

Fisher™ HP Series Control Valves

HP (Globe Valve) HPA (Angle Valve)

- Balanced High-Temperature Trim
- Balanced Tight Shutoff Trim
- Unbalanced Trim

Fisher HP Series control valves are single-port, high-pressure, globe- or angle-style valves with metal seats, cage guides, and push-down-to-close valve plug action.

These valves are designed for high-pressure applications in process control industries such as power generation, hydrocarbon production, chemical processing, and refining.

HP Series valves have NACE compliant materials available. In certain sizes extra valve body wall thickness provides a safety margin of protection against erosion, as well as extra protection against corrosion due to chemical attack. Because these valves feature a thicker valve body wall, they are available in higher intermediate ratings with weld-end fittings.

Unless otherwise noted, all NACE references are to NACE MR0175-2002 and MR0103.

Balanced High-Temperature Trim

HPD and HPAD

These valves use a balanced valve plug with graphite piston rings and are well suited for general applications with process temperatures in excess of 232°C (450°F), where extremely tight shutoff is not required.

X0183-2

FISHER HP VALVE WITH 667 ACTUATOR AND FIELDVUE™ DVC6200 DIGITAL VALVE CONTROLLER

Balanced Tight Shutoff Trim

HPT and HPAT

These valves use a balanced valve plug and offer excellent shutoff with process temperatures below 232°C (450°F). The temperature limits of HPT can be extended above 232°C (450°F) to 316°C (600°F) by using PEEK (PolyEtherEtherKetone) anti-extrusion rings in combination with a spring-loaded PTFE seal. The PEEK anti-extrusion rings expand to help close off the clearance gaps on the plug outside diameter and the cage inside diameter where the PTFE seal may extrude at high temperatures and pressures.

Expanded Ends

Expanded ends are available on the NPS 4 and 6 CL900 and 1500 HP (ISA 75.08.05 (long) or ISA 75.08.06 (long)) valves. The NPS 4 HP valve body is offered with NPS 6 ends. The NPS 6 valve body is offered with NPS 8 ends. Both flanged and butt-weld end valve bodies are offered with expanded ends.

Cavitrol III, Whisper Trim III, and WhisperFlo Cages

To eliminate cavitation damage in a properly-sized valve, a Cavitrol III cage is available with HPS, HPAS, HPT, HPAT, and HPD control valves.

To help attenuate aerodynamic noise in gaseous service, Whisper Trim III and WhisperFlo (figure 3) cages are available with HPS, HPAS, HPT, HPAT, along with NPS 8 through 14 HPD and HPT control valves. Contact your [Emerson sales office](#) for more information.

Features

- **Valve Plug Stability**—Rugged cage guiding provides increased valve plug stability, which reduces vibration and mechanical noise.
- **Full Pressure Drop Capability**—Rugged construction allows full pressure drop capability in HP series valves.
- **Spiral-Wound Gaskets for Excellent Sealing Under All Service Conditions**—Premium materials are used in the construction of spiral-wound gaskets for HP Series valves. These premium materials, which make up the standard spiral-wound gaskets, are N06600 (alloy 600)/graphite or N07750 (alloy X750)/graphite.

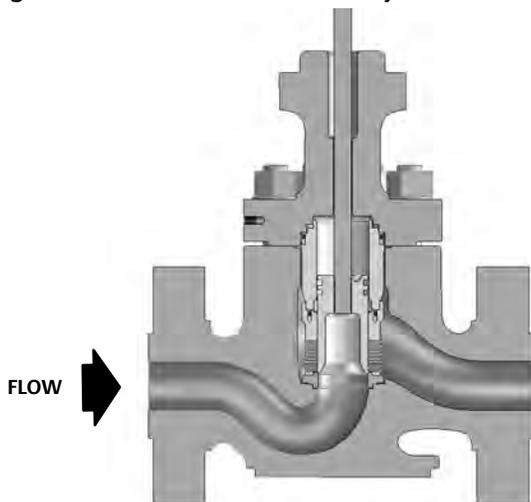

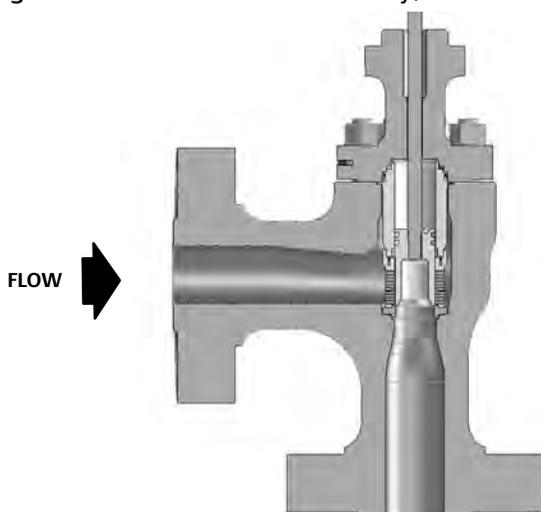

Figure 5. Fisher HPAT Valve Assembly, NPS 6 to 12

Features (cont.)

- **Compliance with the Clean Air Act**—Optional ENVIRO-SEAL packing systems (figure 7) provide an improved stem seal to help prevent the loss of valuable process fluid or emission of hazardous process fluid. The ENVIRO-SEAL packing systems feature PTFE or graphite ULF.
- **Piping Economy**—The availability of expanded end connections on NPS 4 and 6 HP (ISA 75.08.05 (long) or ISA 75.08.06 (long)) valves may eliminate the need for line swages while accommodating oversized piping arrangements.
- **Quick Change Trim**—Maintenance is simple and can easily be performed using common tools. Trim components can be quickly removed and changed with no need for special tools.
- **Integrated Cage-Seat Ring Design**—Find this option on globe NPS 8, 10, 12, 14 and angle NPS 12 valves offering easier maintenance and better shutoff.
- **Standard Hard Trim Materials**—The cage, valve plug, and other trim parts are manufactured from hardened materials. This standard feature provides excellent wear resistance.
- **Increased Pressure/Temperature Ratings**—HP Series valves with weld-end fittings have increased pressure/temperature ratings, called intermediate ratings, as defined in ASME B16.34. The extra strength of these valves allows ratings higher than the standard CL900 or 1500 ratings specified in B16.34. The globe NPS 8 to 12 HP is available as a standard Intermediate ANSI Class 3200 to achieve higher pressure/temperature ratings. Not available on angle NPS 8. Contact your [Emerson sales office](#) for further information on intermediate ratings.
- **Trim Interchangeability**—Cavitrol III, Whisper Trim III, and WhisperFlo trims (figures 12, 13, and 15) are interchangeable with standard trims.
- **Control of Low Flow Rates/Tight Shutoff**—Micro-Flute and Micro-Form valve plugs (figures 10 and 11, respectively) provide superb rangeability in high-pressure, low-flow applications, while maintaining tight shutoff (table 4). A choice of several restricted port diameters helps to match valve body capacity to required flow, to provide necessary control with full travel, and to prevent throttling near the seat.

In low-flow applications where cavitation damage may occur, the Micro-Flat valve plug can be used with a special Cavitrol III cage. Contact your Emerson sales office for more information.
- **Smooth Control at High Pressure Drops**—Available on NPS 2 through 14 valves, balanced trim provides smooth control at high pressure drops.

Features (cont.)

- **High-Temperature Capability with Class V Shutoff**—Use of C-seal trim (see figure 8) permits Class V shutoff up to 593°C (1100°F) for NPS 2 through 6 HPD (ISA 75.08.05 (long) or ISA 75.08.06 (long)) valves. Use of Bore-seal trim (see figure 6) permits Class V shutoff up to 593°C (1100°F) for

NPS 8 through 12 HPD valves.

- **Sour Service Trims Available**—Long-lasting, erosion- and corrosion-resistant trims are available for control of sour service. These trims are offered with either a standard cage, a Cavitrol III cage, a Whisper Trim III cage, or WhisperFlo trim. Spiral-wound gasket construction is standard.

Material Selection Guidelines

Use the following steps as a guideline for the selection of materials:

1. Determine the pressure/temperature rating of the valve body size and material required. Inlet pressure and temperature must always be limited by the applicable ASME pressure/temperature rating.
2. Select the desired trim style from the Available Configurations specification and from table 4, Shutoff Classifications.
3. Select desired materials from tables 7, 9, 12, and 13 and figure 17. The temperature capabilities determined from figure 17 may be further limited by the temperature capabilities of materials selected from tables 7 and 13. Refer to figure 17 to determine

pressure drop limits of the valve body-trim combinations selected.

Installation

The valve must be installed so flow through the valve is as indicated by the flow direction arrow on the valve body. Consideration should be given to installing an upstream strainer, especially if the valve uses a Cavitrol III cage, Whisper Trim III, or WhisperFlo trim.

Overall dimensions are shown in figures 21, 22, and 23. Face-to-face dimensions are in compliance with ANSI/ISA-75.08.05 (long or short), ANSI/ISA-75.08.06 (long or short), or ASME B16.10. Actual end connection dimensions conform to ASME B16.25 for butt-weld ends, to B16.11 for socket welding, and to ASME B16.5 for flanged ends.

Trim Selection Guidelines

NPS 1 through 6 HP Globe Valve, NPS 8 Angle Body Valve

Refer to the following descriptions as a guideline for the selection of appropriate trims.

- **Trim 201A**— Trim 201A is the standard trim for carbon steel and alloy steel valve body materials. This trim is recommended for general or severe service applications up to 343°C (650°F) or 427°C (800°F) depending on valve construction. Typical applications for this trim include services in boiler feedwater, water, non-sour hydrocarbons, and steam.
- **Trims 202 and 202H**— Trims 202 and 202H are designed for use in high temperature applications up to 566°C (1050°F). Trim 202H includes special tolerances required for larger sized HPD and HPAD constructions, as indicated in table 13, at operating temperatures above 343°C (650°F).
- **Trim 203**— Trim 203 is the standard trim for stainless steel valve body materials and should only be used with stainless steel valve body materials. This trim meets the metallurgical requirements of NACE MR0175-2002 and can be used in applications up to 593°C (1100°F)
- **Trim 204**— Trim 204 is used in sour or moderately corrosive services. This trim meets the metallurgical requirements of NACE MR0175-2002 and can be used with carbon steel and alloy steel valve body materials.
- **Trim 210**— Provides a S31600 CoCr-A hardfaced valve plug, which can be easily weld repaired. The S17400 H1075 cage in this trim also allows it to be used in an HPT or HPAT construction.
- **Trim 211**— Trim 211 is the standard trim for C12A valve body materials and should only be used with C12A valve body materials. C12A should only be used when the pressure and temperature capabilities for WC9 valve body materials are not acceptable.

C-seal Trim Description

C-seal trim is available for HPD and HPAD valves with port diameters from 2.875 inches through 5.375 inches.

With C-seal trim, a balanced valve can achieve high-temperature, Class V shutoff. Because the C-seal plug seal is formed from metal (N07718 nickel alloy) rather than an elastomer, a valve equipped with the C-seal trim can be applied in processes with a fluid temperature of up to 593°C (1100°F).

Bore-seal Trim Description

Bore-seal trim is available for HPD valves with port diameters from 5.5 inches through 8.5 inches.

With Bore-seal trim, a balanced valve can achieve high-temperature, Class V shutoff. Because the

Bore-seal plug seal is formed from metal (N07718 nickel alloy) rather than an elastomer, a valve equipped with the Bore-seal trim can be applied in processes with a fluid temperature of up to 593°C (1100°F).

Fisher TSO (Tight Shutoff) Trim Capabilities

TSO trim is available for HPS and HPT valves with port diameters as defined in table 5. Also see figure 6 and table 4.

TSO trim consists of a protected soft seat plus PEEK anti-extrusion rings with a spring-loaded PTFE plug seal. Used only in flow down applications, TSO trim offers unparalleled shutoff integrity, resulting in longer plug and seat life. For additional information contact your [Emerson sales office](#).

1. If using valve body/trim combinations other than those listed, consult your [Emerson sales office](#).
2. Temperatures above 538°C (1000°F) require a non-standard CF8M body material (CF8M to FMS 20B16).
3. For HPA valves.
4. Trims 202H and 208H have valve plug tolerances for high temperature service and are used in place of trims 202 and 208 for the constructions listed when operating temperatures exceed 343°C (650°F).
5. NACE MRO175-2002.
6. Trim 215B has a S31600 valve stem instead of the standard S20910 material.
7. NPS 1 2 stage and NPS 2 3 stage HPS can be used at temperatures up to 343°C (650°F).
8. NPS 1 and 2 can be used at temperatures up to 427°C (800°F).
9. Trims 211 and 212 use S41000 stem instead of the standard S20910 material. S41000 is limited to 538°C (1000°F). For temperatures greater than 538°C (1000°F), S42200 stem is used.
10. Use with Micro-Form trim in HPS, Micro-Form and Micro-Flat in HPAS valves.
11. Not available with bore seal.
12. NACE MRO175-2002, 2003, and NACE MRO103.
13. Separate seat and cage design trim.
14. NPS 12 angle limited to -198 to 510°C (-325 to 950°F).
15. NPS 12 angle limited to -29 to 371°C (-20 to 700°F).

SOUR SERVICE APPLICATIONS (NACE) 2

Notes:

- 1 Use trim 207B in NPS 3, 4, 6 HP and NPS 4, 6, 8 HPA above 343°C (650°F).
- 2 NACE MR0175-2002.
- 3 Be especially careful to specify service temperature if trim 202 or 208 is selected, as different thermal expansion rates require special plug clearances.
- 4 The limit for 2-stage NPS 1 and 2 valves is 2160 psig. For NPS 3 to 6 valves the limit is 1800 psig.
- 5 Use trim 215 up to 427°C (800° F) for NPS 1 and 2.
