

No switch or socket goes on thinner

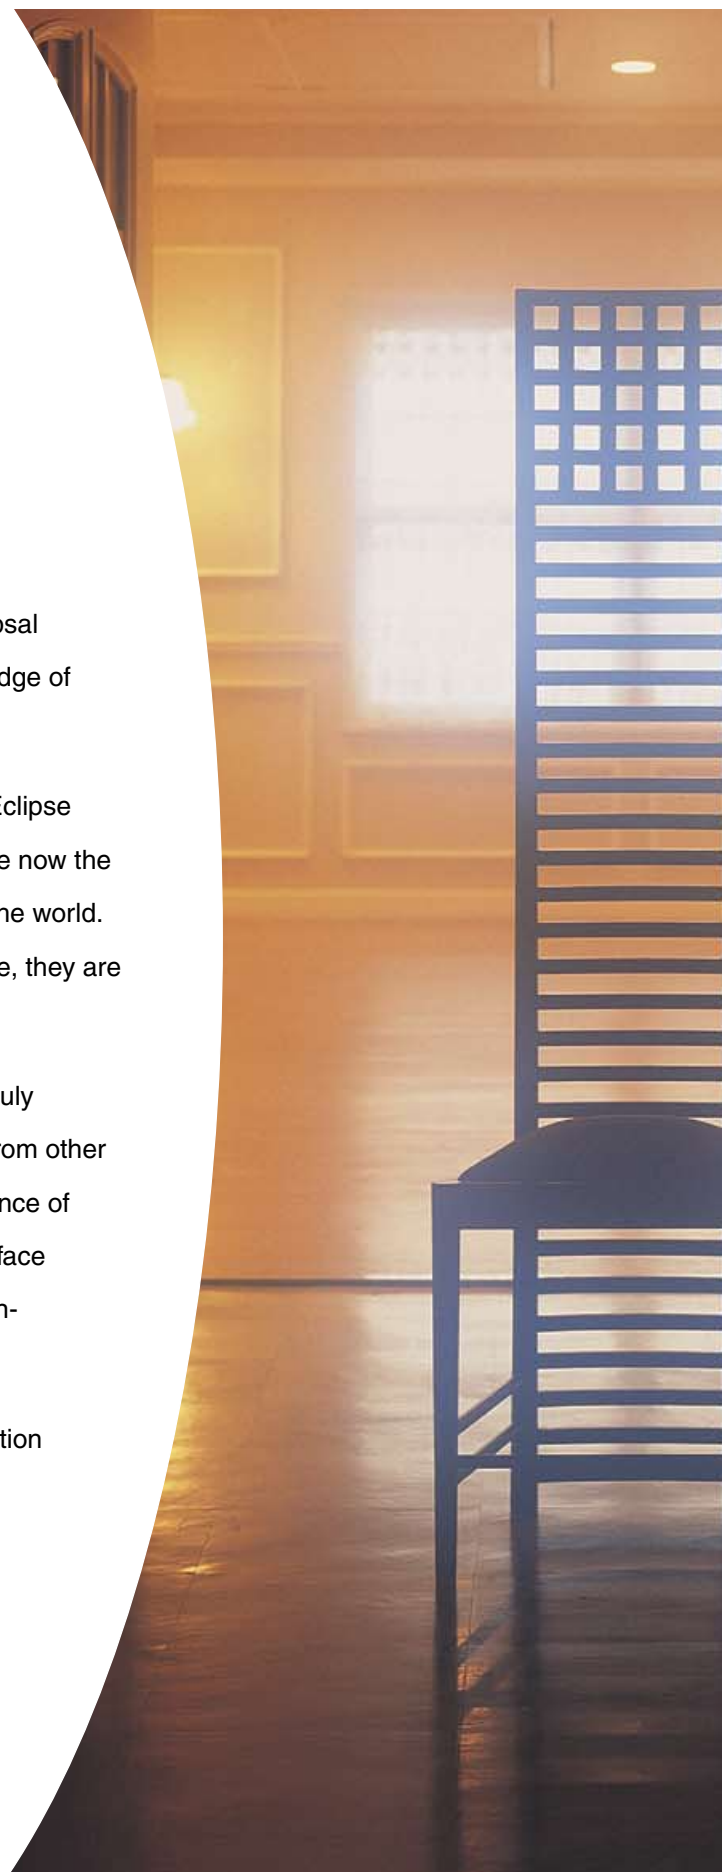

A work of art.

80 years of evolution has kept Clipsal electrical products at the cutting edge of technology.

Little surprise then, that the new Eclipse Range of switches and sockets are now the thinnest single fix accessories in the world. With a remarkably thin 4mm profile, they are up to 60% thinner than others.

It is this understated design that truly distinguishes the Eclipse Range from other products on offer. The sleek elegance of Eclipse rests smoothly on any surface to ensure a slim and highly fashionable finish.

All in all, switch and socket innovation has never looked this good.

Slim switches. Wide range.

From single switches up to six gang, plus 1 and 2 gang architrave switches - the Eclipse Range is as practical as it is stylish.

And because the switch cover simply clicks onto the grid assembly, you can mix and match them as often as you like. It's a decorator's dream come true.

None of the slender styling is lost to the demands of function in a product range that will surpass your expectations.

The range includes low voltage dimmers, standard dimmers and fan controllers too.

New look switched sockets for total control.

We've redesigned our switched sockets as well.

The new central control switches for twin switched sockets not only looks superb it also gives you easier access. Highly fashionable and combined with European influences, this latest trend in switch technology will further enhance any home.

It is this kind of innovative design that ensures Eclipse will be coveted for many years to come. Blending superbly with the current curved rocker switch design, Eclipse is ideal for any room.

Colours to suit any decor.

Fashionably slick switches and sockets need a stylish range of colours to match their smooth surroundings.

The Eclipse Range lets you choose from moulded designs in white, cream, soft grey, desert sand, black and brown. Metal finish covers are available in gold, brushed brass, chrome and brushed aluminium.

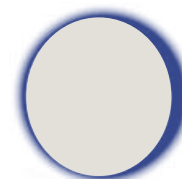

Best of all, the easily interchangeable faces allow switches to always suit the surrounding décor. No matter how often it changes.

New Grid Flex design

*Clipsal's Grid
Flex design makes
installation super
smooth.*

for a perfect finish.

Most Eclipse grid assemblies now incorporate Clipsal's unique Grid Flex design. This patented system allows the flush plate to adjust to unevenness in the mounting surface, ensuring a perfectly flat finish.

The secret is in the specially designed grid flex slots.

They allow the grid assembly to distort slightly while keeping the cover plate neat and flat against the wall.

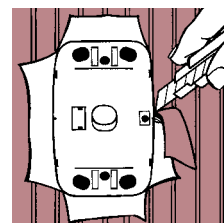

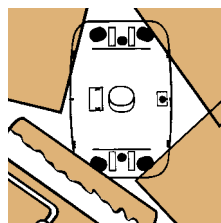

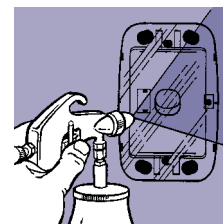

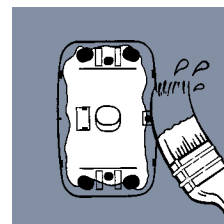

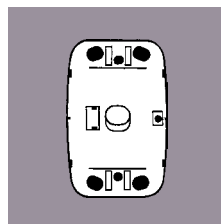

SL2000ID, TR

Paint up, not over.

The unique Clipsal switch cover design means you will always have the perfect finish. Simply paint or wall-paper to the edge of the grid assembly then attach the cover for seamless

decorating. Snap-on paint protection shields are also available, (SL2000PP,TR).

Eclipse is fully compatible with other Clipsal interchangeable components too.

Reliable, light speed labelling

The unique labelling system introduced in the C2000 Classic Series has been enhanced for the Eclipse Range. Simply clip in the window over sticky labels for a tidy labelling and easy identification system.

A small sheet of sticky labels is included with each cover kit.

SL2000ID, TR can be purchased separately if extra labels & protective windows (10) are required.

The clip-in-window has been modified for easier use and the A4 software has been adjusted to allow vertical text.

Adhesive labels on A4 sheets are also available in 10 packs, (SC2000A4L). The revised software to suit these labels is available free on the Alfred CD-ROM.

1. Apply label

2. Insert window

3. Fit cover

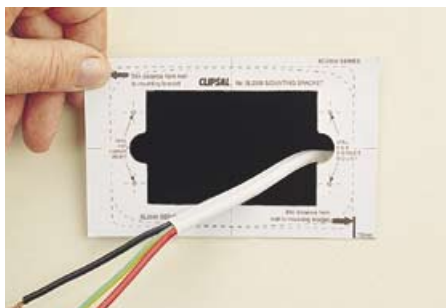

4. Finished product

Installation made easier.

They don't just go on thin, they go on fast too! To help with installation, every Eclipse switch and socket comes with an easy to use template to make sure you get a perfect fit every time. Remember: the thin design means a more careful cut-out is needed to accommodate the mounting bosses.

Clipsal also offers the option of installing the Eclipse/Slimline ranges to plaster brackets or wall clips. The release of the new recessed plaster bracket (155PRM) and recessed wall clip (154RM) allows Eclipse/Slimline to be installed onto popular plaster walls. These wall brackets and/or clips automatically calculate the depth needed when installing Eclipse/Slimline to plaster by recessing the mounting screw fixing points by 10mm (standard plaster depth). The 154RM can also adopt to 5mm walls, eg:fibro.

Clipsal also offers a low cost spacer (SL2000WBS) to take the guesswork out of masonry wall installations. The spacer measures an exact recess of 10mm to ensure the required depth of plaster for the Eclipse accessory.

155PRM

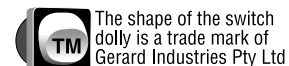

154RM

New inline terminal driver guide.

Eclipse switches and sockets come with the generous terminal dimensions you've come to expect. And the SL2025 twin switched socket - with the new inline terminal design - incorporates a driver guide for even easier use.

Mounting options include the standard 84mm centres as well as four screw fixing positions.

Be sure to ask about the new Slimline Range of switches and sockets too. Slimline is the next super slim generation of the C2000 Classic Series. Just like Eclipse, Slimline combines a smooth blend of style and function.
