

HCL OneTest UI

Ensure sound integration of complex systems
with a wide range of technologies

OVERVIEW

HCL OneTest UI enables testers to take automation all the way from mainframe terminals with 3270 interfaces, through .Net and Java based thick client applications and ERP systems such as SAP and Oracle, right up to HTML5 based responsive web applications built on modern frameworks like Angular, React and Vue.js in the latest versions of the world's top browsers. Validation of business processes is

achieved through simple yet powerful scripting tools which empower complex test assertions, created with just a couple of clicks. Integration into DevOps pipelines (Jenkins, UrbanCode, etc) allows users to embed automated testing in the development process and increase the quality of deliveries.

CAPABILITIES

WEB UI TESTING

			
Provides automated testing for HTML5-based browser applications	Supports Internet Explorer, Firefox, Chrome, Safari, and Microsoft Edge on Windows, Linux, or Mac OS	Relies on graphical scripting (no programming knowledge needed)	Integrated with HCL OneTest Data – for on-demand synthetic test data generation.

FUNCTIONAL TESTING

			
Automated regression testing for traditional GUI clients	Simple record – enhance – execute model	Multiple scripting options (Java, VB.Net & Storyboard)	Powerful custom scripting and extensibility SDK

BENEFITS

 SPEED AND COVERAGE	 IMPROVE QUALITY
Automate tests once done by error-prone manual processes	Fast, comprehensive testing optimized for your development environment yields higher quality products
 REDUCE COST	 SIMPLIFY TEAMWORK
Find defects early when they cost less to fix	Simple execution model and graphical scripting reliance

HCL OneTest UI is part of the wider HCL OneTest Suite, providing additional functionality.

- **HCL OneTest API:** Trigger and validate a system’s APIs across a range of network protocols and message formats
- **HCL OneTest Performance:** Create performance tests for any of the technologies supported by OneTest API
- **HCL OneTest Virtualization:** Automatically trigger the virtual services required for your API tests
