step 4: attach back panel

****FAILURE TO FOLLOW ALL DIRECTIONS ON THIS PAGE MAY RESULT IN UNEVEN DOOR ALIGNMENT****

Begin by installing all of the screws along one edge of the back panel. Next, using a square or tape measure, make sure that the cabinet is square. (If using a tape measure, the distance from one corner, diagonally to the other corner should be the same in both directions.) If not, apply gentle pressure to the diagonally opposite corners to shift case into alignment. Re-measure to ensure equal distances. Install the remaining screws, starting with the corners.

how to adjust door alignment

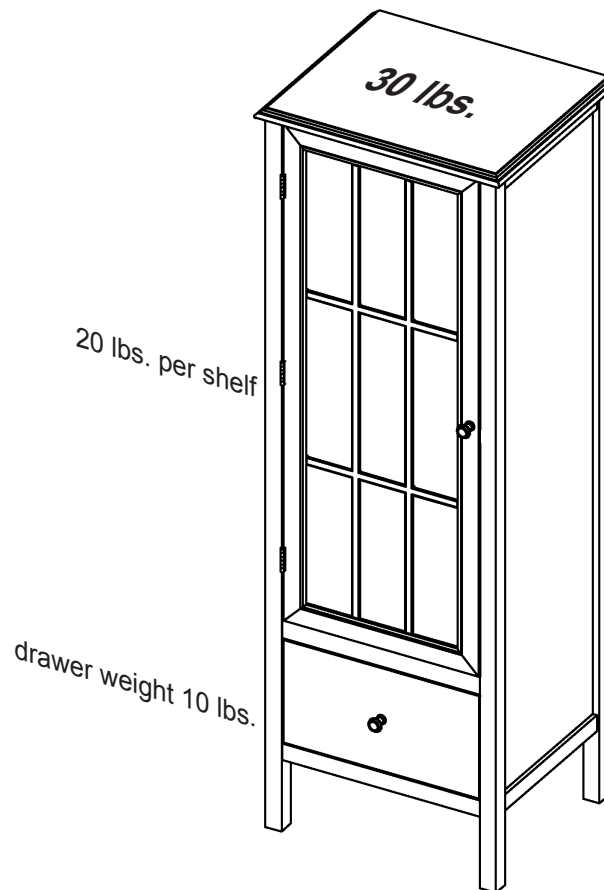

Tips for proper door alignment:

- Adjustable levelers will reduce minor door mis-alignments caused by an uneven floor.
- Use a level to determine if the cabinet top is level. If not, start with the levelers retracted and adjust them as needed. To retract the levelers turn them counterclockwise. To extend the levelers turn them clockwise.
- If door mis-alignment persists, refer back to page 10 for additional information. If the cabinet is not square you will need to repeat this step.
