this setting the last value of the map remains valid within the tank bottom area.

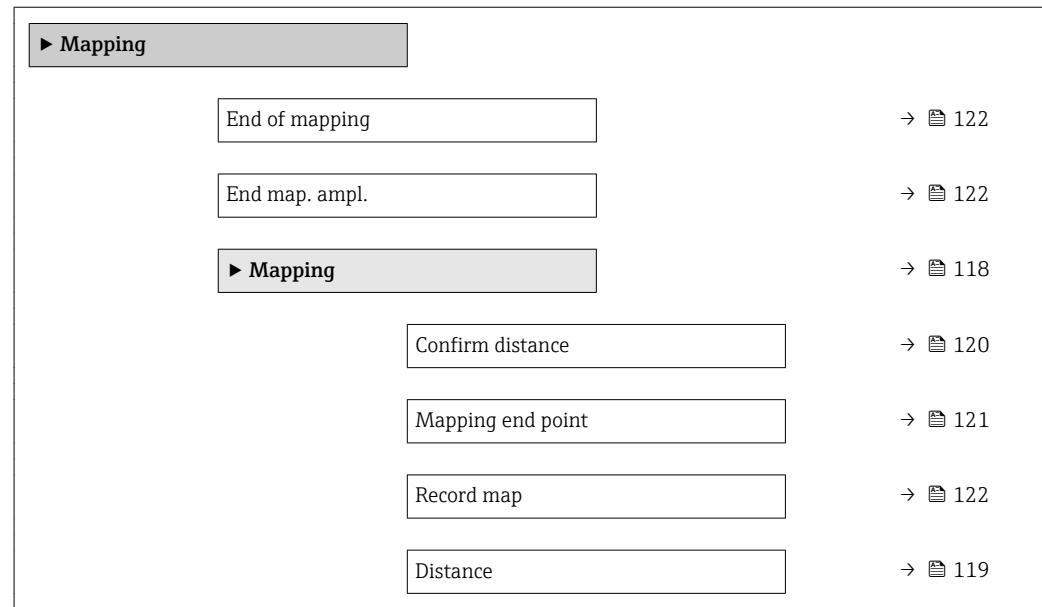

- 1 Envelope curve
- 2 Map
- 3 Tank/silo height (→ 63)
- 4 Tank bottom area

"End of mapping" = "Adjustable"

With this setting the value of the mapping curve within the tank bottom area is defined in the **End map. ampl.** parameter (→ 122)

- 1 Envelope curve
- 2 Map
- 3 Tank/silo height (→ 63)
- 4 Tank bottom area
- 5 End map. ampl. (→ 122)

Description of parameters

Navigation

Diagram Expert → Sensor → Mapping

Distance

Navigation

Diagram Expert → Sensor → Mapping → Distance (1124)

Description

Displays the measured distance D between the reference point (lower edge of the flange or threaded connection) and the level.

Additional information

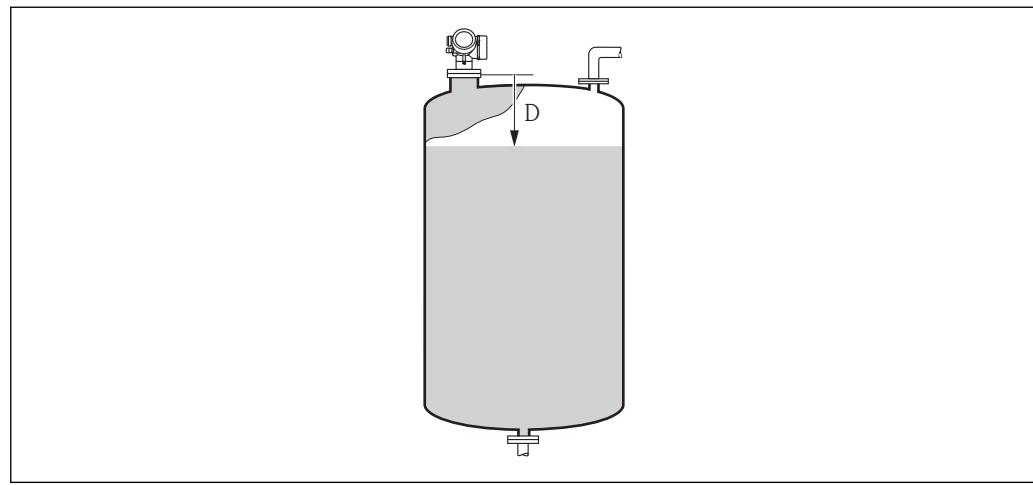

Diagram 37 Distance for liquid measurements

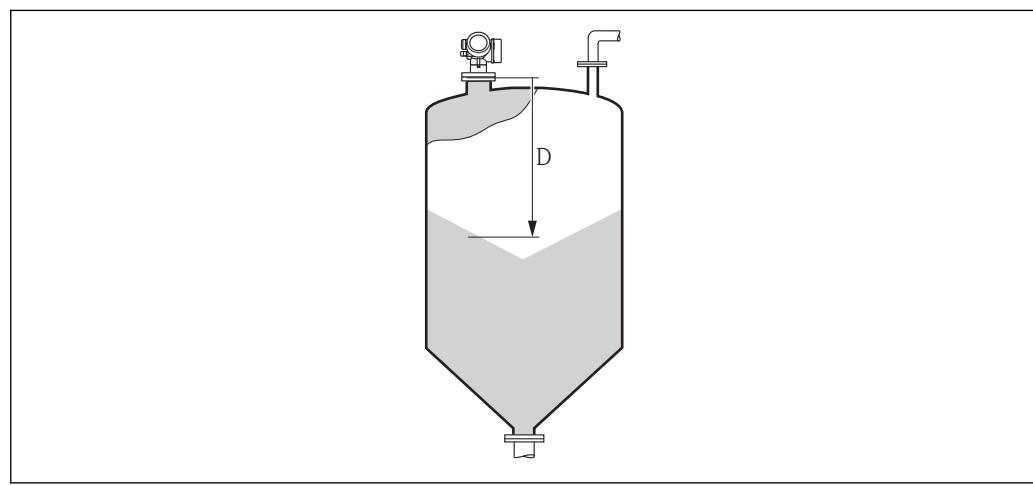

Diagram 38 Distance for bulk solid measurements

The unit is defined in the **Distance unit** parameter (→ Diagram 46).

Confirm distance**Navigation**

█ Expert → Sensor → Mapping → Confirm distance (1045)

Description

Specify, whether the measured distance matches the real distance.

Depending on the selection the device automatically sets the range of mapping.

Selection

- Manual map
- Distance ok
- Distance unknown
- Distance too small⁷⁾
- Distance too big⁷⁾
- Tank empty
- Factory map

Factory setting

Distance unknown

Additional information**Meaning of the options****■ Manual map**

To be selected if the range of mapping is to be defined manually in the **Mapping end point** parameter (→ 121). In this case it is not necessary to confirm the distance.

■ Distance ok

To be selected if the measured distance matches the actual distance. The device performs a mapping.

■ Distance unknown

To be selected if the actual distance is unknown. A mapping can not be performed in this case.

■ Distance too small

To be selected if the measured distance is smaller than the actual distance. The device searches for the next echo and returns to the **Confirm distance** parameter. The distance is recalculated and displayed. The comparison must be repeated until the displayed distance matches the actual distance. After this, the recording of the map can be started by selecting **Distance ok**.

7) Visibility depends on order options or device settings

■ **Distance too big**⁸⁾

To be selected if the measured distance exceeds the actual distance. The device adjusts the signal evaluation and returns to the **Confirm distance** parameter. The distance is recalculated and displayed. The comparison must be repeated until the displayed distance matches the actual distance. After this, the recording of the map can be started by selecting **Distance ok**.

■ **Tank empty**

To be selected if the tank is completely empty. The device records a mapping covering the complete measuring range as defined by the **Tank/silo height** parameter (→ 63). By default, **Tank/silo height = Empty calibration**.

Take into account that in case of conical outlets, for example, a measurement is only possible up to the point at which the radar hits the bottom of the tank or silo. If the **Tank empty** option is used, **Empty calibration** (→ 57) and **Tank/silo height** may not reach below this point as otherwise the empty signal is suppressed.

■ **Factory map**

To be selected if the present mapping curve (if one exists) is to be deleted. The device returns to the **Confirm distance** parameter and a new mapping can be recorded.

 When operating via the display module, the measured distance is displayed together with this parameter for reference purposes.

 If the teaching procedure with the **Distance too small** option or the **Distance too big** option is quit before the distance has been confirmed, a map is **not** recorded and the teaching procedure is reset after 60 s.

Present mapping

Navigation  Expert → Sensor → Mapping → Present mapping (1182)

Description Indicates up to which distance a mapping has already been recorded.

Mapping end point

Navigation  Expert → Sensor → Mapping → Map. end point (1022)

Prerequisite **Confirm distance** (→ 120) = **Manual map** or **Distance too small**

Description Specify new end of the mapping.

User entry 0.1 to 999 999.9 m

Factory setting 0.1 m

Additional information This parameter defines up to which distance the new mapping is to be recorded. The distance is measured from the reference point, i.e. from the lower edge of the mounting flange or the threaded connection.

 For reference purposes the **Present mapping** parameter (→ 121) is displayed together with this parameter. It indicates up to which distance a mapping has already been recorded.

8) Only available for "Expert → Sensor → Echo tracking → Evaluation mode parameter (→ 129)" = "Short time history" or "Long time history"

Record map

Navigation	Expert → Sensor → Mapping → Record map (1069)
Prerequisite	Confirm distance (→ 120) = Manual map or Distance too small
Description	Start recording of the map.
Selection	<ul style="list-style-type: none">■ No■ Record map■ Overlay map■ Factory map■ Delete partial map
Factory setting	No
Additional information	Meaning of the options <ul style="list-style-type: none">■ No The map is not recorded.■ Record map The map is recorded. After the recording is completed, the new measured distance and the new mapping range appear on the display. When operating via the local display, these values must be confirmed by pressing <input checked="" type="checkbox"/>.■ Overlay map The new mapping curve is generated by overlaying the old and the current envelope curves.■ Factory map The factory map stored in the ROM of the device is used.■ Delete partial map The mapping curve is deleted up to Mapping end point (→ 121).

End of mapping

Navigation	Expert → Sensor → Mapping → End of mapping (1224)
Description	Define behavior of the mapping curve in the tank bottom area.
Selection	<ul style="list-style-type: none">■ Adjustable■ Last map value
Factory setting	Adjustable

End map. ampl.

Navigation	Expert → Sensor → Mapping → End map. ampl. (1109)
Description	Specify the amplitude of the mapping curve in the tank bottom area.
User entry	-99 999.0 to 99 999.0 dB

Factory setting -90 dB

3.4.14 "Echo tracking" submenu

The echo tracking algorithm takes into account the change in time of the individual echoes when evaluating the envelope curve. This improves the allocation of the echoes to the level or interface signal. Different types of echo tracking can be selected in the **Evaluation mode** parameter (→ 129). A number of further parameters is used to configure the echo tracking more precisely.

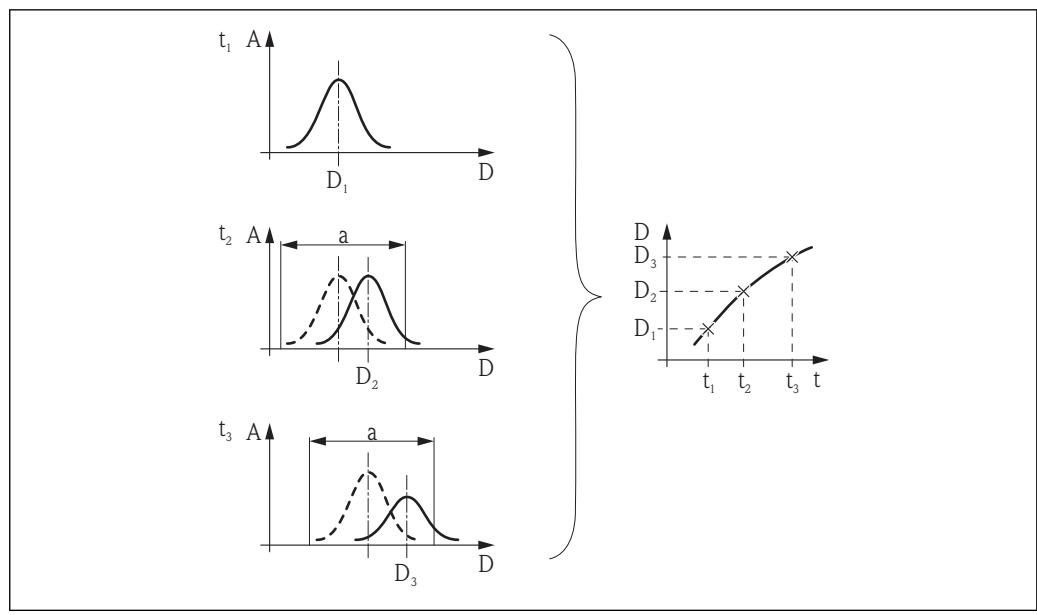

"Evaluation mode" = "History off"

The envelope curve is evaluated statically.

"Evaluation mode" = "Short time history"

The static envelope curve evaluation is taken as a starting point.

The position of the individual echoes is tracked. The track contains the position, the velocity, the relative and the absolute echo amplitude. Normally the strongest echo within a search window is selected and allocated to the track.

A0018587

39 Definition of a track: In a new envelope curve, the echo is searched for in a window of width "a" centered around the echo position in the previous envelope curve. The change of the echo position in the course of time defines the track.

In this evaluation mode it is possible to activate the moving track recognition (**Moving track recognition** parameter).

The moving track recognition is used to distinguish the level echo from interference echoes. It makes use of the fact that an echo which moves in one direction for a certain time is likely to be the level echo. Interference echoes, on the other hand, normally stay at the same position within the envelope curve.

If the moving track recognition is switched on, this distinction is used as an additional criterion to identify the level echo.

In firmware version 01.00.zz the allocation of the echoes to the track depends on the current position of the echo (for details refer to SI01373F-3):

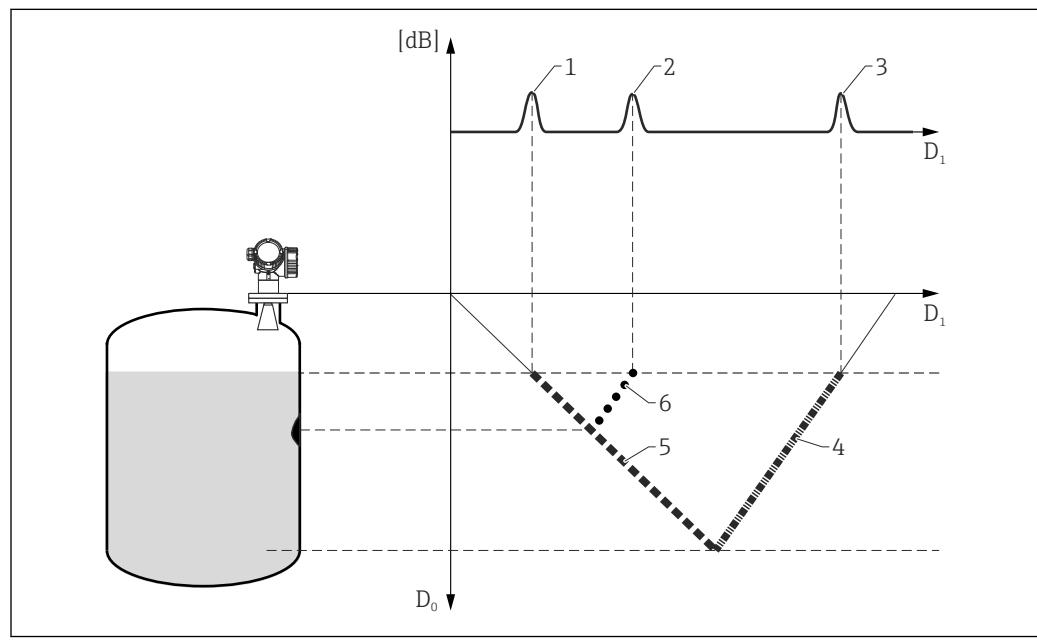

- If the echo is within the tank bottom area (parameter **Tank bottom range** (\rightarrow 133)), the first echon within the search window is allocated to the track.
- If the echo is above the tank bottom area, the largest echo within the search window is allocated to the track.

From firmware version 01.01.zz the largest echo within the search window is allocated to the track in any case.

"Evaluation mode" = "Long time history"

A so-called tank history is used for the determination of the level and a consistency check of the echoes.

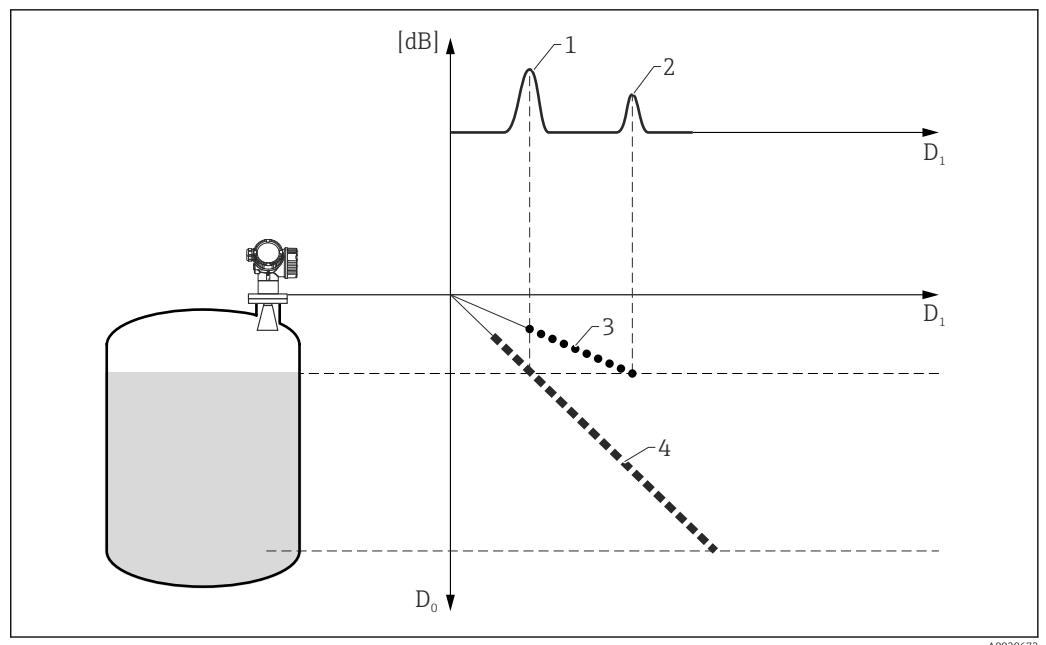

For a given tank with a given medium, the positions of the level, interface, multiple and end-of-probe or tank bottom echoes are in a defined relation to each other. This relationship is recorded during the operation of the device and stored in the tank history. On the basis of this tank history, echoes can be reliably allocated, even if one echo is lost temporarily or if the device was switched off for a while.

Schematic examples

A0020671

40 Example 1: Tank history with interference echo and tank-bottom echo

- D_0 Actual level distance
- D_1 Distance of the signal in the envelope curve
- 1 Level echo
- 2 Interference echo
- 3 Tank-bottom echo
- 4 Track "Tank-bottom echo" (stored in the tank history)
- 5 Track "Level echo" (stored in the tank history)
- 6 Track "Interference echo" (stored in the tank history)

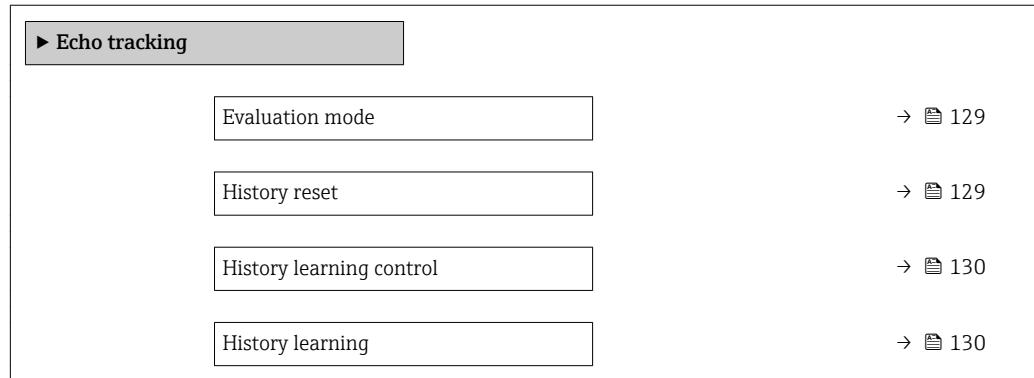

41 Example 2: Tank history with a multiple echo

- D0 Actual level distance
- D1 Distance of the signal in the envelope curve
- 1 Level echo
- 2 Multiple echo
- 3 Track "Multiple echo" (stored in the tank history)
- 4 Track "Level echo" (stored in the tank history)

  Expert → Sensor → Echo tracking

Evaluation mode

Navigation

  Expert → Sensor → Echo tracking → Evaluation mode (1112)

Description

Select evaluation mode for echo tracking.

Selection

- History off
- Short time history
- Long time history⁹⁾

Factory setting

Dependent on the **Tank type** (→  46) or **Bin type** (→  47) parameter, respectively.

Additional information

Meaning of the options

▪ **History off**

The envelope curve is evaluated only statically.

▪ **Short time history**

In addition to the static algorithms a dynamic echo trace is continuously created.

▪ **Long time history**

(Only available for level measurements)

In addition to the static algorithms and the dynamic echo trace a tank trace is continuously generated. Using the tank trace the device can determine the level even if the level echo is lost temporarily.

The **Long time history** option is not recommended if there are substantial changes of the medium or process conditions within a short period of time (e.g. in the case of changing dielectric constants or boiling media).

History reset

Navigation

  Expert → Sensor → Echo tracking → History reset (1145)

Description

Reset history of the echo and tank tracking.

Selection

- Reset done
- Restart echo tracking
- Delete history

Factory setting

Reset done

9) Visibility depends on order options or device settings

Additional information**Meaning of the options****▪ Reset done**

Does not initiate an action but is only a display option. It is displayed as soon as the reset operation has been accomplished.

▪ Restart echo tracking

The echo tracking is reset. The tank trace, however, is maintained.

▪ Delete history

The echo tracking and tank trace are reset.

History learning control**Navigation**

Description

Start or stop the recording of the echo track.

Selection

- Off
- On

Factory setting

On

Additional information

This parameter is only relevant for **History learning control** (→ 130) = **Manual**.

3.4.15 "Tank bottom evaluation" submenu

The tank bottom evaluation is intended to prevent an echo loss if the tank is empty.

If no echo is found within the defined tank height (**Tank/silo height** (→ 63)) the tank bottom searches beyond this distance in the **Tank bottom range** (→ 133), to see whether an echo from the tank bottom exists.

If a tank bottom echo has been found, a level of 0% is assumed. If neither a direct level echo nor a tank bottom echo has been found, an echo loss is reported (error message S941).

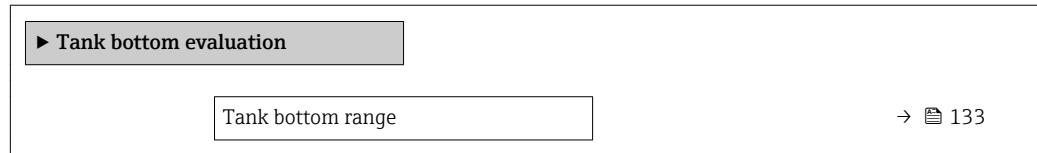

- Level echoes from within the measuring range always have a higher priority than the tank bottom echo.
- The first echo factor is not applied to the tank bottom echo.

Expert → Output → Switch output

Switch output function

Navigation

Expert → Output → Switch output → Switch out funct (0481)

Description

Select function for switch output.

Selection

- Off
- On
- Diagnostic behavior
- Limit
- Digital Output

Factory setting

Off

Additional information

Meaning of the options

▪ Off

The output is always open (non-conductive).

▪ On

The output is always closed (conductive).

▪ Diagnostic behavior

The output is normally closed and is only opened if a diagnostic event is present. The **Assign diagnostic behavior** parameter (→ 136) determines for which type of event the output is opened.

▪ Limit

The output is normally closed and is only opened if a measured variable exceeds or falls below a defined limit. The limit values are defined by the following parameters:

- Assign limit (→ 137)
- Switch-on value (→ 137)
- Switch-off value (→ 138)

▪ Digital Output

The switching state of the output tracks the output value of a DI function block. The function block is selected in the **Assign status** parameter (→ 139).

The **Off** and **On** options can be used to simulate the switch output.

Assign diagnostic behavior

Navigation

Expert → Output → Switch output → Assign diag. beh (0482)

Prerequisite

Switch output function (→ 136) = Diagnostic behavior

Description

Select diagnostic behavior for switch output.

Selection

- Alarm
- Alarm or warning
- Warning

Factory setting Alarm

Assign limit

Navigation Expert → Output → Switch output → Assign limit (0483)

Prerequisite **Switch output function (→ 136) = Limit**

Description Select process variable for limit monitoring.

Selection

- Off
- Level linearized
- Distance
- Terminal voltage
- Electronic temperature
- Relative echo amplitude
- Area of incoupling

Factory setting Off

Switch-on value

Navigation Expert → Output → Switch output → Switch-on value (0466)

Prerequisite **Switch output function (→ 136) = Limit**

Description Enter measured value for the switch-on point.

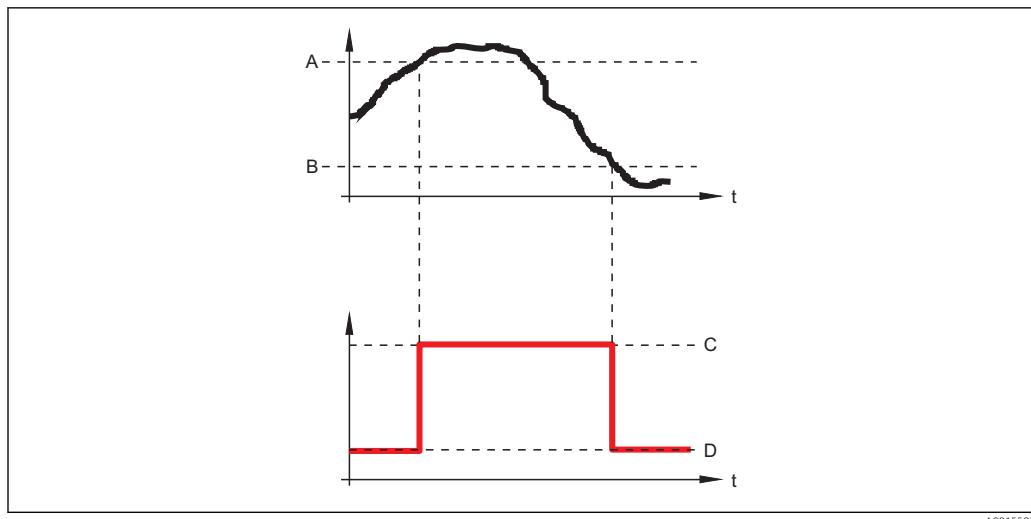

User entry Signed floating-point number

Factory setting 0

Additional information The switching behavior depends on the relative position of the **Switch-on value** and **Switch-off value** parameters:

Switch-on value > Switch-off value

- The output is closed if the measured value is larger than **Switch-on value**.
- The output is opened if the measured value is smaller than **Switch-off value**.

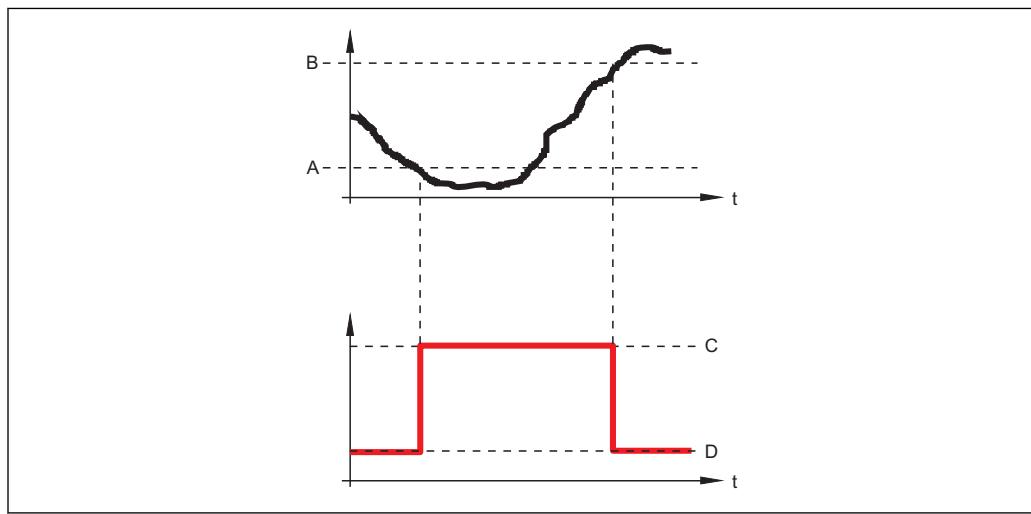

A0015585

- A Switch-on value
- B Switch-off value
- C Output closed (conductive)
- D Output opened (non-conductive)

Switch-on value < Switch-off value

- The output is closed if the measured value is smaller than **Switch-on value**.
- The output is opened if the measured value is larger than **Switch-off value**.

A0015586

- A Switch-on value
- B Switch-off value
- C Output closed (conductive)
- D Output opened (non-conductive)

Switch-off value

Navigation

Expert → Output → Switch output → Switch-off value (0464)

Prerequisite

Switch output function (→ 136) = Limit

Description

Enter measured value for the switch-off point.

User entry	Signed floating-point number
Factory setting	0
Additional information	The switching behavior depends on the relative position of the Switch-on value and Switch-off value parameters; description: see the Switch-on value parameter (→ 137).

Assign status

Navigation	Expert → Output → Switch output → Assign status (0485)
Prerequisite	Switch output function (→ 136) = Digital Output
Description	Select device status for switch output.
Selection	<ul style="list-style-type: none"> ▪ Off ▪ Digital output AD 1 ▪ Digital output AD 2 ▪ Digital output 1 ▪ Digital output 2 ▪ Digital output 3 ▪ Digital output 4
Factory setting	Off
Additional information	The Digital output AD 1 and Digital output AD 2 options refer to the Advanced Diagnostic Blocks → 240. A switch signal generated in these blocks can be transmitted via the switch output.

Switch-on delay

Navigation	Expert → Output → Switch output → Switch-on delay (0467)
Prerequisite	<ul style="list-style-type: none"> ▪ Switch output function (→ 136) = Limit ▪ Assign limit (→ 137) ≠ Off
Description	Define switch-on delay.
User entry	0.0 to 100.0 s
Factory setting	0.0 s

Switch-off delay

Navigation Expert → Output → Switch output → Switch-off delay (0465)

Prerequisite

- Switch output function (→ 136) = Limit
- Assign limit (→ 137) ≠ Off

Description Define switch-off delay.

User entry 0.0 to 100.0 s

Factory setting 0.0 s

Failure mode

Navigation Expert → Output → Switch output → Failure mode (0486)

Description Define output behavior in alarm condition.

Selection

- Actual status
- Open
- Closed

Factory setting Open

Switch status

Navigation Expert → Output → Switch output → Switch status (0461)

Description Displays the current state of the switch output.

Invert output signal

Navigation Expert → Output → Switch output → Invert outp.sig. (0470)

Description Specify whether the output signal is to be inverted.

Selection

- No
- Yes

Factory setting No

Additional information**Meaning of the options****■ No**

The behavior of the switch output is as described above.

■ Yes

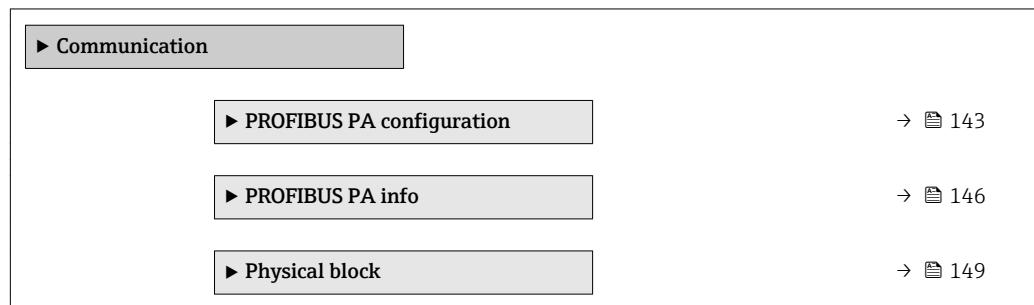

The states **Open** and **Closed** are inverted as compared to the description above.

3.6 "Communication" submenu

3.6.1 Structure of the submenu

Navigation

☰ ☰ Expert → Communication

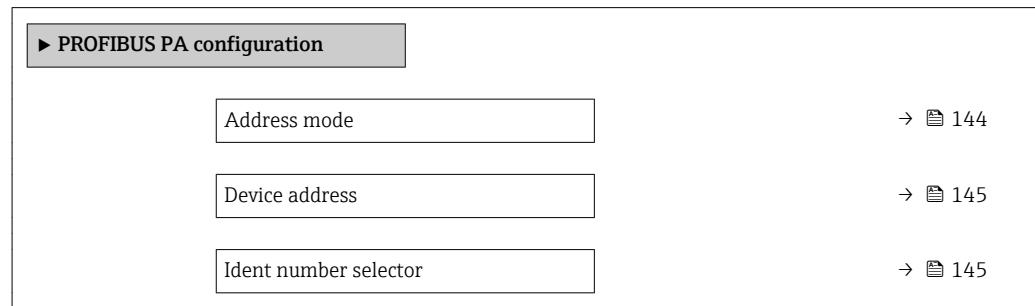

3.6.2 "PROFIBUS PA configuration" submenu

The **PROFIBUS PA configuration** submenu (→ 143) contains the parameters needed to define the bus address and device ID number.

Structure of the submenu

Navigation

Expert → Communication → PROFIBUS PA conf

Description of parameters

Navigation

Diagram Expert → Communication → PROFIBUS PA conf

Address mode

Navigation

Diagram Expert → Communication → PROFIBUS PA conf → Address mode (1468)

Description

Displays the address mode.

Additional information

Meaning of the display options

The address mode is defined via address switch 8 in the connection compartment:

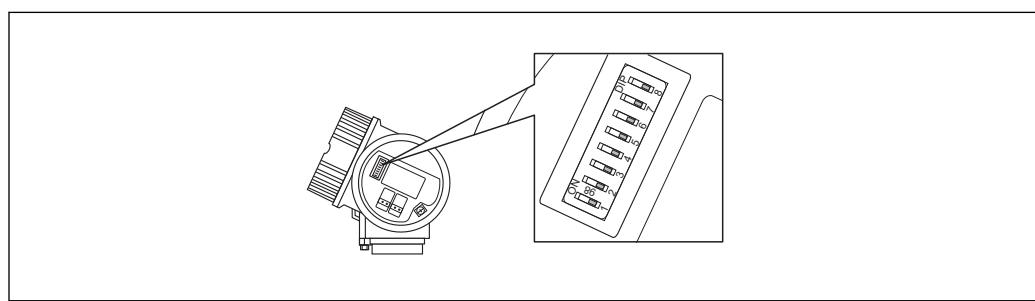

■ **Hardware**

Address switch 8 is in the "OFF" position. Hardware addressing is therefore active: the bus address of the device is configured via address switches 1 to 7

■ **Software**

Address switch 8 is in the "ON" position. Software addressing is therefore active: the bus address of the device is defined in the **Device address** parameter (→ 145).

Information on hardware addressing

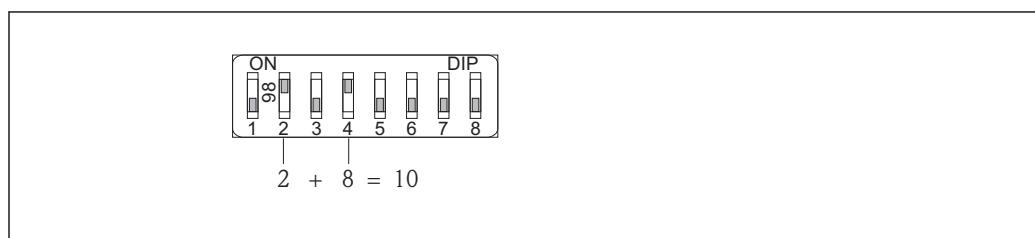

A0015686

42 Address switch in the connection compartment

Address switches in the "OFF" position do not contribute to the address. Address switches in the "ON" position contribute to the address as defined in the following list:

- Switch 1: Value = 1
- Switch 2: Value = 2
- Switch 3: Value = 4
- Switch 4: Value = 8
- Switch 5: Value = 16
- Switch 6: Value = 32
- Switch 7: Value = 64

Example

A0015902

Address switches 2 and 4 are in the "ON" position; all other address switches are in the "OFF" position
 $\Rightarrow \text{Address} = 2 + 8 = 10$

Device address

Navigation	Expert → Communication → PROFIBUS PA conf → Device address (1462)

DescriptionStandard block parameter **ST_REV** according to the PROFIBUS profile**User interface**

0 to 65 535

Factory setting

0

Strategy**Navigation**

Expert → Communication → Physical block → Strategy (1494)

DescriptionStandard block parameter **STRATEGY** according to the PROFIBUS profile**User entry**

0 to 65 535

Factory setting 0

Alert key

Navigation	Expert → Communication → Physical block → Alert key (1473)
Description	Standard block parameter ALERT_KEY according to the PROFIBUS profile
User entry	0 to 255
Factory setting	0

Target mode

Navigation	Expert → Communication → Physical block → Target mode (1497)
Description	Standard block parameter TARGET_MODE according to the PROFIBUS profile
Selection	<ul style="list-style-type: none"> ■ Auto ■ Out of service
Factory setting	Auto

Mode block actual

Navigation	Expert → Communication → Physical block → Mode block act (1472)
Description	Element Actual of the standard block parameter MODE_BLK according to the PROFIBUS profile
User interface	<ul style="list-style-type: none"> ■ Auto ■ Out of service

Mode block permitted

Navigation	Expert → Communication → Physical block → Mode block perm (1493)
Description	Element Permitted of the standard block parameter MODE_BLK according to the PROFIBUS profile
User interface	0 to 255

Mode block normal

Navigation  Expert → Communication → Physical block → Mode blk norm (1492)

Description Element **Normal** of the standard block parameter **MODE_BLK** according to the PROFIBUS profile

User interface

- Auto
- Out of service

Alarm summary

Navigation  Expert → Communication → Physical block → Alarm summary (1474)

Description Standard block parameter **ALARM_SUM** according to the PROFIBUS profile

User interface

- Discrete alarm
- Alarm state HiHi limit
- Alarm state Hi limit
- Alarm state LoLo limit
- Alarm state Lo limit
- Update Event

Software revision

Navigation  Expert → Communication → Physical block → Software rev. (1478)

Description Standard parameter **SOFTWARE_REVISION** of the Physical block according to the PROFIBUS profile

Hardware revision

Navigation  Expert → Communication → Physical block → Hardware rev. (1479)

Description Standard parameter **HARDWARE_REVISION** of the Physical block according to the PROFIBUS profile

Manufacturer ID

Navigation  Expert → Communication → Physical block → Manufacturer ID (1502)

Description Standard parameter **DEVICE_MAN_ID** of the Physical block according to the PROFIBUS profile

User interface	0 to 65 535
----------------	-------------

Device ID

Navigation	 Expert → Communication → Physical block → Device ID (1480)
Description	Standard parameter DEVICE_ID of the Physical block according to the PROFIBUS profile

Serial number

Navigation	 Expert → Communication → Physical block → Serial number (1481)
Description	Standard parameter DEVICE_SER_NUM of the Physical block according to the PROFIBUS profile

Diagnostics

Navigation	 Expert → Communication → Physical block → Diagnostics (1482)
Description	Standard parameter DIAGNOSIS of the Physical block according to the PROFIBUS profile
User interface	<ul style="list-style-type: none">■ Hardware failure electronics■ Hardware failure mechanics■ Temperature motor■ Electronic temperature■ Memory checksum error■ Measurement error■ Device not initialized■ Initialization error■ Zero point error■ Power supply■ Configuration invalid■ On warmstart■ On coldstart■ Maintenance required■ Characterization invalid■ Ident number violation■ More information available■ Maintenance alarm■ Maintenance demanded■ Function check or simulation■ Invalid process condition

Diagnostics mask

Navigation

 Expert → Communication → Physical block → Diagnostics mask (1484)

Description

Standard parameter **DIAGNOSIS_MASK** of the Physical block according to the PROFIBUS profile

User interface

- Hardware failure electronics
- Hardware failure mechanics
- Temperature motor
- Electronic temperature
- Memory checksum error
- Measurement error
- Device not initialized
- Initialization error
- Zero point error
- Power supply
- Configuration invalid
- On warmstart
- On coldstart
- Maintenance required
- Characterization invalid
- Ident number violation
- More information available
- Maintenance alarm
- Maintenance demanded
- Function check or simulation
- Invalid process condition

Device certification

Navigation

 Expert → Communication → Physical block → Dev certificate (1486)

Description

Standard parameter **DEVICE_CERTIFICATION** of the Physical block according to the PROFIBUS profile

Factory reset

Navigation

 Expert → Communication → Physical block → Factory reset (1488)

Description

Standard parameter **FACTORY_RESET** of the Physical block according to the PROFIBUS profile

Selection

- to defaults
- warmstart device
- reset bus address
- Cancel

Factory setting

Cancel

Descriptor**Navigation**

Expert → Communication → Physical block → Descriptor (1489)

Description

Standard parameter **_DESCRIPTOR** of the Physical block according to the PROFIBUS profile

Device message**Navigation**

Expert → Communication → Physical block → Device message (1490)

Description

Standard parameter **DEVICE_MESSAGE** of the Physical block according to the PROFIBUS profile

Device install date**Navigation**

Expert → Communication → Physical block → Device inst.date (1491)

Description

Standard parameter **DEVICE_INSTAL_DATE** of the Physical block according to the PROFIBUS profile

Ident number selector**Navigation**

Expert → Communication → Physical block → Ident num select (1461)

Description

Select ident number of the device.

Selection

- Profile
- FMR5x (1559hex)
- FMR2xx (1522hex)
- Auto

Factory setting

Auto

Additional information**Meaning of the options**

- **Profile**
The ident number of the PROFIBUS profiles is used.
- **FMR5x (1559hex)**
The ident number of Micropilot FMR5x is used.
- **FMR2xx (1522hex)**
The ident number of the previous device type, Micropilot M FMR2xx, is used.
- **Auto**
The ident number can be adapted automatically by a Class I PROFIBUS master.

Hardware lock

Navigation

 Expert → Communication → Physical block → Hardware lock (1499)

Description

Standard parameter **HW_WRITE_PROTECTION** of the Physical block according to the PROFIBUS profile

User interface

- Unprotected
- Protected

Feature supported

Navigation

 Expert → Communication → Physical block → Feature support (1477)

Description

Element **Supported** of the parameter **HW_WRITE_PROTECTION** in the Physical block according to the PROFIBUS profile

User interface

- Condensed status
- Classic status diagnosis
- Data exchange broadcast
- MS1 application relationship
- PROFIsafe communication

Feature enabled

Navigation

 Expert → Communication → Physical block → Feature enabled (1476)

Description

Element **Enabled** of the parameter **HW_WRITE_PROTECTION** in the Physical block according to the PROFIBUS profile

User interface

- Condensed status
- Classic status diagnosis
- Data exchange broadcast
- MS1 application relationship
- PROFIsafe communication

Condensed status diagnostic

Navigation

 Expert → Communication → Physical block → Condensed status (1500)

Description

Parameter **COND_STATUS_DIAG** in the Physical block according to the PROFIBUS profile

Selection

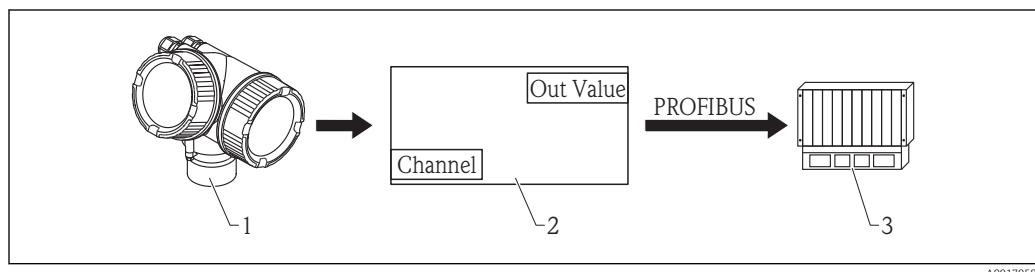

- Off
- On

Factory setting On

3.7 "Analog input 1 to 6" submenu

3.7.1 Overview

There is an **Analog input** submenu for each Analog Input block in the device. This submenu contains the block parameters of the individual block. The parameters of the Analog Input block are described in the PROFIBUS profile. The most important characteristics of the parameters are summarized below. An Analog Input block can be used to scale a measured variable of the device and transmit it via the bus to a PLC, for example.

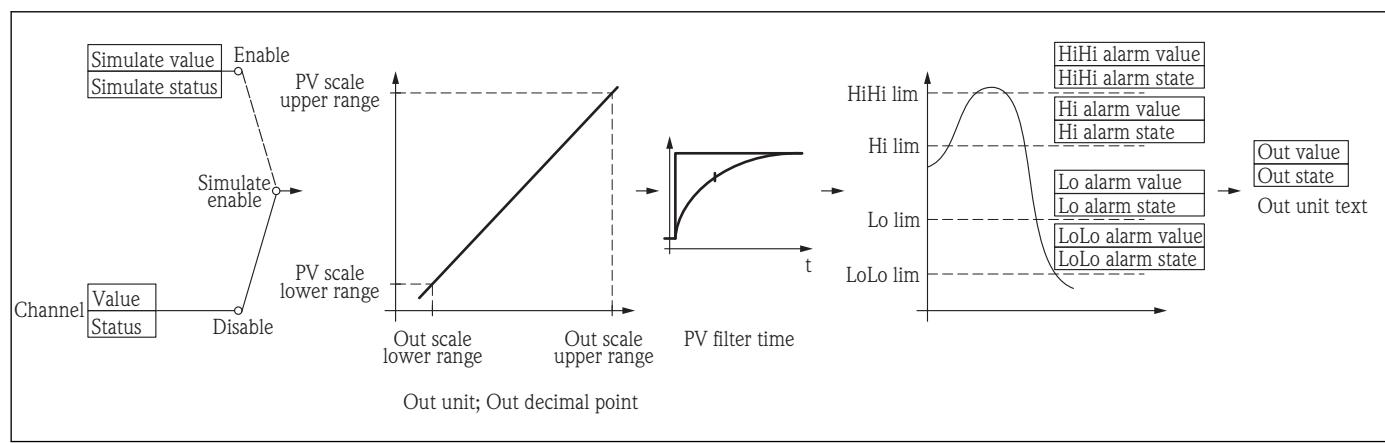

A0017058

■ 43 Transmission of an analog value to a PLC via the Analog Input block

- 1 Transmitter
- 2 Analog Input block (part of the transmitter software)
- 3 PLC

Data processing in the Analog Input block

A0016781

i The diagram describes the function of the Analog Input block in the normal operational state (**Mode block actual** (→ ■ 162) = **Auto**). The block's behavior in other operational states is described in the Profibus profiles of the Profibus User Organization (PNO).

Alert key

Navigation

Expert → Analog inputs → Analog input 1 to 6 → Alert key (1522–1 to 6)

Description

Standard block parameter **ALERT_KEY** according to the PROFIBUS profile

User entry

0 to 255

Factory setting

0

Target mode

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Target mode (1563–1 to 6)
Description	Standard block parameter TARGET_MODE according to the PROFIBUS profile
Selection	<ul style="list-style-type: none">■ Auto■ Man■ Out of service
Factory setting	Auto

Mode block actual

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Mode block act (1521–1 to 6)
Description	Element Actual of the standard block parameter MODE_BLK according to the PROFIBUS profile
User interface	<ul style="list-style-type: none">■ Auto■ Man■ Out of service

Mode block permitted

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Mode block perm (1553–1 to 6)
Description	Element Permitted of the standard block parameter MODE_BLK according to the PROFIBUS profile
User interface	0 to 255

Mode block normal

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Mode blk norm (1546–1 to 6)
Description	Element Normal of the standard block parameter MODE_BLK according to the PROFIBUS profile
User interface	<ul style="list-style-type: none">■ Auto■ Man■ Out of service

Alarm summary

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Alarm summary (1537–1 to 6)
Description	Standard block parameter ALARM_SUM according to the PROFIBUS profile
User interface	<ul style="list-style-type: none"> ■ Discrete alarm ■ Alarm state HiHi limit ■ Alarm state Hi limit ■ Alarm state LoLo limit ■ Alarm state Lo limit ■ Update Event

Batch ID

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Batch ID (1533–1 to 6)
Description	Element Batch_ID of the standard block parameter BATCH according to the PROFIBUS profile
User entry	Positive integer
Factory setting	0

Batch operation

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Batch operation (1534–1 to 6)
Description	Element Operation of the standard block parameter BATCH according to the PROFIBUS profile
User entry	0 to 65 535
Factory setting	0

Batch phase

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Batch phase (1535–1 to 6)
Description	Element Phase of the standard block parameter BATCH according to the PROFIBUS profile
User entry	0 to 65 535
Factory setting	0

Batch Recipe Unit Procedure

Navigation Expert → Analog inputs → Analog input 1 to 6 → Batch Recipe (1536–1 to 6)

Description Element **Rup** (**Recipe unit procedure**) of the standard block parameter **BATCH** according to the PROFIBUS profile

User entry 0 to 65 535

Factory setting 0

Out value

Navigation Expert → Analog inputs → Analog input 1 to 6 → Out value (1552–1 to 6)

Description Element **Value** of the standard parameter **OUT** in the Analog Input Block according to the PROFIBUS Profile.

User entry Signed floating-point number

Factory setting 0

Additional information

- For **Mode block actual** (→ 162) = **Man**: Enter the output value of the Analog Input Block.
- Else: Displays the output value of the Analog Input Block.

Out status

Navigation Expert → Analog inputs → Analog input 1 to 6 → Out status (1564–1 to 6)

Description Element **Status** of the standard parameter **OUT** in the Analog Input Block accordintg to the PROFIBUS Profile.

User interface

- Good
- Uncertain
- Bad

Additional information Only the two quality bits are evaluated in this parameter.

Out status HEX

Navigation	  Expert → Analog inputs → Analog input 1 to 6 → Out status HEX (1549–1 to 6)
Description	Element Status of the standard parameter OUT in the Analog Input Block according to the PROFIBUS Profile.
User entry	0 to 255
Factory setting	128
Additional information	The complete status byte is displayed in the form of a two-digit hexadecimal number in this parameter.

PV scale lower range

Navigation	 Expert → Analog inputs → Analog input 1 to 6 → PVscale lo range (1554–1 to 6)
Description	Element EU_at_0% of the standard parameter PV_SCALE in the Analog Input block according to the PROFIBUS profile
User entry	Signed floating-point number
Factory setting	0
Additional information	This parameter defines the 0% marker for the input value of the block.

PV scale upper range

Navigation	 Expert → Analog inputs → Analog input 1 to 6 → PVscale up range (1555–1 to 6)
Description	Element EU_at_100% of the standard parameter PV_SCALE in the Analog Input block according to the PROFIBUS profile
User entry	Signed floating-point number
Factory setting	100.0
Additional information	This parameter defines the 100% marker for the input value of the block.

Out scale lower range

Navigation Expert → Analog inputs → Analog input 1 to 6 → Out scale low (1548–1 to 6)

Description Element **EU_at_0%** of the standard parameter **OUT_SCALE** in the Analog Input block according to the PROFIBUS profile

User entry Signed floating-point number

Factory setting 0

Additional information This parameter defines the 0% marker for the output value of the block.

Out scale upper range

Navigation Expert → Analog inputs → Analog input 1 to 6 → Out scale up (1551–1 to 6)

Description Element **EU_at_100%** of the standard parameter **OUT_SCALE** in the Analog Input block according to the PROFIBUS profile

User entry Signed floating-point number

Factory setting 100.0

Additional information This parameter defines the 100% marker for the output value of the block.

Lin type

Navigation Expert → Analog inputs → Analog input 1 to 6 → Lin type (1523–1 to 6)

Description Standard parameter **LIN_TYPE** of the Analog Input block according to the PROFIBUS profile

Selection Off

Factory setting Off

Channel

Navigation Expert → Analog inputs → Analog input 1 to 6 → Channel (1561–1 to 6)

Description Standard parameter **CHANNEL** of the Analog Input Block according to the PROFIBUS Profile.

Selection	<ul style="list-style-type: none"> ■ Level linearized ■ Distance ■ Terminal voltage ■ Electronic temperature ■ Absolute echo amplitude ■ Relative echo amplitude ■ Sensor debug ■ Analog output adv. diagnostics 1 ■ Analog output adv. diagnostics 2
------------------	--

Factory setting	Level linearized
------------------------	------------------

Additional information	Allocates a measured value to the AI block.
-------------------------------	---

Out unit

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Out unit (1550–1 to 6)
-------------------	---

Description	Element Units_Index of the standard parameter OUT_SCALE in the Analog Input block according to the PROFIBUS profile
--------------------	---

User entry	0 to 65 535
-------------------	-------------

Factory setting	1 997
------------------------	-------

Additional information	This parameter defines the unit for the output value. The units are represented by a numeric code according to the PROFIBUS profile.
-------------------------------	--

Out decimal point

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Out dec_point (1547–1 to 6)
-------------------	--

Description	Element Decimal_Point of the standard parameter OUT_SCALE in the Analog Input block according to the PROFIBUS profile
--------------------	---

User entry	0 to 7
-------------------	--------

Factory setting	0
------------------------	---

Additional information	This parameter defines up to which decimal the output value is to be considered valid.
-------------------------------	--

Out unit text

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Out unit text (1532–1 to 6)
-------------------	--

Description	Standard block parameter OUT_UNIT_TEXT in the Analog Input block according to the PROFIBUS profile
--------------------	---

Factory setting	NoUnit
Additional information	This text is used as unit if Out unit (→ 167) = 1995: Textual unit .
PV filter time	
Navigation	  Expert → Analog inputs → Analog input 1 to 6 → PV filter time (1524–1 to 6)
Description	Standard parameter PV_FTIME of the Analog Input Block according to the PROFIBUS profile.
User entry	Positive floating-point number
Factory setting	0
Additional information	This parameter defines the damping constant τ (in seconds) for the output of the Analog Input Block.
Fail safe type	
Navigation	  Expert → Analog inputs → Analog input 1 to 6 → Fail safe type (1525–1 to 6)
Description	Standard parameter FSAFE_TYPE of the Analog Input Block according to the PROFIBUS profile.
Selection	<ul style="list-style-type: none"> ▪ Fail safe value ▪ Fallback value ▪ Off
Factory setting	Off
Additional information	<p>Meaning of the options</p> <p>This parameter specifies the output value of the Analog Input block in the event of an error.</p> <ul style="list-style-type: none"> ▪ Fail safe value The output value in the event of an error is defined in the Fail safe value parameter (→ 168). ▪ Fallback value The last output value that was valid before the error occurred is retained. ▪ Off The output value follows the current measured value. The status is set to BAD.
Fail safe value	
Navigation	  Expert → Analog inputs → Analog input 1 to 6 → Fail safe value (1526–1 to 6)
Prerequisite	Fail safe type (→ 168) = Fail safe value

Description	Standard parameter FSAFE_VALUE of the Analog Input Block according to the PROFIBUS profile.
User entry	Signed floating-point number
Factory setting	0
Additional information	This parameter defines the output value of the Analog Input Block in case of an error.

Alarm hysteresis

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Alarm hysteresis (1527–1 to 6)
Description	Standard parameter ALARM_HYS of the Analog Input block according to the PROFIBUS profile
User entry	Signed floating-point number
Factory setting	0
Additional information	This parameter defines the hysteresis for limit violation of the output value in the Analog Input block. The hysteresis is specified in the same unit as the output value (Out unit parameter (→ 167)).

Hi Hi Lim

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Hi Hi Lim (1528–1 to 6)
Description	Standard parameter HI_HI_LIM of the Analog Input block according to the PROFIBUS profile
User entry	Signed floating-point number
Factory setting	Positive floating-point number
Additional information	An alarm is generated if the output value of the Analog Input block rises above this value. For a consistent evaluation of the output status, the limit values must be defined in ascending order: Lo Lo Lim < Lo Lim < Hi Lim < Hi Hi Lim

Hi Lim

Navigation	Expert → Analog inputs → Analog input 1 to 6 → Hi Lim (1529–1 to 6)
Description	Standard parameter HI_LIM in the Analog Input block according to the PROFIBUS profile

User entry Signed floating-point number

Factory setting Positive floating-point number

Additional information An alarm is generated if the output value of the Analog Input block rises above this value.

 For a consistent evaluation of the output status, the limit values must be defined in ascending order:

Lo Lo Lim < Lo Lim < Hi Lim < Hi Hi Lim

Lo Lim

Navigation  Expert → Analog inputs → Analog input 1 to 6 → Lo Lim (1530–1 to 6)

Description Standard parameter **LO_LIM** of the Analog Input block according to the PROFIBUS profile

User entry Signed floating-point number

Factory setting Negative floating-point number

Additional information An alarm is generated if the output value of the Analog Input block falls below this value.

 For a consistent evaluation fo the output status, the limit values must be defined in ascending order:

Lo Lo Lim < Lo Lim < Hi Lim < Hi Hi Lim

Lo Lo Lim

Navigation  Expert → Analog inputs → Analog input 1 to 6 → Lo Lo Lim (1531–1 to 6)

Description Standard parameter **LO_LO_LIM** of the Analog Input block according to the PROFIBUS profile

User entry Signed floating-point number

Factory setting Negative floating-point number

Additional information An alarm is generated if the output value of the Analog Input block falls below this value.

 For a consistent evaluation of the output status, the limit values must be defined in ascending order:

Lo Lo Lim < Lo Lim < Hi Lim < Hi Hi Lim

Hi Hi alarm value

Navigation	 Expert → Analog inputs → Analog input 1 to 6 → HiHi alarm value (1541–1 to 6)
Description	Element Value of the standard parameter HI_HI_ALM in the Analog Input block according to the PROFIBUS profile
User interface	Signed floating-point number
Additional information	This parameter displays the output value which caused the alarm.

Hi Hi alarm state

Navigation	 Expert → Analog inputs → Analog input 1 to 6 → HiHi alarm state (1540–1 to 6)
Description	Element Alarm_State of the standard parameter HI_HI_ALM in the Analog Input block according to the PROFIBUS profile
User interface	<ul style="list-style-type: none">■ No alarm■ Alarm state HiHi limit
Additional information	This parameter indicates whether an alarm caused by Hi Hi Lim violation is currently active.

Hi alarm value

Navigation	 Expert → Analog inputs → Analog input 1 to 6 → Hi alarm value (1539–1 to 6)
Description	Element Value of the standard parameter HI_ALM in the Analog Input block according to the PROFIBUS profile
User interface	Signed floating-point number
Additional information	This parameter displays the output value which caused the alarm.

Hi alarm state

Navigation	 Expert → Analog inputs → Analog input 1 to 6 → Hi alarm state (1538–1 to 6)
Description	Element Alarm_State of the standard parameter HI_ALM in the Analog Input block according to the PROFIBUS profile
User interface	<ul style="list-style-type: none">■ No warning■ Alarm state Hi limit

Additional information This parameter indicates whether an alarm caused by a Hi Lim violation is currently active.

Lo alarm value

Navigation  Expert → Analog inputs → Analog input 1 to 6 → Lo alarm value (1543–1 to 6)

Description Element **Value** of the standard parameter **LO_ALM** in the Analog Input block according to the PROFIBUS profile

User interface Signed floating-point number

Additional information This parameter displays the output value which caused the alarm.

Lo alarm state

Navigation  Expert → Analog inputs → Analog input 1 to 6 → Lo alarm state (1542–1 to 6)

Description Element **Alarm_State** of the standard parameter **LO_ALM** in the Analog Input block according to the PROFIBUS profile

User interface

- No warning
- Alarm state Lo limit

Additional information This parameter indicates whether an alarm caused by a Lo Lim violation is currently active.

Lo Lo alarm value

Navigation  Expert → Analog inputs → Analog input 1 to 6 → LoLo alarm value (1545–1 to 6)

Description Element **Value** of the standard parameter **LO_LO_ALM** in the Analog Input block according to the PROFIBUS profile

User interface Signed floating-point number

Additional information This parameter displays the output value which caused the alarm.

Lo Lo alarm state

Navigation  Expert → Analog inputs → Analog input 1 to 6 → LoLo alarm state (1544–1 to 6)

Description Element **Alarm_State** of the standard parameter **LO_LO_ALM** in the Analog Input block according to the PROFIBUS profile

User interface	<ul style="list-style-type: none"> ■ No alarm ■ Alarm state LoLo limit
Additional information	This parameter indicates whether an alarm caused by a Lo Lo Lim violation is currently active.

Simulate enabled

Navigation	█ Expert → Analog inputs → Analog input 1 to 6 → Simulate enabled (1556–1 to 6)
Description	Element Simulate_Enabled of the standard parameter SIMULATE in the Analog Input block according to the PROFIBUS profile
Selection	<ul style="list-style-type: none"> ■ Disable ■ Enable
Factory setting	Disable
Additional information	Enables or disables the simulation of the Analog Input block. If the simulation is enabled, the Analog Input block uses a constant simulation value instead of the measured value selected in Channel (→ 166). This value is specified in Simulate value (→ 173). The associated status is specified in Simulate status (→ 173).

Simulate value

Navigation	█ Expert → Analog inputs → Analog input 1 to 6 → Simulate value (1558–1 to 6)
Description	Element Simulate_Value of the standard parameter SIMULATE in the Analog Input block according to the PROFIBUS profile
User entry	Signed floating-point number
Factory setting	0
Additional information	This parameter defines the simulation value.

Simulate status

Navigation	█ Expert → Analog inputs → Analog input 1 to 6 → Simulate status (1557–1 to 6)
Description	Element Simulate_Status of the standard parameter SIMULATE in the Analog Input block according to the PROFIBUS profile
User entry	0 to 255
Factory setting	0

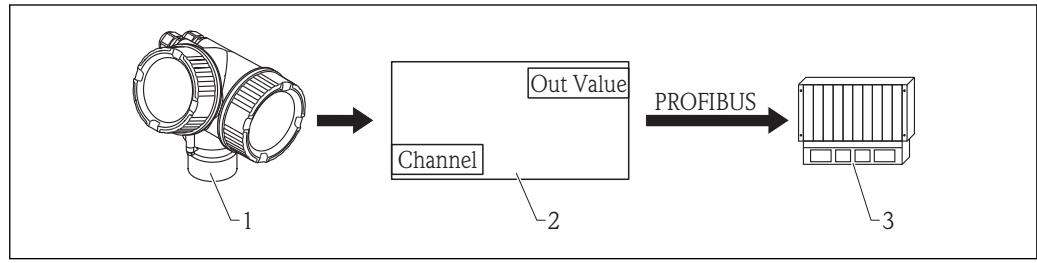

Additional information

This parameter defines the status of the simulation value.

3.8 "Discrete input 1 to 4" submenu

3.8.1 Übersicht

There is a **Discrete input** submenu for each Discrete Input block in the device. It contains the block parameters of the respective block. The parameters of the Discrete Input block are described in the PROFIBUS profile. The most important characteristics of the parameters are summarized below. A Discrete Input block can be used to transmit a discrete measured variable via the bus to a PLC, for example.

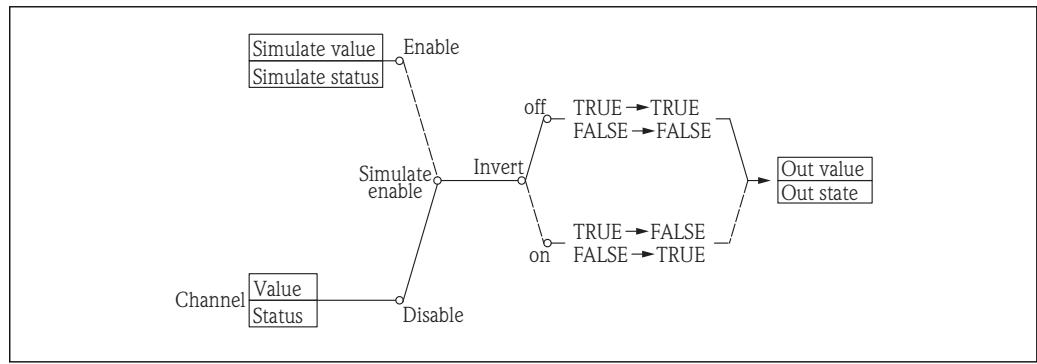

A0017058

Batch ID

Navigation	Expert → Discrete inputs → Discrete input 1 to 4 → Batch ID (2183–1 to 4)
Description	Element Batch_ID of the standard block parameter BATCH according to the PROFIBUS profile
User entry	Positive integer
Factory setting	0

Batch operation

Navigation	Expert → Discrete inputs → Discrete input 1 to 4 → Batch operation (2184–1 to 4)
Description	Element Operation of the standard block parameter BATCH according to the PROFIBUS profile
User entry	0 to 65 535
Factory setting	0

Batch phase

Navigation	Expert → Discrete inputs → Discrete input 1 to 4 → Batch phase (2185–1 to 4)
Description	Element Phase of the standard block parameter BATCH according to the PROFIBUS profile
User entry	0 to 65 535
Factory setting	0

Batch Recipe Unit Procedure

Navigation	Expert → Discrete inputs → Discrete input 1 to 4 → Batch Recipe (2186–1 to 4)
Description	Element Rup (Recipe unit procedure) of the standard block parameter BATCH according to the PROFIBUS profile
User entry	0 to 65 535
Factory setting	0

Out value

Navigation	Expert → Discrete inputs → Discrete input 1 to 4 → Out value (2194–1 to 4)
Description	Element Value of the standard parameter OUT_D in the Discrete Input block according to the PROFIBUS profile
User entry	0 to 255
Factory setting	0
Additional information	<ul style="list-style-type: none"> ■ For Mode block actual (→ 179) = Man: Enter the output value of the Discrete Input block. ■ Else: Displays the output value of the Discrete Input block. <p>The display or input format is a two-digit hexadecimal number. This corresponds to the output value of the DI block as follows:</p> <ul style="list-style-type: none"> ■ Out value = 00 → FALSE ■ Out value ≠ 00 → TRUE

Out status

Navigation	Expert → Discrete inputs → Discrete input 1 to 4 → Out status (2203–1 to 4)
Description	Element Status of the standard parameter OUT_D in the Discrete Input Block according to the PROFIBUS profile
User interface	<ul style="list-style-type: none"> ■ Good ■ Uncertain ■ Bad
Additional information	Only the two quality bits are evaluated in this parameter.

Out status HEX

Navigation	  Expert → Discrete inputs → Discrete input 1 to 4 → Out status HEX (2193-1 to 4)
Description	Element Status of the standard parameter OUT in the Discrete Input block according to the PROFIBUS profile.
User entry	0 to 255
Factory setting	128
Additional information	The complete status byte is displayed in this parameter in the form of a two-digit hexadecimal number.

Channel

Navigation	  Expert → Discrete inputs → Discrete input 1 to 4 → Channel (2187-1 to 4)
Description	Standard parameter CHANNEL of the Discrete Input Block according to the PROFIBUS profile
Selection	<ul style="list-style-type: none"> ▪ None ▪ Switch output ▪ Digital output AD 1 ▪ Digital output AD 2
Factory setting	None
Additional information	This parameter allocates a switching variable to the Discrete Input Block.

Invert

Navigation	  Expert → Discrete inputs → Discrete input 1 to 4 → Invert (2188-1 to 4)
Description	Standard parameter INVERT of the Discrete Input block according to the PROFIBUS profile
Selection	<ul style="list-style-type: none"> ▪ Off ▪ On
Factory setting	Off
Additional information	<p>The discrete output signal can be inverted by this parameter (permutation of the logical states FALSE and TRUE)</p> <p>Meaning of the options:</p> <ul style="list-style-type: none"> ▪ Off No inversion ▪ On The switching signal is inverted before the transmission to the bus.

Fail safe type

Navigation	Expert → Discrete inputs → Discrete input 1 to 4 → Fail safe type (2189–1 to 4)
Description	Standard parameter FSAFE_TYPE of the Discrete Input block according to the PROFIBUS profile
Selection	<ul style="list-style-type: none"> ▪ Fail safe value ▪ Fallback value ▪ Off
Factory setting	Off
Additional information	<p>Meaning of the options</p> <p>This parameter defines the output value of the Discrete Input block in case of a failure.</p> <ul style="list-style-type: none"> ▪ Fail safe value The output value in case of a failure is defined in the Fail safe value parameter (→ 183). ▪ Fallback value The last output value before occurrence of the failure is kept. ▪ Off The output follows the measuring value. The status is set to BAD.

Fail safe value

Navigation	Expert → Discrete inputs → Discrete input 1 to 4 → Fail safe value (2190–1 to 4)
Prerequisite	Fail safe type (→ 183) = Fail safe value
Description	Standard parameter FSAFE_VAL_D of the Discrete Input block according to the PROFIBUS profile
User entry	0 to 255
Factory setting	0
Additional information	This parameter defines the output value of the Discrete Input block in case of a failure.

Simulate enabled

Navigation	Expert → Discrete inputs → Discrete input 1 to 4 → Simulate enabled (2196–1 to 4)
Description	Element Simulate_Enabled of the standard parameter SIMULATE_D in the Discrete Input block according to the PROFIBUS profile
Selection	<ul style="list-style-type: none"> ▪ Disable ▪ Enable
Factory setting	Disable

Additional information

This parameter activates or deactivates the simulation of the Discrete Input block. If the simulation is active, the Discrete Input block does not use the measured value selected in **Channel** (→ 182) but a constant simulation value. This value is defined in **Simulate value** (→ 184).

Simulate value**Navigation**

█ Expert → Discrete inputs → Discrete input 1 to 4 → Simulate value (2198-1 to 4)

Description

Element **Simulate_Value** of the standard parameter **SIMULATE_D** in the Discrete Input block according to the PROFIBUS profile

User entry

0 to 255

Factory setting

0

Additional information

This parameter defines the simulation value.

Simulate status**Navigation**

█ Expert → Discrete inputs → Discrete input 1 to 4 → Simulate status (2197-1 to 4)

Description

Element **Simulate_Status** of the standard parameter **SIMULATE_D** in the Discrete Input block according to the PROFIBUS profile

User entry

0 to 255

Factory setting

0

Additional information

This parameter defines the status of the simulation value.

3.9 "Analog output 1 to 4" submenu

3.9.1 Overview

There is an **Analog output** submenu for each Analog Output block in the device. This submenu contains the parameters of the individual block. The parameters of the Analog Output block are described in the PROFIBUS profile. The most important characteristics of the parameters are summarized below.

- i** The device uses the Analog Output block to read in a value, which has been measured externally, via the bus. This value can be used
 - for display on the display module (**Display** submenu (→ 27))
 - in the case of a pressure value: for the automatic gas phase compensation (**External pressure selector** parameter (→ 94))

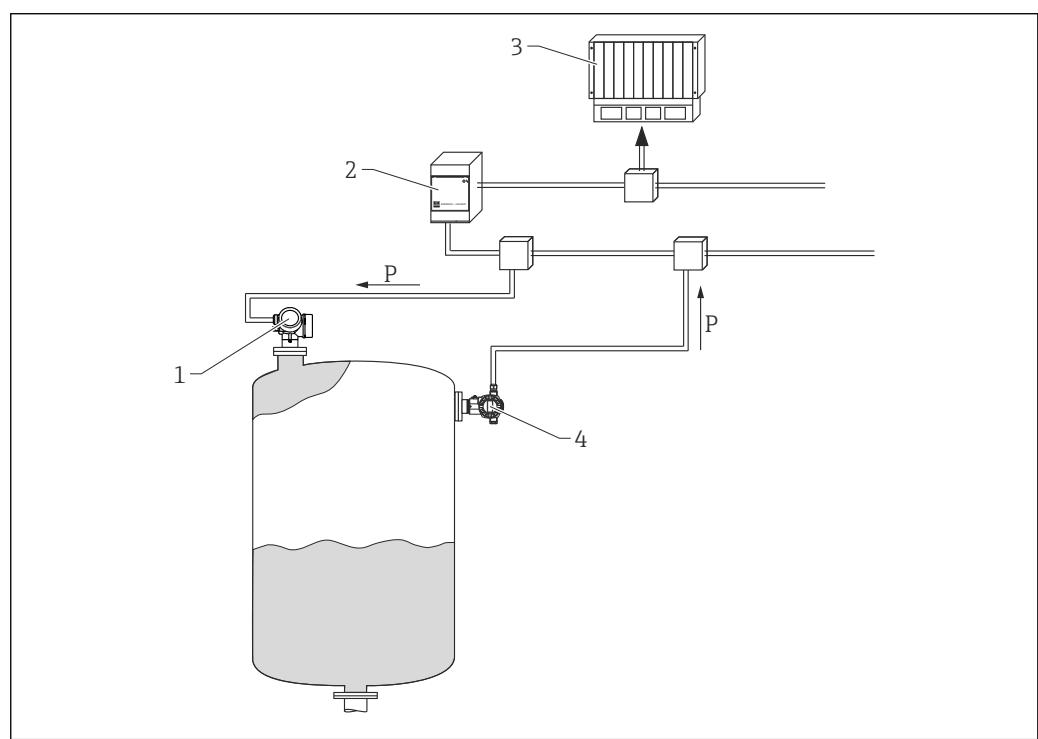

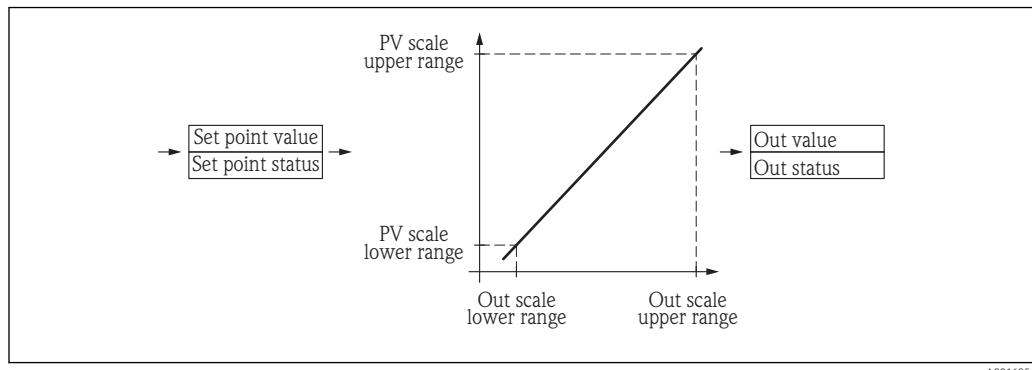

图 45 The level transmitter reads the externally measured pressure via the Analog output block.

- 1 Level transmitter
- 2 Segment coupler
- 3 PLC
- 4 Absolute pressure transmitter

Data processing in the Analog Output block

i The diagram describes the function of the Analog Output block in the normal operational state (**Mode block actual** (→ 190) = **Auto**). The block's behavior in other operational states is described in the Profibus profiles of the Profibus User Organization (PNO).

Description	Standard block parameter TARGET_MODE according to the PROFIBUS profile
Selection	<ul style="list-style-type: none">■ Auto■ Local override■ Man■ Out of service■ Remote Cascaded
Factory setting	Auto

Mode block actual

Navigation	Expert → Analog outputs → Analog output 1 to 4 → Mode block act (1631–1 to 4)
Description	Element Actual of the standard block parameter MODE_BLK according to the PROFIBUS profile
User interface	<ul style="list-style-type: none">■ Auto■ Local override■ Man■ Out of service■ Remote Cascaded

Mode block permitted

Navigation	Expert → Analog outputs → Analog output 1 to 4 → Mode block perm (1648–1 to 4)
Description	Element Permitted of the standard block parameter MODE_BLK according to the PROFIBUS profile
User interface	0 to 255

Mode block normal

Navigation	Expert → Analog outputs → Analog output 1 to 4 → Mode blk norm (1643–1 to 4)
Description	Element Normal of the standard block parameter MODE_BLK according to the PROFIBUS profile

User interface	<ul style="list-style-type: none"> ■ Auto ■ Local override ■ Man ■ Out of service ■ Remote Cascaded
-----------------------	--

Alarm summary

Navigation	 Expert → Analog outputs → Analog output 1 to 4 → Alarm summary (1642–1 to 4)
Description	Standard block parameter ALARM_SUM according to the PROFIBUS profile
User interface	<ul style="list-style-type: none"> ■ Discrete alarm ■ Alarm state HiHi limit ■ Alarm state Hi limit ■ Alarm state LoLo limit ■ Alarm state Lo limit ■ Update Event

Batch ID

Navigation	 Expert → Analog outputs → Analog output 1 to 4 → Batch ID (1633–1 to 4)
Description	Element Batch_ID of the standard block parameter BATCH according to the PROFIBUS profile
User entry	Positive integer
Factory setting	0

Batch operation

Navigation	 Expert → Analog outputs → Analog output 1 to 4 → Batch operation (1639–1 to 4)
Description	Element Operation of the standard block parameter BATCH according to the PROFIBUS profile
User entry	0 to 65 535
Factory setting	0

Batch phase

Navigation	Expert → Analog outputs → Analog output 1 to 4 → Batch phase (1640–1 to 4)
Description	Element Phase of the standard block parameter BATCH according to the PROFIBUS profile
User entry	0 to 65 535
Factory setting	0

Batch Recipe Unit Procedure

Navigation	Expert → Analog outputs → Analog output 1 to 4 → Batch Recipe (1641–1 to 4)
Description	Element Rup (Recipe unit procedure) of the standard block parameter BATCH according to the PROFIBUS profile
User entry	0 to 65 535
Factory setting	0

Set point value

Navigation	Expert → Analog outputs → Analog output 1 to 4 → Set point val (1661–1 to 4)
Description	Input value of the AO block
User entry	Signed floating-point number
Factory setting	0
Additional information	This value is normally written via PROFIBUS by a linked device (e.g. a pressure transmitter). It can be scaled by the AO block before being transmitted to Out value (→ 198) and is then used for the display or for additional calculations.

Set point status

Navigation	Expert → Analog outputs → Analog output 1 to 4 → Set point status (1660–1 to 4)
Description	Hexadecimal representation of the status of the input value
User entry	0 to 255
Factory setting	0

Additional information	Normally, this value is written via PROFIBUS by a linked device (e.g. a pressure transmitter).
-------------------------------	--

PV scale lower range

Navigation	█ Expert → Analog outputs → Analog output 1 to 4 → PVscale lo range (1651–1 to 4)
Description	Element EU_at_0% of the standard parameter PV_SCALE in the Analog Output block according to the PROFIBUS profile
User entry	Signed floating-point number
Factory setting	0
Additional information	This parameter defines the 0% marker for the input value.

PV scale upper range

Navigation	█ Expert → Analog outputs → Analog output 1 to 4 → PVscale up range (1652–1 to 4)
Description	Element EU_at_100% of the standard parameter PV_SCALE in the Analog Output block according to the PROFIBUS profile
User entry	Signed floating-point number
Factory setting	100.0
Additional information	This parameter defines the 100% marker for the input value.

Readback value

Navigation	█ Expert → Analog outputs → Analog output 1 to 4 → Readback value (1659–1 to 4)
Description	Element Value of the standard parameter READBACK in the Analog Output block
User interface	Signed floating-point number

Readback status

Navigation	█ Expert → Analog outputs → Analog output 1 to 4 → Readback status (1658–1 to 4)
Description	Element Status of the standard parameter READBACK in the Analog Output block

User interface 0 to 255

RCAS in value

Navigation ☐ Expert → Analog outputs → Analog output 1 to 4 → RCAS in value (1655–1 to 4)

Description Element **Value** of the standard parameter **RCAS_IN** in the Analog Output block according to the PROFIBUS profile

User entry Signed floating-point number

Factory setting 0

RCAS in status

Navigation ☐ Expert → Analog outputs → Analog output 1 to 4 → RCAS in status (1654–1 to 4)

Description Element **Status** of the standard parameter **RCAS_IN** in the Analog Input block according to the PROFIBUS profile

User entry 0 to 255

Factory setting 0

Input channel

Navigation ☐ Expert → Analog outputs → Analog output 1 to 4 → Input channel (1670–1 to 4)

Description Standard parameter **IN_CHANNEL** of the Analog Output block according to the PROFIBUS profile

Selection None

Factory setting None

Output channel

Navigation ☐ Expert → Analog outputs → Analog output 1 to 4 → Output channel (1671–1 to 4)

Description Standard parameter **OUT-CHANNEL** of the Analog Output block according to the PROFIBUS profile

Selection None

Factory setting	None
------------------------	------

Fail safe time

Navigation	 Expert → Analog outputs → Analog output 1 to 4 → Fail safe time (1635–1 to 4)
Description	Standard parameter FSAFE_TIME of the Analog Output block according to the PROFIBUS profile
User entry	0 to 999.0
Factory setting	0
Additional information	Defines the time (in seconds) between the occurrence of an error in the set point (Set point status (→  192) = BAD) and the corresponding reaction of the AO block.

Fail safe type

Navigation	 Expert → Analog outputs → Analog output 1 to 4 → Fail safe type (1636–1 to 4)
Description	Standard parameter FSAFE_TYPE of the Analog Output block according to the PROFIBUS profile
Selection	<ul style="list-style-type: none"> ■ Fail safe value ■ Fallback value ■ Off
Factory setting	Fallback value
Additional information	<p>Meaning of the options</p> <p>This parameter defines the output value of the Analog Output block in case of an error.</p> <ul style="list-style-type: none"> ■ Fail safe value The output value in case of an error is defined in the Fail safe value parameter (→  195). ■ Fallback value The last valid output value before the occurrence of the error is maintained. ■ Off The output value corresponds to the current measured value. The status, however, is set to BAD.

Fail safe value

Navigation	 Expert → Analog outputs → Analog output 1 to 4 → Fail safe value (1637–1 to 4)
Prerequisite	Fail safe type (→  195) = Fail safe value

Description Standard parameter **FSAFE_VALUE** of the Analog Output block according to the PROFIBUS profile

User entry Signed floating-point number

Factory setting 0

Additional information This parameter defines the output value of the Analog Output block in case of an error.

RCAS out value

Navigation  Expert → Analog outputs → Analog output 1 to 4 → RCAS out value (1657–1 to 4)

Description Element **Value** of the standard parameter **RCAS_OUT** in the Analog Output block according to the PROFIBUS profile

User interface Signed floating-point number

RCAS out status

Navigation  Expert → Analog outputs → Analog output 1 to 4 → RCAS out status (1656–1 to 4)

Description Element **Status** of the standard parameter **RCAS_OUT** in the Analog Input block according to the PROFIBUS profile

User interface 0 to 255

Position value

Navigation  Expert → Analog outputs → Analog output 1 to 4 → Pos value (1650–1 to 4)

Description Element **Value** of the standard parameter **POS_D** in the Analog Output block according to the PROFIBUS profile

User interface 0 to 255

Position status

Navigation  Expert → Analog outputs → Analog output 1 to 4 → Position status (1649–1 to 4)

Description Element **Status** of the standard parameter **POS_D** in the Analog Output block according to the PROFIBUS profile

User interface 0 to 255

Setpoint deviation

Navigation ☐ Expert → Analog outputs → Analog output 1 to 4 → Setp. deviation (1653–1 to 4)

Description Standard parameter **SETP_DEVIATION** of the Analog Output block according to the PROFIBUS profile

User interface Signed floating-point number

Simulate enabled

Navigation ☐ Expert → Analog outputs → Analog output 1 to 4 → Simulate enabled (1662–1 to 4)

Description Element **Simulate_Enabled** of the standard parameter **SIMULATE** in the Analog Input block according to the PROFIBUS profile

Selection

- Disable
- Enable

Factory setting Disable

Simulate value

Navigation ☐ Expert → Analog outputs → Analog output 1 to 4 → Simulate value (1664–1 to 4)

Description Element **Simulate_Value** of the standard parameter **SIMULATE** in the Analog Output block according to the PROFIBUS profile.

User entry Signed floating-point number

Factory setting 0

Simulate status

Navigation ☐ Expert → Analog outputs → Analog output 1 to 4 → Simulate status (1663–1 to 4)

Description Element **Simulate_Status** of the standard parameter **SIMULATE** in the Analog Output block according to the PROFIBUS profile

User entry 0 to 255

Factory setting	0
-----------------	---

Increase close	
----------------	---

Navigation	 Expert → Analog outputs → Analog output 1 to 4 → Increase close (1638–1 to 4)
------------	---

Description	Standard parameter INCREASE_CLOSE of the Analog Input block according to the PROFIBUS profile
-------------	---

User entry	0 to 255
------------	----------

Factory setting	0
-----------------	---

Out value

Navigation	  Expert → Analog outputs → Analog output 1 to 4 → Out value (1647–1 to 4)
------------	--

Description	Element Value of the standard parameter OUT in the Analog Output block according to the PROFIBUS profile
-------------	--

User entry	Signed floating-point number
------------	------------------------------

Factory setting	0
-----------------	---

Additional information	<ul style="list-style-type: none">■ For Mode block actual (→  190) = Man: Enter the output value of the Analo Output block.■ Else: Indicates the output value of the Analog Output block.
------------------------	---

Out status

Navigation	  Expert → Analog outputs → Analog output 1 to 4 → Out status (1669–1 to 4)
------------	---

Description	Element Status of the standard parameter OUT in the Analog Output block according to the PROFIBUS profile
-------------	---

User interface	<ul style="list-style-type: none">■ Good■ Uncertain■ Bad
----------------	--

Additional information	Only the two quality bits are evaluated in this parameter.
------------------------	--

Out status HEX

Navigation	  Expert → Analog outputs → Analog output 1 to 4 → Out status HEX (1645–1 to 4)
Description	Element Status of the standard parameter OUT in the Analog Output block according to the PROFIBUS profile
User entry	0 to 255
Factory setting	128
Additional information	The complete status byte is displayed in this parameter in the form of a two-digit hexadecimal number.

Out scale upper range

Navigation	 Expert → Analog outputs → Analog output 1 to 4 → Out scale up (1646–1 to 4)
Description	Element EU_at_100% of the standard parameter OUT_SCALE in the Analog Output block according to the PROFIBUS profile
User entry	Signed floating-point number
Factory setting	100.0
Additional information	This parameter defines the 100% marker for the output value of the block.

Out scale lower range

Navigation	 Expert → Analog outputs → Analog output 1 to 4 → Out scale low (1644–1 to 4)
Description	Element EU_at_0% of the standard parameter OUT_SCALE in the Analog Output block according to the PROFIBUS profile
User entry	Signed floating-point number
Factory setting	0
Additional information	This parameter defines the 0% marker for the output value of the block.

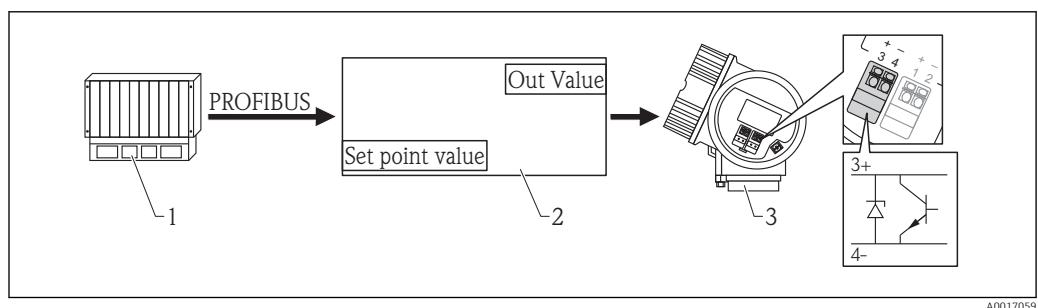

3.10 "Discrete output 1 to 4" submenu

3.10.1 Overview

There is a Discrete output 1 to 4 for each Discrete Output block in the device. This submenu contains the parameters of the individual block. The parameters of the Discrete Output block are described in the PROFIBUS profile. The most important characteristics of the parameters are summarized below.

i The device uses the Discrete Output block to read in a discrete value (0-False / 1-TRUE). This discrete value can be used:

- for transmission via the switch output (terminals 3 and 4 in the connection compartment). This is controlled by:
Assign status (\rightarrow 139)
- to switch the measurement on and off. This is controlled by:
Control measurement
- to transmit a permanently defined level or interface value, regardless of the measurement. This is controlled by:
Level external input 1

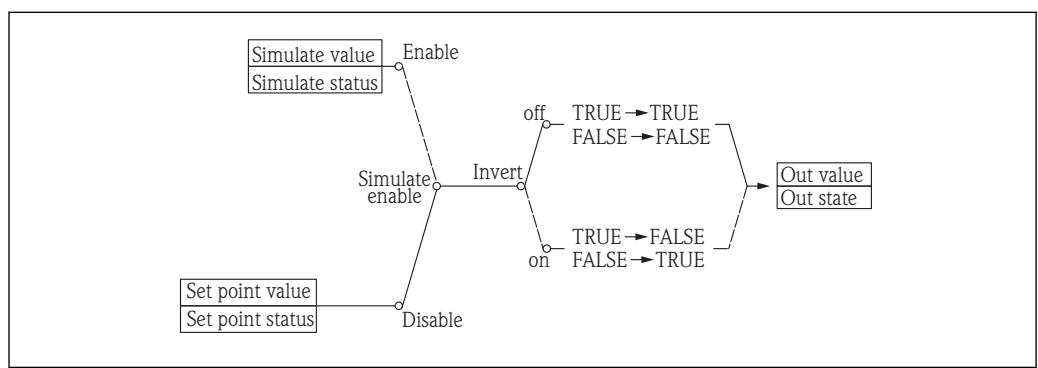

46 Transmission of an external discrete value via the switch output of the device

- 1 PLC
- 2 Discrete Output block (part of transmitter software)
- 3 Transmitter

Data processing in the Discrete Output block

i The diagram describes the function of the Discrete Output block in the normal operational state (**Mode block actual** (\rightarrow 204) = **Auto**). The block's behavior in other operational states is described in the Profibus profiles of the Profibus User Organization (PNO).

Batch Recipe Unit Procedure

Navigation Expert → Discrete outputs → Discr. out. 1 to 4 → Batch Recipe (1700–1 to 4)

Description Element **Rup (Recipe unit procedure)** of the standard block parameter **BATCH** according to the PROFIBUS profile

User entry 0 to 65 535

Factory setting 0

Set point value

Navigation Expert → Discrete outputs → Discr. out. 1 to 4 → Set point val (1715–1 to 4)

Description Input value of the DO block

User entry 0 to 255

Factory setting 0

Additional information Normally, this value is transmitted via PROFIBUS by a PLC or another device.

Set point status

Navigation Expert → Discrete outputs → Discr. out. 1 to 4 → Set point status (1714–1 to 4)

Description Hexadecimal representation of the status of the input value

User entry 0 to 255

Factory setting 0

Additional information Normally, this value is transmitted via PROFIBUS from a PLC or another device.

Out value

Navigation  Expert → Discrete outputs → Discr. out. 1 to 4 → Out value (1704-1 to 4)

Description Element **Value** of the standard parameter **OUT** in the Discrete Output block according to the PROFIBUS profile

User entry 0 to 255

Factory setting 0

Additional information

- For **Mode block actual** (→  204) = **Man**: Enter the output value of the Discrete Output block
- Else: Displays the output value of the Discrete Output block.

Out status

Navigation  Expert → Discrete outputs → Discr. out. 1 to 4 → Out status (1723-1 to 4)

Description Element **Status** of the standard parameter **OUT** in the Discrete Output block according to the PROFIBUS profile

User interface

- Good
- Uncertain
- Bad

Additional information Only the two quality bits are evaluated in this parameter.

Out status HEX

Navigation  Expert → Discrete outputs → Discr. out. 1 to 4 → Out status HEX (1703-1 to 4)

Description Element **Status** of the standard parameter **OUT** in the Discrete Output block according to the PROFIBUS profile

User entry 0 to 255

Factory setting 128

Additional information The complete status byte is displayed in this parameter in the form of a hexadecimal number.

Readback value

Navigation	 Expert → Discrete outputs → Discr. out. 1 to 4 → Readback value (1713–1 to 4)
Description	Element Value of the standard parameter READBACK in the Discrete Output block
User interface	0 to 255

Readback status

Navigation	 Expert → Discrete outputs → Discr. out. 1 to 4 → Readback status (1712–1 to 4)
Description	Element Status of the standard parameter READBACK in the Discrete Output block
User interface	0 to 255

RCAS in value

Navigation	 Expert → Discrete outputs → Discr. out. 1 to 4 → RCAS in value (1707–1 to 4)
Description	Element Value of the standard parameter RCAS_IN in the Discrete Output block according to the PROFIBUS profile
User entry	0 to 255
Factory setting	0

RCAS in status

Navigation	 Expert → Discrete outputs → Discr. out. 1 to 4 → RCAS in status (1706–1 to 4)
Description	Element Status of the standard parameter RCAS_IN in the Discrete Output block according to the PROFIBUS profile
User entry	0 to 255
Factory setting	0

Input channel

Navigation	Expert → Discrete outputs → Discr. out. 1 to 4 → Input channel (1724-1 to 4)
Description	Standard parameter IN_CHANNEL of the Discrete Output block according to the PROFIBUS profile
Selection	None
Factory setting	None

Output channel

Navigation	Expert → Discrete outputs → Discr. out. 1 to 4 → Output channel (1725-1 to 4)
Description	Standard parameter OUT-CHANNEL of the Discrete Output block according to the PROFIBUS profile
Selection	None
Factory setting	None

Invert

Navigation	Expert → Discrete outputs → Discr. out. 1 to 4 → Invert (1692-1 to 4)
Description	Standard parameter INVERT of the Discrete Output block according to the PROFIBUS profile
Selection	<ul style="list-style-type: none">■ Off■ On
Factory setting	Off
Additional information	Enables the inversion of the discrete output signal (permutation of the logical states FALSE and TRUE). Meaning of the options <ul style="list-style-type: none">■ Off No inversion■ On The switch signal is inverted before being used in the device.

Fail safe time**Navigation**

Expert → Discrete outputs → Discr. out. 1 to 4 → Fail safe time (1697–1 to 4)

Description

Standard parameter **FSAFE_TIME** in the Discrete Input block according to the PROFIBUS profile

User entry

Signed floating-point number

Factory setting

0

Additional information

Defines the time (in seconds) between the occurrence of a set point error (**Set point status** (→ 206) = **BAD**) and the corresponding response of the DO block.

Fail safe type**Navigation**

Expert → Discrete outputs → Discr. out. 1 to 4 → Fail safe type (1696–1 to 4)

Description

Standard parameter **FSAFE_TYPE** in the Discrete Output block according to the PROFIBUS profile

Selection

- Fail safe value
- Fallback value
- Off

Factory setting

Fallback value

Additional information**Meaning of the options**

This parameter specifies the output value of the Discrete Input block in the event of an error.

▪ Fail safe value

The value output in the event of an error is defined in the **Fail safe value** parameter (→ 210).

▪ Fallback value

The last output value that was valid before the error occurred is maintained.

▪ Off

The output value follows the current measured value. The status is set to BAD.

Fail safe value**Navigation**

Expert → Discrete outputs → Discr. out. 1 to 4 → Fail safe value (1693–1 to 4)

Prerequisite

Fail safe type (→ 210) = **Fail safe value**

Description

Standard parameter **FSAFE_VALUE** in the Discrete Output block according to the PROFIBUS profile

User entry

0 to 255

Factory setting	0
Additional information	This parameter specifies the output value of the Discrete Output block in the event of an error.

RCAS out value

Navigation	 Expert → Discrete outputs → Discr. out. 1 to 4 → RCAS out value (1711-1 to 4)
Description	Element Value of the standard parameter RCAS_OUT in the Discrete Output block according to the PROFIBUS profile
User interface	0 to 255

RCAS out status

Navigation	 Expert → Discrete outputs → Discr. out. 1 to 4 → RCAS out status (1708-1 to 4)
Description	Element Status of the standard parameter RCAS_OUT in the Discrete Output block according to the PROFIBUS profile
User interface	0 to 255

Simulate enabled

Navigation	 Expert → Discrete outputs → Discr. out. 1 to 4 → Simulate enabled (1716-1 to 4)
Description	Element Simulate_Enabled of the standard parameter SIMULATE in the Discrete Output block according to the PROFIBUS profile
Selection	<ul style="list-style-type: none"> ■ Disable ■ Enable
Factory setting	Disable

Simulate value

Navigation	 Expert → Discrete outputs → Discr. out. 1 to 4 → Simulate value (1718-1 to 4)
Description	Element Simulate_Value of the standard parameter SIMULATE in the Discrete Output block according to the PROFIBUS profile
User entry	0 to 255

Factory setting 0

Simulate status

Navigation Expert → Discrete outputs → Discr. out. 1 to 4 → Simulate status (1717-1 to 4)

Description Element **Simulate_Status** of the standard parameter **SIMULATE** in the Discrete Output block according to the PROFIBUS profile

User entry 0 to 255

Factory setting 0

3.11 "Diagnostics" submenu

3.11.3 Description of parameters

Navigation

  Expert → Diagnostics

Actual diagnostics

Navigation

  Expert → Diagnostics → Actual diagnos. (0691)

Description

Displays current diagnostic message.

Additional information

The display consists of:

- Symbol for event behavior
- Code for diagnostic behavior
- Operating time of occurrence
- Event text

 If several messages are active at the same time, the messages with the highest priority is displayed.

 Information on what is causing the message, and remedy measures, can be viewed via the  symbol on the display.

Timestamp

Navigation

 Expert → Diagnostics → Timestamp (0667)

Description

Displays timestamp for the **Actual diagnostics** parameter (→  215).

User interface

Days (d), hours (h), minutes (m), seconds (s)

Previous diagnostics

Navigation

  Expert → Diagnostics → Prev.diagnostics (0690)

Description

Displays the last diagnostic message which has been active before the current message.

Additional information

The display consists of:

- Symbol for event behavior
- Code for diagnostic behavior
- Operating time of occurrence
- Event text

 The condition displayed may still apply. Information on what is causing the message, and remedy measures, can be viewed via the  symbol on the display.

Timestamp

Navigation  Expert → Diagnostics → Timestamp (0672)

Description Displays timestamp for the **Previous diagnostics** parameter (→  215).

User interface Days (d), hours (h), minutes (m), seconds (s)

Operating time from restart

Navigation   Expert → Diagnostics → Time fr. restart (0653)

Description Displays the time the device has been in operation since the last device restart.

User interface Days (d), hours (h), minutes (m), seconds (s)

Operating time

Navigation   Expert → Diagnostics → Operating time (0652)

Description Indicates how long the device has been in operation.

User interface Days (d), hours (h), minutes (m), seconds (s)

Additional information *Maximum time*

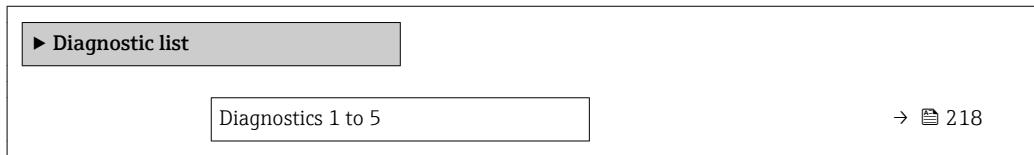

9 999 d (≈ 27 years)

3.11.4 "Diagnostic list" submenu

Structure of the submenu on the local display

Navigation

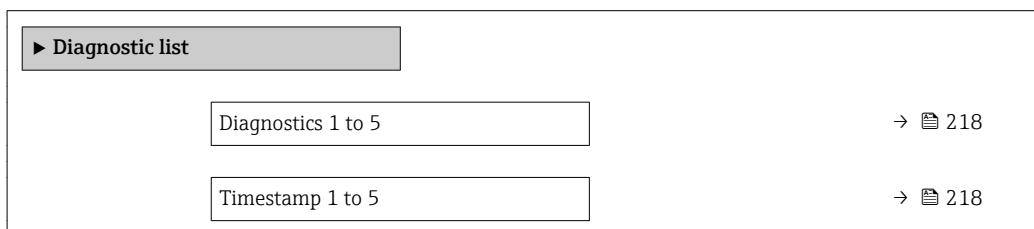

Expert → Diagnostics → Diagnostic list

Structure of the submenu in an operating tool

Navigation

Expert → Diagnostics → Diagnostic list

Description of parameters

Navigation

 Expert → Diagnostics → Diagnostic list

Diagnostics 1 to 5

Navigation

 Expert → Diagnostics → Diagnostic list → Diagnostics 1 to 5 (0692–1 to 5)

Description

Display the current diagnostics messages with the highest to fifth-highest priority.

Additional information

The display consists of:

- Symbol for event behavior
- Code for diagnostic behavior
- Operating time of occurrence
- Event text

Timestamp 1 to 5

Navigation

 Expert → Diagnostics → Diagnostic list → Timestamp (0683)

Description

Displays timestamp for the **Diagnostics 1 to 5** parameter (→  218).

User interface

Days (d), hours (h), minutes (m), seconds (s)

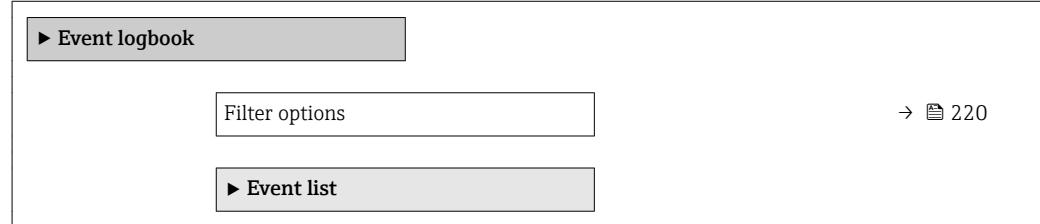

3.11.5 "Event logbook" submenu

Structure of the submenu on the local display

Navigation

Expert → Diagnostics → Event logbook

Structure of the submenu in an operating tool

Navigation

Expert → Diagnostics → Event logbook

Description of parameters*Navigation*

Expert → Diagnostics → Event logbook

Filter options**Navigation**

Expert → Diagnostics → Event logbook → Filter options (0705)

Description

Select category (status signal) whose event messages are displayed in the events list.

Selection

- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information (I)

Factory setting

All

Additional information

- This parameter is only used for operation via the local display.
- The status signals are categorized according to NAMUR NE 107.

"Event list" submenu

The **Event list** submenu displays the history of past events of the category selected in the **Filter options** parameter (→ 220). A maximum of 20 events are displayed in chronological order. If the advanced HistoROM functionality has been activated in the device, the event list may comprise up to 100 entries.

The following symbols indicate whether an event has occurred or has ended:

- : Event has occurred
- : Event has ended

 Information on what is causing the message, and remedy instructions, can be viewed via the -button.

Display format

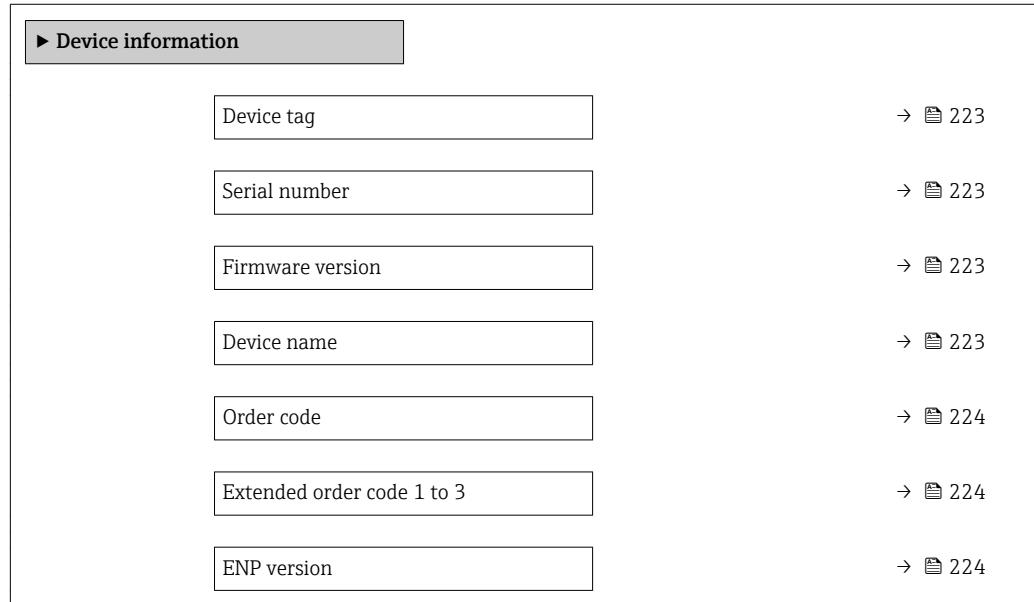

- For event messages in category I: information event, event text, "recording event" symbol and time the event occurred
- For event messages in category F, M, C, S (status signal): diagnostics event, event text, "recording event" symbol and time the event occurred

3.11.6 "Device information" submenu

Structure of the submenu

Navigation

☰ ☰ Expert → Diagnostics → Device info

Description of parameters

Navigation

  Expert → Diagnostics → Device info

Device tag

Navigation

  Expert → Diagnostics → Device info → Device tag (0011)

Description

Enter the name for the measuring point.

Factory setting

FMR5x

Serial number

Navigation

  Expert → Diagnostics → Device info → Serial number (0009)

Description

Displays serial number of the device.

Additional information

 **Uses of the serial number**

- To identify the device quickly, e.g. when contacting Endress+Hauser.
- To obtain specific information on the device using the Device Viewer:
www.endress.com/deviceviewer

 The serial number is also indicated on the nameplate.

Firmware version

Navigation

  Expert → Diagnostics → Device info → Firmware version (0010)

Description

Indicates the installed Firmware version.

User interface

xx.yy.zz

Additional information

 For firmware versions differing only in the last two digits ("zz") there is no difference concerning functionality or operation.

Device name

Navigation

  Expert → Diagnostics → Device info → Device name (0013)

Description

Displays device name.

Order code

Navigation

  Expert → Diagnostics → Device info → Order code (0008)

Description

Displays order code of the device.

Additional information

The order code is generated from the extended order code, which defines all device features of the product structure. In contrast, the device features can not be read directly from the order code.

Extended order code 1 to 3

Navigation

  Expert → Diagnostics → Device info → Ext. order cd. 1 to 3 (0023–1 to 3)

Description

Displays the three parts of the extended order code.

Additional information

The extended order code indicates the version of all the features of the product structure and thus uniquely identifies the device.

ENP version

Navigation

  Expert → Diagnostics → Device info → ENP version (0012)

Description

Displays version of the electronic nameplate (ENP).

User interface

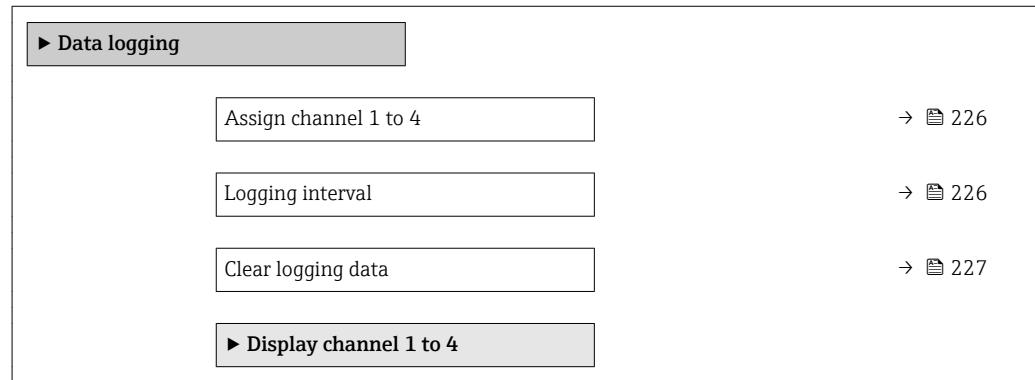

xx.yy.zz

3.11.7 "Data logging" submenu

Structure of the submenu on the local display

Navigation

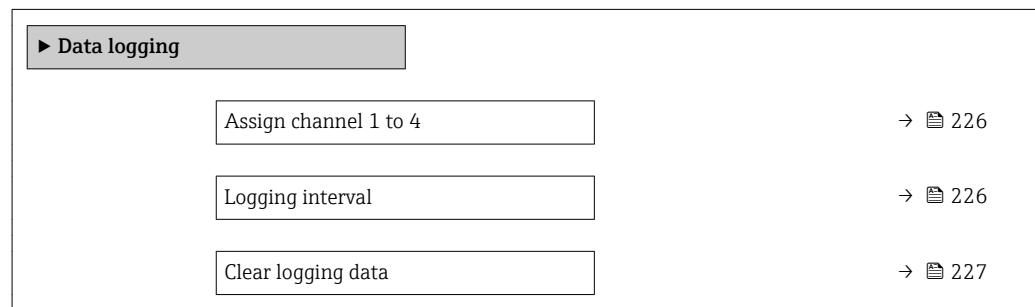

Expert → Diagnostics → Data logging

Structure of the submenu in an operating tool

Navigation

Expert → Diagnostics → Data logging

Description of parameters*Navigation* Expert → Diagnostics → Data logging**Assign channel 1 to 4****Navigation** Expert → Diagnostics → Data logging → Assign chan. 1 (0851)**Description**

Allocate a process variable to the respective data logging channel.

Selection

- Off
- Level linearized
- Distance
- Terminal voltage
- Electronic temperature
- Absolute echo amplitude
- Relative echo amplitude
- Area of incoupling
- Analog output adv. diagnostics 1
- Analog output adv. diagnostics 2

Factory setting

Off

Additional information

A total of 500 measured values can be logged. This means:

- 500 data points if 1 logging channel is used
- 250 data points if 2 logging channels are used
- 166 data points if 3 logging channels are used
- 125 data points if 4 logging channels are used

If the maximum number of data points is reached, the oldest data points in the data log are cyclically overwritten in such a way that the last 500, 250, 166 or 125 measured values are always in the log (ring memory principle).

 The logged data are deleted if a new option is selected in this parameter.

Logging interval**Navigation** Expert → Diagnostics → Data logging → Logging interval (0856)**Description**Define logging interval t_{\log} .**User entry**

1.0 to 3 600.0 s

Factory setting

30.0 s

Additional information

This parameter defines the interval between the individual data points in the data log, and thus the maximum loggable process time T_{\log} :

- If 1 logging channel is used: $T_{\log} = 500 \cdot t_{\log}$
- If 2 logging channels are used: $T_{\log} = 250 \cdot t_{\log}$
- If 3 logging channels are used: $T_{\log} = 166 \cdot t_{\log}$
- If 4 logging channels are used: $T_{\log} = 125 \cdot t_{\log}$

Once this time elapses, the oldest data points in the data log are cyclically overwritten such that a time of T_{\log} always remains in the memory (ring memory principle).

 The logged data are deleted if this parameter is changed.

Example

When using 1 logging channel

- $T_{\log} = 500 \cdot 1 \text{ s} = 500 \text{ s} \approx 8.5 \text{ min}$
- $T_{\log} = 500 \cdot 10 \text{ s} = 5000 \text{ s} \approx 1.5 \text{ h}$
- $T_{\log} = 500 \cdot 80 \text{ s} = 40000 \text{ s} \approx 11 \text{ h}$
- $T_{\log} = 500 \cdot 3600 \text{ s} = 1800000 \text{ s} \approx 20 \text{ d}$

Clear logging data

Navigation

 Expert → Diagnostics → Data logging → Clear logging (0855)

Description

Initiate a deletion of the complete logging memory.

Selection

- Cancel
- Clear data

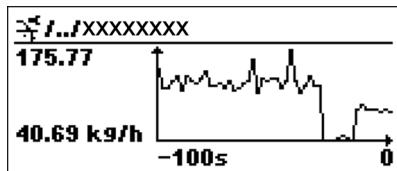

Factory setting

Cancel

"Display channel 1 to 4" submenu

i The **Display channel 1 to 4** submenu is only available when operating via the local display. When operating via FieldCare, the diagram can be displayed in the "Event List / HistoROM" function.

The **Display channel 1 to 4** submenu displays the measured value trend of the respective logging channel.

- x-axis: displays 125 to 500 measured values of a process variable (the number of values depending on the number of selected channels).
- y-axis: displays the approximate measured value span and constantly adapts this to the ongoing measurement.

i To quit the diagram and to return to the operating menu, press **⊕** and **⊖** simultaneously.

3.11.8 "Min/max values" submenu

Structure of the submenu

Navigation

Expert → Diagnostics → Min/max val.

- Reset all

Factory setting

None

3.11.9 "Simulation" submenu

The **Simulation** submenu is used to simulate specific measuring values or other conditions. This helps to check the correct configuration of the device and connected control units.

Conditions which can be simulated

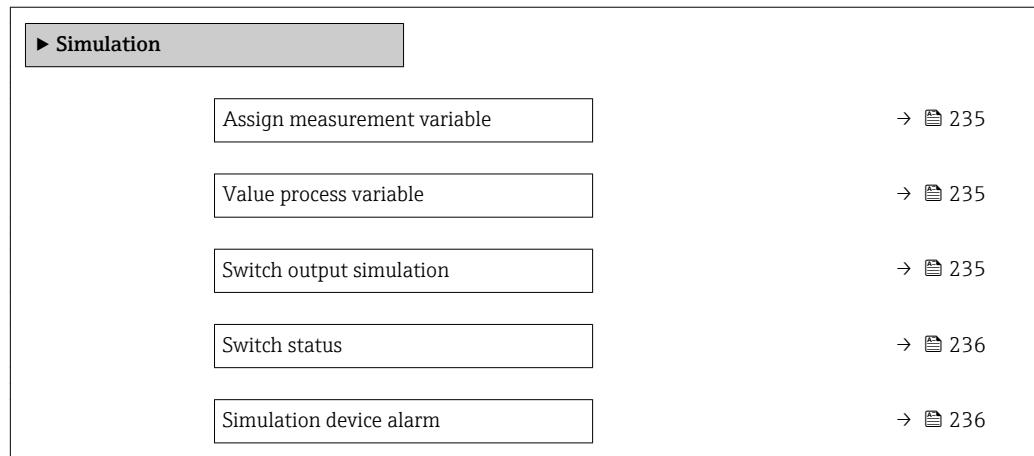

Condition to be simulated	Associated parameters
Specific value of a process variable	<ul style="list-style-type: none">▪ Assign measurement variable (→ 235)▪ Value process variable (→ 235)
Specific state of the switch output	<ul style="list-style-type: none">▪ Switch output simulation (→ 235)▪ Switch status (→ 236)
Existence of an alarm	Simulation device alarm (→ 236)

Structure of the submenu

Navigation

Expert → Diagnostics → Simulation

Description of parameters

Navigation

  Expert → Diagnostics → Simulation

Assign measurement variable

Navigation

  Expert → Diagnostics → Simulation → Assign meas.var. (2328)

Description

Select process variable to be simulated.

Selection

- Off
- Level
- Level linearized

Factory setting

Off

Additional information

- The value of the variable to be simulated is defined in the **Value process variable** parameter (→  235).
- If **Assign measurement variable ≠ Off**, a simulation is active. This is indicated by a diagnostic message of the *Function check (C)* category.

Value process variable

Navigation

  Expert → Diagnostics → Simulation → Value proc. var. (2329)

Prerequisite

Assign measurement variable (→  235) ≠ Off

Description

Specify value of the process value being simulated.

User entry

Signed floating-point number

Factory setting

0

Additional information

Downstream measured value processing and the signal output use this simulation value. In this way, users can verify whether the measuring device has been configured correctly.

Switch output simulation

Navigation

  Expert → Diagnostics → Simulation → Switch sim. (0462)

Description

Switch the simulation of the switch output on or off.

Selection

- Off
- On

Factory setting

Off

Switch status**Navigation**

Expert → Diagnostics → Simulation → Switch status (0463)

Prerequisite**Switch output simulation (→ 235) = On****Description**

Define the switch state to be simulated.

Selection

- Open
- Closed

Factory setting

Open

Additional information

The switch status assumes the value defined in this parameter. This helps to check correct operation of connected control units.

Simulation device alarm**Navigation**

Expert → Diagnostics → Simulation → Sim. alarm (0654)

Description

Switch alarm simulation on or off.

Selection

- Off
- On

Factory setting

Off

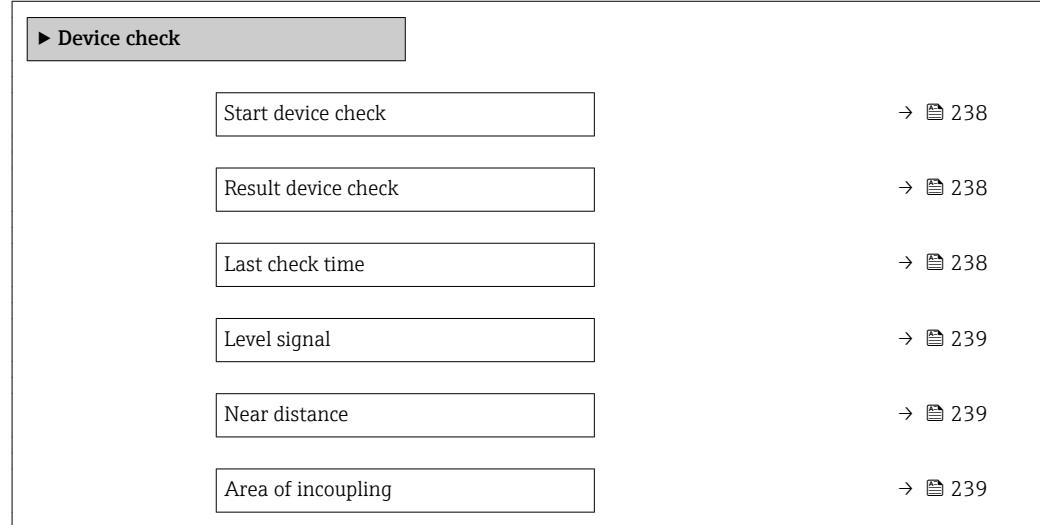

Additional informationWhen selecting the **On** option, the device generates an alarm. This helps to check the correct output behavior of the device in the case of an alarm.An active simulation is indicated by the diagnostic message **☒C484 Simulation failure mode**.

3.11.10 "Device check" submenu

Structure of the submenu

Navigation

Diagram Expert → Diagnostics → Device check

Description of parameters

Navigation

  Expert → Diagnostics → Device check

Start device check

Navigation

  Expert → Diagnostics → Device check → Start dev. check (1013)

Description

Start a device check.

Selection

- No
- Yes

Factory setting

No

Additional information

In the case of a lost echo a device check can not be performed.

Result device check

Navigation

  Expert → Diagnostics → Device check → Result dev.check (1014)

Description

Displays the result of the device check.

Additional information

Meaning of the display options

■ **Installation ok**

Measurement possible without restrictions.

■ **Accuracy reduced**

A measurement is possible. However, the measuring accuracy may be reduced due to the signal amplitudes.

■ **Measurement capability reduced**

A measurement is currently possible. However, there is the risk of an echo loss. Check the mounting position of the device and the dielectric constant of the medium.

■ **Check not done**

No device check has been performed.

Last check time

Navigation

  Expert → Diagnostics → Device check → Last check time (1203)

Description

Displays the operating time at which the last device check has been performed.

Level signal

Navigation	  Expert → Diagnostics → Device check → Level signal (1016)
Prerequisite	Device check has been performed.
Description	Displays result of the device check for the level signal.
User interface	<ul style="list-style-type: none">■ Check not done■ Check not OK■ Check OK
Additional information	For Level signal = Check not OK : Check the mounting position of the device and the dielectric constant of the medium.

Near distance

Navigation	  Expert → Diagnostics → Device check → Near distance (1157)
Description	Displays result of the device check for the near distance.
User interface	<ul style="list-style-type: none">■ Check not done■ Check not OK■ Check OK
Factory setting	Check not done

Area of incoupling

Navigation	  Expert → Diagnostics → Device check → Area incoupling (1169)
Description	Indicates the area of ringing zone.

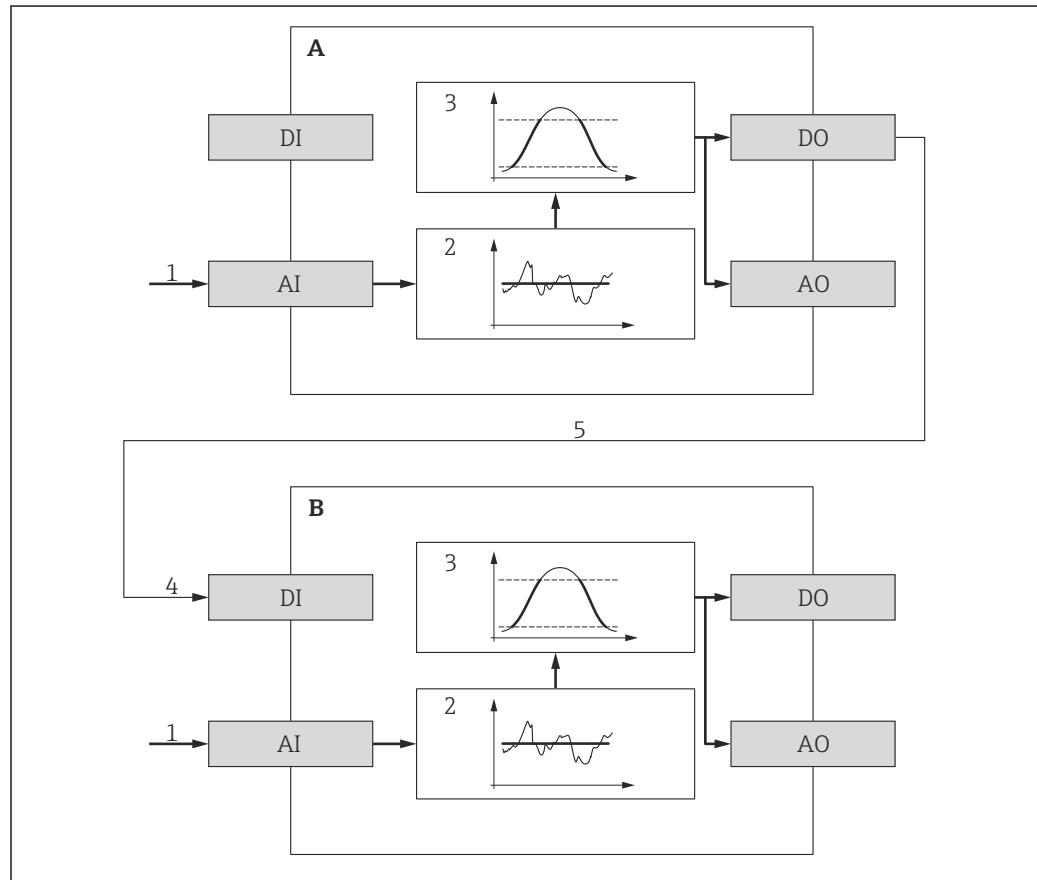

3.11.11 "Advanced diagnostics 1 to 2" submenu

Mode of operation

The Advanced Diagnostics offers additional options to monitor the process. The device contains two Advanced Diagnostic Blocks which can be used separately or in combination.

A measuring variable can be assigned to the input of each Advanced Diagnostic Block. Based on a freely configurable time interval, the variable can be submitted to a statistical function (e.g. maximum, minimum, mean, slope). Finally, a limit detection can be parametrized and its result can be transmitted to a digital output.

The result can be displayed and evaluated by a DCS or PLC. If required, it can also be linked to the second Advanced Diagnostic block and thus it is possible to combine the two results by the logical operators AND or OR.

A0021629

47 Combined Advanced Diagnostic blocks

- A Advanced Diagnsotics 1
- B Advanced Diagnsotics 2
- AI Analog input of the respective block
- DI Digital input of the respective block
- AO Analog output of the respective block
- DO Digital output of the respective block
- 1 Analog process variable
- 2 Statistical calculation (maximum, minimum, mean, slope)
- 3 Limit check
- 4 Digital input of AD2
- 5 Digital output of AD1 is linked to digital input of AD2

Overview of the Advanced Diagnostic functionalities

Task	Associated parameters
Allocation of a process variable to the analog input of the block.	Assign diagnostic signal (→ 248)
Linking the digital input to the digital output of the other block.	<ul style="list-style-type: none"> ▪ Link AD to (→ 248) ▪ Linking logic AD (→ 248)
Calculation of one of the following quantities for a freely configurable sampling interval: <ul style="list-style-type: none"> ▪ Maximum ▪ Minimum ▪ Mean ▪ Standard deviation ▪ Difference Max. - Min. ▪ Slope 	<ul style="list-style-type: none"> ▪ Sample time (→ 249) ▪ Calculation type (→ 249) ▪ Calculation unit (→ 251)
Drag indicator for the calculated quantity	<ul style="list-style-type: none"> ▪ Maximum value (→ 253) ▪ Minimum value (→ 253) ▪ Reset min./max. (→ 254)
Limit check	<ul style="list-style-type: none"> ▪ Check mode (→ 250) ▪ Upper limit (→ 252) ▪ Lower limit (→ 252) ▪ Hysteresis (→ 253)
Reaction in case of a limit violation	<ul style="list-style-type: none"> ▪ Assign status signal to AD event (→ 254) ▪ Assign event behaviour (→ 254) ▪ Alarm delay (→ 255)

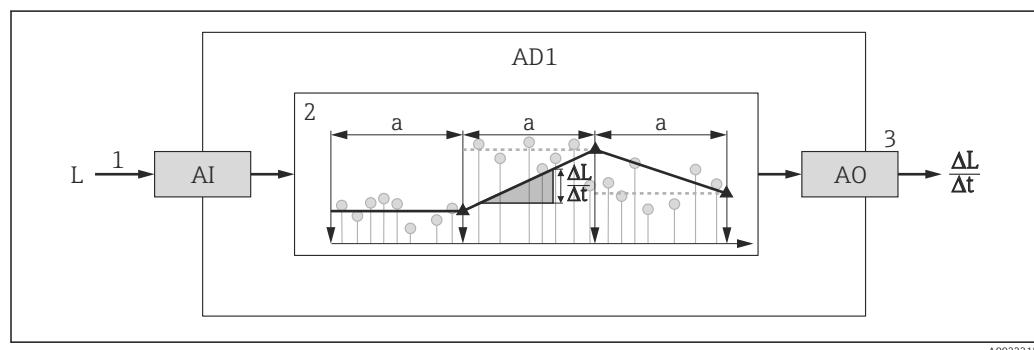

Example 1: Draining/filling speed

i Only one Advanced Diagnostic Block is needed for this application. In the example this is **Advanced diagnostics 1** (\rightarrow [247](#)). However, **Advanced diagnostics 2** (\rightarrow [247](#)) could be used just as well.

The level change rate (i.e. draining or filling speed) allows the customer to instantly realize whether or not the level is changing, and at which rate. The rate at which the level is changing must be observed as powerful pumps can create significant over and underpressure in a tank. Pressure relieve valves can only operate properly up to a certain level change rate. This is in particular valid for almost emptied tanks. The level change rate is also an intermediate result for calculating transfer estimates, such as time to fill, time to empty, time to target, etc.

Basic idea

The Advanced Diagnostics is used to calculate the draining or filling speed from the measured level. The result can be transmitted via the current output or the HART communication interface.

A0022315

48 Calculation of the draining or filling speed

- 1 Allocation of the (linearized) level to Advanced Diagnostic Block AD1
- 2 Calculation of the draining or filling speed $\Delta L / \Delta t$ within the sampling interval a .
- 3 $\Delta L / \Delta t$ can be transmitted via the current output or the HART communication interface.

Configuration of the calculation

The calculation of the rate of level change is configured as follows:

- 1 Select **Assign diagnostic signal 1 = Level linearized**.
- 2 Select **Link AD 1 to = None** (= factory setting)
- 3 Define **Sample time 1** in accordance with the expected draining or filling speed.
- 4 Select **Calculation type 1 = Slope**.
- 5 Select a suitable option in **Calculation unit 1**, e.g.: "Level unit" / s

i As the rate of level change is not to be checked for limit violation, the following parameters may retain their factory settings:

- **Check mode 1**
- **Assign status signal to AD event** (\rightarrow [254](#))
- **Assign event behaviour** (\rightarrow [254](#))
- **Alarm delay** (\rightarrow [255](#))

i With this configuration, the **Maximum value 1** and **Minimum value 1** drag indicators display the maximum or minimum value the rate of level change has obtained. Positive values indicate filling (rising level), negative values indicate draining (falling level). If required, the drag indicators can be reset by the **Reset min./max. 1** parameter.

Allocation of the calculated rate of level change to the current output

1. Navigate to the following submenu: Expert → Output → Curr.output 1.
2. Select **Assign current output = Analog output adv. diagnostics 1.**
3. Select **Turn down = On.**
4. Enter maximum expected draining speed (negative value) in **4 mA value**.
5. Enter maximum expected filling speed (positive value) in **20 mA value**.

With this configuration, the rate of level change is transmitted via the current output. The relationship between the rate of level change and the output current is as follows:

$$\frac{\Delta L}{\Delta t} = \frac{5W_4 - W_{20}}{4} + \frac{W_{20} - W_4}{16 \text{ mA}} I$$

A0022342

Where:

- $\Delta L/\Delta t$: Rate of level change ¹⁰⁾
- W_4 : **4 mA value**
- W_{20} : **20 mA value**
- I: Output current

In the case of a constant level ($\Delta L/\Delta t = 0$) the current is:

$$I_0 = 4 \text{ mA} - \frac{W_4}{W_{20} - W_4} 16 \text{ mA}$$

A0022343

Allocation of the calculated rate of level change to the HART output

1. Navigate to the following submenu: Expert → Communication → Output
2. Select **Assign PV = Analog output adv. diagnostics 1.**

 With this configuration, the **Primary variable (PV)** parameter displays the calculated filling or draining speed. Positive values indicate filling; negative values indicate draining.

 Instead of PV, it is also possible to allocate the rate of level change to SV, TV or QV.

10) Negative values: draining speed; Positive values: filling speed

Example 2: Foam detection

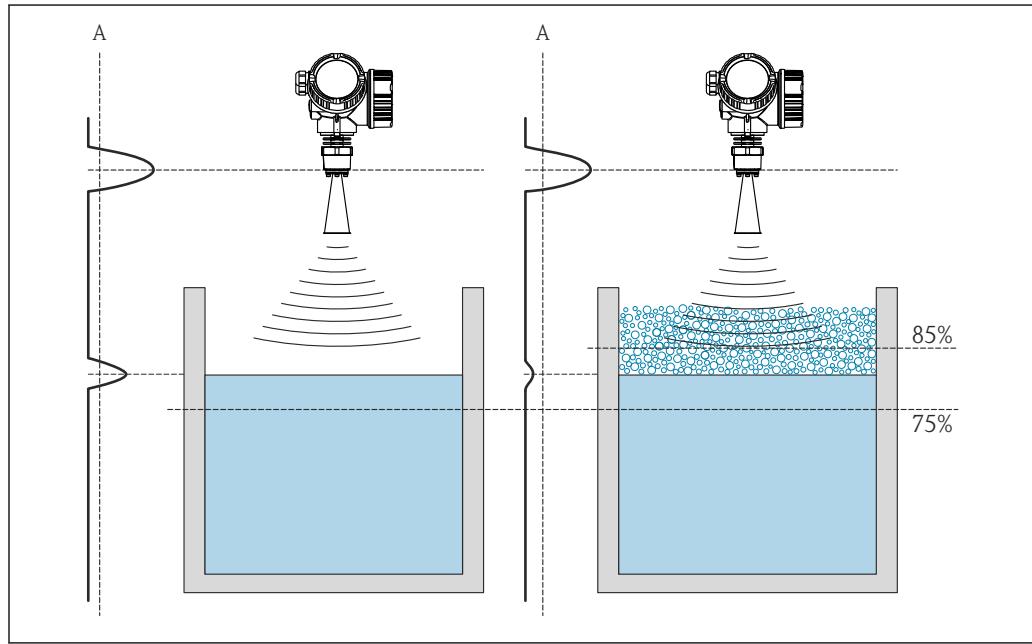

i In this example, both Advance Diagnostic Blocks are used.

Preconditions

- The process runs at a fixed level (in the example: 80 %)
- If foam occurs during the operation, the vessel should automatically be sprinkled with water from the top or an antifoam agent should be added to dissolve the foam.

Basic idea

The echo amplitude decreases in the case of foam formation. This can be used by the Advanced Diagnostics to detect the foam. The foam detection, however, should only be active as long as the level is between 75 % and 85 %.

49 Decrease of the amplitude in case of foam formation

A Amplitude threshold for foam detection

Configuration of the level monitoring

In order to ensure that the level is within the correct range, configure the **Advanced diagnostics 1** submenu (→ **247**) submenu as follows:

1. Navigate to the **Advanced diagnostics 1** submenu (→ **247**)
2. Select **Assign diagnostic signal 1 = Level linearized**.
3. Select **Check mode 1 = Out of range**
4. Set **Upper limit 1 = 85 %**.
5. Set **Lower limit 1 = 75 %**.

i **Check mode 1 = Out of range** checks whether the level is outside a defined range. As long as this is the case, the block outputs "0" (INACTIVE). If the level gets into the defined range, the block outputs "1" (ACTIVE).

Configuration of the foam detection

For the foam detection, configure the **Advanced diagnostics 2** submenu (→ **247**) as follows:

1. Select **Assign diagnostic signal 2 = Relative echo amplitude**.
2. Use the **Minimum value 2** parameter to observe the echo amplitude for the specified level (80 % in the example) for a while and determine a suitable lower limit for the amplitude (10 dB in the example).
3. Select **Calculation type 2 = Mean**.
4. Enter **Sample time 2 = "60 s"**.
5. Select **Check mode 2 = Lower limit**.
6. Enter the amplitude limit determined in step 2 into the **Lower limit 2** parameter (10 dB in the example).

With these settings, the Advanced Diagnostic Block behaves as follows:

- If the amplitude is above 10 dB (i.e.: no foam), the block assumes the digital value "0" (INACTIVE).
- If the amplitude is below 10 dB (i.e.: foam present), the block assumes the digital value "1" (ACTIVE).

Configuration of the block linking

The linking logic is configured in the **Advanced diagnostics 2** submenu (→ 247):

1. Select **Link AD 2 to = Digital output AD 1**.
2. Select **Linking logic AD 2 = AND**.

With this configuration the output of **Advanced Diagnostics 2** assumes the following value:

- 0 (INACTIVE) - if at least one of the two blocks is in the "0" (INACTIVE) status.
- 1 (ACTIVE) - if both blocks are in the "1" (ACTIVE) status.

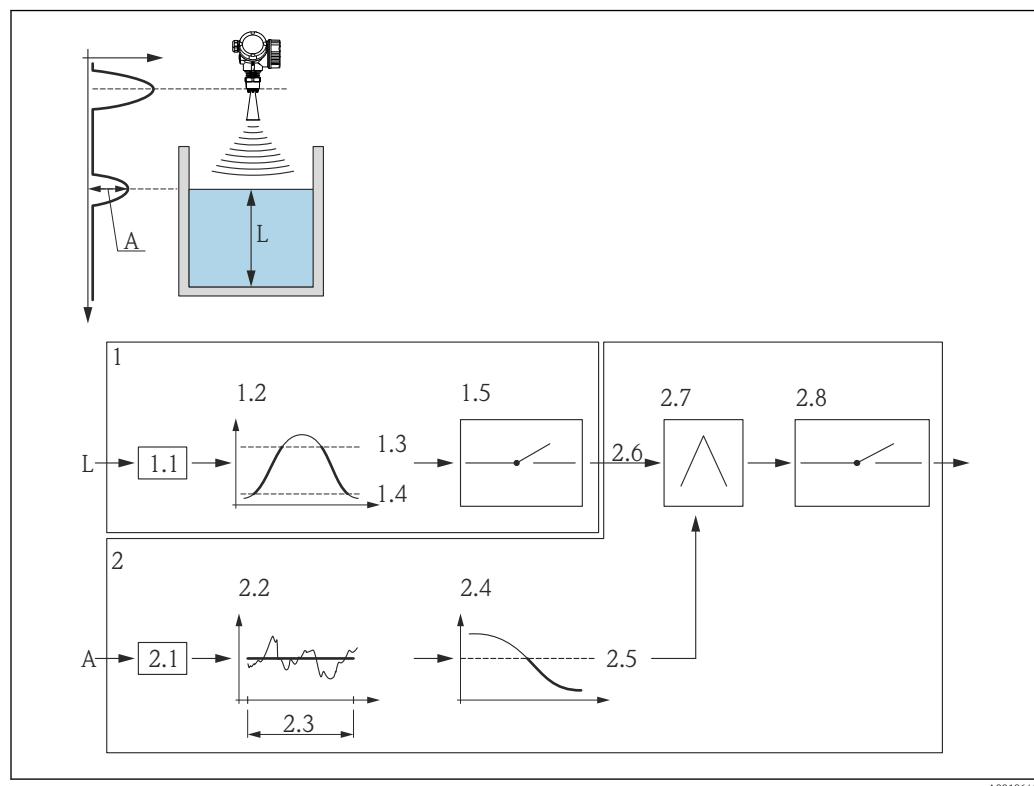

For the example this means:

- A diagnostic signal is output, if the level is within the defined range and the signal amplitude is below the threshold (i.e. foam is present).
- If, on the other hand, the level is out of the defined range or if the signal amplitude exceeds the threshold (i.e. no foam), **no** diagnostic signal is transmitted via the switch output.

The digital output signal of **Advanced diagnostics 2** can be linked to the switch output of the device:

Expert → Output → Switch output → Assign status (0485) = Digital output AD 2

Factory setting

Dependent on the following parameters:

- Assign diagnostic signal (→ 248)
- Calculation type (→ 249)

Lower limit 1 to 2**Navigation**

④ ⑤ Expert → Diagnostics → Adv.diagn. 1 to 2 → Lower limit 1 to 2 (11184-1 to 2)

Prerequisite

Check mode parameter (→ 250) has one of the following values:

- Lower limit
- In range
- Out of range

Description

Define lower limit for the limit monitoring.

User entry

Dependent on the following parameters:

- Assign diagnostic signal (→ 248)
- Calculation type (→ 249)

Factory setting

Dependent on the following parameters:

- Assign diagnostic signal (→ 248)
- Calculation type (→ 249)

Hysteresis 1 to 2

Navigation	Expert → Diagnostics → Adv.diagn. 1 to 2 → Hysteresis 1 to 2 (11178–1 to 2)
Prerequisite	Check mode parameter (→ 250) has one of the following values: ■ Upper limit ■ Lower limit ■ In range ■ Out of range
Description	Select hysteresis for the limit monitoring.
User entry	Dependent on the following parameters: ■ Assign diagnostic signal (→ 248) ■ Calculation type (→ 249)
Factory setting	Dependent on the following parameters: ■ Assign diagnostic signal (→ 248) ■ Calculation type (→ 249)

Value

Navigation	Expert → Diagnostics → Adv.diagn. 1 to 2 → Value (11172–1 to 2)
Description	Displays the current value of the calculated process variable.

Maximum value 1 to 2

Navigation	Expert → Diagnostics → Adv.diagn. 1 to 2 → Maximum value 1 to 2 (11183–1 to 2)
Prerequisite	Assign diagnostic signal (→ 248) ≠ None
Description	Indicates the maximum value the assigned measuring variable has obtained in the past (drag indicator).

Minimum value 1 to 2

Navigation	Expert → Diagnostics → Adv.diagn. 1 to 2 → Minimum value 1 to 2 (11185–1 to 2)
Prerequisite	Assign diagnostic signal (→ 248) ≠ None
Description	Indicates minimum value the assigned measuring variable has obtained in the past (drag indicator).

Reset min./max. 1 to 2

Navigation	Expert → Diagnostics → Adv.diagn. 1 to 2 → Reset min/max 1 to 2 (11186–1 to 2)
Prerequisite	Assign diagnostic signal (→ 248) ≠ None
Description	Reset drag indicators (Maximum value (→ 253) and/or Minimum value (→ 253)).

Assign status signal to AD event 1 to 2

Navigation	Expert → Diagnostics → Adv.diagn. 1 to 2 → Stat. AD event 1 to 2 (11176–1 to 2)
Prerequisite	Assign diagnostic signal (→ 248) ≠ None
Description	Assign a category according to NAMUR NE107 to the event of the Advanced Diagnostic Block.
Selection	<ul style="list-style-type: none">■ Failure (F)■ Maintenance required (M)■ Function check (C)■ Out of specification (S)
Factory setting	Maintenance required (M)

Assign event behaviour 1 to 2

Navigation	Expert → Diagnostics → Adv.diagn. 1 to 2 → Evt behaviour 1 to 2 (11177–1 to 2)
Prerequisite	Assign diagnostic signal (→ 248) ≠ None
Description	Assign an event behavior to the event of the Advanced Diagnostic Block.
Selection	<ul style="list-style-type: none">■ Off■ Alarm■ Warning■ Logbook entry only
Factory setting	Warning

Alarm delay 1 to 2

Navigation	Expert → Diagnostics → Adv.diagn. 1 to 2 → Alarm delay 1 to 2 (11171–1 to 2)
Prerequisite	Assign diagnostic signal (→ 248) ≠ None
Description	Define alarm delay for the Advanced Diagnostic Block.
User entry	0.0 to 3 600.0 s
Factory setting	10.0 s

3.11.12 "Envelope diagnostics" submenu

i In devices which have been delivered with software version 01.00.zz, this submenu is only visible for the "Service" user role.

After the configuration of the measurement it is recommended to record the current envelope curve as a reference curve. The reference curve can be used later for diagnostic purposes. To record the reference curve use the **Save reference curve** parameter (→ [257](#)).

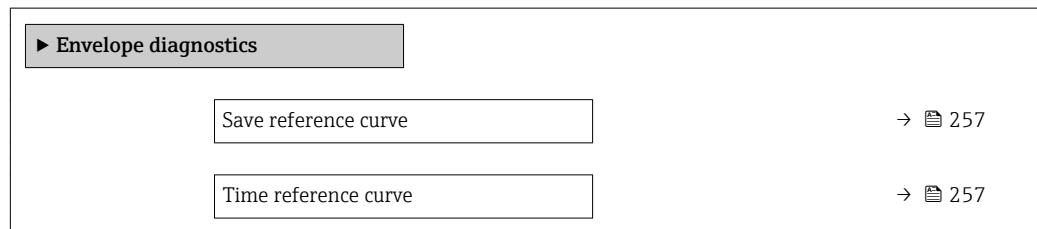

The reference curve can only be displayed in the envelope curve diagram of FieldCare after it has been loaded from the device into FieldCare. This is performed by the "Load Reference Curve" function in FieldCare:

Structure of the submenu

Navigation

Expert → Diagnostics → Envelope diag.

Description of parameters

Navigation

  Expert → Diagnostics → Envelope diag.

Save reference curve

Navigation

  Expert → Diagnostics → Envelope diag. → Save ref. curve (1218)

Description

Save current envelope curve as reference curve.

Selection

- No
- Yes

Factory setting

No

Additional information

Meaning of the options

- No
- No action

- Yes

The current envelope curve is saved as reference curve.

Time reference curve

Navigation

  Expert → Diagnostics → Envelope diag. → Time ref. curve (1232)

Description

Indicates at which time the existing reference curve has been recorded.

---	---

I

- Ident number selector (Parameter) 145, 155
 In safety distance (Parameter) 107
 Increase close (Parameter) 198
 Information (Submenu) 75, 76
 Input channel (Parameter) 194, 209
 Integration time (Parameter) 87
 Intermediate height (Parameter) 71
 Invert (Parameter) 182, 209
 Invert output signal (Parameter) 140

L

- Language (Parameter) 28
 Last backup (Parameter) 37
 Last check time (Parameter) 238
 Level (Parameter) 62, 73, 74
 Level (Submenu) 55, 56
 Level correction (Parameter) 61
 Level limit mode (Parameter) 60
 Level linearized (Parameter) 63, 70
 Level signal (Parameter) 239
 Level unit (Parameter) 59
 Lin type (Parameter) 166
 Linearization (Submenu) 66, 67, 68
 Linearization type (Parameter) 68
 Link AD 1 to 2 to (Parameter) 248
 Linking logic AD 1 to 2 (Parameter) 248
 Lo alarm state (Parameter) 172
 Lo alarm value (Parameter) 172
 Lo Lim (Parameter) 170
 Lo Lo alarm state (Parameter) 172
 Lo Lo alarm value (Parameter) 172
 Lo Lo Lim (Parameter) 170
 Locking status (Parameter) 23
 Logging interval (Parameter) 226
 Low limit (Parameter) 61
 Lower limit 1 to 2 (Parameter) 252

M

- Manufacturer ID (Parameter) 152
 Mapping (Submenu) 117, 118, 119
 Mapping end point (Parameter) 121
 Max. draining speed (Parameter) 230
 Max. draining speed liquid (Parameter) 48
 Max. draining speed solid (Parameter) 49
 Max. electronics temperature (Parameter) 231
 Max. filling speed (Parameter) 231
 Max. filling speed liquid (Parameter) 47
 Max. filling speed solid (Parameter) 48
 Max. level value (Parameter) 230
 Maximum value (Parameter) 71
 Maximum value 1 to 2 (Parameter) 253
 Measurement frequency (Parameter) 79
 Medium (Submenu) 51, 52
 Medium group (Parameter) 52
 Medium property (Parameter) 53
 Medium type (Parameter) 52
 Menu
 Expert 5, 22, 23

- Min. electronics temperature (Parameter) 231
 Min. level value (Parameter) 230
 Min/max values (Submenu) 229, 230
 Minimum value 1 to 2 (Parameter) 253
 Mode block actual (Parameter) 151, 162, 179, 190, 204
 Mode block normal (Parameter) 152, 162, 179, 190, 204
 Mode block permitted (Parameter) 151, 162, 179, 190, 204

N

- Near distance (Parameter) 239
 Number format (Parameter) 32
 Number of good between bad telegrams (Parameter) 148

O

- Operating time (Parameter) 37, 216
 Operating time from restart (Parameter) 216
 Order code (Parameter) 224
 Out decimal point (Parameter) 167
 Out scale lower range (Parameter) 166, 199
 Out scale upper range (Parameter) 166, 199
 Out status (Parameter) 164, 181, 198, 207
 Out status HEX (Parameter) 165, 182, 199, 207
 Out unit (Parameter) 167
 Out unit text (Parameter) 167
 Out value (Parameter) 164, 181, 198, 207
 Output (Submenu) 134
 Output channel (Parameter) 194, 209
 Output echo lost (Parameter) 104
 Output mode (Parameter) 61

P

- Physical block (Submenu) 149, 150
 Position status (Parameter) 196
 Position value (Parameter) 196
 Present mapping (Parameter) 121
 Present reference distance (Parameter) 95
 Previous diagnostics (Parameter) 215
 PROFIBUS ident number (Parameter) 147
 PROFIBUS PA configuration (Submenu) 143, 144
 PROFIBUS PA info (Submenu) 146, 147
 Profile version (Parameter) 147
 PV filter time (Parameter) 168
 PV scale lower range (Parameter) 165, 193
 PV scale upper range (Parameter) 165, 193

R

- Ramp at echo lost (Parameter) 106
 RCAS in status (Parameter) 194, 208
 RCAS in value (Parameter) 194, 208
 RCAS out status (Parameter) 196, 211
 RCAS out value (Parameter) 196, 211
 Readback status (Parameter) 193, 208
 Readback value (Parameter) 193, 208
 Record map (Parameter) 122
 Reference distance (Parameter) 96
 Reference echo threshold (Parameter) 96
 Relative echo amplitude (Parameter) 77

Reset min./max. (Parameter)	231
Reset min./max. 1 to 2 (Parameter)	254
Reset min./max. temp. (Parameter)	232
Result device check (Parameter)	238
Result self check (Parameter)	98
S	
Safety distance (Parameter)	107
Safety settings (Submenu)	103, 104
Sample time 1 to 2 (Parameter)	249
Save reference curve (Parameter)	257
Sensor (Submenu)	44, 46
Sensor diagnostics (Submenu)	97, 98
Sensor module (Parameter)	82
Sensor properties (Submenu)	81, 82
Separator (Parameter)	32
Serial number (Parameter)	153, 223
Set point status (Parameter)	192, 206
Set point value (Parameter)	192, 206
Setpoint deviation (Parameter)	197
Signal quality (Parameter)	76
Simulate enabled (Parameter)	173, 183, 197, 211
Simulate status (Parameter)	173, 184, 197, 212
Simulate value (Parameter)	173, 184, 197, 211
Simulation (Submenu)	234, 235
Simulation device alarm (Parameter)	236
Software revision (Parameter)	152
Start device check (Parameter)	238
Start self check (Parameter)	98
Static revision (Parameter)	150, 161, 178, 189, 203
Status echo lost (Parameter)	105
Status in safety distance (Parameter)	108
Status PROFIBUS Master Config (Parameter)	147
Strategy (Parameter)	150, 161, 178, 189, 203
Submenu	
Administration	40, 41
Advanced diagnostics 1 to 2	247, 248
Analog input 1 to 6	159, 161
Analog output 1 to 4	187, 189
Communication	142
Configuration backup display	36, 37
Data logging	225, 226
Device check	237, 238
Device information	222, 223
Diagnostic list	217, 218
Diagnostics	213, 214, 215
Discrete input 1 to 4	176, 178
Discrete output 1 to 4	201, 203
Display	27, 28
Distance	84, 85
Echo tracking	128, 129
Envelope curve	111
Envelope diagnostics	256, 257
Event logbook	219, 220
Gas phase compensation	93, 94
Information	75, 76
Level	55, 56
Linearization	66, 67, 68
Mapping	117, 118, 119

Medium	51, 52
Min/max values	229, 230
Output	134
Physical block	149, 150
PROFIBUS PA configuration	143, 144
PROFIBUS PA info	146, 147
Safety settings	103, 104
Sensor	44, 46
Sensor diagnostics	97, 98
Sensor properties	81, 82
Simulation	234, 235
Switch output	135, 136
System	26
Tank bottom evaluation	132, 133
Switch output (Submenu)	135, 136
Switch output function (Parameter)	136
Switch output simulation (Parameter)	235
Switch status (Parameter)	140, 236
Switch-off delay (Parameter)	140
Switch-off value (Parameter)	138
Switch-on delay (Parameter)	139
Switch-on value (Parameter)	137
System (Submenu)	26

T

Table mode (Parameter)	72
Table number (Parameter)	73
Tag description (Parameter)	161, 178, 189, 203
Tank bottom echo amplitude (Parameter)	78
Tank bottom evaluation (Submenu)	132, 133
Tank bottom range (Parameter)	133
Tank trace state (Parameter)	79
Tank type (Parameter)	46
Tank/silo height (Parameter)	63
Target mode (Parameter)	151, 162, 179, 190, 204
Temperature unit (Parameter)	46
Terminal voltage 1 (Parameter)	148
Time max. electronics temperature (Parameter)	231
Time max. level (Parameter)	230
Time min. electronics temperature (Parameter)	232
Time min. level (Parameter)	230
Time reference curve (Parameter)	257
Timestamp (Parameter)	215, 216, 218
Tube diameter (Parameter)	47

U

Unit after linearization (Parameter)	69
Upper limit 1 to 2 (Parameter)	252
Used calculation (Parameter)	78

V

Value (Parameter)	253
Value 1 display (Parameter)	30
Value echo lost (Parameter)	104
Value process variable (Parameter)	235

W

Wizard	
Define access code	43
