Uploading cert to OpenManage Enterprise Modular12

Audience and scope

The scope of the document is to provide a detailed procedure towards setting up a custom SSL/HTTPS certificate for Dell EMC OpenManage Enterprise Modular using Microsoft Windows Certification Authority. This white paper is intended for sale engineers, field application engineers, test engineers, architects or IT administrators who are involved in the decision-making process for the planning, configuration, and operation of a dynamic datacenter.

Prerequisites

You are expected to have working knowledge of networking, SSL, HTTP and digital certificates. This illustrates the usage of Microsoft Windows Certification Authority for the generation of custom certificate. You are expected to know the steps for accessing and logging into the Dell EMC OpenManage Enterprise Modular web console. You can find more information about how to access and login to the console using the console's user guide.

Why use an SSL certificate?

For secure HTTPS communication, the web server requires the SSL certificate on the Dell EMC OpenManage Enterprise Modular chassis. It secures data between the server and user's browser for safety.

Why use a custom certificate?

By default the console comes with a self-signed SSL/HTTPS certificate generated on the chassis. It serves the purpose of securing the communication but it shows an untrusted certificate exception in the browser.

Uploading a custom SSL certificate, signed by a trusted CA, establishes a trusted/secure client and server communication within the organization. This custom certificate fixes the untrusted certificate exception in the web browser.

Custom certificate attributes

The chassis supports a X.509 certificate with RSA 4096-bit key encryption standard and requires a web server certificate in DER Base64 encoded format.

Generating a Certificate Signing Request (CSR)

Open the OpenManage Enterprise Modular web console using <https://chassis-ip-or-fqdn> and then navigate to Application Settings -> Security -> Certificates tab.

[Generate Certificate Signing Request](#)

Click [Generate Certificate Signing Request](#), provide the required information, and make sure that the Distinguished Name field contains the chassis FQDN/Hostname or localhost.localdomain if FQDN/Hostname is not set.

Generating a Certificate Signing Request (CSR)

Generate Certificate Signing Request

Enter the details and click Generate. This information will be used to generate a Certificate Signing Request.

Distinguished Name (hostName.domainName.com)	CDEV123.dell.com
Business Name	DellEMC
Department Name	ISG
Locality (Town/City)	Round Rock
State (Providence/Region)	TX
Country Code	US
Email	support@dell.com

Step 1 of 2

Generate

Cancel

Click generate, and then click Download Certificate Signing Request or Copy and/or save the text from the newly opened browser tab or window.

Certificate signing using Microsoft Windows CA

Certificate Signing Request

Copy the text below and submit it to a certificate authority to receive a valid SSL certificate.

Step 2 of 2

[Previous](#)

[Finish](#)

Certificate signing using Microsoft Windows CA

This section shows you how to digitally sign a CSR generated using Microsoft Windows Certification Authority. This section assumes that the certification authority server has already been configured.

Open the certification authority portal page in the web browser by using <http://certificateauthority-ad/certsrv>. Click certificate request and then advanced certificate request.

Certificate signing using Microsoft Windows CA

Then click the Submit a certificate request by using a base-64-encoded CMC or PKCS#10 file.

Copy and paste the contents of the CSR either by opening the downloaded CSR file or paste the already copied text into the Saved Request text area. Make sure that the BEGIN and END certificate REQUEST tags are present in the text and there are not trailing spaces in the text.

Certificate signing using Microsoft Windows CA

The screenshot shows a web browser window with the address bar displaying `http://localhost/certsrv/certreq.asp`. The page title is "Microsoft Active Directory Certificate Services - WINSRV2012-CA". The main heading is "Submit a Certificate Request or Renewal Request". Below this, a text block states: "To submit a saved request to the CA, paste a base-64-encoded CMC or PKCS #10 certificate request or PKCS #7 renewal request generated by an external source (such as a Web server)." The "Saved Request:" section contains a text area with a base-64-encoded certificate request. The text in the area is: `jbdHxtjtqGv0ieZNX1Zwbldhy4o6GSFqW5mUnJh.
jZ26wK1xe0RbaUdXEOeljWLLhAef646r8NOTeX7s!
42fb1TCpsD96Cd3X1Jh4k7GgFM3VjV2yfyCLlmpJl
2y7EcTc9JzvAtahtmino7mH9vEf/6lRyoP6Vbor4f
EqONT963k8cLG/cIWsiCYArXA2BL0AT/fjbKqWh.
-----END CERTIFICATE REQUEST-----`. Below the text area is an "Additional Attributes:" section with a label "Attributes:" and a text area. At the bottom right of the form is a "Submit" button.

Submit the certificate signing request using the Submit button. The Certificate Authority portal will show a pending certificate id on the next page.

The screenshot shows a web browser window with the address bar displaying `http://localhost/certsrv/certfnsh.asp`. The page title is "Microsoft Active Directory Certificate Services - WINSRV2012-CA". The main heading is "Certificate Pending". Below this, a text block states: "Your certificate request has been received. However, you must wait for an administrator to issue the certificate you requested." Another text block states: "Your Request Id is 2." A third text block states: "Please return to this web site in a day or two to retrieve your certificate." At the bottom, a note states: "Note: You must return with this web browser within 10 days to retrieve your certificate".

On the Certification Authority server, open the Certification Authority snapshot from Administrative Tools and go to pending requests.

Certificate signing using Microsoft Windows CA

Right-click the pending certificate for the id generated before. On the context menu click All Tasks and Issue the certificate.

Certificate signing using Microsoft Windows CA

Open the Certification Authority portal page and go to View the status of a pending certificate request.

Uploading cert to OpenManage Enterprise Modular

Click on the saved certificate request and download the certificate and Base 64 encoded file on the disk using the Download certificate link.

Uploading cert to OpenManage Enterprise Modular

Open the management console and go to Application Settings - > Security -> Certificates tab.

Click upload and browse the saved certificate to upload the certificate.

Uploading cert to OpenManage Enterprise Modular

MSM will logoff and show an info message about certificate upload success.
