ZTMN-0995A

50Ω 500-6000 MHz

Product Overview

Mini-Circuits' ZTMN series mesh networks are multiport test systems with independently variable attenuation on every internal path. This concept allows simulation of a "real-world" mesh communication network within the confined space of a production environment. Path loss can be varied independently between any pair of devices on the network without affecting any other combination of devices, allowing simulation of a complex range of test cases.

ZTMN-0995A is a 9-port mesh covering the 500-6000 MHz bands, with 0 to 95 dB attenuation range on each of the 36 internal paths. The model is housed in a compact 3U height, 19-inch rack chassis with all SMA RF connectors on the front panel. The ZTMN series also supports larger mesh network combinations, with custom attenuation and frequency ranges available on request.

The system can be controlled via USB or Ethernet (supporting SSH, HTTP & Telnet protocols). Full software support is provided, including our user-friendly GUI application for Windows and a full API with programming instructions for Windows and Linux environments (both 32-bit and 64-bit systems).

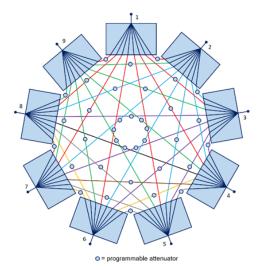

| Feature | Advantages |
|-------------------------------------|--|
| Wide attenuation range | Independently controllable 0-95 dB attenuators on each path allow simulation of a wide range of test scenarios including receiver sensitivity, device / base-station hand-overs, device failures, interference effects. |
| Ethernet / LAN control | Remote control from any computer or device with a network connection (SSH, HTTP or Telnet protocols). |
| USB HID (Human Interface Device) | Local control via USB connection. Plug-and-Play, no driver required. Compatible with Windows [®] or Linux [®] operating systems using 32 and 64 bit architectures. |
| Full software support | The user friendly Windows GUI (graphical user interface automation) allows manual control straight out of the box. A full API (application programming interface), programming examples and manuals are provided to allow automation in most programming environments. |

Software Specifications

Software & Documentation Download:

- Mini-Circuits' full software and support package including user guide, Windows GUI, DLL files, programming manual and examples are available for download from: <u>https://www.minicircuits.com/softwaredownload/multiatt.html</u>
- Please contact <u>testsolutions@minicircuits.com</u> for support

Minimum System Requirements:

| Parameter | Requirements | | | | |
|--|-------------------------------------|--|--|--|--|
| Interface | USB HID & Ethernet (HTTP & Telnet) | | | | |
| | GUI | Windows 98 or later | | | |
| | USB API DLL | Windows 98 or later and programming environment with ActiveX or .NET support | | | |
| System Requirements Programming Linux; Wi | | Linux; Windows 98 or later | | | |
| | Ethernet | Windows, Linux or Mac computer with a network port and Ethernet TCP / IP support | | | |
| Hardware | Pentium II or later with 256 MB RAM | | | | |

Application Programming Interface (API)

Ethernet Support:

- Simple ASCII / SCPI command set for attenuator control
- Communication via HTTP or Telnet
- · Supported by most common programming environments

USB Support (Windows):

- ActiveX COM DLL file for creation of 32-bit programs
- .NET library DLL file for creation of 32 / 64-bit programs
- Supported by most common programming environments (refer to application note <u>AN-49-001</u> for summary of supported environments)

USB Support (Linux):

• Direct USB programming using a series of USB interrupt codes

Full programming instructions and examples available for a wide range of programming environments / languages.

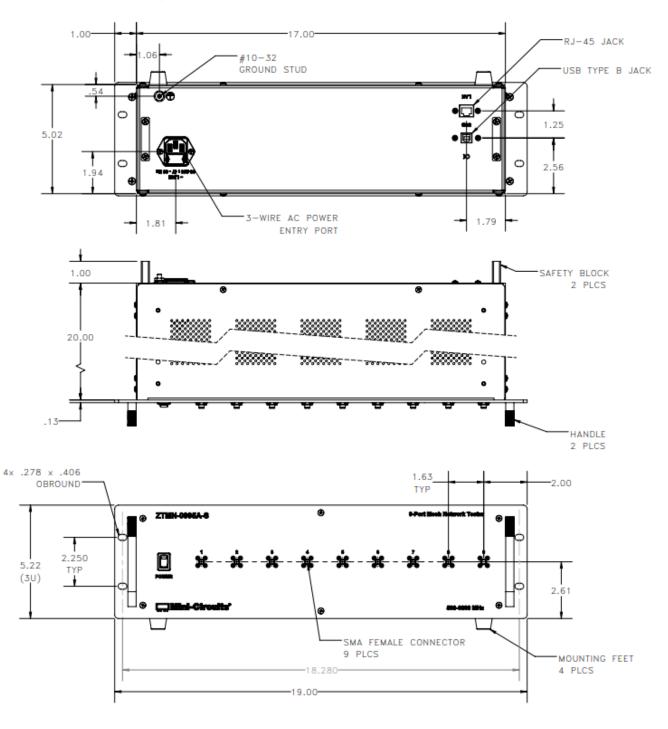

Graphical User Interface (GUI) for Windows - Key Features

- Connect via USB or Ethernet
- Run GUI in "demo mode" to evaluate software without a hardware connection
- View and set all attenuation channels independently or in groups
- · Configure automated attenuation sweep or hop sequences for groups of channels
- Configure Ethernet settings
- Upgrade firmware
