Revision A

April 2020

No part of this publication may be reproduced or used in any form, or by any electrical or mechanical means, without permission in writing from Zebra. This includes electronic or mechanical means, such as photocopying, recording, or information storage and retrieval systems. The material in this manual is subject to change without notice.

The software is provided strictly on an “as is” basis. All software, including firmware, furnished to the user is on a licensed basis. Zebra grants to the user a non-transferable and non-exclusive license to use each software or firmware program delivered hereunder (licensed program). Except as noted below, such license may not be assigned, sub-licensed, or otherwise transferred by the user without prior written consent of Zebra. No right to copy a licensed program in whole or in part is granted, except as permitted under copyright law. The user shall not modify, merge, or incorporate any form or portion of a licensed program with other program material, create a derivative work from a licensed program, or use a licensed program in a network without written permission from Zebra. The user agrees to maintain Zebra’s copyright notice on the licensed programs delivered hereunder, and to include the same on any authorized copies it makes, in whole or in part. The user agrees not to decompile, disassemble, decode, or reverse engineer any licensed program delivered to the user or any portion thereof.

Zebra reserves the right to make changes to any software or product to improve reliability, function, or design. Zebra does not assume any product liability arising out of, or in connection with, the application or use of any product, circuit, or application described herein.

No license is granted, either expressly or by implication, estoppel, or otherwise under any Zebra Technologies Corporation, intellectual property rights. An implied license only exists for equipment, circuits, and subsystems contained in Zebra products.

Warranty

For the complete Zebra hardware product warranty statement, go to:

zebra.com/warranty.

Revision History

Changes to the original guide are listed below:

Change	Date	Description
-01 Rev A	3/2015	Initial Release
-02 Rev A	4/2015	Updated note on page 11-2 regarding Using a Zebra Scanner as an Auxiliary Scanner.
-03 Rev A	7/2015	Updated PIN #2 usage.
-04 Rev A	12/2015	Updated: <ul style="list-style-type: none"> - Beeper Tone default from Medium to High. - Table 13-2 on page 13-42 to reflect the correct behavior in the new image kit.
-05 Rev A	7/2018	<ul style="list-style-type: none"> - Added Note to PDF Prioritization parameter to update length ranges - Added Product ID (PID) Type parameter - Renamed USB Device Type OPOS, and added Note - Added Direct I/O Beep parameter - Updated Beep Directive and Bar Code Configuration Directive for the IBM host - Added IBM-485 Specification Version parameter - Updated SSI Baud Rate option values - Added Codabar Security Level parameter - Added MSI Reduced Quiet Zone parameter - Added Note for Inverse 1D parameter - Added Mailmark parameter - Added GS1 Databar Security Level parameter - Renamed GS1 DataBar Limited Security Level parameter to GS1 DataBar Limited Margin Check and updated description - Added Composite Inverse parameter - Added Grid Matrix, Grid Matrix Inverse, and Grid Matrix Mirrored parameters - Removed QR Inverse parameter - Removed OCR statements regarding slow decoding - Added OCR-B Passport option - Added OCR Redundancy parameter - Changed OCR Template default - Updated 123Scan chapter - Updated Code Identifiers and Modifier Characters tables
-06 Rev	06/2019	<ul style="list-style-type: none"> - Code 39 as a section heading in Chapter 12. - Updated copyright statement.
-07EN Rev	02/2020	<ul style="list-style-type: none"> - Added Weblink QR code - Updated default of Parameter #144 Timeout Between Decodes, Different Symbols to 1 second.
-08EN Rev	08/2020	<ul style="list-style-type: none"> - Updated Electronic Article Surveillance (EAS) - Updated Mobile Phone parameter - Updated Scanner SDK, Other Software Tools, and Videos - Added DotCode, DotCode Inverse, DotCode Mirrored, and DotCode Prioritize parameters.
-09EN Rev	04/2021	Updated Mobile Phone parameter.

About This Guide

Introduction	v
Scanner Configurations	v
Accessories	vi
Chapter Descriptions	viii
Notational Conventions	ix
Related Publications	x
Service Information	x

Chapter 1: GETTING STARTED

Introduction	1-1
Unpacking the Scanner	1-1
Protective Cover	1-1
Features	1-2
Setting Up the Scanner	1-4
Power Options	1-4
Ports	1-4
Connecting the Host and/or Auxiliary Scanner Cable	1-4
Removing and Replacing the Back Cover	1-5
Removing the Back Cover	1-5
Installing the Cable(s)	1-5
Removing the Back Cover with Cables Installed	1-6
Replacing the Back Cover	1-6
Configuring the Scanner	1-6
Synchronization of Settings	1-7
Host Requested Setting Changes	1-7
Bar Code Menu Symbols Scanned on the DS7708	1-7
Bar Code Menu Symbols Scanned on the Hand-held Scanner	1-7
Mounting the Scanner (Optional Hardware Required)	1-8

Mounting the Scanner to the Table Top	1-8
Mounting the Scanner to a Table Top with Double-sided Tape	1-8
Mounting the Scanner to a Table Top with Screws	1-8
Mounting the Scanner to a Wall	1-9
Removing the Scanner from the Mounting Bracket	1-10
Operating the Scanner	1-11
Indicator Lights	1-11
Adjusting Speaker Volume	1-11
Adjusting Speaker Tone	1-11
Wall Mount Template	1-12
Table Mount Template	1-13

Chapter 2: 123SCAN

Introduction	2-1
Communication with 123Scan	2-2
123Scan Requirements	2-2
123Scan Information	2-3
Scanner SDK, Other Software Tools, and Videos	2-3

Chapter 3: DATA CAPTURE

Overview	3-1
Scanning Bar Codes on Products	3-2
Active Scan Area	3-2
Decode Ranges	3-3
User Indicators	3-4
Beeper Volume/ Beeper Tone	3-4
LED and Beeper Indicators	3-4
Electronic Article Surveillance (EAS)	3-7
Installing	3-7
Checkpoint EAS Model Compatibility	3-7
Considerations	3-7
Checkpoint Contact Information	3-7

Chapter 4: MAINTENANCE, TECHNICAL SPECIFICATIONS, MOUNTING TEMPLATES

Introduction	4-1
Maintenance	4-1
Troubleshooting	4-2
Technical Specifications	4-4
Scanner Signal Descriptions	4-7

Chapter 5: USER PREFERENCES & MISCELLANEOUS OPTIONS

Introduction	5-1
Scanning Sequence Examples	5-2
Errors While Scanning	5-2
User Preferences/Miscellaneous Options Parameter Defaults	5-2
User Preferences	5-4
Set Default Parameter	5-4

Parameter Bar Code Scanning	5-6
Beep After Good Decode	5-7
Beeper Tone	5-8
Beeper Volume	5-11
Beeper Duration	5-13
Volume/Tone Button Control	5-15
Suppress Power-up Beeps	5-17
Timeout Between Decodes, Same Symbol	5-18
Timeout Between Decodes, Different Symbols	5-18
Fuzzy 1D Processing	5-19
Decode Mirror Images (Data Matrix Only)	5-20
PDF Prioritization	5-22
PDF Prioritization Timeout	5-23
Mobile Phone/Display Mode	5-24
Field of View	5-25
Product ID (PID) Type	5-27
Miscellaneous Scanner Parameters	5-29
Transmit Code ID Character	5-29
Prefix/Suffix Values	5-31
Scan Data Transmission Format	5-34
FN1 Substitution Values	5-38
Unsolicited Heartbeat Interval	5-39

Chapter 6: IMAGING PREFERENCES

Introduction	6-1
Scanning Sequence Examples	6-2
Errors While Scanning	6-2
Imaging Preferences Parameter Defaults	6-2
Imaging Preferences	6-4
Operational Modes	6-4
Decode Mode	6-4
Snapshot Mode	6-4
Snapshot Mode Timeout	6-5
Image Size (Number of Pixels)	6-6
Image Brightness (Target White)	6-8
JPEG Image Options	6-9
JPEG Target File Size	6-10
JPEG Quality and Size Value	6-11
Image Enhancement	6-12
Image File Format Selection	6-14
Image Rotation	6-16
Bits Per Pixel (BPP)	6-18
Bits Per Pixel (continued)	6-19
Signature Capture	6-20
Output File Format	6-20
Signature Capture File Format Selection	6-21
Signature Capture Bits Per Pixel	6-23
Signature Capture Width	6-25
Signature Capture Height	6-26
Signature Capture JPEG Quality	6-27

Video View Finder	6-28
Video View Finder Image Size	6-29

Chapter 7: USB INTERFACE

Introduction	7-1
Connecting a USB Interface	7-2
USB Default Parameters	7-4
USB Host Parameters	7-5
USB Device Type	7-5
Symbol Native API (SNAPI) Status Handshaking	7-9
USB Keystroke Delay	7-10
USB CAPS Lock Override	7-12
USB Ignore Unknown Characters	7-13
USB Convert Unknown to Code 39	7-14
Emulate Keypad	7-15
Keypad Emulation with Leading Zero	7-16
USB Keyboard FN1 Substitution	7-17
Function Key Mapping	7-18
Simulated Caps Lock	7-19
Convert Case	7-20
USB Static CDC	7-22
Direct I/O Beep	7-23
USB Transmission Speed Parameters	7-24
USB HID Polling Interval	7-24
Fast HID Keyboard	7-29
Quick Keypad Emulation	7-30
IBM Specification Version	7-31
Optional USB Parameters	7-32
Beep Directive	7-32
Bar Code Configuration Directive	7-33
ASCII Character Set for USB	7-34

Chapter 8: RS-232 INTERFACE

Introduction	8-1
RS-232 Host Parameters	8-5
RS-232 Host Types	8-7
Baud Rate	8-11
Parity	8-14
Check Receive Errors	8-16
Hardware Handshaking	8-17
None	8-18
Standard RTS/CTS	8-18
RTS/CTS Option 1	8-19
RTS/CTS Option 2	8-19
RTS/CTS Option 3	8-20
Software Handshaking	8-21
None	8-21
ACK/NAK	8-21
ENQ	8-22

ACK/NAK with ENQ	8-22
XON/XOFF	8-23
Host Serial Response Time-out	8-23
RTS Line State	8-27
Stop Bit Select	8-28
Data Bits	8-29
Beep on <BEL>	8-30
Intercharacter Delay	8-31
Nixdorf Beep/LED Options	8-34
Ignore Unknown Characters	8-36
ASCII Character Set for RS-232	8-37

Chapter 9: IBM 468X/469X INTERFACE

Introduction	9-1
Connecting to an IBM 468X/469X Host	9-2
IBM Default Parameters	9-4
IBM 468X/469X Host Parameters	9-5
Port Address	9-5
Convert Unknown to Code 39	9-7
RS-485 Beep Directive	9-8
RS-485 Bar Code Configuration Directive	9-9
IBM-485 Specification Version	9-10

Chapter 10: KEYBOARD WEDGE INTERFACE

Introduction	10-1
Connecting a Keyboard Wedge Interface	10-2
Keyboard Wedge Default Parameters	10-4
Keyboard Wedge Host Types	10-5
Ignore Unknown Characters	10-6
Keystroke Delay	10-7
Intra-Keystroke Delay	10-9
Alternate Numeric Keypad Emulation	10-10
Quick Keypad Emulation	10-11
Caps Lock On	10-12
Caps Lock Override	10-13
Convert Wedge Data	10-14
Function Key Mapping	10-16
FN1 Substitution	10-17
Send Make Break	10-18
ASCII Character Set for Keyboard Wedge	10-19

Chapter 11: SSI INTERFACE

Introduction	11-1
Communications	11-1
SSI Transactions	11-2
General Data Transactions	11-2
ACK/NAK Handshaking	11-2
Transfer of Decode Data	11-4

ACK/NAK Enabled and Packeted Data	11-4
ACK/NAK Enabled and Unpacketed ASCII Data	11-4
ACK/NAK Disabled and Packeted DECODE_DATA	11-4
ACK/NAK Disabled and Unpacketed ASCII Data	11-5
Communication Summary	11-5
RTS/CTS Lines	11-5
ACK/NAK Option	11-5
Number of Data Bits	11-5
Serial Response Time-out	11-5
Retries	11-5
Baud Rate, Stop Bits, Parity, Response Time-out, ACK/NAK Handshake	11-5
Errors	11-6
Things to Remember When Using SSI Communication	11-6
Encapsulation of RSM Commands/Responses Over SSI	11-7
Command Structure	11-7
Response Structure	11-7
Simple Serial Interface Default Parameters	11-8
SSI Parameters	11-10
Select SSI Host	11-10
Baud Rate	11-11
Parity	11-15
Check Parity	11-17
Stop Bits	11-18
Software Handshaking	11-19
Host RTS Line State	11-20
Decode Data Packet Format	11-21
Host Serial Response Timeout	11-22
Host Character Timeout	11-24
Multipacket Option	11-26
Interpacket Delay	11-28
Event Reporting	11-31
Decode Event	11-31
Boot Up Event	11-32
Parameter Event	11-33

Chapter 12: AUXILIARY SCANNER

Connecting an Auxiliary Scanner	12-1
Programming the Auxiliary Scanner	12-1
Downloading Firmware	12-1
12VDC Power Requirement	12-2
Using Auxiliary Scanners	12-2
Using a Zebra Scanner as an Auxiliary Scanner	12-2
Using a Zebra Scanner That Does Not Support RSM Commands as an Auxiliary Scanner	12-2
Using a Non-Zebra Scanner as an Auxiliary Scanner	12-2
Auxiliary RSM Communication Bar Codes	12-3

Chapter 13: SYMBOLOGIES

Introduction	13-1
Scanning Sequence Examples	13-1

Errors While Scanning	13-1
Symbology Parameter Defaults	13-2
Enable/Disable All Code Types	13-8
UPC/EAN	13-9
Enable/Disable UPC-A	13-9
Enable/Disable UPC-E	13-10
Enable/Disable UPC-E1	13-11
Enable/Disable EAN-8/JAN-8	13-12
Enable/Disable EAN-13/JAN-13	13-13
Enable/Disable Bookland EAN	13-14
Bookland ISBN Format	13-15
Decode UPC/EAN/JAN Supplementals	13-16
User-Programmable Supplementals	13-24
UPC/EAN/JAN Supplemental Redundancy	13-25
UPC/EAN/JAN Supplemental AIM ID Format	13-26
UPC Reduced Quiet Zone	13-28
Transmit UPC-A Check Digit	13-29
Transmit UPC-E Check Digit	13-30
Transmit UPC-E1 Check Digit	13-31
UPC-A Preamble	13-32
UPC-E Preamble	13-34
UPC-E1 Preamble	13-36
Convert UPC-E to UPC-A	13-38
Convert UPC-E1 to UPC-A	13-39
EAN-8/JAN-8 Extend	13-40
UCC Coupon Extended Code	13-41
Coupon Report	13-42
ISSN EAN	13-44
Code 128	13-45
Enable/Disable Code 128	13-45
Set Lengths for Code 128	13-46
Enable/Disable GS1-128 (formerly UCC/EAN-128)	13-49
Enable/Disable ISBT 128	13-50
ISBT Concatenation	13-51
Check ISBT Table	13-53
ISBT Concatenation Redundancy	13-54
Code 128 Reduced Quiet Zone	13-55
Code 128 Security Level	13-56
Ignore Code 128 <FNC4>	13-58
Code 39	13-59
Enable/Disable Code 39	13-59
Enable/Disable Trioptic Code 39	13-60
Convert Code 39 to Code 32	13-61
Code 32 Prefix	13-62
Set Lengths for Code 39	13-63
Code 39 Check Digit Verification	13-66
Transmit Code 39 Check Digit	13-67
Code 39 Full ASCII Conversion	13-68
Code 39 Security Level	13-69
Code 39 Reduced Quiet Zone	13-71
Code 93	13-72

Enable/Disable Code 93	13-72
Set Lengths for Code 93	13-73
Code 11	13-76
Set Lengths for Code 11	13-77
Code 11 Check Digit Verification	13-80
Transmit Code 11 Check Digits	13-82
Interleaved 2 of 5 (ITF)	13-83
Enable/Disable Interleaved 2 of 5	13-83
I 2 of 5 Check Digit Verification	13-87
Transmit I 2 of 5 Check Digit	13-89
Convert I 2 of 5 to EAN-13	13-90
I 2 of 5 Security Level	13-91
I 2 of 5 Reduced Quiet Zone	13-93
Discrete 2 of 5 (D 2 of F)	13-94
Set Lengths for Discrete 2 of 5	13-95
Codabar (NW - 7)	13-98
Enable/Disable Codabar	13-98
Set Lengths for Codabar	13-99
CLSI Editing	13-102
NOTIS Editing	13-103
Codabar Security Level	13-104
Codabar Upper or Lower Case Start/Stop Characters Detection	13-107
MSI	13-108
Enable/Disable MSI	13-108
Set Lengths for MSI	13-109
MSI Check Digits	13-112
Transmit MSI Check Digit(s)	13-113
MSI Check Digit Algorithm	13-114
MSI Reduced Quiet Zone	13-115
Chinese 2 of 5	13-116
Enable/Disable Chinese 2 of 5	13-116
Matrix 2 of 5	13-117
Enable/Disable Matrix 2 of 5	13-117
Set Lengths for Matrix 2 of 5	13-118
Matrix 2 of 5 Check Digit	13-120
Transmit Matrix 2 of 5 Check Digit	13-121
Korean 3 of 5	13-122
Enable/Disable Korean 3 of 5	13-122

Chapter 15: ADVANCED DATA FORMATTING

Introduction	15-1
--------------------	------

Appendix A: STANDARD DEFAULT PARAMETERS

Introduction	B-1
--------------------	-----

Appendix B: COUNTRY CODES

USB and Keyboard Wedge Country Keyboard Types (Country Codes)	B-2
---	-----

Appendix C: COUNTRY CODE PAGES

Introduction	C-1
Country Code Page Defaults	C-2
Country Code Page Bar Codes	C-6

Appendix D: CJK DECODE CONTROL

Introduction	D-1
CJK Control Parameters	D-2
Unicode Output Control	D-2
CJK Output Method to Windows Host	D-3
Non-CJK UTF Bar Code Output	D-8
Country Keyboard Type Missing Characters	D-9
Unicode/CJK Decode Setup with Windows Host	D-10
Setting Up the Windows Registry Table for Unicode Universal Output	D-10
Adding CJK IME on Windows	D-10
Selecting the Simplified Chinese Input Method on the Host	D-11
Selecting the Traditional Chinese Input Method on the Host	D-12

Appendix E: PROGRAMMING REFERENCE

Symbol Code Identifiers	E-1
AIM Code Identifiers	E-3

Appendix F: SAMPLE BAR CODES

Code 39	F-1
UPC/EAN	F-1
UPC-A, 100%	F-1
EAN-13, 100%	F-2
Code 128	F-2
Interleaved 2 of 5	F-2
GS1 DataBar Omnidirectional	F-3
PDF417	F-3
Data Matrix	F-3
Maxicode	F-3
QR Code	F-4
Han Xin	F-4
US Postnet	F-4
UK Postal	F-4

Appendix G: NUMERIC BAR CODES

Numeric Bar Codes	G-1
0	G-1
1	G-1
2	G-2
3	G-3
4	G-4
5	G-5
6	G-6
7	G-7
8	G-8
9	G-9
Cancel	G-10

Appendix H: SIGNATURE CAPTURE CODE

Introduction	H-1
Code Structure	H-1
Signature Capture Area	H-1
CapCode Pattern Structure	H-2
Start / Stop Patterns	H-2
Dimensions	H-3
Data Format	H-3
Additional Capabilities	H-4
Signature Boxes	H-4

Appendix I: NON-PARAMETER ATTRIBUTES

Introduction	I-1
Attributes	I-1
Model Number	I-1
Serial Number	I-1
Date of Manufacture	I-1
Date of First Programming	I-2
Configuration Filename	I-2
Beep/LED	I-3
Parameter Defaults	I-4
Beep on Next Bootup	I-4
Reboot	I-4
Host Trigger Session	I-4
Firmware Version	I-4
Imagekit Version	I-5

Index

ABOUT THIS GUIDE

Introduction

The *DS7708 2D Vertical Slot Scanner Product Reference Guide* provides general instructions for setting up, operating, maintaining, and troubleshooting the scanner.

Scanner Configurations

[Table a](#) lists the configurations of the DS7708 2D Vertical Slot Scanner.

Table a. *DS7708 2D Vertical Slot Scanner Configurations*

Part Number	Description
DS7708-SR00004ZCWW	Vertical Presentation Area Imager, Standard Range, Corded, Midnight Black, Checkpoint EAS

Accessories

Table b lists the accessories available for the DS7708 2D Vertical Slot Scanner.

Table b. *Mounting Accessories*

Part Number	Description
11-TM0077-04	Table Mount Bracket - DS7708 (Midnight Black). Allows the scanner to be fixed to the table top with a double sided tape or screws.
11-WM0077-04	Wall Mount Bracket Kit - DS7708 (Midnight Black). Allows the scanner to be fixed to the wall using screws.

Table c. *Power Supplies*

Part Number	Description
PWRS-14000-253R	Power Supply, 100 - 220VAC, Output 5V - US/CA/MX/JP/TW
PWRS-14000-255R	Power Supply, 100 - 220VAC, Output 5V - Brazil Korea
PWRS-14000-256R	Power Supply, 100 - 220VAC, Output 5V - EU/UK
PWRS-14000-257R	Power Supply, 100 - 220VAC, Output 5V - CH
PWRS-14000-258R	Power Supply, 100 - 220VAC, Output 5V - HK/AU
PWRS-14000-148R	Power Supply, 100 - 220VAC, Output 12V - Worldwide
PWRS-14000-148C	Power Supply, 100 - 240VAC, Output 12V - Worldwide Note: This power supply is required for Keyboard Wedge only.

Table d. *USB Cables*

Part Number	Description
CBA-U21-S07ZAR	USB Cable (Shielded Series A Connector, 7ft. Straight)
CBA-U23-S07ZAR	USB Cable (Shielded Power Plus Connector, 7ft. Straight)
CBA-U28-C15ZAR	USB Cable (Shielded Power Plus Connector, 15ft. Coiled)
CBA-U29-C15ZAR	USB Cable (Shielded Series A Connector, 15ft. Coiled)
CBA-U30-S15ZAR	USB Cable (Shielded Series A Connector, 15ft. Straight)
CBA-U32-C09ZAR	USB Cable (Shielded Series A Connector, 9ft. Coiled)
CBA-U34-C09ZAR	USB Cable (Shielded Power Plus Connector, 9ft. Coiled)
CBA-U35-S15ZAR	USB Cable (Shielded Power Plus Connector, 15ft. Straight)
CBA-U42-S07PAR	USB Cable (Shielded Series A Connector, 7ft. Straight), 12V For the DS7708 with an auxiliary scanner the PWRS-14000-148R power is required.

Table d. USB Cables (Continued)

Part Number	Description
CBA-U44-S15PAR	USB Cable (Shielded Series A Connector, 15ft. Straight), 12V For the DS7708 with an auxiliary scanner the PWRS-14000-148R power supply is required.
CBA-U43-S07ZAR	USB Cable (Shielded Power Plus Connector, 7ft. Straight), 12V For the DS7708 with an auxiliary scanner, 12Volts from host.
CBA-U45-S15ZAR	USB Cable (Shielded Power Plus Connector, 15ft. Straight), 12V For the DS7708 with an auxiliary scanner, 12Volts from host.

Table e. RS-232 Cables

Part Number	Description
CBA-R01-S07PAR	RS-232 Cable (DB9 Female, TxD on 2, 7 ft. Straight)
CBA-R03-C12PAR	RS-232 Cable (DB9 Female, TxD on 2, 12ft. Coiled)
CBA-R08-S07ZAR	RS-232 (Nixdorf Beetle- 5V Direct Power) Cable (7ft. Straight)
CBA-R10-S07ZAR	RS-232 (Nixdorf Beetle- Direct Power) Cable (7ft. Straight)
CBA-R16-S07ZAR	RS-232 (IBM Sure One) Cable (DB15 TxD on 2, 7ft Straight)
CBA-R20-S07PAR	RS-232 (Olivetti - ORS500) Cable (7ft straight)
CBA-R23-S07ZAR	RS-232 (Fujitsu Team POS 500 ICL) Cable (7ft straight)
CBA-R27-S07ZAR	RS-232 (NCR 7452 DYNAKEY) Cable (7ft. Straight)
CBA-R28-C09ZAR	RS-232 (VeriFone Ruby) Cable (9ft, Coiled)
CBA-R29-C12ZAR	RS-232 (NCR 7452 DYNAKEY) Cable (12ft. Coiled)
CBA-R31-C09ZAR	RS-232 (NCR 7448) Cable (9ft. Coiled)
CBA-R32-S07PAR	RS-232 (True TTL, DB9 Female, TxD on 2, 7ft. Straight)
CBA-R36-C09ZAR	RS-232 (DB9F PWR Pin 9, 9ft coiled)
CBA-R38-C09ZAR	RS-232 (DB25F PWR Pin 12, 9ft coiled)
CBA-R40-C09SAR	RS-232 (Split DB9F & PWR line, 9ft coiled)
CBA-R41-S12ZAR	RS-232 (Nixdorf Beetle- Direct Power) Cable (12ft. Straight)
CBA-R21-S15PAR	RS-232 Cable (DB9 Female, TxD on 2, 15 ft. Straight), 12V For the DS7708 with an auxiliary scanner the PWRS-14000-148R power supply is required.
CBA-R07-S07PAR	RS-232 Cable (DB9 Female, TxD on 2, 7 ft. Straight), 12V For the DS7708 with an auxiliary scanner the PWRS-14000-148R power supply is required.

Table f. Keyboard Wedge Cables

Part Number	Description
CBA-K61-S07PAR	Keyboard Wedge PS/2 Auto-Detect (7ft. Power Port, Straight), 5V
CBA-K63-S07PAR	Keyboard Wedge PS/2 Auto-Detect (7ft. Power Port, Straight), 12V For the DS7708 with an auxiliary scanner the PWRS-14000-148R power supply is required.
CBA-K65-S15PAR	Keyboard Wedge PS/2 Auto-Detect (15ft. Power Port, Straight), 5V

Table g. IBM Cables

Part Number	Description
CBA-M61-S07ZAR	IBM 468x/9x (Port 9B) Auto-Detect (7ft. Straight)
CBA-M64-S07ZAR	IBM 468x/9x (Port 5) Auto-Detect (7ft. Straight)
CBA-M65-S07ZAR	IBM 468x/9x (Port 9B) Auto-Detect (7 ft. Straight), 12V For the DS7708 with an auxiliary scanner, 12Volts from host.
CBA-M66-S15ZAR	IBM 468x/9x (Port 9B) Auto-Detect (15ft. Straight), 12V For the DS7708 with an auxiliary scanner, 12Volts from host.

Chapter Descriptions

Following are brief descriptions of each chapter in this guide.

- [Chapter 1, GETTING STARTED](#) provides a product overview and unpacking instructions.
- [Chapter 2, 123SCAN](#) describes this PC based scanner configuration tool.
- [Chapter 3, DATA CAPTURE](#) describes parts of the scanner, beeper and LED definitions, and how to use the scanner.
- [Chapter 4, MAINTENANCE, TECHNICAL SPECIFICATIONS, MOUNTING TEMPLATES](#) provides information on how to care for the scanner, troubleshooting, technical specifications and mounting templates to assist in proper placement of the scanner when attaching it to a surface.
- [Chapter 5, USER PREFERENCES & MISCELLANEOUS OPTIONS](#) provides the programming bar codes necessary for selecting user preference features and commonly used bar codes to customize how data is transmitted to the host device.
- [Chapter 6, IMAGING PREFERENCES](#) provides the programming bar codes necessary for selecting user preference features for the scanner.
- [Chapter 7, USB INTERFACE](#) provides information for setting up the scanner for USB operation.
- [Chapter 8, RS-232 INTERFACE](#) provides information for setting up the scanner for RS-232 operation.
- [Chapter 9, IBM 468X/469X INTERFACE](#) provides information for setting up the scanner with IBM 468X/469X POS systems.

- [Chapter 10, KEYBOARD WEDGE INTERFACE](#) provides information for setting up the scanner for Keyboard Wedge operation.
- [Chapter 11, SSI INTERFACE](#) describes the system requirements of the Simple Serial Interface (SSI), which provides a communications link between Zebra decoders.
- [Chapter 12, AUXILIARY SCANNER](#) provides information for setting up the optional auxiliary scanner.
- [Chapter 13, SYMBOLOGIES](#) describes all symbology features and provides the programming bar codes necessary for selecting these features for the scanner.
- [Chapter 14, OCR PROGRAMMING](#) describes how to set up the scanner for OCR programming.
- [Chapter 15, ADVANCED DATA FORMATTING](#) is a means of customizing data before transmission to the host device. This chapter provides the name and location of the Advanced Data Formatting Programmer Guide.
- [Appendix A, STANDARD DEFAULT PARAMETERS](#) provides a table of all host devices and miscellaneous scanner defaults.
- [Appendix B, COUNTRY CODES](#) provides instructions for programming the keyboard to interface with a USB, or Keyboard Wedge host.
- [Appendix C, COUNTRY CODE PAGES](#) provides bar codes for selecting code pages for the country keyboard type selected in [Appendix B, COUNTRY CODES](#).
- [Appendix D, CJK DECODE CONTROL](#) describes control parameters for CJK (Chinese, Japanese, Korean) bar code decode through USB HID Keyboard Emulation mode.
- [Appendix E, PROGRAMMING REFERENCE](#) provides a table of AIM code identifiers, ASCII character conversions, and keyboard maps.
- [Appendix F, SAMPLE BAR CODES](#) includes sample bar codes.
- [Appendix G, NUMERIC BAR CODES](#) includes the numeric bar codes to scan for parameters requiring specific numeric values.
- [Appendix H, SIGNATURE CAPTURE CODE](#) includes information about signature capture codes and patterns that enclose a signature area on a document allowing a scanner to capture a signature.
- [Appendix I, NON-PARAMETER ATTRIBUTES](#) includes non parameter attributes.

Notational Conventions

This document uses these conventions:

- “User” refers to anyone operating the device.
- “Device” refers to the scanner.
- *Italics* are used to highlight specific items in the general text, and to identify chapters and sections in this and related documents. It also identifies names of windows, menus, menu items, and fields within windows.
- **Bold** identifies buttons, and switches to be tapped or clicked, and bar code names.
- Bullets (•) indicate:
 - lists of alternatives or action items.
 - lists of required steps that are not necessarily sequential.

- Numbered lists indicate a set of sequential steps, i.e., those that describe step-by-step procedures.

NOTE This symbol indicates something of special interest to the reader. Failure to read the note will not result in physical harm to the bar code reader, equipment or data.

IMPORTANT This symbol indicates something of importance to the reader. Failure to read the note may impair the equipment or data.

CAUTION This symbol indicates that if this information is ignored, the possibility of data or material damage may occur.

WARNING! This symbol indicates that if this information is ignored the possibility that serious personal injury may occur.

- Throughout the programming bar code menus, asterisks (*) are used to denote default parameter settings.

* Indicates Default — * Baud Rate 9600 — Feature/Option

Related Publications

Following is a list of documents that provide additional information about configuring the DS7708:

- DS7708 2D Vertical Slot Scanner Quick Reference Guide, p/n MN001063Axx.

For the latest version of this guide and all guides, go to: www.zebra.com/support.

Service Information

If you have a problem using the equipment, contact your facility's technical or systems support. If there is a problem with the equipment, they will contact the Zebra Technologies Support Center at: www.zebra.com/support.

When contacting Zebra Technologies support, please have the following information available:

- Serial number of the unit
- Model number or product name
- Software type and version number

Zebra Technologies responds to calls by e-mail, telephone or fax within the time limits set forth in service agreements.

If your problem cannot be solved by Zebra Technologies support, you may need to return your equipment for servicing and will be given specific directions. Zebra Technologies is not responsible for any damages incurred during shipment if the approved shipping container is not used. Shipping the units improperly can possibly void the warranty.

If you purchased your business product from a Zebra Technologies business partner, please contact that business partner for support.

CHAPTER 1 GETTING STARTED

Introduction

The DS7708 2D Vertical Slot Scanner provides intuitive, hands-free scanning. The scanner reads all retail symbologies and has multi-interface capability to interface to all popular POS devices. The scanner can be mounted to a table top or vertical surface such as a wall using optional mounting accessories.

Unpacking the Scanner

Remove the scanner from its packing and inspect it for damage. The following items are included in the package:

- Scanner
- *DS7708 2D Vertical Slot Scanner Quick Reference Guide* (p/n MN001063Axx).

If any items are missing or damaged, call the Zebra Technologies Support Center. See [page x](#) for contact information. **KEEP THE PACKING**. It is the approved shipping container and should be used if it is ever necessary to return the equipment for servicing.

Protective Cover

Before using the scanner peel off the protective cover from the scan window.

Figure 1-1 *Peeling Off Protective Covering*

Features

Figure 1-2 DS7708 Views - Front and Back

Figure 1-3 DS7708 Views - Bottom and With and Without Cables

Figure 1-4 DS7708 Mounting Accessories

- ✓ **Note** The recommended method of table top installation is attaching the scanner to the table top using the double-sided tape provided. See [Mounting the Scanner \(Optional Hardware Required\) on page 1-8](#).

The DS7708 Vertical 2D Slot Scanner supports the following interfaces:

- ✓ **Note** The DS7708 automatically adapts to the host to which it is connected.
- USB connection to a host. The scanner defaults to the HID keyboard interface type. To select other USB interface types, scan programming bar code menus or use the Windows-based programming tool 123Scan². International keyboards are supported. See [Appendix B, COUNTRY CODES](#) to program the keyboard to interface with a USB host.
 - TTL-level RS-232 connection to a host. The scanner defaults to the standard RS-232 interface type. Modify communication between the scanner and the host either by scanning bar code menus or using the Windows-based programming tool 123Scan².
 - Connection to IBM 468X/469X hosts. User selection is required to configure this interface. Modify communication between the scanner and the IBM terminal either by scanning bar code menus or using the Windows-based programming tool 123Scan².
 - Keyboard Wedge connection to a host. The scanner defaults to the IBM AT Notebook interface type. The host interprets scanned data as keystrokes. International keyboards are supported. See [Appendix B, COUNTRY CODES](#) to program the keyboard to interface with a Keyboard Wedge host.
 - SSI communications link between the scanner and a serial host. It provides the means for the host to control the scanner.

Setting Up the Scanner

Power Options

The DS7708 does not have an on/off switch. It is powered via the host through the host cable and is ready to scan when connected to a host.

- **When an auxiliary scanner is not connected:** If an auxiliary scanner is not connected, the DS7708 requires 5VDC from the host. If the host cannot provide 5VDC, or cannot provide sufficient power (for example, RS-232 or Keyboard Wedge hosts) then an external 5VDC power supply is required.
- **When an auxiliary scanner is connected:** If an auxiliary scanner is connected, the DS7708 requires 12VDC from the host. If the host cannot provide 12VDC, or cannot provide sufficient power (for example, USB Series A type connector, or RS-232) then a cable with a 12VDC power port and external 12VDC power supply is required.

When the scanner receives power, the green LED lights and three short high beeps sound, indicating that the scanner is operational.

Ports

Host Port. A 10-pin RS-45 type connector is provided to connect various host interface cables.

Auxiliary (Hand-held) Scanner Port. A Series A type USB connector is provided to connect an auxiliary scanner, such as the DS4308. The auxiliary scanner's host interface is automatically set to match the DS7708 host interface.

Note For detailed connection information, see the applicable host interface chapter.

Connecting the Host and/or Auxiliary Scanner Cable

Different hosts require different cables. The connectors illustrated in each host chapter are examples only. Connectors may be different from those illustrated, but the steps to connect the scanner are the same. See each individual host interface chapter for interface specific connections.

The back cover must be removed prior to connecting cables (see [Removing and Replacing the Back Cover on page 1-5](#)).

Removing and Replacing the Back Cover

- ✓ **Note** For instructions on host and auxiliary scanner cable connections, see the applicable host interface chapter.

Removing the Back Cover

To remove the back cover, lightly press on the indentations at the top of the cover, slide downward until it becomes free, and lift up off the scanner.

Figure 1-5 Removing the Back Cover

Installing the Cable(s)

Insert the host cable into the RJ-45 connector on the back right of the scanner. Insert auxiliary scanner cable (optional) into the USB connector on the back left of the scanner. Replace the back cover (see [Replacing the Back Cover on page 1-6](#))

Figure 1-6 Installing Cables

Removing the Back Cover with Cables Installed

To remove the back cover with cables installed, slide the cable(s) out of the cable retaining slots to ensure they can move freely, lightly press on the indentations at the top of the cover, slide downward until it becomes free, and lift up off the scanner.

Figure 1-7 *Removing the Back Cover with Cables Installed*

Replacing the Back Cover

The back cover has three channels to route the outgoing cables so that they are organized and do not hinder the scanner's placement. Place the back cover on the back of the scanner and ensure the cables are positioned appropriately to be routed through one of the cable routing channels. Route the cables through the nearest channel.

Press the cover and slide upwards until it snaps into place.

Figure 1-8 *Replacing the Back Cover*

Configuring the Scanner

To configure the scanner, use the bar codes in this manual, or use the 123Scan² configuration program (see [Chapter 2, 123SCAN](#)).

The scanner supports RS-232, IBM 468X/469X, Keyboard Wedge, and USB to interface with a host system. Each host-specific chapter describes how to set up each of these connections.

Synchronization of Settings

Host Requested Setting Changes

The IBM 4683, IBM Hand-held, and USB hosts can change a limited set of the scanner's settings. The 123Scan² host maintains all the scanner settings. When an auxiliary scanner is connected, all setting changes the host requests are processed by both the DS7708 and the auxiliary scanner. Only a limited set of auxiliary scanner settings are updated, including code type enable/disable, code type lengths, beeper settings, redundancy, and security level settings.

For example, if the IBM 4683 host requests to disable the Code 39 symbology, then Code 39 is disabled on both the DS7708 and the auxiliary scanner.

Bar Code Menu Symbols Scanned on the DS7708

A limited set of bar code menu symbols scanned on the DS7708 are synchronized with the auxiliary scanner (if attached). These settings are code type enable/disable, code type lengths, beeper settings, redundancy, and security level settings.

Bar Code Menu Symbols Scanned on the Hand-held Scanner

By default, the auxiliary scanner can program the DS7708 settings (primary only mode).

The auxiliary programming mode setting All Scanners Mode allows programming both the auxiliary scanner and the DS7708 simultaneously. In this mode, scanning **Set Defaults** returns the DS7708 to the default mode.

Another setting isolates the auxiliary scanner so that the bar code menu symbols scanned apply only to the auxiliary scanner. To return to the default functionality change the setting on the DS7708 directly.

Regardless of the auxiliary scanner mode, all parameter changes requested by the host and via bar code menu settings on the DS7708 are synchronized on the auxiliary scanner for applicable settings.

Mounting the Scanner (Optional Hardware Required)

- ✓ **Note** The scanner should not be installed behind an additional protective window; this would create blind decode zones in the imaging field of view.

The DS7708 is designed to sit on top of a table, but optional mounting kits are available to mount the DS7708 to a table top or a wall. The mounting bracket slots in the bottom of the scanner accept the various mounting brackets.

Figure 1-9 Mounting Overview

Mounting the Scanner to the Table Top

Mounting the Scanner to a Table Top with Double-sided Tape

The recommended method of installation is attaching the scanner to the table top using the double-sided tape provided. Determine the location for installing the scanner; attach the scanner to the mounting bracket; peel off the paper on the two strips of double-sided tape; position the bracket; and press down onto the table surface.

Mounting the Scanner to a Table Top with Screws

Figure 1-10 Table Top Mounting Diagram

1. See [Removing and Replacing the Back Cover on page 1-5](#) to connect all interface and power cables to the scanner. Ensure the back cover is replaced and the cables are routed appropriately.
2. Determine the location for installing the scanner.
3. [Figure 1-10 - 1](#): Mount the table bracket with three screws (not included).
4. [Figure 1-10 - 2](#): Invert the scanner slightly and align the mounting slots over the plastic tabs on the bracket.
5. [Figure 1-10 - 3](#): Insert the plastic tabs into the mounting slots on the scanner, and slide the scanner back until it clicks into place.

Mounting the Scanner to a Wall

Figure 1-11 Wall Mounting Diagram - Mounting the Bracket

Figure 1-12 Wall Mounting Diagram - Mounting the Scanner on Bracket

1. Follow the steps in [Removing and Replacing the Back Cover on page 1-5](#) to connect all interface and power cables to the scanner. Ensure the back cover is replaced and the cables are routed appropriately.
2. Determine the location for installing the scanner.
3. Use the [Wall Mount Template on page 1-12](#) as a guide to mark the four mounting holes.
4. [Figure 1-11 - 1](#): Insert the back metal bracket under the plastic hook in the base plate and set in place so that the thumb screw holes align.
5. Place the mounting bracket in position over the drilled holes with its flat surface facing the mounting surface.

6. *Figure 1-11* - 2: Insert four screws (provided) through the holes and fasten to the mounting surface.
7. *Figure 1-12* - 3: Invert the scanner slightly and align the mounting slots over the plastic tabs on the bracket.
8. *Figure 1-12* - 4: Insert the plastic tabs into the mounting slots on the scanner, and slide the scanner back until it clicks into place.
9. *Figure 1-12* - 5: To secure the scanner in the bracket, insert the thumb screw (provided) through the hole in the bottom of the bracket and fasten to the scanner bottom.

Removing the Scanner from the Mounting Bracket

To remove the scanner:

1. Grasp the scanner firmly on both sides.
2. Slide the scanner forward and lift out.

Operating the Scanner

Indicator Lights

The scanner includes an array of three bi-color (green/red) LEDs to display system status and alerts. Center LED conditions: Off, Dim, Full; Outer LED conditions: Off, Full.

Adjusting Speaker Volume

To change the volume of the beep, scan the a bar code in the section [Beep Volume on page 5-11](#), or use the two-function **Volume/Tone** button on the front of the scanner (see [Figure 1-2 on page 1-2](#)).

Press and release the **Volume/Tone** button repeatedly until the desired volume level sounds (high, medium or low).

Adjusting Speaker Tone

To change the tone of the beep, scan the a bar code in the section [Beep Tone on page 5-8](#), or use the two-function **Volume/Tone** button on the front of the scanner (see [Figure 1-2 on page 1-2](#)).

Press and hold the **Volume/Tone** button for three seconds to change to a different tone. Repeat this process until the desired tone sounds (high, medium, low or medium to high tone).

✓ **Note** If the decode tone is set to **Off**, the **Volume/Tone** button cannot be used to change the decode tone. To allow the tone change using the **Volume/Tone** button, scan a tone other than **Off**.

If the **Volume/Tone Button Control** parameter is set to **Disable Volume and Tone Change**, the **Volume/Tone** button on the scanner cannot be used to change the volume and tone of the beeps.

Wall Mount Template

To use this template:

1. **Print the actual size of this page. Do not scale.**
2. Determine the location for installing the scanner.
3. Tape the template to the wall.
4. Drill the four holes using the template.
5. Place the mounting bracket in position over the drilled holes with its flat surface facing the mounting surface.
6. Insert four screws (provided) through the holes and fasten to the mounting surface.

Figure 1-13 *Wall Mount Template*

Table Mount Template

The recommended method of installation is attaching the scanner to the table top using the double-sided tape provided on the bottom of the bracket. If you wish to mount the bracket to the table top with screws use the template provided in [Figure 1-14](#).

To use this template:

1. **Print the actual size of this page. Do not scale.**
2. Determine the location for installing the scanner.
3. Tape the template to the table.
4. Drill the three holes using the template.
5. Place the mounting bracket in position over the drilled holes with the Symbol logo facing up.
6. Insert three screws (not provided) through the holes and fasten to the table surface.

Figure 1-14 Table Mount Template

CHAPTER 2 123SCAN

Introduction

123Scan is a software tool that simplifies scanner setup and more.

Intuitive enough for first time users, the 123Scan wizard guides users through a streamlined setup process. Settings are saved in a configuration file that can be printed as a single programming bar code for scanning, emailed to a smart phone for scanning from its screen, or downloaded to the scanner using a USB cable.

Through 123Scan a user can:

- Configure a scanner using a wizard
 - Program the following scanner settings:
 - Beeper tone / volume settings
 - Enable / disable symbologies
 - Communication settings
 - Preferred Symbol
 - Modify data before transmission to a host using:
 - Advanced Data Formatting (ADF) - Scan one bar code per trigger pull
 - Multicode Data Formatting (MDF) - Scan many bar codes in one trigger pull
- Load parameter settings to a scanner via:
 - Bar code scanning:
 - Scan a paper bar code
 - Scan a bar code from a PC screen
 - Scan a bar code from a smart phone screen
 - Download over a USB cable:
 - Load settings to one scanner
 - Stage up to 10 scanners simultaneously

- Validate scanner setup:
 - View scanned data within the utility's Data View screen
 - Capture an image and save to a PC within the utility's Data View screen
 - Review settings using the Parameter Report
 - Clone settings from an already deployed scanner
- Upgrade scanner firmware:
 - Load settings to one scanner
 - Stage up to 10 scanners simultaneously with a power USB hub
- View statistics such as:
 - Asset tracking information
 - Time and usage information
 - Bar codes scanned by symbology
 - Battery diagnostics
 - Communication diagnostics
- Generate the following reports:
 - Barcode Report - Programming bar code, included parameter settings, and supported scanner models
 - Parameter Report - Lists parameters programmed within a configuration file
 - Activity Report - Lists activities performed on a scanner(s)
 - Inventory Report - Lists scanner asset tracking information
 - Validation Report - Printout of scanned data
 - Statistics Report - Lists all statistics retrieved from the scanner

For more information go to: zebra.com/123Scan.

Communication with 123Scan

Use a USB cable to connect the scanner to a Windows host computer running 123Scan.

123Scan Requirements

- Host computer running Windows
- Scanner
- USB cable.

123Scan Information

For more information on 123Scan, go to: zebra.com/123Scan

For a 1 minute tour of 123Scan, go to: zebra.com/ScannerHowToVideos

To download any of the following free tools, go to: zebra.com/scannersoftware

- 123Scan configuration utility (described in this chapter)
- How-to-videos.

Scanner SDK, Other Software Tools, and Videos

Tackle all your scanner programming needs with our diversified set of software tools. Whether you need to simply stage a device, or develop a fully featured application with image and data capture as well as asset management, these tools help you every step of the way.

To download any of the following free tools, go to: zebra.com/scannersoftware.

- 123Scan configuration utility
- SDKs
 - Scanner SDK for Windows
 - Scanner SDK for Linux
- Drivers
 - OPOS driver
 - JPOS driver
 - TWAIN driver
 - USB CDC driver
- Scanner Management Service (SMS) for Remote Management
 - Windows
 - Linux
 - IBM 4690
- How-To-Videos
- User documentation.

CHAPTER 3 DATA CAPTURE

Overview

This chapter covers the techniques involved in scanning bar codes, beeper and LED definitions, and general instructions and tips about scanning. See [Chapter 1, GETTING STARTED](#) for information on scanner components. See each host chapter for information about connecting host cables and power supplies, when necessary.

Scanning Bar Codes on Products

Install and program the scanner.

For the best scanning performance, the table top or surface area covered by the active scan area should be free of any designs (for example, stripes or patterns). Ideally, that area should be a light, solid color.

The DS7708 includes an automatic Object Detection wakeup system that provides a high swipe speed and reduces power consumption. The red Illumination has two power levels mode: *Idle Mode* for object detection and *Full Illumination* for scanning. When any object is presented in front of the window opening, the red illumination changes from *Idle Mode* to *Full Mode*, but automatically returns to *Idle Mode* when the object is removed. When the object presented in the Field of View (FOV) includes a bar code, the DS7708 scans the bar code, and if the bar code is successfully decoded, the illumination LEDs automatically return to *Idle Mode* when the object is removed.

The DS7708 is able to adjust the FOV by a reading a command bar code and prevent decoding undesired bar codes that are in the FOV.

Active Scan Area

The active scan area is the area in front of the scanner window opening in which a bar code can be decoded. The dotted area represents the active scan area.

To scan a bar code:

1. Ensure all cable connections are secure.
2. Orient the item with the bar code facing the scanner window.
3. Present the item anywhere within the active scan area.
4. Upon successful decode, the scanner beeps and the green LED flashes momentarily.

Figure 3-1 Active Scan Area

Decode Ranges

Table 3-1 includes the paper bar code decode ranges for the scanner.

Table 3-1 *Decode Ranges*

Symbol Specifications	Typical Ranges (Inches)
Code 39, 5mil	0 - 7.20
UPCA, 10.0mil (80%)	0 - 10.0
UPCA, 13.0mil (100%)	0 - 10.3
PDF417, 4mil	0 - 2.20
PDF417, 5mil	0 - 3.50
PDF417, 6.6mil	0 - 5.20
PDF417, 10 mil	0 - 7.30
PDF417, 15 mil	0 - 9.90
Data Matrix, 10mil	0 - 5.00
Data Matrix, 20mil	0 - 9.50
QR cell phone 23mil	0 - 7.0

User Indicators

Table 3-2 lists beeper and LED indicators.

Beeper Volume/ Beeper Tone

If the decode tone is set to **Off**, the **Volume/Tone** button cannot be used to change the decode tone. To allow the tone change using the **Volume/Tone** button, scan a tone other than **Off**.

See *Adjusting Speaker Volume on page 1-11* and *Adjusting Speaker Tone on page 1-11* to change the volume and/or tone of the beep.

LED and Beeper Indicators

The scanner includes an array of three bi-color (green/red) LEDs to display system status and alerts.

Center LED conditions: Off, Full; Outer LED conditions: Off, Full.

Table 3-2 *Beeper and LED Indicators*

Event	Beeper Sequence	LED	Description
Standard Use			
Bootup	Low, medium, high beeps	Green	Power up.
Decode	(as configured)	Center green full on, followed by outer LEDs green full on	A bar code symbol was decoded.
Presentation Mode	None	Center green LED remains ON	Presentation Mode is on.
Transmit Error	4 low beeps	Red	Transmission error
Convert Error	5 low beeps	Red	Conversion or Format error
Parity Error	Low, low, low, extra low beeps	Red	RS-232 Receive error
BELL (RS-232)	High beep	None	A <BEL> character is received over RS-232
Image Capture			
Snapshot Start	Low beep	All green, blinking	Snapshot mode started.
Snapshot Complete	Low beep	Green (default) LED mode based upon Hands-free mode state	Snapshot mode completed.
Snapshot Timeout	High, low beeps	Green (default) LED mode based upon Hand-held/Hands-free mode state	Snapshot mode timed-out.

Parameter Programming

Unless otherwise specified, both red and green LEDs display across all three LED indicators (center and outer).

Table 3-2 *Beeper and LED Indicators (Continued)*

Event	Beeper Sequence	LED	Description
Entry Error	Low, high beeps	Red	Input error: incorrect bar code, programming sequence, or Cancel scanned.
Number Expected	High, low beeps	Green	Number expected. Enter value using numeric bar codes.
Parameter Entered	High, low, high, low beeps	Green	Successful program exit with change in parameter setting.
ADF Programming (Refer to the <i>Advanced Data Formatting Programmer Guide</i> , p/n 72E-69680-xx. for ADF bar codes.)			
Number Expected	High, low beeps	Green	Enter another digit. Add leading zeros to the front if necessary.
Alpha Expected	Low, low beeps	Green	Enter another alphabetic character or scan the End of Message bar code.
Criteria Action Expected	High, high beeps	Green blinking	ADF criteria or action is expected. Enter another criterion or action, or scan the Save Rule bar code.
Rule Saved	High, low, high, low beeps	Green (turns off blinking)	Rule saved. Rule entry mode exited.
Criteria Action Cleared	High, low, low beeps	Green	All criteria or actions cleared for current rule. Continue entering rule.
Last Rule Deleted	Low beep	Green	Delete last saved rule. The current rule is left in tact.
All Rules Deleted	Low, high, high beeps	Green	All rules are deleted.
Out Of Rule Memory	Low, high, low, high beeps	Red	Out of rule memory. Erase some existing rules, then try to save rule again.
Cancel Rule Entry	Low, high, low beeps	Green (turns off blinking)	Cancel rule entry. Rule entry mode exited because of an error, or the user asked to exit rule entry.
Rule Error	Low, high beeps	Red	Entry error, wrong bar code scanned, or criteria/action list is too long for a rule. Re-enter criterion or action.

Macro PDF

Unless otherwise specified, both red and green LEDs display across all three LED indicators (center and outer).

Table 3-2 *Beeper and LED Indicators (Continued)*

Event	Beeper Sequence	LED	Description
Macro PDF Buffered	2 Low beeps	None	File ID error. A bar code not in the current Macro PDF sequence was scanned.
Macro PDF File ID Error	2 Long low beeps	None	File ID error. A bar code not in the current Macro PDF sequence was scanned.
Macro PDF Out Of Memory	3 Long low beeps	None	Out of memory. There is not enough buffer space to store the current Macro PDF symbol.
Macro PDF Bad Symbology	4 Long low beeps	None	Bad symbology. Scanned a 1D or 2D bar code in a Macro PDF sequence, a duplicate Macro PDF label, a label in an incorrect order, or trying to transmit an empty or illegal Macro PDF field.
Macro PDF Flush Buffer	5 Long low beeps	None	Flushing Macro PDF buffer.
Macro PDF Abort	Fast warble beep	None	Aborting Macro PDF sequence.
Macro PDF Flush No Data	Low, high beeps	None	Flushing an already empty Macro PDF buffer.

Unless otherwise specified, both red and green LEDs display across all three LED indicators (center and outer).

Electronic Article Surveillance (EAS)

The scanner includes an integrated Electronic Article Surveillance (EAS) antenna. The scanner and EAS system can operate independently of each other. The deactivation range is mapped suitable to the scanning range, so both can be accomplished almost simultaneously.

A pair of EAS leads in the back of the DS7708 allow the EAS deactivation antenna to be connected to the Checkpoint EAS system at the other end.

Installing

Checkpoint EAS Model Compatibility

The DS7708 is intended for use with Checkpoint CP-VII, CP-IX, and CP-XI systems. It does not support CP-IV and other low-power receiver-based EAS deactivation systems.

Considerations

The Checkpoint CP-VII system generates a periodic burst of electromagnetic energy that deactivates EAS tags brought near the scanner. To avoid interference with the scanner's operation, take the following precautions when installing the EAS system:

- Position the EAS antenna box as far as possible from the scanner (at least 6 in. / 15.24 cm.)
- Position the EAS antenna, EAS antenna box, EAS control cable, and EAS controller box as far as possible from the scanner's host and power cables.

EAS range is as dependent on the Checkpoint system (which is calibrated onsite) as it is on the scanner. Therefore, we cannot provide estimated ranges, however these are some of the factors that contribute to EAS range:

- Antenna – Length, gauge, number of turns, placement in the scanner
- Type of Checkpoint EAS system used (ie. CP-VII, CP-IX, and CP-XI)
- Length of wire connecting antenna to (Checkpoint) EAS (site/installation dependent)
- Settings done within Checkpoint system (site/installation dependent).

Checkpoint Contact Information

Contact your local Checkpoint representative to install the EAS cable to the Checkpoint Deactivation System.

CHAPTER 4 MAINTENANCE, TECHNICAL SPECIFICATIONS, MOUNTING TEMPLATES

Introduction

This chapter covers suggested scanner maintenance, troubleshooting, technical specifications, and signal descriptions (pinouts).

Maintenance

Cleaning the exit window is the only maintenance required. A dirty window can affect scanning accuracy.

- Do not allow abrasive material to touch the window.
- Remove dirt particles with a damp cloth.
- Wipe the window using a tissue moistened with ammonia/water.
- Do not spray water or other cleaning liquids directly into the window.

Troubleshooting

- ✓ **Note** If after performing the checks in [Table 4-1](#) the problem persists, contact the distributor or call the Zebra Support Center. See [Service Information](#) on [page x](#) for more information.

Table 4-1 *Troubleshooting*

Problem	Possible Causes	Possible Solutions
The red LED illumination does not come on when the directions for installing the host cable are followed.	No power to the scanner.	Ensure the host has power, and is on. If the scanner uses a separate power supply, ensure it is connected to a working AC outlet. Power-up sequence is incorrect. Refer to the <i>Product Reference Guide</i> for more information.
	Interface cable is not properly connected.	Check for loose cable connections.
The red LED illumination gets brighter when the bar code is presented in the field of view, but bar code cannot be read.	Scanner is not programmed to read the bar code type.	Ensure scanner is programmed to read the bar code type scanned.
	Bar code is damaged.	Try scanning other bar codes of the same bar code type.
	Bar code is not within the scanner's decode range.	Move the bar code to the region within the scanner's decode range.
	The host has disabled scanning or overridden parameter settings.	See the technical person in charge of scanning.
The red LED illumination turns on dim and does not get brighter (the scanner does not change to active decoding mode) when a bar code is presented in the field of view.	Bar code is not within the scanner's detection range.	Move the bar code to the region within the scanner's detection range.

Table 4-1 *Troubleshooting (Continued)*

Problem	Possible Causes	Possible Solutions
Bar code is decoded, but not transmitted to the host.	Scanner is not programmed for the correct host type.	Scan the appropriate host type bar code.
Scanned data is incorrectly displayed on the host.	Scanner is not programmed to work with the host. Check scanner host type parameters or editing options.	<p>Ensure proper host is selected.</p> <p>For RS-232, ensure the scanner's communication parameters match the host's settings.</p> <p>For Keyboard Wedge, ensure scanner is programmed with the correct country code and that the CAPS LOCK key is off.</p> <p>Ensure editing options (for example., UPCE to UPCA Conversion) are properly programmed.</p>
USB host not functioning properly.	Scanner does not recognize host.	Remove and reinsert the USB cable and the external power supply, if applicable.

Technical Specifications

CHAPTER 5 USER PREFERENCES & MISCELLANEOUS OPTIONS

Introduction

You can program the scanner to perform various functions, or activate different features. This chapter describes each user preference feature and provides programming bar codes for selecting these features.

The scanner ships with the settings shown in [Table 5-1 on page 5-2](#) (also see [Appendix A, STANDARD DEFAULT PARAMETERS](#) for all host device and miscellaneous defaults). If the default values suit requirements, programming is not necessary.

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner is powered down.

If not using a USB cable, select a host type (see each host chapter for specific host information) after the power-up beeps sound. This is only necessary upon the first power-up when connected to a new host.

To return all features to default values, scan the [Set Default Parameter on page 5-4](#). Throughout the programming bar code menus, asterisks indicate (*) default values.

* Indicates Default — *High Volume — Feature/Option
(00h) — Option Hex Value

Scanning Sequence Examples

In most cases, scanning one bar code sets the parameter value. For example, to set the beeper tone to high, scan the **High Tone** (beeper tone) bar code in the *Beeper Tone* section on [page 5-8](#). Other parameters, such as **Serial Response Timeout** or **Data Transmission Formats**, require scanning several bar codes. See these parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

User Preferences/Miscellaneous Options Parameter Defaults

[Table 5-1](#) lists defaults for user preferences parameters. To change the default values, scan the appropriate bar codes in this guide. These new values replace the standard default values in memory. To recall the default parameter values, scan the [Set Default Parameter on page 5-4](#).

✓ **Note** See [Appendix A, STANDARD DEFAULT PARAMETERS](#) for all user preferences, hosts, symbologies, and miscellaneous default parameters.

Table 5-1 *User Preferences Parameter Defaults*

Parameter	SSI Number ¹	Parameter Number ²	Default	Page Number
User Preferences				
Set Default Parameter	N/A	N/A	Set Defaults	5-4
Parameter Bar Code Scanning	ECh	236	Enable	5-6
Beep After Good Decode	38h	56	Enable	5-7
Beeper Tone	91h	145	High	5-8
Beeper Volume	8Ch	140	High	5-11
Beeper Duration	F1h 74h	628	Medium	5-13
Volume/Tone Button Control	F8h 05h 07h	1287	Enable (both)	5-15
Suppress Power-up Beeps	F1h D1h	721	Do not suppress	5-17
Timeout Between Decodes, Same Symbol	89h	137	0.5 Sec	5-18
Timeout Between Decodes, Different Symbols	90h	144	1 Sec	5-18

¹ SSI number hex values are used for programming via SSI commands.

² Parameter number decimal values are used for programming via RSM commands.

User Preferences

Set Default Parameter

You can reset the scanner to two types of defaults: factory defaults or custom defaults. Scan the appropriate bar code below to reset the scanner to its default settings and/or set its current settings as custom defaults.

Options:

- ***Set Defaults:** Scan this bar code to reset all default parameters as follows.
 - If you previously set custom defaults by scanning **Write to Custom Defaults**, scan **Set Defaults** to retrieve and restore the scanner custom default settings.
 - If you did not set custom defaults, scan **Set Defaults** to restore the factory default values listed in [Table A-1](#).
- **Set Factory Defaults:** Scan this bar code to restore the factory default values listed in [Table A-1](#). This deletes any custom defaults set.
- **Write to Custom Defaults:** Scan this bar code to set the current scanner settings as custom defaults. Once set, you can recover custom default settings by scanning **Set Defaults**.

***Set Defaults**

Set Factory Defaults

Set Default Parameter (continued)

Write to Custom Defaults

Parameter Bar Code Scanning

SSI # ECh

Parameter # 236

To disable the decoding of parameter bar codes, including the **Set Defaults** parameter bar codes, scan the **Disable Parameter Scanning** bar code below. To enable decoding of parameter bar codes, scan **Enable Parameter Scanning**.

Options:

- *Enable Parameter Bar Code Scanning
- Disable Parameter Bar Code Scanning.

***Enable Parameter Bar Code Scanning
(01h)**

**Disable Parameter Bar Code Scanning
(00h)**

Beep After Good Decode

SSI # 38h

Parameter # 56

Scan a bar code below to select whether or not the scanner beeps after a good decode. If selecting **Do Not Beep After Good Decode**, the beeper still operates during parameter menu scanning and to indicate error conditions.

Options:

- *Beep After Good Decode (Enable)
- Do Not Beep After Good Decode (Disable).

***Beep After Good Decode
(Enable)
(01h)**

**Do Not Beep After Good Decode
(Disable)
(00h)**

Beeper Tone

SSI # 91h

Parameter # 145

To select a decode beep frequency (tone), scan one of the bar codes that follow.

If the decode tone is set to **Off**, the **Volume/Tone** button cannot be used to change the decode tone. To allow the tone change using the **Volume/Tone** button, scan a tone other than **Off**.

Options:

- Off
- Low Tone
- Medium Tone
- *High Tone
- Medium to High Tone (2-tone).

Off
(03h)

Low Tone
(02)

Beeper Volume**SSI # 8Ch****Parameter # 140**

To select a beeper volume, scan the one of the bar codes that follows.

Options:

- Low Volume
- Medium Volume
- *High Volume

**Low Volume
(02h)**

**Medium Volume
(01h)**

Beeper Volume (continued)

***High Volume
(00h)**

Beeper Duration**SSI # F1h 74h****Parameter # 628**

To select the duration for the beeper, scan one of the following bar codes.

Options:

- Short
- *Medium
- Long.

**Short
(00h)**

***Medium
(01h)**

Beeper Duration (continued)

Long
(02h)

Volume/Tone Button Control

SSI # F8h 05h 07h

Parameter # 1287

When this parameter is enabled the physical **Volume/Tone** button on the front panel of the scanner can be used to change the speaker volume and tone.

When this parameter is disabled the speaker volume and tone cannot be changed using the physical **Volume/Tone** button on the front panel of the scanner.

Options:

- *Enable Volume and Tone Change
- Disable Tone Change and Enable Volume Change
- Enable Tone Change and Disable Volume Change
- Disable Volume and Tone Change

***Enable Volume and Tone Change
(1)**

**Disable Volume and Tone Change
(0)**

Volume/Tone Button Control (continued)

**Disable Tone Change and Enable Volume Change
(2)**

**Enable Tone Change and Disable Volume Change
(3)**

Suppress Power-up Beeps

SSI # F1h D1h

Parameter # 721

Select whether or not to suppress the scanner power-up beeps.

Options:

- *Do Not Suppress Power-up Beeps
- Suppress Power-up Beeps.

***Do Not Suppress Power-up Beeps
(00h)**

**Suppress Power-up Beeps
(01h)**

Timeout Between Decodes, Same Symbol

SSI # 89h

Parameter # 137

Use this option to prevent the beeper from continuously beeping when a symbol is left in the scanner's field of view. It is programmable in 0.1 second increments from 0.0 to 9.9 seconds. The default interval is 0.5 seconds.

To select the timeout between decodes for the same symbol, scan the bar code below, then scan two numeric bar codes from [Appendix G, NUMERIC BAR CODES](#) that correspond to the desired interval, in 0.1 second increments.

Timeout Between Decodes, Same Symbol

Timeout Between Decodes, Different Symbols

SSI # 90h

Parameter # 144

Use this option in to control the time the scanner is inactive between decoding different symbols. It is programmable in 0.1 second increments from 0 to 9.9 seconds. The default is 1 second.

To select the timeout between decodes for different symbols, scan the bar code below, then scan two numeric bar codes from [Appendix G, NUMERIC BAR CODES](#) that correspond to the desired interval, in 0.1 second increments.

Timeout Between Decodes, Different Symbols

Fuzzy 1D Processing

SSI # F1h 02h

Parameter # 514

This option is enabled by default to optimize decode performance on 1D bar codes, including damaged and poor quality symbols. Disable this only if you experience time delays when decoding 2D bar codes, or in detecting a no decode.

Options:

- *Enable Fuzzy 1D Processing
- Disable Fuzzy 1D Processing.

***Enable Fuzzy 1D Processing
(01h)**

**Disable Fuzzy 1D Processing
(00h)**

Decode Mirror Images (Data Matrix Only)

SSI # F1h 19h

Parameter # 537

Select an option for decoding mirror image Data Matrix bar codes:

- Always - decode only Data Matrix bar codes that are mirror images
- Never - do not decode Data Matrix bar codes that are mirror images
- Auto - decode both mirrored and unmirrored Data Matrix bar codes.

Never
(0)

Always
(1)

Decode Mirror Images (Data Matrix Only - continued)

***Auto
(2)**

PDF Prioritization

SSI # F1h CFh

Parameter # 719

Enable this feature to delay decoding certain 1D bar codes (see *Note* below) by the value specified in *PDF Prioritization Timeout*. During that time the scanner attempts to decode a PDF417 symbol (e.g., on a US driver's license), and if successful, reports this only. If it does not decode (can not find) a PDF417 symbol, it reports the 1D symbol after the timeout. The 1D symbol must be in the device's field of view for the scanner to report it. This parameter does not affect decoding other symbologies.

**Note**

The 1D Code 128 bar code lengths include the following:

- 7 to 10 characters
- 14 to 22 characters
- 27 to 28 characters

In addition, a Code 39 bar code with the following lengths are considered to potentially be part of a US driver's license:

- 8 characters
- 12 characters

Options:

- *Disable PDF Prioritization
- Enable PDF Prioritization.

***Disable PDF Prioritization
(00h)**

**Enable PDF Prioritization
(01h)**

PDF Prioritization Timeout

SSI # F1h D0h

Parameter # 720

When *PDF Prioritization* is enabled, this timeout specifies how long the scanner attempts to decode a PDF417 symbol before reporting the 1D bar code in the field of view.

Scan the following bar code, then scan four digits from *Appendix G, NUMERIC BAR CODES* that specify the timeout in milliseconds. For example, to enter 400 ms, scan the following bar code, then scan 0400. The range is 0 to 5000 ms, and the default is 200 ms.

PDF Prioritization Timeout

Mobile Phone/Display Mode

SSI # F1h CCh

Parameter # 716

This mode improves bar code reading performance off mobile phones and electronic displays. Scan one of the following bar codes to select the desired mode.

Options:

- Normal Mobile Phone/Display Mode
- *Enable Mobile Phone/Display Mode.

**Normal Mobile Phone/Display Mode
(0)**

***Enable Mobile Phone/Display Mode
(2)**

Field of View

SSI # F1h 61h

Parameter # 609

By default, the scanner searches the full field of view.

To search for a bar code in a smaller region, in order to speed search time and prevent unintended bar code reads, select **Small Field of View** or **Medium Field of View**.

✓ **Note** When the scanner is set to **Small Field of View** or **Medium Field of View** and a bar code is only partially presented into the field of view, the scanner automatically opens to **Full Field of View** to scan the bar code. It then returns to the mode set.

Options:

- Small Field of View
- Medium Field of View
- *Full Field of View.

**Small Field of View
(00h)**

**Medium Field of View
(01h)**

Field of View (continued)

***Full Field of View
(02h)**

Product ID (PID) Type**SSI # F8h 05h 01h****Parameter # 1281**

Defines the PID value reported in USB enumeration.

Options:

- *Host Type Unique
- Product Unique
- IBM Unique.

***Host Type Unique
(0)**

**Product Unique
(1)**

PID Type (continued)

**IBM Unique
(2)**

Miscellaneous Scanner Parameters

Transmit Code ID Character

SSI # 2Dh

Parameter # 45

A Code ID character identifies the code type of a scanned bar code. This is useful when decoding more than one code type. In addition to any single character prefix already selected, the Code ID character is inserted between the prefix and the decoded symbol.

Select no Code ID character, a Symbol Code ID character, or an AIM Code ID character. For Code ID Characters, see [Symbol Code Identifiers on page E-1](#) and [AIM Code Identifiers on page E-3](#).

Options:

- Symbol Code ID Character
- AIM Code ID Character
- *None.

**Symbol Code ID Character
(02h)**

**AIM Code ID Character
(01h)**

Transmit Code ID Character (continued)

***None
(00h)**

Prefix/Suffix Values

Key Category SSI # P = 63h, S1 = 62h, S2 = 64h

Decimal Value SSI # P = 69h, S1 = 68h, S2 = 6Ah

Key Category Parameter # P = 99, S1 = 98, S2 = 100

Decimal Value Parameter # P = 105, S1 = 104, S2 = 106

You can append a prefix and/or one or two suffixes to scan data for use in data editing. To set a value for a prefix or suffix, scan a four-digit number (i.e., four bar codes from [Appendix G, NUMERIC BAR CODES](#)) that corresponds to that value. See [ASCII Character Set for USB on page 7-34](#) and [ASCII Character Set for RS-232 on page 8-37](#) for the four-digit codes.

When using host commands to set the prefix or suffix, set the key category parameter to 1, then set the 3-digit decimal value.

To correct an error or change a selection, scan [Cancel on page G-10](#).

✓ **Note** To use Prefix/Suffix values, first set the [Scan Data Transmission Format on page 5-34](#).

Options:

- Scan Prefix
- Scan Suffix 1
- Scan Suffix 2
- Data Format Cancel.

**Scan Prefix
(07h)**

FN1 Substitution Values

Key Category SSI # 67h

Decimal Value SSI # 6Dh

Key Category Parameter # 103

Decimal Value Parameter # 109

The wedge and USB HID keyboard hosts support a FN1 Substitution feature. Enabling this substitutes any FN1 character (0x1b) in a GS1 bar code with a value. This value defaults to 7013 (Enter key).

When using host commands to set the FN1 substitution value, set the key category parameter to 1, then set the 3-digit keystroke value. See the ASCII character set table for the current host interface for the desired value.

To select a FN1 substitution value via bar code menus:

1. Scan the **Set FN1 Substitution Value** bar code below.
2. Locate the keystroke desired for FN1 substitution in the ASCII character set table in the appropriate host interface chapter. Enter the 4-digit ASCII value by scanning each digit in [Appendix G, NUMERIC BAR CODES](#).

To correct an error or change the selection, scan [Cancel on page G-10](#).

See [USB Keyboard FN1 Substitution on page 7-17](#) to enable FN1 substitution for the USB HID keyboard.

Set FN1 Substitution Value

Unsolicited Heartbeat Interval

SSI # F8h 04h 5Eh

Parameter # 1118

The scanner supports sending *Unsolicited Heartbeat Messages* to assist in diagnostics. To enable this feature and set the desired unsolicited heartbeat interval, scan one of the time interval bar codes below, or scan **Set Another Interval** followed by four numeric bar codes from [Appendix G, NUMERIC BAR CODES](#) (scan sequential numbers that correspond to the desired number of seconds).

Options:

- 10 seconds
- 1 minute
- Set Another Interval
- *Disable Unsolicited Heartbeat Interval.

Scan **Disable Unsolicited Heartbeat Interval** to turn off the feature.

The heartbeat event is sent as decode data (with no decode beep) in the form of:

MOTEVTHB:nnn

where nnn is a three digit sequence number starting at 001 and wrapping after 100.

10 seconds

1 minute

Unsolicited Heartbeat Interval (continued)

Set Another Interval

***Disable Unsolicited Heartbeat Interval**

CHAPTER 6 IMAGING PREFERENCES

Introduction

You can program the scanner to perform various functions, or activate different features. This chapter describes each user preference feature and provides programming bar codes for selecting these features.

The scanner ships with the settings shown in [Table 6-1 on page 6-2](#) (also see [Appendix A, STANDARD DEFAULT PARAMETERS](#) for all host device and miscellaneous defaults). If the default values suit requirements, programming is not necessary.

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner is powered down.

If not using a USB cable, select a host type (see each host chapter for specific host information) after the power-up beeps sound. This is only necessary upon the first power-up when connected to a new host.

To return all features to default values, scan the [*Set Defaults on page 5-4](#). Throughout the programming bar code menus, asterisks indicate (*) default values.

Scanning Sequence Examples

In most cases scanning one bar code sets the parameter value. For example, to enable signature capture, scan the **Enable Signature Capture** bar code under [Signature Capture on page 6-20](#). The scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters require scanning several bar codes. See these parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

Imaging Preferences Parameter Defaults

[Table 6-1](#) lists the defaults for imaging preferences parameters. To change the default values, scan the appropriate bar codes in this guide. These new values replace the standard default values in memory. To recall the default parameter values, scan the [Set Default Parameter on page 5-4](#).

✓ **Note** See [Appendix A, STANDARD DEFAULT PARAMETERS](#) for all user preferences, hosts, symbologies, and miscellaneous default parameters.

Table 6-1 *Imaging Preferences Parameter Defaults*

Parameter	SSI Number ¹	Parameter Number ²	Default	Page Number
Imaging Preferences				
Operational Modes	N/A	N/A	N/A	6-4
Snapshot Mode Timeout	F0h 43h	323	0 (30 seconds)	6-5

¹ SSI number hex values are used for programming via SSI commands.

² Parameter number decimal values are used for programming via RSM commands.

Imaging Preferences

The parameters in this chapter control image capture characteristics. Image capture occurs in all modes of operation, including decode and snapshot.

Operational Modes

The scanner has two modes of operation:

- Decode Mode
- Snapshot Mode.

Decode Mode

In decode mode, the scanner attempts to locate and decode enabled bar codes within its field of view. The scanner remains in this mode until it decodes a bar code.

Snapshot Mode

Use Snapshot Mode to capture a high-quality image and transmit it to the host. To temporarily enter this mode scan the **Snapshot Mode** bar code. While in this mode the scanner blinks the green LED at 1-second intervals to indicate it is not in standard operating (decode) mode.

In Snapshot Mode, the scanner turns on its red LED illumination to highlight the area to capture in the image. The next soft trigger command instructs the scanner to capture a high quality image and transmit it to the host. A short time may pass (less than 2 seconds) between when the soft trigger command is sent and the image is captured as the scanner adjusts to the lighting conditions. Hold the scanner steady until the image is captured, denoted by a single beep.

If you do not send a soft trigger command within the Snapshot Mode Timeout period, the scanner returns to Decode Mode. Use [Snapshot Mode Timeout on page 6-5](#) to adjust this timeout period. The default timeout period is 30 seconds.

Snapshot Mode

Snapshot Mode Timeout

SSI # F0h, 43h

Parameter # 323

This parameter sets the amount of time the scanner remains in Snapshot Mode. The scanner exits Snapshot Mode when you send a soft trigger command, or when the Snapshot Mode Timeout elapses. To set this timeout value, scan the bar code below followed by a bar code from [Appendix G, NUMERIC BAR CODES](#). The default value is 0 which represents 30 seconds; values increment by 30. For example, 1 = 60 seconds, 2 = 90 seconds, etc.

Snapshot Mode Timeout

Image Size (Number of Pixels)**SSI # F0h, 2Eh****Parameter # 302**

This option alters image resolution before compression. Multiple pixels are combined to one pixel, resulting in a smaller image containing the original content with reduced resolution.

Select one of the following values:

Resolution Value	Image Size
Full	1280 x 880
1/2	640 x 440
1/4	320 x 220

***Full Resolution
(00h)**

**1/2 Resolution
(01h)**

Image Size (Number of Pixels - continued)

**1/4 Resolution
(03h)**

Image Brightness (Target White)

SSI # F0h 86h

Parameter # 390

Type: Byte

Range: 1 - 240

Options:

- *180
- Image Brightness.

This parameter sets the Target White value used in Snapshot and Video Viewfinder mode when using auto exposure. White and black are defined as 240 decimal and 1, respectively. Setting the value to the factory default of 180 sets the white level of the image to ~180.

To set the Image Brightness parameter, scan **Image Brightness** below followed by three numeric bar codes representing the value. Leading zeros are required. For example, to set an Image Brightness value of 99, scan 0, 9, 9. See [Appendix G, NUMERIC BAR CODES](#) for numeric bar codes.

*180

Image Brightness
(3 digits)

JPEG Image Options

SSI # F0h, 2Bh

Parameter # 299

Select an option to optimize JPEG images for either size or for quality. Scan the **JPEG Quality Selector** bar code to enter a quality value; the scanner then selects the corresponding image size. Scan the **JPEG Size Selector** bar code to enter a size value; the scanner then selects the best image quality.

Options:

- *JPEG Quality Selector
- JPEG Size Selector.

***JPEG Quality Selector
(01h)**

**JPEG Size Selector
(00h)**

JPEG Target File Size

SSI # F1h, 31h

Parameter # 561

Type: Word

Range: 5-350

This parameter defines the target JPEG file size in terms 1 Kilobytes (1024 bytes). The default value is 160 kB which represents 160 Kilobytes.

caution JPEG compress may take 10 to 15 seconds based on the amount of information in the target image. Scanning **JPEG Quality Selector** (default setting) on [page 6-9](#) produces a compressed image that is consistent in quality and compression time.

To set the JPEG Target File Size parameter, scan **JPEG Target File Size** below followed by three numeric bar codes representing the value. Leading zeros are required. For example, to set an image file size value of 99, scan 0, 9, 9 in [Appendix G, NUMERIC BAR CODES](#).

JPEG Target File Size
(3 digits)

JPEG Quality and Size Value

SSI # F0h, 31h

Parameter # 305

If you selected **JPEG Quality Selector**, scan the **JPEG Quality Value** bar code followed by 3 bar codes from [Appendix G, NUMERIC BAR CODES](#) corresponding to a value from 5 to 100, where 100 represents the highest quality image.

JPEG Quality Value
(Default: 065)
(5 - 100 Decimal)

Image Enhancement

SSI # F1h, 34h

Parameter # 564

This parameter configures the scanner's Image Enhance feature. This feature uses a combination of edge sharpening and contrast enhancement to produce an image that is visually pleasing.

The levels of image enhancement are:

- Off (0)
- *Low (1)
- Med (2)
- High (3).

**Off
(0)**

***Low
(1)**

Image Enhancement (continued)

**Medium
(2)**

**High
(3)**

Image File Format Selection

SSI # F0h, 30h

Parameter # 304

Select an image format appropriate for the system (BMP, TIFF, or JPEG). The scanner stores captured images in the selected format.

Options:

- BMP File Format
- *JPEG File Format
- TIFF File Format.

**BMP File Format
(03h)**

***JPEG File Format
(01h)**

Image File Format Selection (continued)

**TIFF File Format
(04h)**

Image Rotation

SSI # F1h 99h

Parameter # 665

This parameter controls the rotation of the image.

Rotation Options:

- *0 degrees
- 90 degrees
- 180 degrees
- 270 degrees.

***Rotate 0°
(00h)**

**Rotate 90°
(01h)**

Image Rotation (continued)

**Rotate 180°
(02h)**

**Rotate 270°
(03h)**

Bits Per Pixel (BPP)

SSI # F0h, 2Fh

Parameter # 303

Select the number of significant bits per pixel (BPP) to use when capturing an image. Select **1 BPP** for a black and white image, **4 BPP** to assign 1 of 16 levels of grey to each pixel, or **8 BPP** to assign 1 of 256 levels of grey to each pixel.

Note The scanner ignores these settings for JPEG file formats, which only support **8 BPP**.

The scanner ignores 1 BPP for TIFF file formats, which only support **4 BPP** and **8 BPP**. 1 BPP is coerced to 4 BPP for TIFF file formats.

Options:

- 1 BPP
- 4 BPP
- *8 BPP.

1 BPP
(00h)

4 BPP
(01h)

Bits Per Pixel (continued)

***8 BPP
(02h)**

Signature Capture

SSI # 5Dh

Parameter # 93

A signature capture bar code is a special-purpose symbology which delineates a signature capture area in a document with a machine-readable format. The recognition pattern is variable so it can optionally provide an index to various signatures. The region inside the bar code pattern is considered the signature capture area. See [Appendix H, SIGNATURE CAPTURE CODE](#) for more information.

Output File Format

Decoding a signature capture bar code de-skews the signature image and converts the image to a BMP, JPEG, or TIFF file format. The output data includes the file descriptor followed by the formatted signature image.

File Descriptor			Signature Image
Output Format (1 byte)	Signature Type (1 byte)	Signature Image Size (4 bytes) (BIG Endian)	
JPEG - 1 BMP - 3 TIFF - 4	1-8	0x00000400	0x00010203....

Options:

- Enable Signature Capture
- Disable Signature Capture.

**Enable Signature Capture
(01h)**

***Disable Signature Capture
(00h)**

Signature Capture File Format Selection

SSI # F0h, 39h

Parameter # 313

Select a signature file format appropriate for the system (BMP, TIFF, or JPEG). The scanner stores captured signatures in the selected format.

Options:

- BMP Signature Format
- *JPEG Signature Format
- TIFF Signature Format.

**BMP Signature Format
(03h)**

***JPEG Signature Format
(01h)**

Signature Capture File Format Selection (continued)

**TIFF Signature Format
(04h)**

Signature Capture Bits Per Pixel

SSI # F0h, 3Ah

Parameter # 314

Select the number of significant bits per pixel (BPP) to use when capturing a signature. Select **1 BPP** for a black and white image, **4 BPP** to assign 1 of 16 levels of grey to each pixel, or **8 BPP** to assign 1 of 256 levels of grey to each pixel.

Options:

- 1 BPP
- 4 BPP
- *8 BPP.

✓ **Note** The scanner ignores these settings for JPEG file formats, which only support **8 BPP**.

1 BPP
(00h)

4 BPP
(01h)

Signature Capture Bits Per Pixel (continued)

*8 BPP
(02h)

Signature Capture Width

SSI # F4h, F0h, 6Eh

Parameter # 366

The aspect ratio of the Signature Capture Width and Signature Capture Height parameters must match that of the signature capture area. For example, a 4 x 1 inch signature capture area would require a 4 to 1 aspect ratio of width to height.

To set the width of the signature capture box, scan the **Signature Capture Width** bar code, followed by 4 bar codes from [Appendix G, NUMERIC BAR CODES](#) corresponding to a value in the range of 0001 to 1280 decimal.

Signature Capture Width
(Default: 400)
(001 - 1280 Decimal)

Signature Capture Height

SSI # F4h, F0h, 6Fh

Parameter # 367

To set the height of the signature capture box, scan the **Signature Capture Height** bar code, followed by 3 bar codes from [Appendix G, NUMERIC BAR CODES](#) corresponding to a value in the range of 001 to 960 decimal.

Signature Capture Height (Default: 100)
(001 - 960 Decimal)

Signature Capture JPEG Quality**SSI # F0h, A5h****Parameter # 421**

Scan the **JPEG Quality Value** bar code followed by 3 bar codes from [Appendix G, NUMERIC BAR CODES](#) corresponding to a value from 005 to 100, where 100 represents the highest quality image.

JPEG Quality Value (Default: 065)
(5 - 100 Decimal)

Video View Finder

SSI # F0h 44h

Parameter # 324

Select **Enable Video View Finder** to project the video view finder while in Video Mode, or **Disable Video View Finder** to turn the video view finder off.

Options:

- *Disable Video View Finder
- Enable Video View Finder.

***Disable Video View Finder
(0)**

**Enable Video View Finder
(1)**

Video View Finder Image Size

SSI # F0h 49h

Parameter # 329

Select the number of 100-byte blocks. Values range from 800 to 12,000 bytes. Selecting a smaller value transmits more frames per second; selecting a larger value increases video quality.

To set the Video View Finder Image Size, scan the bar code below followed by three bar codes from [Appendix G, NUMERIC BAR CODES](#) corresponding to the 100-byte value from 800 to 12,000 bytes. For example, to select 1500 bytes, enter 0, 1, 5. To select 900 bytes, enter 0, 0, 9. The default is 1700 bytes.

Video View Finder Image Size

CHAPTER 7 USB INTERFACE

Introduction

This chapter provides information on setting up the scanner with a USB host. The scanner attaches directly to a USB host computer.

If no auxiliary scanner is used, the host can power the scanner through the interface cable. If an auxiliary scanner is used, an external power supply is necessary.

Throughout the programming bar code menus, asterisks (*) indicate default values.

*No Delay

* Indicates Default Feature/Option

Connecting a USB Interface

The scanner connects with most USB-capable hosts including:

- Desktop PCs and Notebooks
- Apple™
- IBM SurePOS terminals.

The scanner supports a number of Operating Systems including:

- Windows® XP, 7, and 8
- MacOS
- IBM 4690 OS.

The scanner also interfaces with other USB hosts that support USB Human Interface Devices (HID).

Figure 7-1 *USB Connection - Host Supplies Power*

Figure 7-2 USB Connection With Optional Auxiliary Scanner - 12 Volt Power Supplied Externally

- ✓ **Note** Interface cables vary depending on configuration. The connectors may be different from the examples illustrated, but the steps to connect the scanner are the same. See [USB Cables on page vi](#) for cable information and part numbers.

To set up the DS7708 with a USB interface:

1. Remove the back cover from the DS7708. See [Removing the Back Cover on page 1-5](#).
2. Plug the host interface cable modular connector into the scanner's host port.
3. Connect the other end of the interface cable to the host.
4. Select the USB device type. See [USB Device Type on page 7-5](#).
5. If not using a North American keyboard, scan the appropriate country bar code in [Appendix B, COUNTRY CODES](#).
6. If using an auxiliary scanner:
 - a. Connect the auxiliary scanner cable to the auxiliary scanner port on the DS7708.
 - b. Connect a 12 volt external power supply to the host cable as shown in [Figure 7-2](#), or connect a 12 volt Power Plus host connector.
7. Replace the DS7708 back cover (see [Removing and Replacing the Back Cover on page 1-5](#)).

USB Default Parameters

Table 7-1 lists the defaults for USB host parameters. To change any option, scan the appropriate bar code(s) beginning in *USB Host Parameters on page 7-5*.

Note See *Appendix B, COUNTRY CODES* for USB Country Keyboard Types (Country Codes).

See *Appendix A, STANDARD DEFAULT PARAMETERS* for all user preferences, hosts, symbologies, and miscellaneous default parameters.

Table 7-1 *USB Host Default Table*

Parameter	Default	Page Number

USB Host Parameters

USB Device Type

Select the desired USB device type.

- ✓ **notes** When changing USB Device Types, the scanner automatically restarts and issues the standard startup beep sequences.

Select IBM Hand-held USB to transmit data only once when an IBM register issues a Scan Disable command. If the register issues a Scan Enable command before the timeout expires, scanning can continue. If a Scan Enable does not occur within the timeout, the scanner issues 4 long low transmission error beeps, and data does not transmit. You can then scan again under the same criteria.

Select OPOS (IBM Hand-held with Full Disable) to completely shut off the scanner when an IBM register issues a Scan Disable command, including aim, illumination, decoding, and data transmission.

Options:

- *USB HID Keyboard
- IBM Table-Top USB
- IBM Hand-Held USB
- OPOS (IBM Hand-Held with Full Disable)
- Simple COM Port Emulation
- USB CDC Host
- Symbol Native API (SNAPI) with Imaging Interface
- Symbol Native API (SNAPI) without Imaging Interface.

***USB HID Keyboard**

IBM Table-Top USB

USB Device Type (continued)

**OPOS
(IBM Hand-Held with Full Disable)**

USB Device Type (continued)**Simple COM Port Emulation****USB CDC Host**

USB Device Type (continued)

Symbol Native API (SNAPI) with Imaging Interface

Symbol Native API (SNAPI) without Imaging Interface

Symbol Native API (SNAPI) Status Handshaking

After selecting a SNAPI interface as the USB device type, select whether to enable or disable status handshaking.

Options:

- *Enable SNAPI Status Handshaking
- Disable SNAPI Status Handshaking.

***Enable SNAPI Status Handshaking**

Disable SNAPI Status Handshaking

USB Keystroke Delay

This parameter sets the delay, in milliseconds, between emulated keystrokes. Scan one of the following bar codes to increase the delay when hosts require a slower transmission of data.

Options:

- *No Delay
- Medium Delay (20 msec)
- Long Delay (40 msec).

***No Delay**

Medium Delay (20 msec)

USB Keystroke Delay (continued)**Long Delay (40 msec)**

USB CAPS Lock Override

This option applies only to the HID Keyboard Emulation device. When enabled, the case of the data is preserved regardless of the state of the caps lock key. This setting is always enabled for the Japanese, Windows (ASCII) keyboard type and can not be disabled.

Options:

- Override Caps Lock Key (Enable)
- *Do Not Override Caps Lock Key (Disable).

**Override Caps Lock Key
(Enable)**

***Do Not Override Caps Lock Key
(Disable)**

USB Ignore Unknown Characters

This option applies only to the HID Keyboard Emulation device and IBM device. Unknown characters are characters the host does not recognize. When **Send Bar Codes With Unknown Characters** is selected, all bar code data is sent except for unknown characters, and no error beeps sound. When **Do Not Send Bar Codes With Unknown Characters** is selected, bar codes containing at least one unknown character are not sent to the host, and an error beep sounds.

Options:

- *Send Bar Codes With Unknown Characters
- Do Not Send Bar Codes With Unknown Characters.

***Send Bar Codes With Unknown Characters**

Do Not Send Bar Codes With Unknown Characters

USB Convert Unknown to Code 39

This option applies only to the IBM hand-held, IBM table-top, and OPOS devices. Scan a bar code below to enable or disable converting unknown bar code type data to Code 39.

Options:

- *Disable Convert Unknown to Code 39
- Enable Convert Unknown to Code 39.

***Disable Convert Unknown to Code 39**

Enable Convert Unknown to Code 39

Emulate Keypad

When enabled, all characters are sent as ASCII sequences over the numeric keypad. For example ASCII A would be sent as "ALT make" 0 6 5 "ALT Break."

Options:

- Disable Emulate Keypad
- *Enable Emulate Keypad.

Disable Emulate Keypad

***Enable Emulate Keypad**

Keypad Emulation with Leading Zero

Enable this to send character sequences sent over the numeric keypad as ISO characters which have a leading zero. For example ASCII A transmits as "ALT MAKE" 0 0 6 5 "ALT BREAK".

Options:

- Disable Keypad Emulation with Leading Zero
- *Enable Keypad Emulation with Leading Zero.

Disable Keypad Emulation with Leading Zero

***Enable Keypad Emulation with Leading Zero**

USB Keyboard FN1 Substitution

This option applies only to the USB HID Keyboard Emulation device. Enable this to replace any FN1 characters in a GS1 bar code with a selected Key Category and value (see [FN1 Substitution Values on page 5-38](#) to set the Key Category and Key Value).

Options:

- Enable Keyboard FN1 Substitution
- *Disable Keyboard FN1 Substitution.

Enable

***Disable**

Function Key Mapping

ASCII values under 32 are normally sent as a control-key sequences (see [Table 7-2 on page 7-34](#)). Enable this parameter to send the keys in bold in place of the standard key mapping. Items that do not have a bold entry remain the same whether or not this parameter is enabled.

Options:

- *Disable Function Key Mapping
- Enable Function Key Mapping.

***Disable Function Key Mapping**

Enable Function Key Mapping

Simulated Caps Lock

Enable this to invert upper and lower case characters on the bar code as if the Caps Lock state is enabled on the keyboard. This inversion occurs regardless of the keyboard's Caps Lock state.

✓ **Note** Simulated Caps Lock applies to ASCII characters only.

Options:

- *Disable Simulated Caps Lock
- Enable Simulated Caps Lock.

***Disable Simulated Caps Lock**

Enable Simulated Caps Lock

Convert Case

When enabled, the scanner converts all bar code data to the selected case.

Options:

- *No Case Conversion
- Convert All To Upper Case
- Convert All To Lower Case.

***No Case Conversion**

Convert All to Upper Case

Convert Case (continued)

Convert All to Lower Case

USB Static CDC

When disabled, each device connected consumes another COM port (first device = COM1, second device = COM2, third device = COM3, etc.)

When enabled, each device connects to the same COM port.

Options:

- *Enable USB Static CDC
- Disable USB Static CDC.

***Enable USB Static CDC**

Disable USB Static CDC

Direct I/O Beep

The host can send a direct I/O beep request to the scanner. If you select **Ignore Direct I/O Beep**, the scanner does not sound beeps on this command. All directives are still acknowledged to the USB host as if they were processed.

Options:

- *Honor Direct IO Beep
- Ignore Direct IO Beep.

***Honor Direct IO Beep**

Ignore Direct IO Beep

USB Transmission Speed Parameters

Use the following parameters to speed USB data transmission:

- *USB HID Polling Interval* - When using more current USB systems, use this parameter to set a lower interval in order to increase data transmission speed.
- *Fast HID Keyboard* - When configured as a USB HID keyboard device, use this parameter to increase the data transmission speed of printable (7-bit) ASCII characters.
- *Quick Keypad Emulation* - When configured as a USB HID keyboard device, use this parameter to increase the data transmission speed of a mix of both printable (7-bit) and full (8-bit) ASCII characters.

✓ **Note** Enabling *Emulate Keypad on page 7-15* or *Quick Keypad Emulation on page 7-30* overrides *Fast HID Keyboard*.

USB HID Polling Interval

This option speeds data transmission for all USB devices except CDC. Scan the appropriate bar code to set the polling interval. The polling interval determines the rate at which data can be sent between the scanner and the host computer. A lower number indicates a faster data rate. The default value is 3 msec.

Options:

- 1 msec
- 2 msec
- *3 msec
- 4 msec
- 5 msec
- 6 msec
- 7 msec
- 8 msec.

Changing the polling interval re-initializes the scanner.

caution Ensure the host can handle the selected data rate. Selecting a data rate that is too fast for the host can result in lost data.

1 msec

USB HID Polling Interval (continued)

2 msec

*3 msec

USB HID Polling Interval (continued)

9 msec

Fast HID Keyboard

This option transmits USB HID keyboard data at a faster rate.

Options:

- *Enable Fast HID Keyboard
- Disable Fast HID Keyboard.

✓ **Note** Enabling [Emulate Keypad on page 7-15](#) or [Quick Keypad Emulation on page 7-30](#) overrides [Fast HID Keyboard](#).

***Enable**

Disable

Quick Keypad Emulation

This option applies only to the HID keyboard emulation device when [Emulate Keypad on page 7-15](#) is enabled. This parameter enables a quicker method of emulation utilizing the numeric keypad. The default value is **Disable**.

Options:

- *Enable Quick Keypad Emulation
- Disable Quick Keypad Emulation.

✓ **Note** Enabling [Emulate Keypad on page 7-15](#) or [Quick Keypad Emulation on page 7-30](#) overrides [Fast HID Keyboard](#).

*Enable

Disable

IBM Specification Version

The IBM USB interface specification version selected defines how code types are reported over the IBM USB interface.

Options:

- Original Specification
- *Version 2.2.

Original Specification

***Version 2.2**

Optional USB Parameters

If the configured settings are changed or not saved after restarting the system, scan the following bar codes to override USB interface defaults.

Beep Directive

Scan one of the following bar codes to honor or ignore a beep directive from the USB host. When enabled, the request is **not** sent to the scanner. All directives are still acknowledged to the USB host as if they were processed.

Options:

- *Ignore Beep Directive
- Honor Beep Directive

***Ignore Beep Directive**

Honor Beep Directive

Bar Code Configuration Directive

Scan one of the following bar codes to honor or ignore a bar code configuration (type) directive from the USB host. When this parameter is enabled, this request is **not** sent to the scanner. All directives are still acknowledged to the USB host as if they were processed.

Options:

- Honor Bar Code Configuration Directive
- *Ignore Bar Code Configuration Directive.

Honor Bar Code Configuration Directive

***Ignore Bar Code Configuration Directive**

CHAPTER 8 RS-232 INTERFACE

Introduction

This chapter provides information for setting up the scanner with an RS-232 host. Use the RS-232 interface to attach the scanner to point-of-sale devices, host computers, or other devices with an available RS-232 port (e.g., com port). This scanner uses TTL RS-232 levels to interface with all PC's without additional hardware.

✓ **Note** Particularly noisy electrical environments may require a cable with an RS-232 transceiver. To obtain this cable, contact the Zebra Support Center.

If the particular host is not listed in [Table 8-1](#), set the communication parameters to match the host device. See the documentation for the host device.

Throughout the programming bar code menus, asterisks (*) indicate default values.

* Indicates Default — *Baud Rate 9600 — Feature/Option

Connecting an RS-232 Interface

There are two possible configurations for connecting to an RS-232 host. The DS7708 connects directly to the host computer; and an auxiliary scanner can connect to the DS7708. Both configurations require a power supply; 5 volt without an auxiliary scanner, and 12 volt with an auxiliary scanner.

Figure 8-1 RS-232 Connection - 5 Volt Power Supplied Externally

Figure 8-2 RS-232 Connection with Auxiliary Scanner - 12 Volt Power Supplied Externally

- ✓ **Note** Interface cables vary depending on configuration. The connectors may be different from the examples illustrated, but the steps to connect the scanner are the same. See [RS-232 Cables on page vii](#) for cable information and part numbers.

To set up the DS7708 with an RS-232 interface:

1. Remove the back cover from the DS7708. See [Removing the Back Cover on page 1-5](#).
2. Plug the host interface cable modular connector into the scanner's host port host port.
3. Connect the other end of the interface cable to the serial port on the host.
4. Scan the appropriate bar codes in this chapter, or use 123Scan² to match the host settings.
5. If using an auxiliary scanner:
 - a. Connect the auxiliary scanner cable to the auxiliary scanner port on the DS7708.
 - b. Connect a 12 volt external power supply to a 12 volt Power Plus host connector as shown in [Figure 8-2](#).
6. Replace the DS7708 back cover (see [Removing and Replacing the Back Cover on page 1-5](#)).

RS-232 Default Parameters

Table 8-1 lists the defaults for RS-232 host parameters. To change any option, scan the appropriate bar code(s) beginning in *RS-232 Host Parameters on page 8-5*.

notes See *Appendix A, STANDARD DEFAULT PARAMETERS* for all user preferences, hosts, symbologies, and miscellaneous default parameters.

Table 8-1 *RS-232 Host Default Table*

Parameter	Default	Page Number
RS-232 Host Parameters		
RS-232 Host Types	Standard	8-7
Baud Rate	9600	8-11
Parity	None	8-14
Check Receive Errors	Enable	8-16
Hardware Handshaking	None	8-17
Software Handshaking	None	8-21
Host Serial Response Time-out	2 Sec	8-24
RTS Line State	Low RTS	8-27
Stop Bit Select	1 Stop Bit	8-28
Data Bits	8-Bit	8-29
Beep on <BEL>	Disable	8-30
Intercharacter Delay	0 msec	8-31
Nixdorf Beep/LED Option	Normal Operation	8-34
Ignore Unknown Characters	Send Bar Codes	8-36

RS-232 Host Parameters

Various RS-232 hosts are set up with their own parameter default settings. Selecting the ICL, Fujitsu, Wincor-Nixdorf Mode A, Wincor-Nixdorf Mode B, Olivetti, Omron, or terminal sets the defaults listed in [Table 8-2](#).

Table 8-2 Terminal Specific RS-232

Parameter	Standard (Default)	ICL	Fujitsu	Wincor-Nixdorf Mode A	Wincor-Nixdorf Mode B/OPOS	Olivetti	Omron
Transmit Code ID	No	Yes	Yes	Yes	Yes	Yes	Yes
Data Transmission Format	Data as is	Data/Suffix	Data/Suffix	Data/Suffix	Data/Suffix	Prefix/Data/Suffix	Data/Suffix
Suffix	CR/LF (7013)	CR (1013)	CR (1013)	CR (1013)	CR (1013)	ETX (1002)	CR (1013)
Baud Rate	9600	9600	9600	9600	9600	9600	9600
Parity	None	Even	None	Odd	Odd	Even	None
Hardware Handshaking	None	RTS/CTS Option 3	None	RTS/CTS Option 3	RTS/CTS Option 3	None	None
Software Handshaking	None	None	None	None	None	Ack/Nak	None
Serial Response Time-out	2 Sec.	9.9 Sec.	2 Sec.	9.9 Sec.	9.9 Sec.	9.9 Sec.	9.9 Sec.
Stop Bit Select	One	One	One	One	One	One	One
ASCII Format	8-Bit	8-Bit	8-Bit	8-Bit	8-Bit	7-Bit	8-Bit
Beep On <BEL>	Disable	Disable	Disable	Disable	Disable	Disable	Disable
RTS Line State	Low	High	Low	Low	Low = No data to send	Low	High
Prefix	None	None	None	None	None	STX (1003)	None

*In the Nixdorf Mode B, if CTS is Low, scanning is disabled. When CTS is High, the user can scan bar codes.

**If Nixdorf Mode B is scanned without the scanner connected to the proper host, it may appear unable to scan. If this happens, scan a different RS-232 host type within 5 seconds of cycling power to the scanner.

Selecting the ICL, Fujitsu, Wincor-Nixdorf Mode A, Wincor-Nixdorf Mode B, OPOS, JPOS terminal enables the transmission of code ID characters listed in [Table 8-3](#). These code ID characters are not programmable and are separate from the Transmit Code ID feature. Do not enable the Transmit Code ID feature for these terminals.

Table 8-3 Terminal Specific Code ID Characters

Code Type	ICL	Fujitsu	Wincor-Nixdorf Mode A	Wincor-Nixdorf Mode B/ OPOS/JPOS	Olivetti	Omron

RS-232 Host Types

To select an RS-232 host interface, scan one of the following bar codes.

Options:

- *Standard RS-232
- ICL RS-232
- Wincor-Nixdorf RS-232 Mode A
- Wincor-Nixdorf RS-232 Mode B
- Fujitsu RS-232
- Olivetti ORS4500
- Omron
- OPOS/JPOS.

***Standard RS-232**

ICL RS-232

RS-232 Host Types (continued)

Wincor-Nixdorf RS-232 Mode A

Wincor-Nixdorf RS-232 Mode B

RS-232 Host Types (continued)

Fujitsu RS-232

Olivetti ORS4500

RS-232 Host Types (continued)

Omron

OPOS/JPOS

Baud Rate

Baud rate is the number of bits of data transmitted per second. Select the baud rate setting to match the baud rate setting of the host device. Otherwise, data may not reach the host device or may reach it in distorted form.

Options:

- *9600
- 19,200
- 38,400
- 57,600
- 115,200.

***Baud Rate 9600**

Baud Rate 19,200

Baud Rate (continued)

Baud Rate 38,400

Baud Rate 57,600

Baud Rate (continued)

Baud Rate 115,200

Parity

A parity check bit is the most significant bit of each ASCII coded character. Select the parity type according to host device requirements.

Select **Odd** parity and the parity bit value is set to 0 or 1, based on data, to ensure that an odd number of 1 bits are contained in the coded character.

Options:

- Odd
- Even - Select Even parity and the parity bit value is set to 0 or 1, based on data, to ensure that an even number of 1 bits are contained in the coded character.
- *None - Select **None** when no parity bit is required.

Odd

Even

Parity (continued)

***None**

Check Receive Errors

Select whether or not the parity, framing, and overrun of received characters are checked. The parity value of received characters is verified against the parity parameter selected above.

Options:

- *Check For Received Errors
- Do Not Check For Received Errors.

***Check For Received Errors**

Do Not Check For Received Errors

Hardware Handshaking

The data interface consists of an RS-232 port designed to operate either with or without the hardware handshaking lines, *Request to Send (RTS)*, and *Clear to Send (CTS)*.

If Standard RTS/CTS handshaking is not selected, scan data is transmitted as it becomes available. If Standard RTS/CTS handshaking is selected, scan data is transmitted according to the following sequence:

- The scanner reads the CTS line for activity. If CTS is asserted, the scanner waits up to 2 seconds for the host to negate the CTS line. If, after 2 seconds (default), the CTS line is still asserted, the scanner sounds a transmit error, and any scanned data is lost.
- When the CTS line is negated, the scanner asserts the RTS line and waits up to 2 seconds for the host to assert CTS. When the host asserts CTS, data is transmitted. If, after 2 seconds (default), the CTS line is not asserted, the scanner sounds a transmit error, and discards the data.
- When data transmission is complete, the scanner negates RTS 10 msec after sending the last character.
- The host should respond by negating CTS. The scanner checks for a negated CTS upon the next transmission of data.

During the transmission of data, the CTS line should be asserted. If CTS is deasserted for more than 50 ms between characters, the transmission is aborted, the scanner sounds a transmission error, and the data is discarded.

If the above communications sequence fails, the scanner issues an error indication. In this case, the data is lost and must be rescanned.

If Hardware Handshaking and Software Handshaking are both enabled, Hardware Handshaking takes precedence.

Note The DTR signal is jumpered to the active state.

Options:

- *None
- Standard RTS/CTS
- RTS/CTS Option 1
- RTS/CTS Option 2
- RTS/CTS Option 3.

Hardware Handshaking (continued)

None

Scan the bar code below if no Hardware Handshaking is desired.

***None**

Standard RTS/CTS

Scan the bar code below to select Standard RTS/CTS Hardware Handshaking.

Standard RTS/CTS

Hardware Handshaking (continued)

RTS/CTS Option 1

When RTS/CTS Option 1 is selected, the scanner asserts RTS before transmitting and ignores the state of CTS. The scanner de-asserts RTS when the transmission is complete.

RTS/CTS Option 1

RTS/CTS Option 2

When Option 2 is selected, RTS is always high or low (user-programmed logic level). However, the scanner waits for CTS to be asserted before transmitting data. If CTS is not asserted within 2 seconds (default), the scanner issues an error indication and discards the data.

RTS/CTS Option 2

Hardware Handshaking (continued)

RTS/CTS Option 3

When Option 3 is selected, the scanner asserts RTS prior to any data transmission, regardless of the state of CTS. The scanner waits up to 2 seconds (default) for CTS to be asserted. If CTS is not asserted during this time, the scanner issues an error indication and discards the data. The scanner de-asserts RTS when transmission is complete.

RTS/CTS Option 3

Software Handshaking

This parameter offers control of the data transmission process in addition to, or instead of, that offered by hardware handshaking. There are five options.

If Software Handshaking and Hardware Handshaking are both enabled, Hardware Handshaking takes precedence.

Options:

- *None
- ACK/NAK
- ENQ
- ACK/NAK with ENQ
- XON/XOFF.

None

When this option is selected, data is transmitted immediately.

***None**

ACK/NAK

When this option is selected, after transmitting data, the scanner expects either an ACK or NAK response from the host. When a NAK is received, the scanner transmits the same data again and waits for either an ACK or NAK. After three unsuccessful attempts to send data when NAKs are received, the scanner issues an error indication and discards the data.

The scanner waits up to the programmable Host Serial Response Time-out to receive an ACK or NAK. If the scanner does not get a response in this time, it issues an error indication and discards the data. There are no retries when a time-out occurs.

ACK/NAK

Software Handshaking (continued)

ENQ

When this option is selected, the scanner waits for an ENQ character from the host before transmitting data. If an ENQ is not received within the Host Serial Response Time-out, the scanner issues an error indication and discards the data. The host must transmit an ENQ character at least every Host Serial Response Time-out to prevent transmission errors.

ENQ

ACK/NAK with ENQ

This combines the two previous options.

ACK/NAK with ENQ

Software Handshaking (continued)

XON/XOFF

An XOFF character turns the scanner transmission off until the scanner receives an XON character. There are two situations for XON/XOFF:

- XOFF is received before the scanner has data to send. When the scanner has data to send, it waits up to 2 seconds for an XON character before transmission. If the XON is not received within this time, the scanner issues an error indication and discards the data.
- XOFF is received during a transmission. Data transmission then stops after sending the current byte. When the scanner receives an XON character, it sends the rest of the data message. The scanner waits indefinitely for the XON.

XON/XOFF

Host Serial Response Time-out

This parameter specifies how long the scanner waits for an ACK, NAK, or CTS before determining that a transmission error has occurred. This only applies when in one of the ACK/NAK Software Handshaking modes, or RTS/CTS Hardware Handshaking option.

Options:

- *Minimum: 2 Sec
- Low: 2.5 Sec.
- Medium: 5 Sec
- High: 7.5 Sec
- Maximum: 9.9 Sec.

***Minimum: 2 Sec**

Low: 2.5 Sec

Host Serial Response Time-out (continued)

Medium: 5 Sec

High: 7.5 Sec

Host Serial Response Time-out (continued)

Maximum: 9.9 Sec

RTS Line State

This parameter sets the idle state of the Serial Host RTS line. Scan a bar code below to select **Low RTS** or **High RTS** line state.

Options:

- *Host: Low RTS
- Host: High RTS.

***Host: Low RTS**

Host: High RTS

Stop Bit Select

The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving device for the next character in the serial data stream. The number of stop bits selected (one or two) depends on the number the receiving terminal is programmed to accommodate. Set the number of stop bits to match host device requirements.

Options:

- *1 Stop Bit
- 2 Stop Bits.

***1 Stop Bit**

2 Stop Bits

Data Bits

This parameter allows the scanner to interface with devices requiring a 7-bit or 8-bit ASCII protocol.

Options:

- 7-Bit
- *6-Bit.

7-Bit

***8-Bit**

Beep on <BEL>

When this parameter is enabled, the scanner issues a beep when a <BEL> character is detected on the RS-232 serial line. <BEL> is issued to gain a user's attention to an illegal entry or other important event.

Options:

- Beep On <BEL> Character (Enable)
- *Do Not Beep On <BEL> Character (Disable).

Beep On <BEL> Character (Enable)

***Do Not Beep On <BEL> Character (Disable)**

Intercharacter Delay

This parameter specifies the intercharacter delay inserted between character transmissions.

Options:

- *Minimum: 0 msec
- Low: 25 msec
- Medium: 50 msec
- High: 75 msec
- Maximum: 99 msec.

***Minimum: 0 msec**

Low: 25 msec

Intercharacter Delay (continued)

Medium: 50 msec

High: 75 msec

Intercharacter Delay (continued)**Maximum: 99 msec**

Nixdorf Beep/LED Options

When Nixdorf Mode B is selected, this indicates when the scanner should beep and turn on its LED after a decode.

Options:

- *Normal Operation (Beep/LED immediately after decode)
- Beep/LED After Transmission
- Beep/LED After CTS Pulse.

***Normal Operation
(Beep/LED immediately after decode)**

Beep/LED After Transmission

Nixdorf Beep/LED Options (continued)**Beep/LED After CTS Pulse**

Ignore Unknown Characters

Unknown characters are characters the host does not recognize. When **Send Bar Codes With Unknown Characters** is selected, all bar code data is sent except for unknown characters, and no error beeps sound on the scanner. When **Do Not Send Bar Codes With Unknown Characters** is selected, bar code data is sent up to the first unknown character and then four (error) beeps sound on the scanner.

Options:

- *Send Bar Code (With Unknown Characters)
- Do Not Send Bar Codes (With Unknown Characters).

***Send Bar Code
(With Unknown Characters)**

**Do Not Send Bar Codes
(With Unknown Characters)**

ASCII Character Set for RS-232

You can assign the values in [Table 8-4](#) as prefixes or suffixes for ASCII character data transmission.

Table 8-4 *Prefix/Suffix Values*

CHAPTER 9 IBM 468X/469X INTERFACE

Introduction

This chapter provides information on setting up the scanner with an IBM 468X/469X host.

Throughout the programming bar code menus, asterisks (*) indicate default values.

* Indicates Default *Disable Convert _____ Feature/Option
Unknown to Code 39

Connecting to an IBM 468X/469X Host

The DS7708 connects directly to an IBM host interface. This configuration requires an external power supply regardless of whether peripherals are attached.

Figure 9-1 IBM Connection - Host Supplies Power

Figure 9-2 IBM Connection with Optional Auxiliary Scanner

- ✓ **Note** Interface cables vary depending on configuration. The connectors may be different from the examples illustrated, but the steps to connect the scanner are the same. See [IBM Cables on page viii](#) for cable information and part numbers.

To set up the DS7708 with an IBM interface:

1. Remove the back cover from the DS7708. See [Removing the Back Cover on page 1-5](#).
2. Plug the host interface cable into the scanner's host port.
3. Connect the other end of the interface cable to the appropriate port on the host (typically, Port 9).
4. Scan the appropriate bar codes in this chapter, or use 123Scan² to match the host settings.
5. If using an auxiliary scanner:
 - a. Connect the auxiliary scanner cable to the auxiliary scanner port on the DS7708.
 - b. Connect either a CBA-M65-S07ZAR or CBA-M66-S15ZAR 12 volt cable to the host as shown in [Figure 9-2](#).
6. Replace the DS7708 back cover (see [Removing and Replacing the Back Cover on page 1-5](#)).

IBM Default Parameters

Table 9-1 lists the defaults for IBM host parameters. To change any option, scan the appropriate bar code(s) beginning in *IBM 468X/469X Host Parameters on page 9-5*.

✓ **Note** See *Appendix A, STANDARD DEFAULT PARAMETERS* for all user preferences, hosts, symbologies, and miscellaneous default parameters.

Table 9-1 *IBM Host Default Table*

Parameter	Default	Page Number
IBM 468X/469X Host Parameters		
Port Address	None Selected ¹	9-5
Convert Unknown to Code 39	Disable	9-7
Beep Directive	Honor	9-8
Bar Code Configuration Directive	Honor	9-9
IBM-485 Specification Version	Original Specification	9-10

¹User selection is required to configure this interface and this is the most common selection.

IBM 468X/469X Host Parameters

Port Address

This parameter sets the IBM 468X/469X port used.

✓ **Note** Scanning one of these bar codes enables the RS-485 interface on the scanner.

Options:

- *None Selected
- Hand-held Scanner Emulation (Port 9B)
- Hand-Held Scanner Emulation (Port 5B)
- Table-top Scanner Emulation (Port 17).

***None Selected**

Hand-held Scanner Emulation (Port 9B)

Port Address (continued)

Hand-Held Scanner Emulation (Port 5B)

Table-top Scanner Emulation (Port 17)

Convert Unknown to Code 39

Scan a bar code below to enable or disable the conversion of unknown bar code type data to Code 39.

Options:

- Enable Convert Unknown to Code 39
- *Disable Convert Unknown to Code 39.

Enable Convert Unknown to Code 39

***Disable Convert Unknown to Code 39**

RS-485 Beep Directive

The IBM RS-485 host can send a beeper configuration request to the scanner. Scan **Ignore Beep Directive** to prevent the scanner from processing the host request. All directives are still acknowledged to the host as if they were processed.

Options:

- *Honor Beep Directive.
- Ignore Beep Directive

***Honor Beep Directive**

Ignore Beep Directive

RS-485 Bar Code Configuration Directive

The IBM RS-485 host can enable and disable code types. Scan **Ignore Bar Code Configuration Directive** to prevent the scanner from processing the host request. All directives are still acknowledged to the IBM RS-485 host as if they were processed.

Options:

- *Honor Bar Code Configuration Directive
- Ignore Bar Code Configuration Directive.

***Honor Bar Code Configuration Directive**

Ignore Bar Code Configuration Directive

IBM-485 Specification Version

SSI # F8h 06h C1h

Parameter # 1729

The IBM interface specification version selected defines how code types are reported over the IBM interface.

Options:

- *Original Specification - only symbologies that were historically supported on each individual port are reported as known.
- Version 2.0 - all symbologies covered in the newer IBM specification are reported as known with their respective code types.

***Original Specification**
(0)

Version 2.0
(1)

CHAPTER 10 KEYBOARD WEDGE INTERFACE

Introduction

This chapter provides information for setting up the scanner with a Keyboard Wedge interface. Use this interface type to attach the scanner between the keyboard and host computer. The scanner translates bar code data into keystrokes which the host computer accepts as if they originate from the keyboard.

This mode of operation allows adding bar code reading functionality to a system designed for manual keyboard input. In this mode the keyboard keystrokes are simply passed through.

Throughout the programming bar code menus, asterisks (*) indicate default values.

* Indicates Default — ***No Delay** — Feature/Option

Connecting a Keyboard Wedge Interface

There are two possible configurations for connecting to a Keyboard Wedge host:

- The DS7708 connects directly to the host computer and keyboard using the keyboard wedge Y-cable (see [Figure 10-1](#)).
- The DS7708 connects directly to the host computer and keyboard using the keyboard wedge Y-cable, and an auxiliary scanner connects to the DS7708. A 12 volt power connection is required when using an auxiliary scanner (see [Figure 10-2](#)).

Figure 10-1 Keyboard Wedge Connection - 5 Volt Power Supplied Externally

Figure 10-2 Keyboard Wedge Connection - With Auxiliary Scanner/Power Supplied Externally

- ✓ **Note** Interface cables vary depending on configuration. The connectors may be different from the examples illustrated, but the steps to connect the scanner are the same. See [Keyboard Wedge Cables on page viii](#) for cable information and part numbers.

To set up the DS7708 with a Keyboard Wedge interface:

1. Switch off the host and unplug the keyboard connector.
2. Remove the back cover from the DS7708. See [Removing the Back Cover on page 1-5](#).
3. Plug the modular connector of the Y-cable into the scanner's host port.
4. Connect the round male DIN host connector of the Y-cable to the keyboard port on the host.
5. Connect the round female DIN keyboard connector of the Y-cable to the keyboard connector.
6. Connect the power supply to the scanner's power port.

- ✓ **Note** When connecting an auxiliary scanner, the required 12 Volt power supply is PWRS-14000-148C.

7. Ensure that all connections are secure.
8. Turn on the host system.
9. If not using a North American keyboard, scan the appropriate country bar code in [Appendix B, COUNTRY CODES](#).
10. If using an auxiliary scanner:
 - a. Connect the auxiliary scanner cable to the auxiliary scanner port on the DS7708.
 - b. Connect a 12 volt external power supply as shown in [Figure 10-2](#).
11. Replace the DS7708 back cover (see [Removing and Replacing the Back Cover on page 1-5](#)).
12. Scan the appropriate bar codes in this chapter or use 123Scan² to configure the scanner.

Keyboard Wedge Default Parameters

Table 10-1 lists the defaults for Keyboard Wedge host parameters. To change any option, scan the appropriate bar code(s) beginning in *Keyboard Wedge Host Types on page 10-5*.

Note See *Appendix B, COUNTRY CODES* for USB Country Keyboard Types (Country Codes).

See *Appendix A, STANDARD DEFAULT PARAMETERS* for all user preferences, hosts, symbologies, and miscellaneous default parameters.

Table 10-1 *Keyboard Wedge Host Default Table*

Parameter	Default	Page Number
Keyboard Wedge Host Parameters		
Keyboard Wedge Host Type	IBM AT Notebook	10-5
Ignore Unknown Characters	Send Bar Codes	10-6
Keystroke Delay	No Delay	10-7
Intra-Keystroke Delay	Disable	10-9
Alternate Numeric Keypad Emulation	Enable	10-10
Quick Keypad Emulation	Enable	10-11
Caps Lock On	Disable	10-12
Caps Lock Override	Disable	10-13
Convert Wedge Data	No Convert	10-14
Function Key Mapping	Disable	10-16
FN1 Substitution	Disable	10-17
Send Make Break	Send	10-18

Keyboard Wedge Host Types

Select the keyboard wedge host by scanning one of the following bar codes.

Options:

- IBM PC/AT & IBM PC Compatibles
- *IBM AT NOTEBOOK.

IBM PC/AT & IBM PC Compatibles

***IBM AT NOTEBOOK**

Ignore Unknown Characters

Unknown characters are characters the host does not recognize. When **Send Bar Codes With Unknown Characters** is selected, all bar code data is sent except for unknown characters, and no error beeps sound on the scanner. When **Do Not Send Bar Codes With Unknown Characters** is selected, bar code data is sent up to the first unknown character and then four (error) beeps sound on the scanner.

Options:

- *Send Bar Codes With Unknown Characters
- Do Not Send Bar Codes With Unknown Characters.

***Send Bar Codes With Unknown Characters**

Do Not Send Bar Codes With Unknown Characters

Keystroke Delay

This is the delay in milliseconds between emulated keystrokes. Scan a bar code below to increase the delay when hosts require a slower transmission of data.

Options:

- *No Delay
- Medium Delay (20 msec)
- Long Delay (40 msec).

***No Delay**

Medium Delay (20 msec)

Keystroke Delay (continued)

Long Delay (40 msec)

Intra-Keystroke Delay

Enable this to insert an additional delay between each emulated key depression and release. This sets the Keystroke Delay parameter to a minimum of 5 msec as well.

Options:

- Enable Intra-Keystroke Delay
- *Disable Intra-Keystroke Delay.

Enable

***Disable**

Alternate Numeric Keypad Emulation

This allows emulation of most other country keyboard types not listed in [Appendix B, COUNTRY CODES](#) in a Microsoft operating system environment.

Options

- *Enable Alternate Numeric Keypad
- Disable Alternate Numeric Keypad.

***Enable Alternate Numeric Keypad**

Disable Alternate Numeric Keypad

Quick Keypad Emulation

This parameter enables faster keypad emulation where character value sequences are only sent for characters not found on the keyboard.

Note This option applies only when [Alternate Numeric Keypad Emulation on page 10-10](#) is enabled.

Options:

- *Enable Quick Keypad Emulation
- Disable Quick Keypad Emulation.

***Enable Quick Keypad Emulation**

Disable Quick Keypad Emulation

Caps Lock On

When enabled, the scanner emulates keystrokes as if the Caps Lock key is always pressed.

Options:

- Enable Caps Lock On
- *Disable Caps Lock On.

Enable Caps Lock On

***Disable Caps Lock On**

Caps Lock Override

When enabled, on AT or AT Notebook hosts, the keyboard ignores the state of the Caps Lock key. Therefore, an 'A' in the bar code is sent as an 'A' regardless of the state of the keyboard's Caps Lock key.

Note If both Caps Lock On and Caps Lock Override are enabled, Caps Lock Override takes precedence.

Options:

- Enable Caps Lock Override
- *Disable Caps Lock Override.

Enable Caps Lock Override

***Disable Caps Lock Override**

Convert Wedge Data

When enabled, the scanner converts all bar code data to the selected case.

Options:

- Convert to Upper Case
- Convert to Lower Case
- *No Convert

Convert to Upper Case

Convert to Lower Case

Convert Wedge Data (continued)

***No Convert**

Function Key Mapping

ASCII values under 32 are normally sent as a control-key sequences (see [Table 10-2 on page 10-19](#)). Enable this parameter to send the keys in bold in place of the standard key mapping. Items that do not have a bold entry remain the same whether or not this parameter is enabled.

Options:

- Enable Function Key Mapping
- *Disable Function Key Mapping.

Enable

***Disable**

FN1 Substitution

Enable this to replace any FN1 characters in a GS1 bar code with a selected Key Category and Key Value (see [FN1 Substitution Values on page 5-38](#)).

Options:

- Enable FN1 Substitution
- *Disable FN1 Substitution.

Enable

***Disable**

Send Make Break

When enabled, the scan codes for releasing a key are not sent.

Options:

- *Send Make and Break Scan Codes
- Send Make Scan Code Only.

***Send Make and Break Scan Codes**

Send Make Scan Code Only

ASCII Character Set for Keyboard Wedge

✓ **Note** Code 39 Full ASCII interprets the bar code special character (\$ + % /) preceding a Code 39 character and assigns an ASCII character value to the pair. For example, if you enable Code 39 Full ASCII and scan **+B**, it transmits as **b**, **%J** as **?**, and **%V** as **@**. Scanning **ABC%I** outputs the keystroke equivalent of **ABC >**.

Table 10-2 Keyboard Wedge ASCII Character Set

ASCII Value	Full ASCII Code 39 Encode Character	Keystroke
1001	\$A	CTRL A
1002	\$B	CTRL B

CHAPTER 11 SSI INTERFACE

Introduction

This chapter describes the system requirements of the Simple Serial Interface (SSI), which provides a communications link between Zebra decoders (e.g., scan engines, slot scanners, hand-held scanners, two-dimensional scanners, hands-free scanners, and RF base stations) and a serial host. It provides the means for the host to control the decoder or scanner.

Communications

All communication between the decoder and host occurs over the hardware interface lines using the SSI protocol. Refer to the *Simple Serial Interface Programmer's Guide*, p/n 72-40451-xx, for more information on SSI.

The host and the decoder exchange messages in packets. A packet is a collection of bytes framed by the proper SSI protocol formatting bytes. The maximum number of bytes per packet that the SSI protocol allows for any transaction is 257 (255 bytes + 2 byte checksum).

Decode data can be sent as ASCII data (unpacketed), or as part of a larger message (packeted), depending on the decoder configuration.

SSI performs the following functions for the host device:

- Maintains a bi-directional interface with the decoder
- Allows the host to send commands that control the decoder
- Passes data from the decoder to a host device in SSI packet format or straight decode message.

The working environment of the SSI consists of a decoder, a serial cable which attaches to the host device, and in some instances, a power supply.

SSI transmits all decode data including special formatting (e.g., AIM ID). Parameter settings can control the format of the transmitted data.

The decoder can also send parameter information, product identification information, or event codes to the host.

All commands sent between the decoder and host must use the format described in the SSI Message Formats section. [SSI Transactions on page 11-2](#) describes the required sequence of messages in specific cases.

Table 11-1 lists all the SSI opcodes the decoder supports. It identifies the SSI partner allowed to send a message of each type. The host transmits opcodes designated type H. The decoder transmits type D opcodes, and either partner can transmit Host/Decoder (H/D) types.

Table 11-1 SSI Commands

Name	Type	Opcode	Description
BEEP	H	0xE6	Sound the beeper.
CAPABILITIES_REPLY	D	0xD4	Reply to CAPABILITIES_REQUEST; contains a list of the capabilities and commands the decoder supports.
CAPABILITIES_REQUEST	H	0xD3	Request capabilities report from the decoder.
CMD_ACK	H/D	0xD0	Positive acknowledgment of received packet.
CMD_NAK	H/D	0xD1	Negative acknowledgment of received packet.
DECODE_DATA	D	0xF3	Decode data in SSI packet format.
EVENT	D	0xF6	Event indicated by associated event code.
LED_OFF	H	0xE8	De-activate LED output.
LED_ON	H	0xE7	Activate LED output.
PARAM_DEFAULTS	H	0xC8	Set parameter default values.
PARAM_REQUEST	H	0xC7	Request values of certain parameters.
PARAM_SEND	H/D	0xC6	Send parameter values.
REPLY_ID	D	0xA6	Reply to REQUEST_ID; contains decoder's serial number.
REPLY_REVISION	D	0xA4	Reply to REQUEST_REVISION contains decoder's software/hardware configuration.
REQUEST_ID	H	0xA3	Request the decoder's serial number.
REQUEST_REVISION	H	0xA3	Request the decoder's configuration.
SCAN_DISABLE	H	0xEA	Prevent the operator from scanning bar codes.
SCAN_ENABLE	H	0xE9	Permit bar code scanning.
START_DECODE	H	0xE4	Tell decoder to attempt to decode a bar code.
STOP_DECODE	H	0xE5	Tell decoder to abort a decode attempt.

For details of the SSI protocol, refer to the *Simple Serial Interface Programmer's Guide (72-40451-xx)*.

SSI Transactions

General Data Transactions

ACK/NAK Handshaking

If you enable ACK/NAK handshaking, all packeted messages must have a CMD_ACK or CMD_NAK response, unless the command description states otherwise. This parameter is enabled by default. Zebra recommends leaving this handshaking enabled to provide feedback to the host. Raw decode data does not use ACK/NAK handshaking since they are not packeted data.

Following is an example of a problem which can occur if you disable ACK/NAK handshaking:

- The host sends a PARAM_SEND message to the decoder to change the baud rate from 9600 to 19200.
- The decoder cannot interpret the message.
- The decoder does not implement the change the host requested.
- The host assumes that the parameter change occurred and acts accordingly.
- Communication is lost because the change did not occur on both sides.

If you enable ACK/NAK handshaking, the following occurs:

- The host sends a PARAM_SEND message.
- The decoder cannot interpret the message.
- The decoder CMD_NAKs the message.
- The host resends the message.
- The decoder receives the message successfully, responds with CMD_ACK, and implements parameter changes.

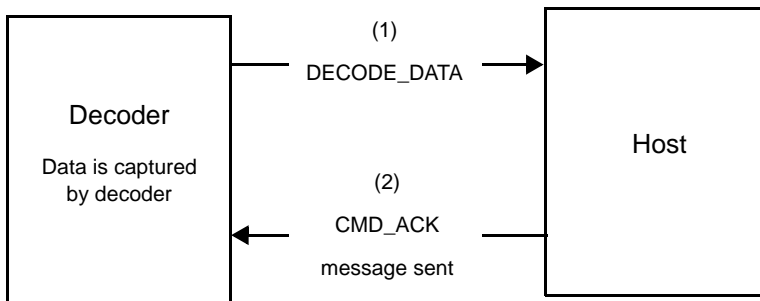

Transfer of Decode Data

The Decode Data Packet Format parameter controls how decode data is sent to the host. Set this parameter to send the data in a DECODE_DATA packet. Clear this parameter to transmit the data as raw ASCII data.

✓ **Note** When transmitting decode data as raw ASCII data, ACK/NAK handshaking does not apply regardless of the state of the ACK/NAK handshaking parameter.

ACK/NAK Enabled and Packeted Data

The decoder sends a DECODE_DATA message after a successful decode. The decoder waits for a programmable time-out for a CMD_ACK response. If it does not receive the response, the decoder tries to send two more times before issuing a host transmission error. If the decoder receives a CMD_NAK from the host, it may attempt a retry depending on the cause field of the CMD_NAK message.

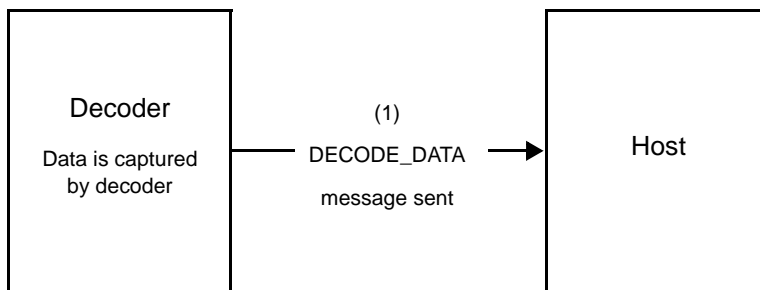

ACK/NAK Enabled and Unpacketed ASCII Data

Even though the ACK/NAK handshaking is enabled, no handshaking occurs because the handshaking applies only to packeted data. In this example the **packeted_decode** parameter is disabled.

ACK/NAK Disabled and Packeted DECODE_DATA

In this example ACK/NAK does not occur even though **packeted_decode** is enabled because the ACK/NAK handshaking parameter is disabled.

ACK/NAK Disabled and Unpacketed ASCII Data

Data captured by the decoder is sent to the host.

Communication Summary

RTS/CTS Lines

All communication must use RTS/CTS handshaking as described in the *Simple Serial Interface Programmer's Guide*, p/n 72-40451-xx.

ACK/NAK Option

Enable or disable ACK/NAK handshaking. This handshaking is enabled by default and Zebra recommends leaving it enabled. Disabling this handshaking can cause communication problems, as handshaking is the only acknowledgment that a message was received, and if it was received correctly. ACK/NAK is not used with unpacketed decode data regardless of whether or not it is enabled.

Number of Data Bits

All communication with the decoder must use 8-bit data.

Serial Response Time-out

The Serial Response Time-out parameter determines how long to wait for a handshaking response before trying again, or aborting any further attempts. Set the same value for both the host and decoder.

- ✓ **Note** You can temporarily change the Serial Response Time-out when the host takes longer to process an ACK or longer data string. Zebra does not recommend frequent permanent changes due to limited write cycles of non-volatile memory.

Retries

When sending data, the host should resend twice after the initial send if the decoder does not respond with an ACK or NAK (if ACK/NAK handshaking is enabled), or response data (e.g., PARAM_SEND, REPLY_REVISION). If the decoder replies with a NAK RESEND, the host resends the data. All resent messages must have the resend bit set in the Status byte.

The decoder resends data two times after the initial send if the host fails to reply with an ACK or NAK (if ACK/NAK handshaking is enabled).

Baud Rate, Stop Bits, Parity, Response Time-out, ACK/NAK Handshake

If you use PARAM_SEND to change these serial parameters, the ACK response to the PARAM_SEND uses the previous values for these parameters. The new values then take effect for the next transaction.

Errors

The decoder issues a communication error when:

- The CTS line is asserted when the decoder tries to transmit, and is still asserted on each of 2 successive retries
- Failure to receive an ACK or NAK after initial transmit and two resends.

Things to Remember When Using SSI Communication

When not using hardware handshaking, space messages sufficiently apart. The host must not communicate with the decoder if the decoder is transmitting.

When using hardware handshaking, frame each message properly with the handshaking signals. Do not try to send two commands within the same handshaking frame.

There is a permanent/temporary bit in the PARAM_SEND message. Removing power from the decoder discards temporary changes. Permanent changes are written to non-volatile memory. Frequent changes shorten the life of the non-volatile memory.

Encapsulation of RSM Commands/Responses Over SSI

The SSI protocol allows the host to send a command that is variable in length up to 255 bytes. Although there is a provision in the protocol to multi-packet commands from the host, the scan engine does not support this. The host must fragment packets using the provisions in the RSM protocol.

Command Structure

Byte	7	6	5	4	3	2	1	0
0	Length (not including the checksum)							
1	SSI_MGMT_COMMAND (0x80)							
2	Message Source (4 - Host)							
3	Reserved (0)			Reserved (0)		Reserved (0)	Cont'd packet	Retransmit
4	Payload data (see the following example)							
...								
Length -1								
Length	2's complement checksum (MSB)							
Length +1	2's complement checksum (LSB)							

The expected response in the positive case is SSI_MGMT_COMMAND which may be a multi-packet response. For devices that do not support the SSI_MGMT_COMMAND, the response is the standard SSI_NAK.

Response Structure

Byte	7	6	5	4	3	2	1	0
0	Length (not including the checksum)							
1	SSI_MGMT_COMMAND (0x80)							
2	Message Source (0 - Decoder)							
3	Reserved (0)			Reserved (0)		Reserved (0)	Cont'd packet	Retransmit
4	Payload data (see the following example)							
...								
Length -1								
Length	2's complement checksum (MSB)							
Length +1	2's complement checksum (LSB)							

Simple Serial Interface Default Parameters

This section describes how to set up the decoder with a SSI host. When using SSI, program the decoder via bar code menu or SSI hosts commands.

Throughout the programming bar code menus, asterisks (*) indicate default values.

- ✓ **Note** Most computer monitors allow scanning the bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces are not merging.

Table 11-2 lists the defaults for the SSI host. There are two ways to change the default values:

- Scan the appropriate bar codes in this guide. These new values replace the standard default values in memory. To recall the default parameter values, scan the bar code **Set Defaults on page 5-4*.
- Download data through the device's serial port using SSI. Hexadecimal parameter numbers appear in this chapter below the parameter title, and options appear in parenthesis beneath the accompanying bar codes. Refer to the *Simple Serial Interface (SSI) Programmer's Guide* for detailed instructions for changing parameters using this method.

- ✓ **Note** See [Appendix A, STANDARD DEFAULT PARAMETERS](#) for all user preferences, hosts, symbologies, and miscellaneous default parameters.

Table 11-2 SSI Default Table

Parameter	SSI Number ¹	Parameter Number ²	Default	Page Number
Select SSI Host	n/a	n/a	n/a	11-10
Baud Rate	9Ch	156	9600	11-11
Parity	9Eh	158	None	11-15
Check Parity	97h	151	Disable	11-17
Stop Bits	9Dh	157	1	11-18
Software Handshaking	9Fh	159	ACK/NAK	11-19
Host RTS Line State	9Ah	154	Low	11-20
Decode Data Packet Format	EEh	238	Send Raw Decode Data	11-21
Host Serial Response Time-out	9Bh	155	2 sec	11-22

¹ SSI number hex values are used for programming via SSI commands.

² Parameter number decimal values are used for programming via RSM commands.

Table 11-2 SSI Default Table (Continued)

Parameter	SSI Number ¹	Parameter Number ²	Default	Page Number
Host Character Time-out	EFh	239	200 msec	11-24
Multipacket Option	F0h 4Eh	334	Option 1	11-26
Interpacket Delay	F0h 4Fh	335	0 ms	11-28
Event Reporting				
Decode Event	F0h 00h	256	Disable	11-31
Boot Up Event	F0h 02h	258	Disable	11-32
Parameter Event	F0h 03h	259	Disable	11-33

¹ SSI number hex values are used for programming via SSI commands.

² Parameter number decimal values are used for programming via RSM commands.

Note SSI interprets Prefix, Suffix1, and Suffix2 values listed in [ASCII Character Set for USB on page 7-34](#) and [Prefix/Suffix Values on page 8-37](#) differently than other interfaces. SSI does not recognize key categories, only the 3-digit decimal value. The default value of 7013 is interpreted as CR only.

SSI Parameters

Select SSI Host

To select SSI as the host interface, scan the following bar code.

SSI Host

Baud Rate

SSI # 9Ch Parameter # 156

Baud rate is the number of bits of data transmitted per second. Set the decoder's baud rate to match the baud rate setting of the host device. Otherwise, data may not reach the host device or may reach it in distorted form.

Options:

- *9600
- 19,200
- 38,400
- 57,600
- 115,200
- 230,400
- 460,800
- 921,600.

***Baud Rate 9600
(06h)**

**Baud Rate 19,200
(07h)**

Baud Rate (continued)

**Baud Rate 38,400
(08h)**

**Baud Rate 57,600
(0Ah)**

Baud Rate (continued)

**Baud Rate 115,200
(0Bh)**

**Baud Rate 230,400
(0Bh)**

Baud Rate (continued)

**Baud Rate 460,800
(0Ch)**

**Baud Rate 921,600
(0Dh)**

Parity

SSI # 9Eh

Parameter # 158

A parity check bit is the most significant bit of each ASCII coded character. Select the parity type according to host device requirements.

- Select **Odd** parity and the parity bit has a value 0 or 1, based on data, to ensure that an odd number of 1 bits is contained in the coded character.
- Select **Even** parity and the parity bit has a value 0 or 1, based on data, to ensure that an even number of 1 bits is contained in the coded character.
- If no parity is required, select **None**.

Odd
(02h)

Even
(01h)

Parity (continued)

***None
(00h)**

Check Parity

SSI # 97h

Parameter # 151

Select whether or not to check the parity of received characters. Use the Parity parameter to select the type of parity.

Options:

- *Do Not Check Parity
- Check Parity.

***Do Not Check Parity
(00h)**

**Check Parity
(01h)**

Stop Bits

SSI # 9Dh

Parameter # 157

The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving (host) device for the next character in the serial data stream. Set the number of stop bits (one or two) to match host device requirements.

Options:

- *1 Stop Bit
- 2 Stop Bits.

***1 Stop Bit
(01h)**

**2 Stop Bits
(02h)**

Software Handshaking

SSI # 9Fh

Parameter # 159

This parameter offers control of data transmission in addition to the control hardware handshaking offers. Hardware handshaking is always enabled; you cannot disable it.

- **Disable ACK/NAK Handshaking:** When this option is selected, the decoder neither generates nor expects ACK/NAK handshaking packets.
- **Enable ACK/NAK Handshaking:** When this option is selected, after transmitting data, the decoder expects either an ACK or NAK response from the host. The decoder also ACKs or NAKs messages from the host.

The decoder waits up to the programmable Host Serial Response Time-out to receive an ACK or NAK. If the decoder does not get a response in this time, it resends its data up to two times before discarding the data and declaring a transmit error.

**Disable ACK/NAK
(00h)**

***Enable ACK/NAK
(01h)**

Host RTS Line State

SSI # 9Ah

Parameter # 154

This parameter sets the expected idle state of the Serial Host RTS line.

The SSI Interface is used with host applications which also implement the SSI protocol. However, you can use the decoder in a "scan-and-transmit" mode to communicate with any standard serial communication software on a host PC (see [Decode Data Packet Format on page 11-21](#)). If transmission errors occur in this mode, the host PC may be asserting hardware handshaking lines which interfere with the SSI protocol. Scan the **Host: RTS High** bar code to address this problem.

Options:

- *Host: Low RTS
- Host: High RTS.

***Host: RTS Low
(00h)**

**Host: RTS High
(01h)**

Decode Data Packet Format

SSI # EEh

Parameter # 238

This parameter selects whether to transmit decoded data in raw format (unpacketed), or with the packet format defined by the serial protocol.

Selecting the raw format disables ACK/NAK handshaking for decode data.

Options:

- *Send Raw Decode Data
- Send Packeted Decode Data.

***Send Raw Decode Data
(00h)**

**Send Packeted Decode Data
(01h)**

Host Serial Response Timeout

SSI # 9Bh

Parameter # 155

This parameter specifies how long the decoder waits for an ACK or NAK before resending. Also, if the decoder wants to send, and the host has already been granted permission to send, the decoder waits for the designated time-out before declaring an error.

To set the delay period (options are 2, 5, 7.5, or 9.9 seconds), scan one of the following bar codes.

✓ **Note** Other values are available via SSI command.

Options:

- *Low - 2 Seconds
- Medium - 5 Seconds
- High - 7.5 Seconds
- Maximum - 9.9 Seconds.

***Low - 2 Seconds
(14h)**

**Medium - 5 Seconds
(32h)**

Host Serial Response Timeout (continued)

**High - 7.5 Seconds
(4Bh)**

**Maximum - 9.9 Seconds
(63h)**

Host Character Timeout

SSI # EFh

Parameter # 239

This parameter determines the maximum time the decoder waits between characters transmitted by the host before discarding the received data and declaring an error.

To set the delay period (options are 200, 500, 750, or 990 ms), scan one of the following bar codes.

✓ **Note** Other values are available via SSI command.

Options:

- *Low - 200 ms
- Medium - 500 ms
- High - 750 ms
- Maximum - 990 ms.

***Low - 200 ms
(14h)**

**Medium - 500 ms
(32h)**

Host Character Timeout (continued)

**High - 750 ms
(4Bh)**

**Maximum - 990 ms
(63h)**

Multipacket Option

SSI # F0h, 4Eh

Parameter # 334

This parameter controls ACK/NAK handshaking for multi-packet transmissions.

- **Multi-Packet Option 1:** The host sends an ACK / NAK for each data packet during a multi-packet transmission.
- **Multi-Packet Option 2:** The decoder sends data packets continuously, with no ACK/NAK handshaking to pace the transmission. The host, if overrun, can use hardware handshaking to temporarily delay decoder transmissions. At the end of transmission, the decoder waits for a CMD_ACK or CMD_NAK.
- **Multi-Packet Option 3:** Option 3 is the same as option 2 with the addition of a programmable interpacket delay.

***Multipacket Option 1
(00h)**

**Multipacket Option 2
(01h)**

Multipacket Option (continued)

**Multipacket Option 3
(02h)**

Interpacket Delay

SSI # F0h, 4Fh Parameter # 335

This parameter specifies the interpacket delay if you selected **Multipacket Option 3**.

To set the delay period (options are 0, 25, 50, 75, or 99 ms), scan one of the following bar codes.

✓ **Note** Other values are available via SSI command.

Options:

- *Minimum - 0 ms
- Low - 25 ms
- Medium - 50 ms
- High - 75 ms
- Maximum - 99 ms.

***Minimum - 0 ms
(00h)**

**Low - 25 ms
(19h)**

Interpacket Delay (continued)

Medium - 50 ms
(32h)

High - 75 ms
(4Bh)

Interpacket Delay (continued)

**Maximum - 99 ms
(63h)**

Event Reporting

The host can request the decoder to provide certain information (events) relative to the decoder's behavior. Enable or disable the events listed in [Table 11-3](#) and on the following pages by scanning the appropriate bar codes.

Table 11-3 *Event Codes*

Event Class	Event	Code Reported
Decode Event	Non parameter decode	0x01
Boot Up Event	System power-up	0x03
Parameter Event	Parameter entry error	0x07
	Parameter stored	0x08
	Defaults set (and parameter event is enabled by default)	0x0A
	Number expected	0x0F

Decode Event

SSI # F0h, 00h

Parameter # 256

When enabled, the decoder generates a message to the host upon a successful bar code decode. When disabled, no notification is sent.

Options:

- Enable Decode Event
- *Disable Decode Event.

**Enable Decode Event
(01h)**

***Disable Decode Event
(00h)**

Boot Up Event

SSI # F0h, 02h

Parameter # 258

When enabled, the decoder generates a message to the host whenever power is applied. When disabled, no notification is sent.

Options:

- Enable Boot Up Event
- *Disable Boot Up Event.

**Enable Boot Up Event
(01h)**

***Disable Boot Up Event
(00h)**

Parameter Event

SSI # F0h, 03h

Parameter # 259

When enabled, the decoder generates a message to the host when one of the events specified in [Table 11-3 on page 11-31](#) occurs. When disabled, no notification is sent.

Options:

- Enable Parameter Event
- *Disable Parameter Event.

**Enable Parameter Event
(01h)**

***Disable Parameter Event
(00h)**

CHAPTER 12 AUXILIARY SCANNER

Connecting an Auxiliary Scanner

The DS7708 provides a USB port to connect an auxiliary hand-held scanner. See the diagrams in each interface chapter for host and auxiliary scanner connection details.

Auxiliary scanners that are supported by the DS7708 include but are not limited to Zebra's LS2208, DS4208, DS4308, DS4308P and DS6878.

Programming the Auxiliary Scanner

The auxiliary scanner can be programmed in the following ways:

- Connect the auxiliary scanner to the DS7708 and connect the DS7708 to a PC running 123Scan². You can program both (independently) via 123Scan².
- Scan a macro programming bar code from this guide, or one created via 123Scan² using the auxiliary scanner.
- Scan the programming bar codes in this guide using the auxiliary scanner.

✓ **Note** Programming done on the DS7708 is not automatically transferred to the auxiliary scanner.

✓ **Note** When the DS7708 powers up it automatically configures the auxiliary scanner host type to be the same as the DS7708 host type. All of the other auxiliary scanner settings and user parameters remain as is.

Downloading Firmware

Updating firmware on the auxiliary scanner can be done in the following ways:

- Connect the auxiliary scanner to a PC running 123Scan². Update firmware via 23Scan².
- Connect the auxiliary scanner to the DS7708 and connect the DS7708 to a PC running 123Scan². You can update firmware in both (independently) via 123Scan².

12VDC Power Requirement

The DS7708 requires 12VDC when an auxiliary scanner is connected.

12VDC is provided as follows:

- USB (Series A) - A 12VDC USB (Series A) cable and 12VDC power supply is required.
- USB (PowerPLus) - A 12VDC USB (PowerPlus) cable is required. 12VDC provided by host.
- RS-232 - A 12VDC RS-232 cable and 12VDC power supply is required.
- IBM (RS485) - A 12VDC IBM (RS485) cable is required. 12VDC provided by host.
- Keyboard Wedge - A 12VDC Keyboard Wedge cable and 12VDC power supply is required.

- ✓ **Note** Power supply model PWRS-14000-148R is required for USB (Series A) and RS-232.
Power supply model PWRS-14000-148C is required for USB (Series A) and RS-232.

Using Auxiliary Scanners

Using a Zebra Scanner as an Auxiliary Scanner

When the DS7708 powers up it automatically configures the auxiliary scanner host type to be the same as the DS7708 host type. This feature is supported by Zebra scanners that support RSM commands. Some Zebra scanners, such as the LS1203 and older LS2208s, do not support this feature. (See [Using a Zebra Scanner That Does Not Support RSM Commands as an Auxiliary Scanner](#) below.) All of the other auxiliary scanner settings and user parameters remain as is.

- ✓ **notes** An auxiliary cordless scanner, such as the LI4278, LS4278, or DS6878, can be attached to the DS7708. If a presentation cradle is used with any of these scanners, a separate cradle power supply (12VDC) is required.

If a standard cradle is used with the DS6878, a separate cradle power supply (5VDC) is required.

Using a Zebra Scanner That Does Not Support RSM Commands as an Auxiliary Scanner

When connecting a Zebra scanner that does not support RSM commands (for example, the LS1203) as an auxiliary scanner you must disable automatic host switching and RSM communication to the auxiliary scanner by setting the parameter **Disable Aux Scanner RSM Communication** ([page 12-3](#)), prior to connecting the auxiliary scanner. Zebra scanners that do not support RSM commands must be programmed separately and pre-configured for the appropriate host type before connecting to the DS7708 as an auxiliary scanner.

Using a Non-Zebra Scanner as an Auxiliary Scanner

The DS7708 provides a USB port to connect an auxiliary hand-held scanner. Non-Zebra scanners must be programmed separately and pre-configured for the appropriate host type before connecting to DS7708.

- ✓ **Note** Zebra does not guarantee that a non-Zebra scanner will operate as an auxiliary scanner on the DS7708.

Auxiliary RSM Communication Bar Codes

SSI # F8 05 4E

Parameter # 1358

Prior to connecting the auxiliary scanner, scan **Disable Aux Scanner RSM Communication** when connecting a Zebra auxiliary scanner that does not support RSM commands. This disables automatic host switching and RSM communication to the auxiliary scanner.

Disable Aux RSM Communication
(00h)

Note This option is not recommended for Zebra scanners that do support RSM, since an auxiliary scanner cannot be configured by 123scan² with this option selected.

***Enable Aux RSM Communication**
(01h)

CHAPTER 13 SYMBOLOGIES

Introduction

This chapter describes symbology features and provides programming bar codes for selecting these features.

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner powers down.

Select a host type (see each host chapter for specific host information) after the power-up beeps sound. This is only necessary upon the first power-up when connected to a new host.

To return all features to default values, scan the [Set Default Parameter on page 5-4](#). Throughout the programming bar code menus, asterisks (*) indicate default values.

* Indicates Default — *Enable UPC-A — Feature/Option
(01h) — Option Hex Value

Scanning Sequence Examples

In most cases, scanning one bar code sets the parameter value. For example, to transmit bar code data without the UPC-A check digit, simply scan the **Do Not Transmit UPC-A Check Digit** bar code under [Transmit UPC-A Check Digit on page 13-29](#). The scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters, such as **Set Length(s) for D 2 of 5** require scanning several bar codes. See the individual parameter, such as **Set Length(s) for D 2 of 5**, for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

Symbology Parameter Defaults

[Table 13-1](#) lists the defaults for all symbologies parameters. To change the default values, scan the appropriate bar codes in this guide. These new values replace the standard default values in memory. To recall the default parameter values, scan the [Set Default Parameter on page 5-4](#).

✓ **Note** See [Appendix A, STANDARD DEFAULT PARAMETERS](#) for all user preferences, hosts, and miscellaneous default parameters.

Table 13-1 *Parameter Defaults*

Enable/Disable All Code Types

To disable all symbologies, scan **Disable All Code Types** below. This is useful when enabling only a few code types.

Scan **Enable All Code Types** to turn on (enable) all code types. This is useful when you want to read all codes, or when you want to disable only a few code types.

Enable All Code Types

Disable All Code Types

UPC/EAN

Enable/Disable UPC-A

SSI # 01h

Parameter # 1

To enable or disable UPC-A, scan the appropriate bar code below.

Options:

- *Enable UPC-A
- Disable UPC-A.

***Enable UPC-A
(01h)**

**Disable UPC-A
(00h)**

Enable/Disable UPC-E

SSI # 02h

Parameter # 2

To enable or disable UPC-E, scan the appropriate bar code below.

Options:

- *Enable UPC-E
- Disable UPC-E.

***Enable UPC-E
(01h)**

**Disable UPC-E
(00h)**

Enable/Disable UPC-E1

SSI # OCh

Parameter # 12

UPC-E1 is disabled by default.

To enable or disable UPC-E1, scan the appropriate bar code below.

✓ **Note** UPC-E1 is not a UCC (Uniform Code Council) approved symbology.

Options:

- Enable UPC-E1
- *Disable UPC-E1.

Enable UPC-E1
(01h)

*Disable UPC-E1
(00h)

Enable/Disable EAN-8/JAN-8

SSI # 04h

Parameter # 4

To enable or disable EAN-8/JAN-8, scan the appropriate bar code below.

Options:

- *Enable EAN-8/JAN-8
- Disable EAN-8/JAN-8.

***Enable EAN-8/JAN-8
(01h)**

**Disable EAN-8/JAN-8
(00h)**

Enable/Disable EAN-13/JAN-13**SSI # 03h****Parameter # 3**

To enable or disable EAN-13/JAN-13, scan the appropriate bar code below.

Options:

- *Enable EAN-13/JAN-13
- Disable EAN-13/JAN-13.

***Enable EAN-13/JAN-13
(01h)**

**Disable EAN-13/JAN-13
(00h)**

Enable/Disable Bookland EAN

SSI # 53h

Parameter # 83

To enable or disable Bookland EAN, scan the appropriate bar code below.

Options:

- Enable Bookland EAN
- *Disable Bookland EAN.

Note If Bookland EAN is enabled, select a [Bookland ISBN Format on page 13-15](#). Also select either Decode UPC/EAN Supplementals, Autodiscriminate UPC/EAN Supplementals, or Enable 978/979 Supplemental Mode in [Decode UPC/EAN/JAN Supplementals on page 13-16](#).

**Enable Bookland EAN
(01h)**

***Disable Bookland EAN
(00h)**

Bookland ISBN Format

SSI # F1h 40h

Parameter # 576

If Bookland EAN is enabled, select one of the following formats for Bookland data.

Options:

- *Bookland ISBN-10 - The scanner reports Bookland data starting with 978 in traditional 10-digit format with the special Bookland check digit for backward-compatibility. Data starting with 979 is not considered Bookland in this mode.
- Bookland ISBN-13 - The scanner reports Bookland data (starting with either 978 or 979) as EAN-13 in 13-digit format to meet the 2007 ISBN-13 protocol.

✓ **Note** For Bookland EAN to function properly, ensure Bookland EAN is enabled (see [Enable/Disable Bookland EAN on page 13-14](#)), then select either Decode UPC/EAN Supplementals, Autodiscriminate UPC/EAN Supplementals, or Enable 978/979 Supplemental Mode in [Decode UPC/EAN/JAN Supplementals on page 13-16](#).

*Bookland ISBN-10
(00h)

Bookland ISBN-13
(01h)

Decode UPC/EAN/JAN Supplementals

SSI # 10h

Parameter # 16

Supplementals are bar codes appended according to specific format conventions (e.g., UPC A+2, UPC E+2, EAN 13+2).

Options:

- Decode UPC/EAN/JAN with Supplementals - the scanner only decodes UPC/EAN symbols with supplemental characters, and ignores symbols without supplementals.
- *Ignore UPC/EAN/JAB with Supplementals - if the scanner is presented with a UPC/EAN plus supplemental symbol, the scanner decodes UPC/EAN and ignores the supplemental characters.
- Autodiscriminate UPC/EANJAN Supplementals - the scanner decodes UPC/EAN symbols with supplemental characters immediately. If the symbol does not have a supplemental, the scanner must decode the bar code the number of times set via [UPC/EAN/JAN Supplemental Redundancy on page 13-25](#) before transmitting its data to confirm that there is no supplemental.
- If you select one of the following **Supplemental Mode** options, the scanner immediately transmits EAN-13 bar codes starting with that prefix that have supplemental characters. If the symbol does not have a supplemental, the scanner must decode the bar code the number of times set via [UPC/EAN/JAN Supplemental Redundancy on page 13-25](#) before transmitting its data to confirm that there is no supplemental. The scanner transmits UPC/EAN bar codes that do not have that prefix immediately.
 - Enable 378/379 Supplemental Mode.
 - Enable 978/979 Supplemental Mode.

Note If you select 978/979 Supplemental Mode and are scanning Bookland EAN bar codes, see [Enable/Disable Bookland EAN on page 13-14](#) to enable Bookland EAN, and select a format using [Bookland ISBN Format on page 13-15](#).

- Enable 977 Supplemental Mode.
- Enable 414/419/434/439 Supplemental Mode.
- Enable 491 Supplemental Mode.
- Enable Smart Supplemental Mode - applies to EAN-13 bar codes starting with any prefix listed previously.
- Supplemental User-Programmable Type 1 - applies to EAN-13 bar codes starting with a 3-digit user-defined prefix. Set this 3-digit prefix using [User-Programmable Supplementals on page 13-24](#).
- Supplemental User-Programmable Type 1 and 2 - applies to EAN-13 bar codes starting with either of two 3-digit user-defined prefixes. Set the 3-digit prefixes using [User-Programmable Supplementals on page 13-24](#).
- Smart Supplemental Plus User-Programmable 1 - applies to EAN-13 bar codes starting with any prefix listed previously or the user-defined prefix set using [User-Programmable Supplementals on page 13-24](#).
- Smart Supplemental Plus User-Programmable 1 and 2 - applies to EAN-13 bar codes starting with any prefix listed previously or one of the two user-defined prefixes set using [User-Programmable Supplementals on page 13-24](#).

Note To minimize the risk of invalid data transmission, select either to decode or ignore supplemental characters.

Decode UPC/EAN/JAN Supplementals (continued)

User-Programmable Supplementals

Supplemental 1: SSI # F1h 43h

Supplemental 2: SSI # F1h 44h

Supplemental 1: Parameter # 579

Supplemental 2: Parameter # 580

Options:

- If you selected a Supplemental User-Programmable option from [Decode UPC/EAN/JAN Supplementals on page 13-16](#), select **User-Programmable Supplemental 1** to set the 3-digit prefix. Then select the 3 digits using the numeric bar codes beginning on [page G-1](#).
- Select **User-Programmable Supplemental 2** to set a second 3-digit prefix. Then select the 3 digits using the numeric bar codes beginning on [page G-1](#).

User-Programmable Supplemental 1

User-Programmable Supplemental 2

UPC/EAN/JAN Supplemental Redundancy

SSI # 50h

Parameter # 80

If you selected **Autodiscriminate UPC/EAN/JAN Supplementals**, this option adjusts the number of times to decode a symbol without supplementals before transmission. The range is from 2 to 16 times. Five or above is recommended when decoding a mix of UPC/EAN/JAN symbols with and without supplementals. The default is 10.

Scan **UPC/EAN/JAN Supplemental Redundancy** below to set a decode redundancy value. Next, scan two numeric bar codes in [Appendix G, NUMERIC BAR CODES](#). Enter a leading zero for single digit numbers. To correct an error or change a selection, scan [Cancel on page G-10](#).

UPC/EAN/JAN Supplemental Redundancy

UPC/EAN/JAN Supplemental AIM ID Format

SSI # F1h A0h

Parameter # 672

Select an output format when reporting UPC/EAN/JAN bar codes with Supplementals with [Transmit Code ID Character on page 5-29](#) set to **AIM Code ID Character**:

- **Separate** - transmit UPC/EAN with supplementals with separate AIM IDs but one transmission, i.e.:
]E<0 or 4><data>]E<1 or 2>[supplemental data]
- **Combined** – transmit UPC/EAN with supplementals with one AIM ID and one transmission, i.e.:
]E3<data+supplemental data>
- **Separate Transmissions** - transmit UPC/EAN with supplementals with separate AIM IDs and separate transmissions, i.e.:
]E<0 or 4><data>
]E<1 or 2>[supplemental data]

**Separate
(00h)**

***Combined
(01h)**

UPC/EAN/JAN Supplemental AIM ID Format (continued)

**Separate Transmissions
(02h)**

UPC Reduced Quiet Zone

SSI # F8h 05h 09h

Parameter # 1289

Scan one of the following bar codes to enable or disable decoding UPC bar codes with reduced quiet zones. If you select **Enable**, select a [1D Quiet Zone Level on page 13-192](#).

Options:

- Enable UPC Reduced Quiet Zone
- *Disable UPC Reduced Quiet Zone.

**Enable UPC Reduced Quiet Zone
(1)**

***Disable UPC Reduced Quiet Zone
(0)**

Transmit UPC-A Check Digit

SSI # 28h

Parameter # 40

The check digit is the last character of the symbol used to verify the integrity of the data. Scan the appropriate bar code below to transmit the bar code data with or without the UPC-A check digit. It is always verified to guarantee the integrity of the data.

Options:

- *Transmit UPC-A Check Digit
- Do Not Transmit UPC-A Check Digit.

***Transmit UPC-A Check Digit
(01h)**

**Do Not Transmit UPC-A Check Digit
(00h)**

Transmit UPC-E Check Digit

SSI # 29h

Parameter # 41

The check digit is the last character of the symbol used to verify the integrity of the data. Scan the appropriate bar code below to transmit the bar code data with or without the UPC-E check digit. It is always verified to guarantee the integrity of the data.

Options:

- *Transmit UPC-E Check Digit
- Do Not Transmit UPC-E Check Digit.

***Transmit UPC-E Check Digit
(01h)**

**Do Not Transmit UPC-E Check Digit
(00h)**

Transmit UPC-E1 Check Digit

SSI # 2Ah

Parameter # 42

The check digit is the last character of the symbol used to verify the integrity of the data. Scan the appropriate bar code below to transmit the bar code data with or without the UPC-E1 check digit. It is always verified to guarantee the integrity of the data.

Options:

- *Transmit UPC-E1 Check Digit
- Do Not Transmit UPC-E1 Check Digit.

***Transmit UPC-E1 Check Digit
(01h)**

**Do Not Transmit UPC-E1 Check Digit
(00h)**

UPC-A Preamble

SSI # 22h

Parameter # 34

Preamble characters are part of the UPC symbol, and include Country Code and System Character. There are three options for transmitting a UPC-A preamble to the host device: transmit System Character only, transmit System Character and Country Code ("0" for USA), and transmit no preamble. Select the appropriate option to match the host system.

Options:

- No Preamble (<DATA>)
- *System Character (<SYSTEM CHARACTER> <DATA>)
- System Character & Country Code (< COUNTRY CODE> <SYSTEM CHARACTER> <DATA>).

No Preamble (<DATA>)
(00h)

***System Character (<SYSTEM CHARACTER> <DATA>)**
(01h)

UPC-A Preamble (continued)

System Character & Country Code
(< COUNTRY CODE> <SYSTEM CHARACTER> <DATA>)
(02h)

UPC-E Preamble

SSI # 23h

Parameter # 35

Preamble characters are part of the UPC symbol, and include Country Code and System Character. There are three options for transmitting a UPC-E preamble to the host device: transmit System Character only, transmit System Character and Country Code ("0" for USA), and transmit no preamble. Select the appropriate option to match the host system.

Options:

- No Preamble (<DATA>)
- *System Character (<SYSTEM CHARACTER> <DATA>)

EAN-8/JAN-8 Extend

SSI # 27h

Parameter # 39

Enable this parameter to add five leading zeros to decoded EAN-8 symbols to make them compatible in format to EAN-13 symbols.

Disable this to transmit EAN-8 symbols as is.

Options:

- Enable EAN/JAN Zero Extend
- *Disable EAN/JAN Zero Extend.

**Enable EAN/JAN Zero Extend
(01h)**

***Disable EAN/JAN Zero Extend
(00h)**

UCC Coupon Extended Code

SSI # 55h

Parameter # 85

Enable this parameter to decode UPC-A bar codes starting with digit '5', EAN-13 bar codes starting with digit '99', and UPC-A/GS1-128 Coupon Codes. UPCA, EAN-13, and GS1-128 must be enabled to scan all types of Coupon Codes.

Options:

- Enable UCC Coupon Extended Code
- *Disable UCC Coupon Extended Code.

**Enable UCC Coupon Extended Code
(01h)**

***Disable UCC Coupon Extended Code
(00h)**

Note See [UPC/EAN/JAN Supplemental Redundancy on page 13-25](#) to control autodiscrimination of the GS1-128 (right half) of a coupon code.

Coupon Report

SSI # F1h DAh

Parameter # 730

Traditional coupon symbols (old coupon symbols) are composed of two bar codes: UPC/EAN and Code128. A new coupon symbol is composed of a single DataBar Expanded bar code. The new coupon format offers more options for purchase values (up to \$999.99) and supports complex discount offers such as a second purchase requirement.

An interim coupon symbol also exists that contains both types of bar codes: UPC/EAN and DataBar Expanded. This format accommodates both retailers that do not recognize or use the additional information included in the new coupon symbol, as well as those who can process new coupon symbols.

Scan a bar code following [Table 13-2](#) to select one of the scan option modes in [Table 13-2](#) for decoding coupon symbols.

Table 13-2 Scanning Coupon Symbols

Scan Option Mode	Scan an Old Coupon Symbol	Scanning an Interim Coupon Symbol	Scanning a New Coupon Symbol
*New Coupon Symbols	<ul style="list-style-type: none"> • Report UPC or CODE 128 (whichever is seen first). • If UPC is covered then report Code 128. • If Code 128 is covered then report UPC, 	<ul style="list-style-type: none"> • Report UPC or DataBar (whichever is seen first). • If UPC is covered then report DataBar . • If DataBar is covered then report UPC. 	Reports DataBar.

Set Lengths for Code 128

SSI # L1 = D1h, L2 = D2h

Parameter # L1 = 209, L2 = 210

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Set lengths for Code 128 to any length, one or two discrete lengths, or lengths within a specific range. The range for Code 128 lengths is 1 - 55.

Note When setting lengths for different bar code types, enter a leading zero for single digit numbers.

Options:

- Code 128 One Discrete Length - Select this option to decode only Code 128 symbols containing a selected length. Select the length using the numeric bar codes in [Appendix G, NUMERIC BAR CODES](#). For example, to decode only Code 128 symbols with 14 characters, scan **Code 128 - One Discrete Length**, then scan **1** followed by **5**. To correct an error or change the selection, scan [Cancel on page G-10](#).
- Code 128 Two Discrete Lengths - Select this option to decode only Code 128 symbols containing either of two selected lengths. Select lengths using the numeric bar codes in [Appendix G, NUMERIC BAR CODES](#). For example, to decode only Code 128 symbols containing either 2 or 14 characters, select **Code 128 - Two Discrete Lengths**, then scan **0, 2, 1**, and then **4**. To correct an error or change the selection, scan [Cancel on page G-10](#).
- *Code 128 Length Within Range - Select this option to decode a Code 128 symbol with a specific length range. Select lengths using numeric bar codes in [Appendix G, NUMERIC BAR CODES](#). For example, to decode Code 128 symbols containing between 4 and 12 characters, first scan **Code 128 - Length Within Range**. Then scan **0, 4, 1**, and **2** (enter a leading zero for single digit numbers). To correct an error or change the selection, scan [Cancel on page G-10](#).
- Code 128 Any Length - Select this option to decode Code 128 symbols containing any number of characters within the scanner's capability.

Code 128 Reduced Quiet Zone

SSI # F8h 04h B8h

Parameter # 1208

Scan one of the following bar codes to enable or disable decoding Code 128 bar codes with reduced quiet zones. If you select **Enable**, select a [1D Quiet Zone Level on page 13-192](#).

Options:

- Enable Code 128 Reduced Quiet Zone
- *Disable Code 128 Reduced Quiet Zone.

**Enable Code 128 Reduced Quiet Zone
(1)**

***Disable Code 128 Reduced Quiet Zone
(0)**

Code 128 Security Level

SSI # F1h EFh

Parameter # 751

Code 128 bar codes are vulnerable to misdecodes by the nature of the symbol, especially when **Any Length** is set for Code 128 bar codes. The scanner offers four levels of decode security for Code 128 bar codes. There is an inverse relationship between security and scanner aggressiveness. Increasing the level of security may result in reduced aggressiveness in scanning, so select only the level of security necessary.

Options:

- **Code 128 Security Level 0:** This setting allows the scanner to operate in its most aggressive state, while providing sufficient security in decoding the most in-spec bar codes.
- **Code 128 Security Level 1:** A bar code must be successfully read twice, and satisfy certain safety requirements before being decoded. This default setting eliminates most misdecodes.
- **Code 128 Security Level 2:** Select this option with higher safety requirements to the bar codes if **Security Level 1** fails to eliminate misdecodes.
- **Code 128 Security Level 3:** If you selected **Security Level 2**, and misdecodes still occur, select this security level. The highest safety requirements are applied. A bar code must be successfully read three times before being decoded.

✓ **Note** Selecting this option is an extreme measure against mis-decoding severely out-of-spec bar codes. Selecting this level of security significantly impairs the decoding ability of the scanner. If this level of security is required, it is recommended that you try to improve the quality of the bar codes.

***Do Not Convert I 2 of 5 to EAN-13 (Disable)**
(00h)

I 2 of 5 Security Level

SSI # F8h 04h 61h

Parameter # 1121

Interleaved 2 of 5 bar codes are vulnerable to misdecodes by the nature of the symbol, especially when **Any Length** is set for Interleaved 2 of 5 bar codes. The scanner offers four levels of decode security for Interleaved 2 of 5 bar codes. There is an inverse relationship between security and scanner aggressiveness. Increasing the level of security may result in reduced aggressiveness in scanning, so select only the level of security necessary.

Options:

- I 2 of 5 Security Level 0 - This setting allows the scanner to operate in its most aggressive state, while providing sufficient security in decoding the most in-spec bar codes.
- *I 2 of 5 Security Level 1 - A bar code must be successfully read twice, and satisfy certain safety requirements before being decoded. This default setting eliminates most misdecodes.
- I 2 of 5 Security Level 2 - Select this option with higher safety requirements to the bar codes if Security Level 1 fails to eliminate misdecodes.
- I 2 of 5 Security Level 3 - If you selected Security Level 2, and misdecodes still occur, select this security level. The highest safety requirements are applied. A bar code must be successfully read three times before being decoded.

Note Selecting this option is an extreme measure against mis-decoding severely out-of-spec bar codes. Selecting this level of security significantly impairs the decoding ability of the scanner. If this level of security is required, it is recommended that you try to improve the quality of the bar codes.

GS1 DataBar Limited Margin Check

SSI # F1h D8h

Parameter # 728

The scanner offers four levels of decode security for GS1 DataBar Limited bar codes. There is an inverse relationship between the level of margin check and scanner aggressiveness. Increasing the level of margin check can reduce scanning aggressiveness, so select only the level of margin check necessary.

Options:

- Margin Check Level 1 – No clear margin required. This complies with the original GS1 standard, yet can result in erroneous decoding of a DataBar Limited bar code when scanning some UPC symbols that start with digits **9** and **7**.
- Margin Check Level 2 – Automatic risk detection. This level of margin check can result in erroneous decoding of DataBar Limited bar codes when scanning some UPC symbols. If a misdecode is detected, the scanner operates in Level 3 or Level 1.
- *Margin Check Level 3 – Margin check level reflects the newly proposed GS1 standard that requires a five times trailing clear margin.
- Margin Check Level 4 – Margin check level extends beyond the standard required by GS1. This level of margin check requires a five times leading and trailing clear margin.

**GS1 DataBar Limited Margin Check Level 1
(01h)**

**GS1 DataBar Limited Margin Check Level 4
(04h)**

Convert GS1 DataBar to UPC/EAN

SSI # F0h 8Dh

Parameter # 397

This parameter only applies to GS1 DataBar and GS1 DataBar Limited symbols not decoded as part of a Composite symbol. Enable this to strip the leading '010' from DataBar and DataBar Limited symbols encoding a single zero as the first digit, and report the bar code as EAN-13.

For bar codes beginning with two or more zeros but not six zeros, this parameter strips the leading '0100' and reports the bar code as UPC-A. The UPC-A Preamble parameter that transmits the system character and country code applies to converted bar codes. Note that neither the system character nor the check digit can be stripped.

Options:

- Enable Convert GS1 DataBar to UPC/EAN
- *Disable Convert GS1 DataBar to UPC/EAN.

**Enable Convert GS1 DataBar to UPC/EAN
(01h)**

***Disable Convert GS1 DataBar to UPC/EAN
(00h)**

Composite

Composite CC-C

SSI # F0h 55h

Parameter # 341

Options:

- Enable CC-C
- *Disable CC-C.

Enable CC-C
(01h)

*Disable CC-C
(00h)

Composite CC-A/B**SSI # F0h 56h****Parameter # 342**

Scan a bar code below to enable or disable Composite bar codes of type CC-A/B.

Note If you enable this code type, also see [UPC Composite Mode on page 13-150](#).

Options:

- Enable CC-A/B
- *Disable CC-A/B.

**Enable CC-A/B
(01h)**

***Disable CC-A/B
(00h)**

Composite TLC-39

SSI # F0h 73h

Parameter # 371

Scan a bar code below to enable or disable Composite bar codes of type TLC-39.

Options:

- Enable TLC39
- *Disable TLC39.

Enable TLC39
(01h)

***Disable TLC39**
(00h)

Composite Inverse

SSI # F8h 04h 59h

Parameter # 1113

Select an option to set Composite for either regular decode or inverse decode.

Options:

- *Regular Only - The scanner decodes regular Composite bar codes only. Before selecting this, set [Inverse 1D on page 13-136](#) to **Regular Only** or **Inverse Autodetect**.
- Inverse Only - The scanner decodes inverse Composite bar codes only. This mode only supports Composite Inverse that includes DataBar combined with CCAB, and does not support other 1D/2D combinations. Before selecting this, enable [Composite CC-A/B on page 13-147](#), and set [Inverse 1D on page 13-136](#) to **Inverse Only** or **Inverse Autodetect**.

***Regular Only**
(01h)

Inverse Only
(00h)

UPC Composite Mode

SSI # F0h 58h

Parameter # 344

If you enable [Composite CC-A/B on page 13-147](#), select an option for linking UPC symbols with a 2D symbol during transmission as if they were one symbol.

Options:

- *UPC Never Linked - Transmit UPC bar codes regardless of whether a 2D symbol is detected.
- UPC Always Linked - Transmit UPC bar codes and the 2D portion. If 2D is not present, the UPC bar code does not transmit.
- Autodiscriminate UPC Composites - The scanner determines if there is a 2D portion, then transmits the UPC, as well as the 2D portion if present.

***UPC Never Linked

Enable or disable MicroPDF417.

Options:

- Enable MicroPDF417
- *Disable MicroPDF417.

**Enable MicroPDF417
(01h)**

***Disable MicroPDF417
(00h)**

Code 128 Emulation

SSI # 7Bh

Parameter # 123

Enable this parameter to transmit data from certain MicroPDF417 symbols as Code 128. *AIM Code ID Character (01h) on page 5-29* must be enabled for this parameter to work.

Enable Code 128 Emulation to transmit these MicroPDF417 symbols with one of the following prefixes:

]C1	if the first codeword is 903-905
]C2	if the first codeword is 908 or 909
]C0	if the first codeword is 910 or 911

Disable Code 128 Emulation to transmit these MicroPDF417 symbols with one of the following prefixes:

]L3	if the first codeword is 903-905
]L4	if the first codeword is 908 or 909
]L5	if the first codeword is 910 or 911

Enable or disable Code 128 Emulation.

✓ **Note** Linked MicroPDF codewords 906, 907, 912, 914, and 915 are not supported. Use GS1 Composites instead.

Options:

- Enable Code 128 Emulation
- *Disable Code 128 Emulation.

**Enable Code 128 Emulation
(01h)**

***Disable Code 128 Emulation
(00h)**

Data Matrix

SSI # F0h 24h

Parameter # 292

DotCode Prioritize**SSI # F8 07 91h****Parameter # 1937**

Enable DotCode Prioritize to give priority to DotCode decoding as compared to other symbologies.

***Disable****Enable**

Redundancy Level

SSI # 4Eh

Parameter # 78

The scanner offers four levels of decode redundancy. Select higher redundancy levels for decreasing levels of bar code quality. As redundancy levels increase, the scanner's aggressiveness decreases.

Select the redundancy level appropriate for the bar code quality.

Options:

- *Redundancy Level 1
- Redundancy Level 2
- Redundancy Level 3
- Redundancy Level 4.

Redundancy Level 1

The following code types must be successfully read twice before being decoded:

Table 13-3 *Redundancy Level 1 Codes*

Code Type	Code Length
Codabar	8 characters or less
MSI	4 characters or less
D 2 of 5	8 characters or less
I 2 of 5	8 characters or less

Redundancy Level 2

The following code types must be successfully read twice before being decoded:

Table 13-4 *Redundancy Level 2 Codes*

Code Type	Code Length
All	All

Redundancy Level 3

Code types other than the following must be successfully read twice before being decoded. The following codes must be read three times:

Table 13-5 *Redundancy Level 3 Codes*

Code Type	Code Length
MSI	4 characters or less
D 2 of 5	8 characters or less
I 2 of 5	8 characters or less
Codabar	8 characters or less

Redundancy Level (continued)**Redundancy Level 4**

The following code types must be successfully read three times before being decoded:

Table 13-6 *Redundancy Level 4 Codes*

Code Type	Code Length
All	All

***Redundancy Level 1
(01h)**

**Redundancy Level 2
(02h)**

Redundancy Level (continued)

**Redundancy Level 3
(03h)**

**Redundancy Level 4
(04h)**

Security Level

SSI # 4Dh

Parameter # 77

The scanner offers four levels of decode security for delta bar codes, which include UPC/EAN and Code 93. Select increasing levels of security for decreasing levels of bar code quality. There is an inverse relationship between security and scanner aggressiveness, so choose only that level of security necessary for any given application.

Options:

- Security Level 0 - This setting allows the scanner to operate in its most aggressive state, while providing sufficient security in decoding most "in-spec" bar codes.
- *Security Level 1 - This default setting eliminates most misdecodes.
- Security Level 2 - Select this option if Security level 1 fails to eliminate misdecodes.
- Security Level 3 - If you selected Security Level 2 and misdecodes still occur, select this security level. Be advised, selecting this option is an extreme measure against mis-decoding severely out of spec bar codes. Selecting this level of security significantly impairs the decoding ability of the scanner. If you need this level of security, try to improve the quality of the bar codes.

**Security Level 0
(00h)**

***Security Level 1
(01h)**

Security Level (continued)

**Security Level 2
(02h)**

**Security Level 3
(03h)**

Intercharacter Gap Size

SSI # F0h 7Dh

Parameter # 381

The Code 39 and Codabar symbologies have an intercharacter gap that is typically quite small. Due to various bar code-printing technologies, this gap can grow larger than the maximum size allowed, preventing the scanner from decoding the symbol. If this problem occurs, scan the **Large Intercharacter Gaps** parameter to tolerate these out-of-specification bar codes.

Options:

- *Normal Intercharacter Gaps
- Large Intercharacter Gaps.

***Normal Intercharacter Gaps
(06h)**

**Large Intercharacter Gaps
(0Ah)**

1D Quiet Zone Level

SSI # F8h 05h 08h

Parameter # 1288

This feature sets the level of aggressiveness in decoding bar codes with a reduced quiet zone (the area in front of and at the end of a bar code), and applies to symbologies enabled by a Reduced Quiet Zone parameter. Because higher levels increase the decoding time and risk of misdecodes, Symbol Technologies strongly recommends enabling only the symbologies which require higher quiet zone levels, and leaving Reduced Quiet Zone disabled for all other symbologies.

Options:

- 0 - The scanner performs normally in terms of quiet zone.
- *1 - The scanner performs more aggressively in terms of quiet zone.
- 2 - The scanner only requires one side EB (end of bar code) for decoding.
- 3 - The scanner decodes anything in terms of quiet zone or end of bar code.

**1D Quiet Zone Level 0
(0)**

***1D Quiet Zone Level 1
(1)**

1D Quiet Zone Level (continued)

**1D Quiet Zone Level 2
(2)**

**1D Quiet Zone Level 3
(3)**

Macro PDF Features

Macro PDF is a special feature for concatenating multiple PDF symbols into one file. The scanner can decode symbols that are encoded with this feature, and can store more than 64 Kb of decoded data stored in up to 50 MacroPDF symbols.

caution When printing, keep each Macro PDF sequence separate, as each sequence has unique identifiers. Do not mix bar codes from several Macro PDF sequences, even if they encode the same data. When scanning Macro PDF sequences, scan the entire Macro PDF sequence without interruption. If, when scanning a mixed sequence, the scanner emits two long low beeps (Low/Low) this indicates an inconsistent file ID or inconsistent symbology error.

Flush Macro Buffer

This flushes the buffer of all decoded Macro PDF data stored to that point, transmits it to the host device, and aborts from Macro PDF mode.

Flush Macro PDF Buffer

Abort Macro PDF Entry

This clears all currently-stored Macro PDF data in the buffer without transmission and aborts from Macro PDF mode.

Abort Macro PDF Entry

CHAPTER 14 OCR PROGRAMMING

Introduction

This chapter describes how to set up the scanner for OCR programming. The scanner can read 6 to 60 point OCR typeface. It supports font types OCR-A and OCR-B.

OCR is not as secure as a bar code. To decrease OCR misdecodes and speed OCR reading, set an accurate OCR template and character subset, and use a check digit. All OCR fonts are disabled by default.

Throughout the programming bar code menus, asterisks (*) indicate default values.

* Indicates Default — ***Disable OCR-A** — Feature/Option

Note Most computer monitors allow scanning the bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces are not merging.

OCR Parameter Defaults

Table 14-1 lists the defaults for OCR parameters. To change any option, scan the appropriate bar code(s) provided in the Parameter Descriptions section beginning on [page 14-3](#).

✓ **Note** See [Appendix A, STANDARD DEFAULT PARAMETERS](#) for all user preferences, hosts, symbologies, and miscellaneous default parameters.

Table 14-1 OCR Programming Default Table

Parameter	SSI Number ¹	Parameter Number ²	Default	Page Number

¹ SSI number hex values are used for programming via SSI commands.
² Parameter number decimal values are used for programming via RSM commands.

OCR Programming Parameters

Enable/Disable OCR-A

SSI # F1h A8h
Parameter # 680

To enable or disable OCR-A, scan one of the following bar codes.

- ✓ **notes** OCR is not as secure as a bar code. To decrease OCR misdecodes and speed OCR reading, set an accurate OCR template and character subset, and use a check digit. See [OCR Subset on page 14-23](#) and [OCR Template on page 14-25](#).

All OCR fonts are disabled by default.

Enable OCR-A

***Disable OCR-A**

OCR-A Variant

SSI # F1 ACh

Parameter # 685

Font variant sets a processing algorithm and default character subset for the given font. To choose a variant, scan one of the following bar codes. Selecting the most appropriate font variant optimizes performance and accuracy.

OCR-A supports the following variants:

- ***OCR-A Full ASCII**
!"#\$()*+,-./0123456789<>ABCDEFGHIJKLMNOPQRSTUVWXYZ^
- **OCR-A Reserved 1**
\$*+,-./0123456789ABCDEFGHIJKLMNOPQRSTUVWXYZ
- **OCR-A Reserved 2**
\$*+,-./0123456789<>ABCDEFGHIJKLMNOPQRSTUVWXYZ
- **OCR-A Banking**
-0123456789<> ƒ ħ ƒ

Special banking characters output as the following representative characters:

- ƒ outputs as f
- ħ outputs as c
- ƒ outputs as h

✓ **Note** Enable OCR-A before setting this parameter. If disabling OCR-A, set the variant to its default (OCR-A Full ASCII).

OCR-A Variant (continued)

***OCR-A Full ASCII
(00h)**

**OCR-A Reserved 1
(01h)**

OCR-A Variant (continued)

**OCR-A Reserved 2
(02h)**

**OCR-A Banking
(03h)**

Enable/Disable OCR-B

SSI # F1h A9h
Parameter # 681

To enable or disable OCR-B, scan one of the following bar codes.

- ✓ **notes** OCR is not as secure as a bar code. To decrease OCR misdecodes and speed OCR reading, set an accurate OCR template and character subset, and use a check digit. See [OCR Subset on page 14-23](#) and [OCR Template on page 14-25](#).

All OCR fonts are disabled by default.

Enable OCR-B

***Disable OCR-B**

OCR-B Variant

SSI # F1h ADh

Parameter # 685

OCR-B has the following variants. Selecting the most appropriate font variant affects performance and accuracy.

- ***OCR-B Full ASCII**
!#\$%()*+,-./0123456789<>ABCDEFGHIJKLMNOPQRSTUVWXYZ^_`ñ
- **OCR-B Banking**
#+-0123456789<>JNP|
- **OCR-B Limited**
+,-./0123456789<>ACENPSTVX
- **OCR-B ISBN 10-Digit Book Numbers**
-0123456789>BCEINPSXz
- **OCR-B ISBN 10 or 13-Digit Book Numbers**
-0123456789>BCEINPSXz
- **OCR-B Travel Document Version 1 (TD1) 3-Line ID Cards**
-0123456789<ABCDEFGHIJKLMNOPQRSTUVWXYZ
- **OCR-B Travel Document Version 2 (TD2) 2-Line ID Cards**
-0123456789<ABCDEFGHIJKLMNOPQRSTUVWXYZ
- **OCR-B Travel Document 2 or 3-Line ID Cards Auto-Detect**
!#\$%()*+,-./0123456789<>ABCDEFGHIJKLMNOPQRSTUVWXYZ^_`ñ
- **OCR-B Passport**
-0123456789<ABCDEFGHIJKLMNOPQRSTUVWXYZñ
- **OCR-B Visa Type A**
-0123456789<ABCDEFGHIJKLMNOPQRSTUVWXYZ
- **OCR-B Visa Type B**
-0123456789<ABCDEFGHIJKLMNOPQRSTUVWXYZñ
- **OCR-B ICAO Travel Documents**

This allows reading either TD1, TD2, Passport, Visa Type A, or Visa Type B without switching between these options. It automatically recognizes the travel document read.

To choose a variant, scan one of the following bar codes. Selecting the following OCR-B variants automatically sets the appropriate [OCR Lines on page 14-20](#). These five variants invoke extensive special algorithms and checking for that particular document type:

Variant	OCR Lines Setting
Passport	2
TD1 ID Cards	3
TD2 ID Cards	2
Visa Type A	2
Visa Type B	2

Selecting one of the ISBN Book Numbers automatically applies the appropriate ISBN checksum, so you do not need to set this.

OCR-B Variant (continued)

For the best performance in passport reading, fix the target passport and the scanner in place (6.5 - 7.5”).

- ✓ **Note** Enable OCR-B before setting this parameter. If disabling OCR-B, set the variant to its default (OCR-B Full ASCII).

***OCR-B Full ASCII
(00h)**

**OCR-B Banking
(01h)**

(0Bh)**

Enable/Disable MICR E13B

SSI # F1h AAh

Parameter # 682

To enable or disable MICR E13B, scan one of the following bar codes.

MICR E 13B uses the following characters:

0 1 2 3 4 5 6 7 8 9 t a o d

TOAD characters (Transit, On Us, Amount, and Dash) output as the following representative characters:

t outputs as t

a outputs as a

o outputs as o

d outputs as d

✓ **Note** OCR is not as secure as a bar code. To decrease OCR misdecodes and speed OCR reading, set an accurate OCR template and character subset, and use a check digit. See [OCR Subset on page 14-23](#) and [OCR Template on page 14-25](#).

✓ **Note** All OCR fonts are disabled by default.

Enable MICR E13B

*Disable MICR E13B

Enable/Disable US Currency Serial Number

SSI # F1h ABh
Parameter # 683

To enable or disable US Currency Serial Number, scan one of the following bar codes.

- ✓ **notes** OCR is not as secure as a bar code. To decrease OCR misdecodes and speed OCR reading, set an accurate OCR template and character subset, and use a check digit. See [OCR Subset on page 14-23](#) and [OCR Template on page 14-25](#).

All OCR fonts are disabled by default.

Enable US Currency

***Disable US Currency**

OCR Orientation

SSI # F1 AFh

Parameter # 687

Select one of five options to specify the orientation of an OCR string to be read:

- 0° to the imaging engine (default)
- 270° clockwise (or 90° clockwise) to the imaging engine
- 180° (upside down) to the imaging engine
- 90° clockwise to the imaging engine
- Omnidirectional

Setting an incorrect orientation can cause misdecodes.

***OCR Orientation 0°
(00h)**

**OCR Orientation 270° Clockwise
(01h)**

OCR Orientation (continued)

**OCR Orientation 180° Clockwise
(02h)**

**OCR Orientation 90° Clockwise
(03h)**

OCR Orientation (continued)

**OCR Orientation Omnidirectional
(04h)**

OCR Lines

SSI # F1 B3h

Parameter # 691

To select the number of OCR lines to decode, scan one of the following bar codes. Selecting Visas, TD1, or TD2 ID cards automatically sets the appropriate **OCR Lines**. Also see [OCR-B Variant on page 14-8](#).

***OCR 1 Line
(001h)**

**OCR 2 Lines
(002h)**

OCR Lines (continued)

OCR 3 Lines
(003h)

OCR Minimum Characters

SSI # F1 B1h

Parameter # 689

To select the minimum number of OCR characters (not including spaces) per line to decode, scan the following bar code, then scan a three-digit number between 003 and 100 using the bar codes in [Appendix G, NUMERIC BAR CODES](#) representing the number of OCR characters to decode. Strings of OCR characters less than the minimum are ignored. The default is 003.

OCR Minimum Characters

OCR Maximum Characters

SSI # F1 B2h

Parameter # 690

To select the maximum number of OCR characters (including spaces) per line to decode, scan the following bar code, then scan a three-digit number between 003 and 100 using the bar codes in [Appendix G, NUMERIC BAR CODES](#) representing the number of OCR characters to decode. Strings of OCR characters greater than the maximum are ignored. The default is 100.

OCR Maximum Characters

OCR Subset

SSI # F1 AEh

Parameter # 686

Set an OCR subset to define a custom group of characters in place of a preset font variant. For example, if scanning only numbers and the letters A, B, and C, create a subset of just these characters to speed decoding. This applies a designated OCR Subset across all enabled OCR fonts.

To set or modify the OCR font subset, first enable the appropriate OCR font(s). Next, scan the following bar code, then scan numbers and letters to form the OCR Subset from the alphanumeric keyboard in the *Advanced Data Formatting Guide*. Then scan **End of Message** in the *Advanced Data Formatting Guide*.

OCR Subset

To cancel an OCR subset, for OCR-A or OCR-B, scan OCR-A variant **Full ASCII**, or OCR-B variant **Full ASCII**.

For MICR E13B or US Currency Serial Number, create a subset which includes all allowed characters in that character set, or scan an option from the [Set Default Parameter on page 5-4](#) and re-program the scanner.

OCR Reduced Quiet Zone

SSI # F1h B7h

Parameter # 695

This option sets the OCR reduced quiet zone. The scanner stops scanning a field when it detects a sufficiently wide blank space. The width of this space is defined by the End of Field option. Used with parsers that tolerate slanted characters, the End of Field count is roughly a count of 8 for a character width. For example if set to 15, then two character widths are an end of line indicator for the parser. Larger end of field numbers require bigger reduced quiet zones at each end of text line.

To set a reduced quiet zone, scan the following bar code, then scan a two-digit number using the numeric keypad in the *Advanced Data Formatting Guide*. The range of the reduced quiet zone is 20 - 99 and the default is 50, indicating a six character width reduced quiet zone.

OCR Reduced Quiet Zone

OCR Template

SSI # F1 23h

Parameter # 547

This option creates a template for precisely matching scanned OCR characters to a desired input format. Carefully constructing an OCR template eliminates scanning errors.

To set or modify the OCR decode template, scan the [OCR Template](#) bar code, then bar codes corresponding to numbers and letters on the following pages to form the template expression. Then scan **End of Message** in the *Advanced Data Formatting Guide*. The default is **99999999** which accepts any character OCR strings.

OCR Template

End of Message

OCR Template (continued)

Required Digit (9)

9

Only a numeric character is allowed in this position.

Template	Valid data	Valid data	Invalid data
99999	12987	30517	123AB

Required Alpha (A)

A

OCR Template (continued)

Only an alpha character is allowed in this position.

Template	Valid data	Valid data	Invalid data
AAA	ABC	WXY	12F

Optional Alphanumeric (1)

1

When this option appears in the template string, the data validator accepts an alphanumeric character if present. Optional characters are not allowed as the first character(s) in a field of like characters.

Template	Valid data	Valid data	Invalid data
99991	1234A	12345	1234<

Optional Alpha (2)

2

OCR Template (continued)

When this option appears in the template string, the data validator accepts an alpha character if present. Optional characters are not allowed as the first character(s) in a field of like characters.

Template	Valid data	Valid data	Invalid data
AAAA2	ABCDE	WXYZ	ABCD6

Alpha or Digit (3)**3**

The data validator requires an alphanumeric character in this position to validate the incoming data.

Template	Valid data	Valid data	Invalid data
33333	12ABC	WXY34	12AB<

Any Including Space & Reject (4)**4**

OCR Template (continued)

The template accepts any character in this position, including space and reject. Rejects are represented as an underscore (_) in the output. This is a good selection for troubleshooting.

Template	Valid data	Valid data
99499	12\$34	34_98

Any except Space & Reject (5)

5

The template accepts any character in this position except a space or reject.

Template	Valid data	Valid data	Invalid data
55999	A.123	*Z456	A BCD

Optional Digit (7)

7

OCR Template (continued)

When this option appears in the template string, the template accepts a numeric character if present. Optional characters are not allowed as the first character(s) in a field of like characters.

Template	Valid data	Valid data	Invalid data
99977	12345	789	789AB

Digit or Fill (8)**8**

The data validator accepts any numeric or fill character in this position.

Template	Valid data	Valid data	Valid data
88899	12345	>>789	<<789

Alpha or Fill (F)**F**

OCR Template (continued)

The data validator accepts any alpha or fill character in this position.

Template	Valid data	Valid data	Valid data
AAAFF	ABCXY	LMN>>	ABC<5

Optional Space ()**Space**

When this option appears in the template string, the template accepts a space if present. Optional characters are not allowed as the first character(s) in a field of like characters.

Template	Valid data	Valid data	Invalid data
99 99	12 34	1234	67891

Optional Small Special (.)

.

OCR Template (continued)

When this option appears in the template string, the data validator accepts a special character if present. Optional characters are not allowed as the first character(s) in a field of like characters. Small special characters are '-', ',' and '.'.

Template	Valid data	Valid data	Invalid data
AA.99	MN.35	XY98	XYZ12

Other Template Operators

These template operators assist in capturing, delimiting, and formatting scanned OCR data.

Literal String (" and +)

“

+

Use either of these delimiting characters surrounding characters from the alphanumeric keyboard in the *Advanced Data Formatting Guide* to define a literal string within a template that must be present in scanned OCR data. There are two characters used to delimit required literal strings; if one of the delimiter characters is present in the desired literal string, use the other delimiter.

Template	Valid data	Invalid data
"35+BC"	35+BC	AB+22

OCR Template (continued)

New Line (E)

E

To create a template of multiple lines, add **E** between the template of each single line.

Template	Valid data	Valid data	Invalid data
999EAAAA	321	987	XYZW
	BCAD	ZXYW	12

String Extract (C)

C

OCR Template (continued)

This operator combined with others defines a string of characters to extract from the scanned data. The string extract is structured as follows:

CbPe

Where:

- C is the string extract operator
- b is the string begin delimiter
- P is the category (one or more numeric or alpha characters) describing the string representation
- e is the string end delimiter

Values for b and e can be any scannable character. They are included in the output stream.

Template	Incoming data	Output
C>A>	XQ3>ABCDE>	>ABCDE>
	->ATHRUZ>123	>ATHRUZ>
	1ABCZXYZ	No Output

Ignore to End of Field (D)

D

This operator causes all characters after a template to be ignored. Use this as the last character in a template expression. Examples for the template 999D:

Template	Incoming data	Output
999D	123-PED	123
	357298	357
	193	193

Skip Until (P1)

P

OCR Template (continued)

1

This operator allows skipping over characters until a specific character type or a literal string is detected. It can be used in two ways:

`P1ct`

Where:

- P1 is the Skip Until operator
- c is the type of character that triggers the start of output
- t is one or more template characters

`P1"s"t`

Where:

- P1 is the Skip Until operator
- "s" is one or more literal string characters (see [Literal String \(" and +\) on page 14-32](#)) that trigger the start of output
- t is one or more template characters

The trigger character or literal string is included in output from a Skip Until operator, and the first character in the template should accommodate this trigger.

Template	Incoming data	Output
<code>P1"PN"AA9999</code>	123PN9876	PN9876
	PN1234	PN1234
	X-PN3592	PN3592

Skip Until Not (P0)

P

OCR Template (continued)**0**

This operator allows skipping over characters until a specific character type or a literal string is not matched in the output stream. It can be used in two ways:

`P0ct`

Where:

- P0 is the Skip Until Not operator
- c is the type of character that triggers the start of output
- t is one or more template characters

`P0"s"t`

Where:

- P0 is the Skip Until Not operator
- "s" is one or more literal string characters (see [Literal String \(" and +\) on page 14-32](#)) that trigger the start of output
- t is one or more template characters

The trigger character or literal string is not included in output from a Skip Until Not operator.

Template	Incoming data	Output
P0A9999	BPN3456	3456
	PN1234	1234
	5341	No output
Template	Incoming data	Output
P0"PN"9999	PN3456	3456
	5341	No output
	PNPN7654	7654

Repeat Previous (R)

**R**

OCR Template (continued)

This operator allows a template character to repeat one or more times, allowing the capture of variable-length scanned data. The following examples capture two required alpha characters followed by one or more required digits:

Template	Incoming data	Output
AA9R	AB34	AB34
	PN12345	PN12345
	32RM52700	No output

Scroll Until Match (S)

S

This operator steps through scanned data one character at a time until the data matches the template.

Template	Incoming data	Output
S99999	AB3	No Output
	PN12345	12345
	32RM52700	52700

Multiple Templates

This feature sets up multiple templates for OCR decoding. To do this, follow the procedure described in [OCR Template on page 14-25](#) (scan the [OCR Template](#) bar code, then bar codes corresponding to numbers and letters to form the template expression, then **End of Message**) for each template in the multiple template string, using a capital letter **X** as a separator between the templates.

For example, set the [OCR Template](#) as **99999XAAAAA** to decode OCR strings of either **12345** or **ABCDE**. Up to 99 templates are permitted.

Template Examples

Following are sample templates with descriptions of valid data for each definition.

Field Definition	Description
"M"99977	M followed by three digits and two optional digits.
"X"997777"X"	X followed by two digits, four optional digits, and an X.
9959775599	Two digits followed by any character, a digit, two optional digits, any two characters, and two digits.
A55 "-"999 "-"99	A letter followed by two characters, a dash, three digits, a dash, and two digits.
33A"."99	Two alphanumeric characters followed by a letter, a period, and two digits.
999992991	Five digits followed by an optional alpha, two digits, and an optional alphanumeric.
"PN98"	Literal field - PN98

OCR Check Digit Modulus

SSI # F1h B0h Parameter # 688

✓ **Note** This feature is currently only partially supported, and will be fully supported in future versions.

This option sets OCR module check digit calculation. The check digit is the last digit (in the right most position) in an OCR string and improves the accuracy of the collected data. The check digit is the end product of a

calculation made on the incoming data. For check digit calculation, for example Modulus 10, alpha and numeric characters are assigned numeric weights (see [OCR Check Digit Multiplier on page 14-39](#)). The calculation is applied to the character weights and the resulting check digit is added to the end of the data. If the incoming data does not match the check digit, the data is considered corrupt.

The selected check digit option does not take effect until you set **OCR Check Digit Validation**.

To choose the Check Digit Modulus, such as 10 for modulo 10, scan the following bar code, then scan a three-digit number from 001 to 099 representing the check digit using the numeric keypad in the *Advanced Data Formatting Guide*. The default is 1.

OCR Check Digit

OCR Check Digit Multiplier

SSI # F1h BCh Parameter # 700

This option sets OCR check digit multipliers for the character positions. For check digit validation, each character in scanned data has an equivalent weight used in the check digit calculation. PL3307 OCR ships with the following weight equivalents:

0 = 0	A = 10	K = 20	U = 30
1 = 1	B = 11	L = 21	V = 31
2 = 2	C = 12	M = 22	W = 32
3 = 3	D = 13	N = 23	X = 33
4 = 4	E = 14	O = 24	Y = 34
5 = 5	F = 15	P = 25	Z = 35
6 = 6	G = 16	Q = 26	Space = 0
7 = 7	H = 17	R = 27	
8 = 8	I = 18	S = 28	
9 = 9	J = 19	T = 29	

All other characters are equivalent to one (1).

You can define the multiplier string if it is different from the default.

121212121212 (default)

123456789A (for ISBN, Product Add Right to Left. See [OCR Check Digit Validation on page 14-40](#))

For example:

ISBN	0	2	0	1	1	8	3	9	9	4	
Multiplier	10	9	8	7	6	5	4	3	2	1	
Product	0	18	0	7	6	40	12	27	18	4	
Product add	0+	18+	0+	7+	6+	40+	12+	27+	18+	4=	132

ISBN uses modulo 11 for its check digit. In this case, 132 is divisible by 11, so it passes the check digit.

To set the check digit multiplier, scan the following bar code, then scan numbers and letters to form the multiplier string from the alphanumeric keyboard in the *Advanced Data Formatting Guide*. Then scan **End of Message** in the *Advanced Data Formatting Guide*.

OCR Check Digit Multiplier

OCR Check Digit Validation

SSI # F1h B6h

Parameter # 694

Use **OCR Check Digit Validation** to protect against scanning errors by applying a check digit validation scheme. The following is a list of options.

None

No check digit validation, indicating no check digit is applied. This is the default.

***No Check Digit
(00h)**

Product Add Left to Right

Each character in the scanned data is assigned a numeric value (see [OCR Check Digit Multiplier on page 14-39](#)). Each digit representing a character in the scanned data is multiplied by its corresponding digit in the multiplier, and the sum of these products is computed. The check digit passes if this sum modulo Check Digit Modulus is zero.

Example:

Scanned data numeric value is 132456 (check digit is 6)

Check digit multiplier string is 123456

Digit	1	3	2	4	5	6
Multiplier	1	2	3	4	5	6
Product	1	6	6	16	25	36
Product add	1+	6+	6+	16+	25+	36= 90

The Check Digit Modulus is 10. It passes because 90 is divisible by 10 (the remainder is zero).

**Product Add Left to Right
(03h)**

OCR Check Digit Validation (continued)

Product Add Right to Left

Each character in the scanned data is assigned a numeric value (see [OCR Check Digit Multiplier on page 14-39](#)). The check digit multiplier is reversed in order. Each value representing a character in the scanned data is multiplied by its corresponding digit in the reversed multiplier, resulting in a product for each character in the scanned data. The sum of these products is computed. The check digit passes if this sum modulo Check Digit Modulus is zero.

Example:

Scanned data numeric value is 132459 (check digit is 9)

Check digit multiplier string is 123456

Digit	1	3	2	4	5	9
Multiplier	6	5	4	3	2	1
Product	6	15	8	12	10	9
Product add	6+	15+	8+	12+	10+	9= 60

The Check Digit Modulus is 10. It passes because 60 is divisible by 10 (the remainder is 0).

**Product Add Right to Left
(01h)**

Digit Add Left to Right

Each character in the scanned data is assigned a numeric value (see [OCR Check Digit Multiplier on page 14-39](#)). Each value representing a character in the scanned data is multiplied by its corresponding digit in the multiplier, resulting in a product for each character in the scanned data. The sum of each individual digit in all of the products is then calculated. The check digit passes if this sum modulo Check Digit Modulus is zero.

Example:

Scanned data numeric value is 132456 (check digit is 6)

Check digit multiplier string is 123456

Digit	1	3	2	4	5	6
Multiplier	1	2	3	4	5	6
Product	1	6	6	16	25	36
Digit add	1+	6+	6+	1+6+	2+5+	3+6= 36

The Check Digit Modulus is 12. It passes because 36 is divisible by 12 (the remainder is 0).

**Digit Add Left to Right
(04h)**

OCR Check Digit Validation (continued)

Digit Add Right to Left

Each character in the scanned data is assigned a numeric value (see [OCR Check Digit Multiplier on page 14-39](#)). The check digit multiplier is reversed in order. Each value representing a character in the scanned data is multiplied by its corresponding digit in the reversed multiplier, resulting in a product for each character in the scanned data. The sum of each individual digit in all of the products is then calculated. The check digit passes if this sum modulo Check Digit Modulus is zero.

Example:

Scanned data numeric value is 132456 (check digit is 6)

Check digit multiplier string is 123456

Digit	1	3	2	4	5	6	
Multiplier	6	5	4	3	2	1	
Product	6	15	8	12	10	6	
Digit add	6+	1+5+	8+	1+2+	1+0+	6=	30

The Check Digit Modulus is 10. It passes because 30 is divisible by 10 (the remainder is 0).

Digit Add Right to Left
(02h)

Product Add Right to Left Simple Remainder

Each character in the scanned data is assigned a numeric value (see [OCR Check Digit Multiplier on page 14-39](#)). The check digit multiplier is reversed in order. Each value representing a character in the scanned data is multiplied by its corresponding digit in the reversed multiplier, resulting in a product for each character in the scanned data. The sum of these products **except for the check digit's product** is computed. The check digit passes if this sum modulo Check Digit Modulus is equal to the check digit's product.

Example:

Scanned data numeric value is 122456 (check digit is 6)

Check digit multiplier string is 123456

Digit	1	2	2	4	5	6	
Multiplier	6	5	4	3	2	1	
Product	6	10	8	12	10	6	
Product add	6+	10+	8+	12+	10=	46	6

The Check Digit Modulus is 10. It passes because 46 divided by 10 leaves a remainder of 6.

Product Add Right to Left Simple Remainder
(05h)

OCR Check Digit Validation (continued)

Digit Add Right To Left Simple Remainder

Each character in the scanned data is assigned a numeric value (see [OCR Check Digit Multiplier on page 14-39](#)). The check digit multiplier is reversed in order. Each value representing a character in the scanned data is multiplied by its corresponding digit in the reversed multiplier, resulting in a product for each character in the scanned data. The sum of each individual digit in all of the products **except for the check digit's product** is then calculated. The check digit passes if this sum modulo Check Digit Modulus is equal to the check digit's product.

Example:

Scanned data numeric value is 122459 (check digit is 6)

Check digit multiplier string is 123456

Digit	1	2	2	4	5	9
Multiplier	6	5	4	3	2	1
Product	6	10	8	12	10	9
Digit add	6+	1+0+	8+	1+2+	1+0=	19 9

The Check Digit Modulus is 10. It passes because 19 divided by 10 leaves a remainder of 9.

**Digit Add Right to Left Simple Remainder
(06h)**

Health Industry - HIBCC43

This is the health industry module 43 check digit standard.

**Health Industry - HIBCC43
(09h)**

Inverse OCR

SSI # F2h 58h

Parameter # 856

Inverse OCR is white or light words on a black or dark background. Select an option for decoding inverse OCR:

- ***Regular Only** - decode regular OCR (black on white) strings only.
- **Inverse Only** - decode inverse OCR (white on black) strings only.
- **Autodiscriminate** - decodes both regular and inverse OCR strings.

***Regular Only
(00h)**

**Inverse Only
(01h)**

Inverse OCR (continued)

**Autodiscriminate
(02h)**

OCR Redundancy

SSI # F8h 06h EAh

Parameter # 1770

This option adjusts the number of times to decode an OCR text string before transmission. There are three levels of OCR decode redundancy. There is an inverse relationship between the redundancy level and OCR decoding aggressiveness. Increasing the level of the redundancy can reduce OCR scanning aggressiveness, so select only the level of redundancy necessary.

- ***OCR Redundancy Level 1:** This default setting allows the scanner to operate in its most aggressive state while providing sufficient accuracy in decoding most in-spec OCR text strings.
- **OCR Redundancy Level 2:** This setting eliminates most misdecodes while maintaining reasonable aggressiveness.
- **OCR Redundancy Level 3:** Select this option with greater redundancy requirements if OCR Redundancy Level 2 fails to eliminate misdecodes.

***OCR Redundancy Level 1
(01h)**

**OCR Redundancy Level 2
(02h)**

OCR Redundancy (continued)

**OCR Redundancy Level 3
(03h)**

CHAPTER 15 ADVANCED DATA FORMATTING

Introduction

Advanced Data Formatting (ADF) is a means of customizing data before transmission to the host device. Use ADF to edit scan data to suit requirements. Implement ADF by scanning a related series of bar codes which program the scanner with ADF rules.

For information and programming bar codes for ADF, refer to the *Advanced Data Formatting Programmer Guide*, p/n 72E-69680-xx. All guides are located on the web at: zebra.com/support.

APPENDIX B COUNTRY CODES

Introduction

This chapter provides instructions for programming the keyboard to interface with a USB, or Keyboard Wedge host. The host can power the scanner. For host setup information, see [Chapter 7, USB INTERFACE](#) and [Chapter 10, KEYBOARD WEDGE INTERFACE](#).

Throughout the programming bar code menus, default values are indicated with asterisks (*).

*Indicates Default — *US English (North American) Keyboard — Feature/Option

USB and Keyboard Wedge Country Keyboard Types (Country Codes)

Scan the bar code corresponding to the keyboard type. For a USB host, this setting applies only to the USB Keyboard (HID) device. If the keyboard type is not listed, see [Emulate Keypad on page 7-15](#) for the USB HID host. For a Keyboard Wedge host, see [Alternate Numeric Keypad Emulation on page 10-10](#).

Note When changing USB country keyboard types the scanner automatically resets. The scanner issues the standard startup beep sequences.

important 1. Some country keyboard bar code types are specific to certain Windows Operating Systems (i.e., XP, and Windows 7, or higher). Bar codes requiring a specific Windows OS are noted so in their bar code captions.

2. Use the **French International** bar code for Belgium French keyboards.

Note For best results when using international keyboards, enable [Quick Keypad Emulation on page 7-30](#).

APPENDIX C COUNTRY CODE PAGES

Introduction

This chapter provides bar codes for selecting code pages for the country keyboard type selected in [Appendix B, COUNTRY CODES](#). If the default code page in [Table C-1](#) is appropriate for your selected country keyboard type, you do not need to scan a country code page bar code.

- ✓ **Note** ADF rules can also specify a code page based on the symbology and other ADF criteria. Refer to the *Advanced Data Formatting Programmer Guide*.

Country Code Page Defaults

Table C-1 lists the code page default for each country keyboard.

Table C-1 *Country Code Page Defaults*

Country Keyboard	Code Page Default
US English (North American)	Windows 1252
US English (Mac)	Mac CP10000
Albanian	Windows 1250
Arabic 101	Windows 1256
Arabic 102	Windows 1256
Arabic 102 AZERTY	Windows 1256
Azeri Latin	Windows 1254
Azeri Cyrillic	Windows 1251
Belarusian	Windows 1251
Bosnian Latin	Windows 1250
Bosnian Cyrillic	Windows 1251
Bulgarian Latin	Windows 1250
Bulgarian Cyrillic	Windows 1251
Canadian French Win7	Windows 1252
Canadian French (Legacy)	Windows 1252
Canadian Multilingual	Windows 1252
Croatian	Windows 1250
Chinese ASCII	Windows 1252
Chinese (Simplified)	Windows 936, GBK
Chinese (Traditional)	Windows 950, Big5
Czech	Windows 1250
Czech Programmers	Windows 1250
Czech QWERTY	Windows 1250
Danish	Windows 1252
Dutch Netherland	Windows 1252
Estonian	Windows 1257
Faeroese	Windows 1252
Finnish	Windows 1252

Table C-1 *Country Code Page Defaults (Continued)*

Country Keyboard	Code Page Default
French (France)	Windows 1252
French (Canada) 95/98	Windows 1252
French (Canada) 2000/XP	Windows 1252
French International (Belgian French)	Windows 1252
Galician	Windows 1252
German	Windows 1252
Greek Latin	Windows 1252
Greek220 Latin	Windows 1253
Greek319 Latin	Windows 1252
Greek	Windows 1253
Greek220	Windows 1253
Greek319	Windows 1253
Greek Polytonic	Windows 1253
Hebrew Israel	Windows 1255
Hungarian	Windows 1250
Hungarian_101KEY	Windows 1250
Icelandic	Windows 1252
Irish	Windows 1252
Italian	Windows 1252
Italian_142	Windows 1252
Japanese ASCII	Windows 1252
Japanese (Shift-JIS)	Windows 932, Shift-JIS
Kazakh	Windows 1251
Korean ASCII	Windows 1252
Korean (Hangul)	Windows 949, Hangul
Kyrgyz	Windows 1251
Latin America	Windows 1252
Latvian	Windows 1257
Latvian QWERTY	Windows 1257
Lithuanian	Windows 1257
Lithuanian_IBM	Windows 1257

Table C-1 Country Code Page Defaults (Continued)

Country Keyboard	Code Page Default
Macedonian -FYROM	Windows 1251
Maltese_47KEY	Windows 1252
Mongolian-Cyrillic	Windows 1251
Norwegian	Windows 1252
Polish_214	Windows 1250
Polish Programmer	Windows 1250
Portuguese Brazil	Windows 1252
Portuguese Brazilian ABNT	Windows 1252
Portuguese Brazilian ABNT2	Windows 1252
Portuguese Portugal	Windows 1252
Romanian	Windows 1250
Romanian Legacy	Windows 1250
Romanian Standard	Windows 1250
Romanian Programmer	Windows 1250
Russian	Windows 1251
Russian Typewriter	Windows 1251
Serbian Latin	Windows 1250
Serbian Cyrillic	Windows 1251
Slovak	Windows 1250
Slovak QWERTY	Windows 1250
Slovenian	Windows 1250
Spanish	Windows 1252
Spanish Variation	Windows 1252
Swedish	Windows 1252
Swiss French	Windows 1252
Swiss German	Windows 1252
Tatar	Windows 1251
Thai-Kedmanee	Windows 874
Turkish F	Windows 1254
Turkish Q	Windows 1254
Ukrainian	Windows 1251

Table C-1 *Country Code Page Defaults (Continued)*

Country Keyboard	Code Page Default
United Kingdom	Windows 1252
United States	Windows 1252
US Dvorak	Windows 1252
US Dvorak Left Hand	Windows 1252
US Dvorak Right Hand	Windows 1252
US International	Windows 1252
Uzbek Cyrillic	Windows 1251
Vietnamese	Windows 1258

Country Code Page Bar Codes

APPENDIX D CJK DECODE CONTROL

Introduction

This appendix describes control parameters for CJK (Chinese, Japanese, Korean) bar code decode through USB HID Keyboard Emulation mode.

Note Because ADF does not support CJK character processing, there is no format manipulation for CJK output.

CJK Control Parameters

Unicode Output Control

SSI # F2 CD

Parameter # 973

For a Unicode encoded CJK bar code, select one of the following options for unicode output:

- **Universal Output to Unicode and MBCS Application** - This default method applies to Unicode and MBCS expected applications, such as MS Word and Notepad on a Windows host.
 - ✓ **Note** To support Unicode universal output, set up the registry table for the Windows host. See [Unicode/CJK Decode Setup with Windows Host on page D-10](#).
- **Output to Unicode Application Only** - This method applies only to Unicode expected applications, such as MS Word and WordPad, but not Notepad.

***Universal Output
(0)**

**Unicode Application Only
(1)**

CJK Output Method to Windows Host

SSI # F2 CC

Parameter # 972

For a national standard encoded CJK bar code, select one of the following options for CJK output to a Windows host:

- **Universal CJK Output** - This is the default universal CJK output method for US English IME or Chinese/Japanese/Korean ASCII IME on a Windows host. This method converts CJK characters to Unicode and emulates the characters when transmitting to the host. Use the [Unicode Output Control](#) parameter to control Unicode output.
- ✓ **Note** To support universal CJK output, set up the registry table for the Windows host. See [Unicode/CJK Decode Setup with Windows Host on page D-10](#).
- **Other options for CJK output** - With the following methods, the scanner sends the CJK character hexadecimal internal code (Nei Ma) value to host, or converts the CJK character to Unicode and sends the hexadecimal Unicode value to host. When using these methods, the Windows host must select the corresponding IME to accept the CJK character. See [Unicode/CJK Decode Setup with Windows Host on page D-10](#).
 - **Japanese Unicode Output**
 - **Simplified Chinese GBK Code Output**
 - **Simplified Chinese Unicode Output**
 - **Korean Unicode Code Output**
 - **Traditional Chinese Big5 Code Output (Windows XP)**
 - **Traditional Chinese Big5 Code Output (Windows 7)**
 - **Traditional Chinese Unicode Code Output (Windows XP)**
 - **Traditional Chinese Unicode Code Output (Windows 7)**
- ✓ **Note** The Unicode emulate output method depends on the host system (Windows XP or Windows 7).

*Universal CJK Output
(0)

CJK Output Method to Windows Host (continued)

**Japanese Unicode Output
(34)**

(for Japanese Unicode Output, select Simplified Chinese Unicode IME on the Windows host)

**Chinese (Simplified) GBK Output
(1)**

(20)

Non-CJK UTF Bar Code Output

SSI # F2 C0

Parameter # 960

Some country keyboard type layouts contain characters that do not exist in the default code page (see [Country Keyboard Type Missing Characters on page D-9](#)). Although the default code page can not encode these characters in a bar code, they can be encoded in the UTF-8 bar code. Scan this parameter bar code to output the Unicode values by emulation mode.

✓ **Note** Use this special country keyboard type to decode the non-CJK UTF-8 bar code. After decoding, re-configure the scanner to use the original country keyboard type.

Use US English IME on Windows. See [Unicode Output Control on page D-2](#).

Non-CJK UTF-8 Emulation Output

Country Keyboard Type Missing CharactersCountry keyboard type: **Tatar, Uzbek, Mongolian, Kyrgyz, Kazakh and Azeri**

Default code page: CP1251

Missing characters:

Ғ	Ɔ
Ҡ	Ɔ
Ң	Ɔ
Ҥ	Ɔ
Ҧ	Ɔ
Ҩ	Ɔ
Ҫ	Ɔ
Ҭ	Ɔ
Ү	Ɔ
Ұ	Ɔ
Ҳ	Ɔ
Ҵ	Ɔ
Ҷ	Ɔ
Ҹ	Ɔ
Һ	Ɔ
Ҽ	Ɔ
Ҿ	Ɔ
ҿ	Ɔ

Country keyboard type: **Romanian (Standard)**

Default code page: CP1250

Missing characters:

ș	Ș
ț	Ț

Country keyboard type: **Portuguese-Brazilian (ABNT), Portuguese-Brazilian (ABNT2)**

Default code page: CP1252

Missing character: **Ç**Country keyboard type: **Azeri-Latin**

Default code page: CP1254

Missing characters: ə, Ə

Unicode/CJK Decode Setup with Windows Host

This section describes how to set up CJK decode with a Windows host.

Setting Up the Windows Registry Table for Unicode Universal Output

To support the Unicode universal output method, set up the Windows host registry table as follows:

1. Select **Start > Run > regedt32** to start the registry editor.
2. Under **HKEY_Current_User\Control Panel\Input Method**, set **EnableHexNumpad** to **1** as follows:
[HKEY_CURRENT_USER\Control Panel\Input Method]
"EnableHexNumpad"="1"
If this key does not exist, add it as type **REG_SZ** (string value).
3. Reboot the computer to implement the registry change.

Adding CJK IME on Windows

To add the desired CJK input language:

1. Click **Start > Control Panel**.
2. If the Control Panel opens in category view, select **Switch to Classic View** in the top left corner.
3. Select **Regional and Language Options**.
4. Click the **Language** tab.
5. Under **Supplemental Language Support**, select the **Install Files for East Asian Languages** check box if not already selected, and click **Apply**. This may require a Windows installation CD to install the required files. This step ensures that the East Asian Languages (CJK) are available.
6. Under **Text Services and Input Language**, click **Details**.
7. Under **Installed Services**, click **Add**.
8. In the **Add Input Language** dialog box, choose the CJK input language and keyboard layout or Input Method Editor (IME) to add.
9. Click **OK** twice. The language indicator appears in the system tray (at bottom right corner of the desktop by default). To switch between input languages (keyboard languages) select the language indicator in the system tray.
10. Select the language indicator in the system tray to select the desired country keyboard type.
11. Verify that the characters displayed on each country's keyboard appear.

Selecting the Simplified Chinese Input Method on the Host

To select the Simplified Chinese input method:

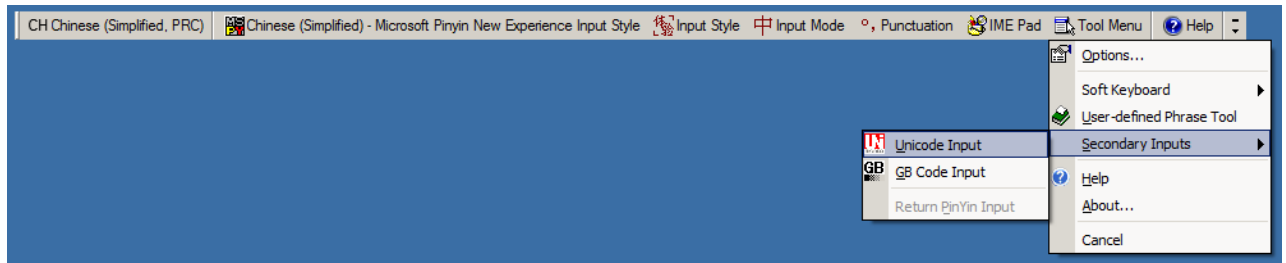

- Select Unicode/GBK input on Windows XP: **Chinese (Simplified) - NeiMa**, then click the input bar to select **Unicode** or **GBK NeiMa** input.

Or

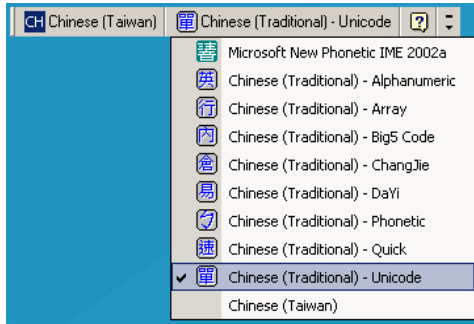

- Select Unicode/GBK input on Windows7: **Chinese (Simplified) - Microsoft Pinyin New Experience Input Style**, then select **Tool Menu > Secondary Inputs > Unicode Input** or **GB Code Input**.

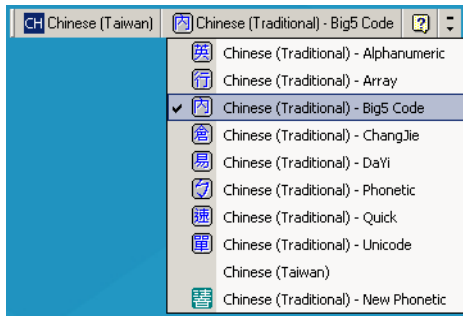

Selecting the Traditional Chinese Input Method on the Host

To select the Traditional Chinese input method:

- Select Unicode input on Windows XP: **Chinese (Traditional) - Unicode**

- Select Big5 input on Windows XP: **Chinese (Traditional) - Big5 Code**

- Select Unicode/Big5 input on Windows 7: **Chinese (Traditional) - New Quick**. This option support both Unicode and Big5 input.

APPENDIX E PROGRAMMING REFERENCE

Symbol Code Identifiers

Table E-1 *Symbol Code Characters*

Code Character	Code Type
A	UPC-A, UPC-E, UPC-E1, EAN-8, EAN-13
B	Code 39, Code 32
C	Codabar
D	Code 128, ISBT 128, ISBT 128 Concatenated
E	Code 93
F	Interleaved 2 of 5
G	Discrete 2 of 5, or Discrete 2 of 5 IATA
H	Code 11
J	MSI
K	GS1-128
L	Bookland EAN
M	Trioptic Code 39
N	Coupon Code
R	GS1 DataBar Family
S	Matrix 2 of 5
T	UCC Composite, TLC 39
U	Chinese 2 of 5
V	Korean 3 of 5

Table E-1 *Symbol Code Characters (Continued)*

Code Character	Code Type
X	ISSN EAN, PDF417, Macro PDF417, Micro PDF417
z	Aztec, Aztec Rune
P00	Data Matrix
P01	QR Code, MicroQR
P02	Maxicode
P03	US Postnet
P04	US Planet
P05	Japan Post
P06	UK Postal
P08	Netherlands KIX Code
P09	Australia Post
P0A	USPS 4CB/One Code/Intelligent Mail
P0B	UPU FICS Postal
P0C	Mailmark
P0D	Grid Matrix, Grid Matrix Inverse, Grid Matrix Mirror
P0G	GS1 Data Matrix
P0H	Han Xin
P0Q	GS1 QR
P0X	Signature Capture

AIM Code Identifiers

Each AIM Code Identifier contains the three-character string **Jcm** where:

- J = Flag Character (ASCII 93)
- c = Code Character (see [Table E-2](#))
- m = Modifier Character (see [Table E-3](#))

Table E-2 *Aim Code Characters*

Code Character	Code Type
A	Code 39, Code 39 Full ASCII, Code 32
C	Code 128, ISBT 128, ISBT 128 Concatenated, GS1-128, Coupon (Code 128 portion)
d	Data Matrix
d2	GS1 Data Matrix
E	UPC/EAN, Coupon (UPC portion)
e	GS1 DataBar Family
F	Codabar
G	Code 93
g	Grid Matrix, Grid Matrix Inverse, Grid Matrix Mirror
H	Code 11
h	Han Xin
I	Interleaved 2 of 5
L	PDF417, Macro PDF417, Micro PDF417
L2	TLC 39
M	MSI
Q	QR Code, MicroQR
Q3	GS1 QR
S	Discrete 2 of 5, IATA 2 of 5
U	Maxicode
z	Aztec, Aztec Rune
X	Bookland EAN, ISSN EAN, Trioptic Code 39, Chinese 2 of 5, Matrix 2 of 5, Korean 3 of 5, US Postnet, US Planet, UK Postal, Japan Post, Australia Post, Netherlands KIX Code, USPS 4CB/One Code/Intelligent Mail, UPU FICS Postal, Signature Capture
X0	Mailmark

The modifier character is the sum of the applicable option values based on [Table E-3](#).

Table E-3 *Modifier Characters*

Code Type	Option Value	Option
Code 39	0	No check character or Full ASCII processing.
	1	Reader has checked one check character.
	3	Reader has checked and stripped check character.
	4	Reader has performed Full ASCII character conversion.
	5	Reader has performed Full ASCII character conversion and checked one check character.
	7	Reader has performed Full ASCII character conversion and checked and stripped check character.
	Example: A Full ASCII bar code with check character W, A+I+MI+DW , is transmitted as J A7AIMID where 7 = (3+4).	
Trioptic Code 39	0	No option specified at this time. Always transmit 0.
	Example: A Trioptic bar code 412356 is transmitted as J X0412356	
Code 128	0	Standard data packet, no Function code 1 in first symbol position.
	1	Function code 1 in first symbol character position.
	2	Function code 1 in second symbol character position.
	Example: A Code (EAN) 128 bar code with Function 1 character ^{FNC1} in the first position, AIMID is transmitted as J C1AIMID	
I 2 of 5	0	No check digit processing.
	1	Reader has validated check digit.
	3	Reader has validated and stripped check digit.
	Example: An I 2 of 5 bar code without check digit, 4123, is transmitted as J I04123	
Codabar	0	No check digit processing.
	1	Reader has checked check digit.
	3	Reader has stripped check digit before transmission.
	Example: A Codabar bar code without check digit, 4123, is transmitted as J F04123	
Code 93	0	No options specified at this time. Always transmit 0.
	Example: A Code 93 bar code 012345678905 is transmitted as J G0012345678905	
MSI	0	Check digits are sent.
	1	No check digit is sent.
	Example: An MSI bar code 4123, with a single check digit checked, is transmitted as J M14123	

Table E-3 *Modifier Characters (Continued)*

Code Type	Option Value	Option
D 2 of 5	0	No options specified at this time. Always transmit 0.
	Example: A D 2 of 5 bar code 4123, is transmitted as JS04123	
UPC/EAN	0	Standard data packet in full EAN format, i.e. 13 digits for UPC-A, UPC-E, and EAN-13 (not including supplemental data).
	1	Two digit supplemental data only.
	2	Five digit supplemental data only.
	3	Combined data packet comprising 13 digits from EAN-13, UPC-A or UPC-E symbol and 2 or 5 digits from supplemental symbol.
	4	EAN-8 data packet.
	Example: A UPC-A bar code 012345678905 is transmitted as JE00012345678905	
Bookland EAN	0	No options specified at this time. Always transmit 0.
	Example: A Bookland EAN bar code 123456789X is transmitted as JX0123456789X	
ISSN EAN	0	No options specified at this time. Always transmit 0.
	Example: An ISSN EAN bar code 123456789X is transmitted as JX0123456789X	
Code 11	0	Single check digit
	1	Two check digits
	3	Check characters validated but not transmitted.
GS1 DataBar Family		No option specified at this time. Always transmit 0. GS1 DataBar Omnidirectional and GS1 DataBar Limited transmit with an Application Identifier "01". Note: In GS1-128 emulation mode, GS1 DataBar is transmitted using Code 128 rules (i.e., JC1).
	Example: A GS1 DataBar Omnidirectional bar code 0110012345678902 is transmitted as Je00110012345678902 .	
EAN.UCC Composites (GS1 DataBar, GS1-128, 2D portion of UPC composite)		Native mode transmission. Note: UPC portion of composite is transmitted using UPC rules.
	0	Standard data packet.
	1	Data packet containing the data following an encoded symbol separator character.
	2	Data packet containing the data following an escape mechanism character. The data packet does not support the ECI protocol.
	3	Data packet containing the data following an escape mechanism character. The data packet supports the ECI protocol.
		GS1-128 emulation Note: UPC portion of composite is transmitted using UPC rules.
	1	Data packet is a GS1-128 symbol (i.e., data is preceded with JC1).

Table E-3 *Modifier Characters (Continued)*

Code Type	Option Value	Option
PDF417, Micro PDF417	0	Reader set to conform to protocol defined in 1994 PDF417 symbology specifications. Note: When this option is transmitted, the receiver cannot reliably determine whether ECIs have been invoked or whether data byte 92 _{DEC} has been doubled in transmission.
	1	Reader set to follow the ECI protocol (Extended Channel Interpretation). All data characters 92 _{DEC} are doubled.
	2	Reader set for Basic Channel operation (no escape character transmission protocol). Data characters 92 _{DEC} are not doubled. Note: When decoders are set to this mode, unbuffered Macro symbols and symbols requiring the decoder to convey ECI escape sequences cannot be transmitted.
	3	The bar code contains a GS1-128 symbol, and the first codeword is 903-907, 912, 914, 915.
	4	The bar code contains a GS1-128 symbol, and the first codeword is in the range 908-909.
	5	The bar code contains a GS1-128 symbol, and the first codeword is in the range 910-911.
	Example: A PDF417 bar code ABCD, with no transmission protocol enabled, is transmitted as]L2ABCD.	
Data Matrix	0	ECC 000-140, not supported.
	1	ECC 200.
	2	ECC 200, FNC1 in first or fifth position.
	3	ECC 200, FNC1 in second or sixth position.
	4	ECC 200, ECI protocol implemented.
	5	ECC 200, FNC1 in first or fifth position, ECI protocol implemented.
	6	ECC 200, FNC1 in second or sixth position, ECI protocol implemented.
GS1 Data Matrix	2	ECC 200, FNC1 in first or fifth position.
MaxiCode	0	Symbol in Mode 4 or 5.
	1	Symbol in Mode 2 or 3.
	2	Symbol in Mode 4 or 5, ECI protocol implemented.
	3	Symbol in Mode 2 or 3, ECI protocol implemented in secondary message.

Table E-3 *Modifier Characters (Continued)*

Code Type	Option Value	Option
QR Code	0	Model 1 symbol.
	1	Model 2 / MicroQR symbol, ECI protocol not implemented.
	2	Model 2 symbol, ECI protocol implemented.
	3	Model 2 symbol, ECI protocol not implemented, FNC1 implied in first position.
	4	Model 2 symbol, ECI protocol implemented, FNC1 implied in first position.
	5	Model 2 symbol, ECI protocol not implemented, FNC1 implied in second position.
	6	Model 2 symbol, ECI protocol implemented, FNC1 implied in second position.
GS1 QR	3	Model 2 symbol, ECI protocol not implemented, FNC1 implied in first position.
Aztec	0	Aztec symbol.
	C	Aztec Rune symbol.
Han Xin	0	Generic data, no special features are set. The transmitted data does not follow the AIM ECI protocol.
	1	ECI protocol enabled. There is at least one ECI mode encoded. Transmitted data must follow the AIM ECI protocol.
Grid Matrix, Grid Matrix Inverse, Grid Matrix Mirror	0	No option specified at this time. Always transmit 0.
Mailmark	0	No option specified at this time. Always transmit 0.

APPENDIX H SIGNATURE CAPTURE CODE

Introduction

CapCode, a signature capture code, is a special pattern that encloses a signature area on a document and allows a scanner to capture a signature.

There are several accepted patterns that allow automatic identification of different signatures on the same form. For example, on the federal tax return 1040 form there are three signature areas, one each for two joint filers, and one for a professional preparer. By using different patterns, a program can correctly identify all three, so they can be captured in any sequence and still be identified correctly.

Code Structure

Signature Capture Area

A CapCode is printed as two identical patterns on either side of a signature capture box, as shown in [Figure H-1](#). Each pattern extends the full height of the signature capture box.

The box is optional, so you can omit it, replace it with a single baseline, or print a baseline with an "X" on top of it towards the left, as is customarily done in the US to indicate a request for signature. However, if an "X" or other markings are added in the signature box area, these are captured with the signature.

Figure H-1 CapCode

CapCode Pattern Structure

A CapCode pattern structure consists of a start pattern followed by a separator space, a signature capture box, a second separator space, and then a stop pattern. Assuming that X is the dimension of the thinnest element, the start and stop patterns each contains 9X total width in 4 bars and 3 spaces. A 7X quiet zone is required to the left and to the right of the CapCode pattern.

Figure H-2 CapCode Structure

The separator spaces on either side of the signature capture box can be between 1X and 3X wide.

Start / Stop Patterns

Table H-1 lists the accepted start / stop patterns. The bar and space widths are expressed as multiples of X. You must use the same pattern on either side of a signature capture box. The type value is reported with the captured signature to indicate the purpose of the signature captured.

Table H-1 Start / Stop Pattern Definitions

Bar/Space Patterns							Type
B	S	B	S	B	S	B	
1	1	2	2	1	1	1	2
1	2	2	1	1	1	1	5
2	1	1	2	1	1	1	7
2	2	1	1	1	1	1	8
3	1	1	1	1	1	1	9

[Table H-2](#) lists selectable parameters used to generate the image of the captured signature.

Table H-2 *User Defined CapCode Parameters*

Parameter	Defined
Width	Number of pixels
Height	Number of pixels
Format	JPEG, BMP, TIFF
JPEG quality	1 (most compression) to 100 (best quality)
Bits Per Pixel (not applicable to JPEG format)	1 (2 levels)
	4 (16 levels)
	8 (256 levels)

BMP format does not use compression, JPEG and TIFF formats do.

Dimensions

The size of the signature capture box is determined by the height and separation of the start and stop patterns. The line width of the signature capture box is insignificant.

The thinnest element width, referred to here as X, is nominally 10 mils (1 mil = 0.0254 mm). Select this as an exact multiple of the pixel pitch of the printer used. For example, when using a 203 DPI (dots-per-inch) printer and printing 2 dots per module, the resulting X dimension is 9.85 mils.

Data Format

The decoder output is formatted according to [Table H-3](#). Symbol Technologies decoders allow different user options to output or inhibit bar code type. Selecting "Symbol ID" as the bar code type for output identifies the CapCode with letter "i".

Table H-3 *Data Format*

File Format (1 byte)	Type (1 byte)	Image Size (4 bytes, BIG Endian)	Image Data
JPEG - 1 BMP - 3 TIFF - 4	See Table H-1 , last column		(Same bytes as in a data file)

Additional Capabilities

Regardless of how the signature is captured, the output signature image is de-skewed and right-side up.

A scanner that captures signatures automatically determines whether it is scanning a signature or a bar code. You can disable the signature capturing capability in a decoder.

Signature Boxes

Figure H-3 illustrates the five acceptable signature boxes:

Type 2:

Type 5:

Type 7:

Type 8:

Type 9:

APPENDIX I NON-PARAMETER ATTRIBUTES

Introduction

This appendix defines non-parameter attributes.

Attributes

Model Number

Attribute #533

Model number of the scanner. This electronic output matches the printout on the physical device label, for example **DS7708-SR00004ZCWW**.

Type	S
Size (Bytes)	18
User Mode Access	R
Values	Variable

Serial Number

Attribute #534

Unique serial number assigned in the manufacturing facility. This electronic output matches the printout on the physical device label, for example **M1J26F45V**.

Type	S
Size (Bytes)	16
User Mode Access	R
Values	Variable

Date of Manufacture

Attribute #535

Date of device manufacture assigned in the manufacturing facility. This electronic output matches the printout on the physical device label, for example **30APR14** (which reads the 30th of April 2014).

Type	S
------	---

Size (Bytes)	7
User Mode Access	R
Values	Variable

Date of First Programming

Attribute #614

Date of first electronic programming represents the first time settings were electronically loaded to the scanner either by 123Scan² or via SMS, for example **18MAY14** (which reads the 18th of May 2014).

Type	S
Size (Bytes)	7
User Mode Access	R
Values	Variable

Configuration Filename

Attribute #616

The name assigned to the configuration settings loaded electronically to the device either by 123Scan² or via SMS.

Note Scanning the **Set Defaults** bar code automatically changes the configuration filename to *factory defaults*.

To indicate the configuration settings loaded to the device were changed, the configuration filename changes to *Modified* upon scanning any parameter bar code.

Type	S
Size (Bytes)	17
User Mode Access	RW
Values	Variable

Beep/LED

Attribute #6000

Activate the beep and/or LED.

Type	X
Size (Bytes)	N/A
User Mode Access	W

Values:

Beep / LED Action	Value
1 high short beep	0
2 high short beeps	1
3 high short beeps	2
4 high short beeps	3
5 high short beeps	4
1 low short beep	5
2 low short beeps	6
3 low short beeps	7
4 low short beeps	8
5 low short beeps	9
1 high long beep	10
2 high long beeps	11
3 high long beeps	12
4 high long beeps	13
5 high long beeps	14
1 low long beep	15
2 low long beeps	16
3 low long beeps	17
4 low long beeps	18
5 low long beeps	19
Fast warble beep	20
Slow warble beep	21
High-low beep	22
Low-high beep	23
High-low-high beep	24
Low-high-low beep	25
High-high-low-low beep	26
Green LED off	42
Green LED on	43
Red LED on	47
Red LED off	48

Parameter Defaults

Attribute #6001

This attribute restores all parameters to their factory defaults.

Type	X
Size (Bytes)	N/A
User Mode Access	W
Values	0 = Restore Defaults 1 = Restore Factory Defaults 2 = Write Custom Defaults

Beep on Next Bootup

Attribute #6003

This attribute configures (enables or disables) beep on next boot up of scanner.

Type	X
Size (Bytes)	N/A
User Mode Access	W
Values	0 = Disable beep on next bootup 1 = Enable beep on next bootup

Reboot

Attribute #6004

This attribute initiates a device reboot.

Type	X
Size (Bytes)	N/A
User Mode Access	W
Values	N/A

Host Trigger Session

Attribute #6005

This attribute triggers a decode session similar to manually depressing the scanner trigger button.

Type	X
Size (Bytes)	N/A
User Mode Access	W
Values	0 = Start Host Trigger Session 1 = Stop Host Trigger Session

Firmware Version

Attribute #20004

The scanner's operating system version. For example, **PAACHS00-001-R00**.

Type	S
Size (Bytes)	Variable
User Mode Access	R
Values	Variable

Imagekit Version

Attribute #20013

Identifies 1D/2D decode algorithms resident on the device, for example **IMGKIT_6.04T05.11**.

Type	S
Size (Bytes)	Variable
User Mode Access	R
Values	Variable

Tell Us What You Think...

We'd like to know what you think about this Manual. Please take a moment to fill out this questionnaire and fax this form to: (631) 627-7184, or mail to:

Zebra Technologies, Inc.
Lincolnshire, IL 60069 USA
Attention: Technical Publications Manager
Data Capture Solutions

IMPORTANT: If you need product support, please call the appropriate customer support number provided. Unfortunately, we cannot provide customer support at the fax number above.

Manual Title: _____
(please include revision level)

How familiar were you with this product before using this manual?

- Very familiar Slightly familiar Not at all familiar

Did this manual meet your needs? If not, please explain.

What topics need to be added to the index, if applicable?

What topics do you feel need to be better discussed? Please be specific.

What can we do to further improve our manuals?
