

SNAP™

THERAPY SYSTEM

Attention users of Negative Pressure Wound Therapy (NPWT)

In an overwhelmed healthcare system, what can you do to help relieve hospital staff and free up capacity?

Transition appropriate* wound patients to SNAP™ Therapy System - It may help facilitate an easier and earlier² discharge to a home setting!

vac therapy

SNAP™
THERAPY SYSTEM

SNAP™ Therapy System's **off-the-shelf** availability, **simple application** process and **ultra-portability** are advantages in an outpatient care setting as compared to electrically powered negative pressure wound therapy.²

* The SNAP™ Therapy System is indicated for patients who would benefit from wound management via the application of negative pressure, particularly as the device may promote wound healing through the removal of excess exudate, infectious material and tissue debris. For a detailed list of indications, please see Instructions for Use.

- SNAP™ Therapy System combines the **simplicity** of advanced wound dressings with the **proven benefits of negative pressure** wound therapy in a **discreet design**.³
- It is **small, silent** and **lightweight** to preserve **patient quality of life**.³
- The **SNAP™ Therapy System** employs a familiar NPWT mechanism of action with reticulated open cell foam and -125mmHg pressure.⁴
- Designed for chronic wounds with exudate less than 180cc/week and less than 18cm x 18cm in size.

Considerations for transitioning from V.A.C. VERAFLOR™ Therapy in acute setting to NPWT in the community.
