LIFT TRUCK PARTS

REDUCE DAMAGE AND INCREASE PRODUCTIVITY

A line laser, shown, is best for low-light areas such as warehouses while dot lasers are best for cold storage and outdoor usage.

A forklift laser guidance system provides operators a continuous visual reference of fork position which aids in increasing safety, accuracy, and productivity while reducing product damage. The laser projects a line or dot onto the pallet or product indicating the level of the forks which allows operator heightened visibility and more accurate fork placement. Single laser, dual laser, and hard-wired series units mount directly to the forklift carriage in less than five minutes.

Notes:
Seat belts meet requirements of SAE J386 and FMVSS 302.

An open circuit, when wired, does not require the latch (male side) be inserted into the buckle in order to start the forklift. If wired to a buzzer or to an alarm, they will sound until the latch (male side) is inserted into the buckle or if wired to a dash lamp, the lamp will stay illuminated until the latch (male side) is inserted into the buckle. A closed circuit, when wired, requires that the latch (male side) be inserted into the buckle to complete the circuit in order to be able to start the forklift.

Overhead Guard Mount

The Overhead Guard Mount is the ideal way to get a ball attached to most any lift cage or overhead guard. Utilizing two identical plates of stamped steel with numerous common hole patterns and slots makes attachment a breeze. Two popular ball sizes: 1.5" & 2.25" diameter may be attached to the same plate for multiple applications. Installation is as easy as attaching the base with ball to one of the plates and then sandwiching the guard or cage between the two mounting plates using the hardware provided.

Requires a square base:
1.5" ball (P.N. 351095-012) or 2.25" ball (P.N. 351095-013 or P.N. 351095-014).

Fork extensions are lift truck attachments that increase the fork's effective length for handling oversized uniformly distributed loads.

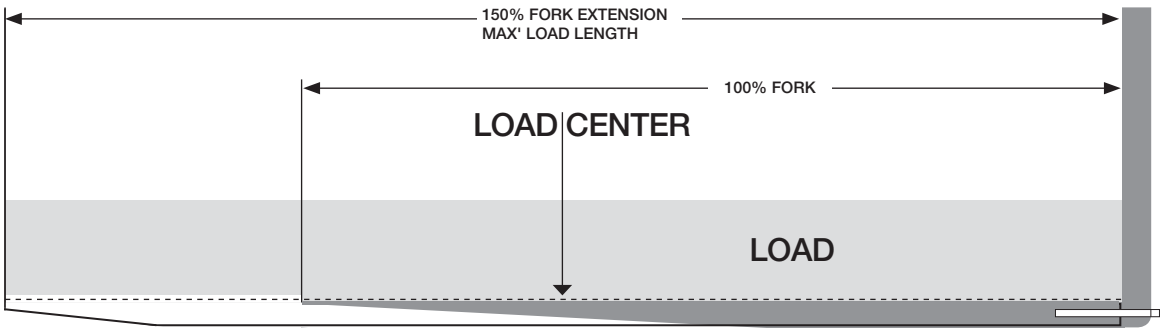

When installed, fork extensions influence the truck's capacity and therefore in accordance with the law – OSHA 1910.178, the User is to request an authorization from their local dealer for a new capacity plate for their specific truck equipped with fork extensions.

Maximum uniform capacity is 4,000 lbs. evenly distributed per pair.

1910.178(a)(4)
Modifications and additions which affect capacity and safe operation shall not be performed by the customer or user without manufacturers prior written approval. Capacity, operation, and maintenance instruction plates, tags, or decals shall be changed accordingly.

1910.178(a)(5)
If the truck is equipped with front-end attachments other than factory installed attachments, the user shall request that the truck be marked to identify the attachments and show the approximate weight of the truck and attachment combination at maximum elevation with load laterally centered.

Fork extension length should not be more than 150% of supporting fork length.

Steps to determine correct cable and connector housing: 1. Reference the Cable Size Matrix Chart to identify your charger model and the corresponding cable size. **2.** Reference the Chart to make the connector housing selection (typically customer/application specific). **3.** All cable assemblies will require the 078723-001 gray 350SB connector housing. (If dual cables are ordered for fast charging, then 2 of the gray SB connectors will be required.) **4.** Selection of the other connector housing(s) is based on the cable specified per the customer's location. *Example: FS9-MP330-8 with 350SBX (Yellow) 15 ft. cable — Cable Assembly Part Number: 39653X-350-15 – qty 2; Connector Housing Part Number: 078723-001 – qty 2; 340055-008 – qty 2.*

Float System - Kits

Is it time to order a new system or replace an existing system? The ordering process is simple. The first step is to identify the battery manufacturer. Is it a Douglas battery? All other battery manufacturer's use a standard size valve. The next step is to determine the voltage of the battery. The final step is to select the proper watering system kit from the table below to match your current watering supply system.

Injector System - Kits

Injector Kits

Part Number	Vendor Number	Description
300301-012	INJ-S12	24V Injector Kit Standard
300301-018	INJ-S18	36V Injector Kit Standard
300301-024	INJ-S24	48V Injector Kit Standard

Note: Prestrung options available upon request.

ATTENTION: Water Injectors require a minimum of 25 psi of flowing water at a rate of 8 gallons per minute. If the flow is inadequate, the Injectors will not shut off. If a factory authorized water supply is not being used water pressure from the wall must be confirmed with a 300310-027 Water Flow Pressure Measurement Tool.

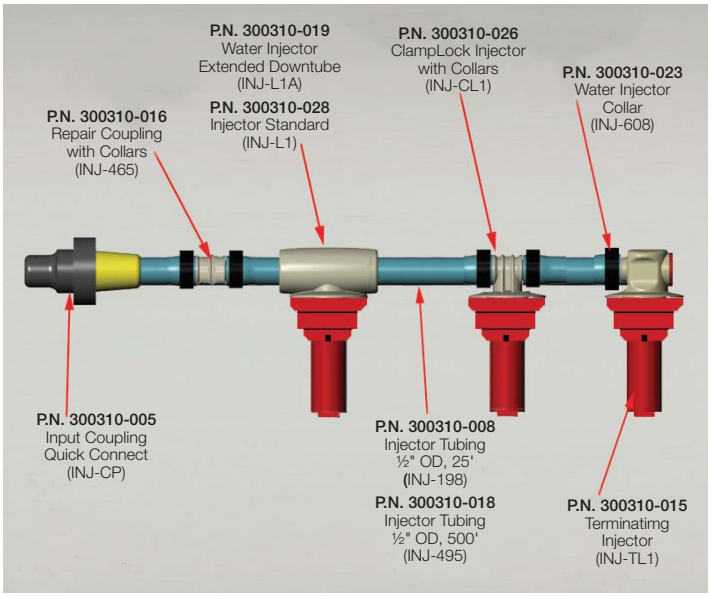

Features

- **Very Fast Operation:** An average industrial truck battery can be filled, with precise level control, in less than 15 seconds. The savings in labor costs alone often pays for the system within its first year of operation.
- **Quality of Watering:** It extends the life of each expensive battery it is installed on due to improved quality of watering. The battery is properly watered every time.
- **Safety and Environmental Cleanliness:** There is no need to peer into cells to inspect levels as with manual filling, and Water Injectors™ automatically fill each cell to the correct level, so no over filling and no electrolyte overflow during charge.
- **Compact:** A very low profile allows them to fit on almost any battery. Injectors can snap in and out to allow inspection of electrolyte levels and specific gravities.
- **Rugged:** Tough enough to survive impacts, abuse and extremes of battery temperatures. There are no exposed parts to break off even when an Injector is removed from a cell. True level sensing mechanism. Needs no submergence to sense level as a float does. Can work right down to the top of the separators. Will not fail if it touches cell components.
- **No-Freeze Tubing**: The surplus water drains from the tubing into cells after filling is complete. This allows the system to be used in cold stores and other freezing environments.
- **2-Stage Filtration:** In addition to the filter screen in the water tubing, each Injector has its own individual filter.
- **5-Year Warranty:** Warrantable against defects in materials and workmanship.

Wheel Application Guide

3-Step Evaluation Process

Usage Analysis
What is the right amount of wheel and tire usage for your application as it relates to your industry?

Failure Analysis
What is the cause of your wheel and tire failures (e.g., overloading, heat failure, bond failure, floor debris damage)?

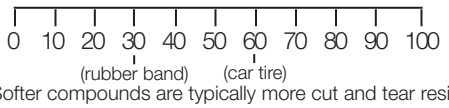

Best Value Benchmarking
Have you established a best value solution for your application through benchmarking and tracking?

Shore A Hardness

Softer compounds are typically more cut and tear resistant and provide a smoother ride. Harder compounds typically provide improved travel speeds, due to less rolling resistance, and generate less heat.

Operator Training Workshops

DP MoveSafe® - Train-the-Operator

Crown's nationwide network of factory-trained instructors offer full-service training programs. Conducted at your site, these highly trained instructor led sessions present the full gamut of powered industrial truck safety information with clear, understandable and highly visual video and animated presentations. Hands-on time is maximized and structured to assure your operators are trained not only in truck operation and task performance, but in safe operating habits and practices as well. These are crucial in the effective training of your operators.

Contact your local Crown lift truck dealer for available dates and pricing.

DP LeadSafe® - Train-the-Supervisor

Supervisors of lift truck operators play a critical role in reinforcing the safe operating skills and habits taught during operator training sessions. To help them do this, Crown offers the award winning* LeadSafe Program in a Demonstrated Performance format to help them learn and demonstrate how to effectively supervise lift truck operators and reinforce safe operating habits.

The workshop covers topics such as: Identifying Proper and Improper Operation, Recognizing Potential Hazards, Giving Feedback to Operators, Pedestrian Supervision, OSHA 29CFR 1910.178 Requirements, and Safety Metrics.

Contact your local Crown lift truck dealer for available dates and pricing.

DP TrainSafe® - Train-the-Trainer

DP TrainSafe uses Crown's award winning, hands-on, Demonstrated Performance approach to deliver the best and most comprehensive operator train-the-trainer program in the industry. Participants in the two day TrainSafe program will learn and practice implementing Crown's MoveSafe operator training programs, 11 step hands-on training and safe skill and habit development process. Trainers will leave with the skills needed to conduct these workshops, as well as three year re-evaluations, safety refreshers (workshops), warehouse inspections, and much more.

In addition, participants in the 3-day TrainSafe class or the 1-day LeadSafe train-the-trainer class will learn to train supervisors utilizing Crown's DPLeadSafe supervisor training program.

DP TrainSafe is offered at most Crown dealers and the following Crown regional training centers:

Service Training Workshops

DP Service Training - For your Lift Truck Technicians

Our award winning* Demonstrated Performance service training workshops give your technicians the Crown-specific skills and knowledge they need to keep your Crown fleet up and running. Since many technicians are hands-on learners, they're more likely to retain information learned through first-hand experience than material presented in a lecture. Crown's Demonstrated Performance Service Technician Training goes above and beyond traditional classroom training, allowing participants to work on trucks with instructor supervision. Technicians can move at their own pace and focus on the particular tasks and skill groups that best serve their organization's needs.

Learn It.
Do It.
Use It.®

This defines the philosophy behind Crown DP training. Participants "Learn it" by reading the module, reviewing any reference material, and practicing the required skills. Then they "Do it" by performing what we call a "skill check" for the instructor to demonstrate their ability to perform the skill. This prepares them to bring their newly acquired skills back to their job and "Use it" to improve the uptime and reliability of Crown lift trucks.

Demonstrated Performance workshops are completely customizable to the needs of your technician. They'll only spend time on what they need to learn, and only work on the trucks that apply to them. For example, they won't spend two hours learning about basic electricity if they already know it. Before the DP training course spend some time talking to your technician about what you want them to cover during the session. Do you want them to focus on mechanical topics, such as repairing or replacing components? Or do you want them to learn how to troubleshoot the electrical system? Contact one of the following Regional Training Centers and the Regional Service Trainer to have a customized training course map developed to match your need.

DP Service Training is offered at the following Regional Training Centers:

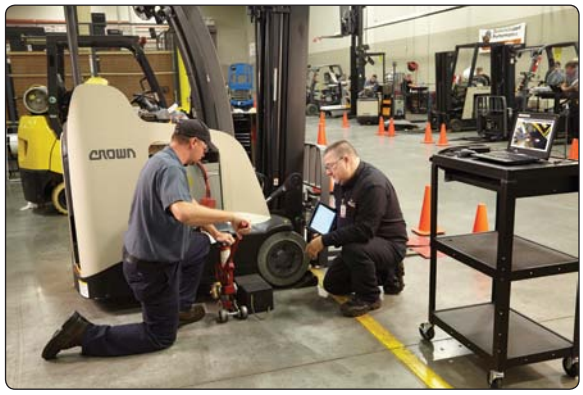

Atlanta, Ga. (phone 770-381-4999; fax 770-381-0576)
