Signetics reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Signetics assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified. Applications that are described herein for any of these products are for illustrative purposes only. Signetics makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

LIFE SUPPORT APPLICATIONS

Signetics Products are not designed for use in life support appliances, devices, or systems where malfunction of a Signetics Product can reasonably be expected to result in a personal injury. Signetics customers using or selling Signetics Products for use in such applications do so at their own risk and agree to fully indemnify Signetics for any damages resulting from such improper use or sale.

Signetics registers eligible circuits under
the Semiconductor Chip Protection Act

Introduction

"Signetics develops, manufactures and globally markets high-performance application-specific and standard ICs."

This catalog is designed to help you, the customer, identify and specify Signetics integrated circuits. The contents include a listing of available commercial products by product grouping and alphanumeric order, ordering and packaging information and a listing of worldwide sales offices.

About Signetics

Signetics was founded in 1961, one of the first companies dedicated exclusively to the potential of the integrated circuit business. Today the company operates as part of a global network of companies within Philips Semiconductors, the tenth largest vendor of integrated circuits in the world.

Signetics designs, manufactures and markets a wide range of integrated circuits to support computing and communications applications for business, industrial, automotive, military and consumer markets. Through its standard product portfolio the company offers the most popular high-performance fixed-function and programmable logic devices in three technologies: Bipolar, CMOS and now BiCMOS. Its application-specific products offer designers value-added products for many personal communication as well as large network applications - both important emerging segments in this age of information.

In the decade ahead Signetics will continue to improve the speed, power and cost structure of what is now the industry's most advanced BiCMOS process. It will also migrate its expertise in digital and analog design into mixed signal circuit applications to meet the demands of newer markets.

Our Commitment to Partnering and Quality

Signetics has been a leader over the last decade in its quality improvement process and its innovative zero defects program. Today the company approaches a highly competitive market with the understanding that customers are narrowing their suppliers to a few key partners who excel in six essential dimensions of performance: Technology Advancements; New Products; Global Customer Support; Product and Service Quality; Manufacturing Excellence and Employee Involvement.

Major Product Categories

DIGITAL LOGIC

- ABT (BiCMOS)
- MULTIBYTE™ (BiCMOS)
- Futurebus+ (BiCMOS)
- FAST
- ACL
- ALS
- HC/HCT CMOS
- 10K/100K ECL
- TTL/LS/S
- 4000 CMOS

MEMORY

- EPROM (UV/OTP)
- PROM/CPROM
- Bipolar PROM
- DRAM Controllers
- FIFO

MICROCONTROLLER

- 8052/80C51 Family
- 80C51 Derivatives
- Other 8-bit MCUs
- EPROM/OTP Versions
- 4-bit MCUs
- 16-bit MCUs
- I²C Bus Controllers

AUTOMOTIVE

- Radio/Entertainment
- Interface/Data Conversion
- Motor Controllers

MEDIA COMPONENTS

- Video
- Audio
- Radio
- Telephony

MILITARY

- JAN B and S
- Military Drawings
- 883C 1.2.1

COMMUNICATIONS

- RF Communications
- Data Communications
- Cellular
- Ethernet
- Compandors
- Fiber

ASIC/CUSTOM PRODUCTS

- Automotive
- Disk Drive
- High-Speed Data Processing

PROGRAMMABLE LOGIC

- PAL®/-Type Devices/PLA
- Sequencer/State Machine (PLS)
- Programmable Macro Logic (PML)
- Field Programmable Gate Array (FPGA)
- Design Support – SLICE & SNAP

SURFACE MOUNT PACKAGING

- Plastic Leaded Chip Carrier (PLCC)
- Ceramic Leadless Chip Carrier (CLLCC)
- Ceramic Leaded Chip Carrier (CLCC)
- Quad Flat Pack (QFP)
- Small Outline (SO)
- Shrink Small Outline Package (SSOP)

PAL is a trademark of AMD/MMI
MULTIBYTE is a trademark of Signetics

PROMS PART NUMBERING SYSTEM

SSOP Shrinks Communications Products

Signetics' new Shrink Small Outline Package (SSOP) is the smallest commercially available 20-pin package targeted for portable communications. Requiring a scant one-third of the board space occupied by predecessors such as Small Outline Large (SOL) packages, it enables designers to fit their highly integrated circuits into substantially smaller spaces.

The SSOP measures $1.5\text{mm} \times 4.5\text{mm} \times 6.75\text{mm}$. In addition to its small footprint, it is thinner as well, a key advantage for space-sensitive applications.

This new package is perfect for pocket cordless phones and other pocket cellular products, wireless microphones, hearing aids, pagers and pen/watch receivers.

The first products offered in this space-saving package are Signetics' popular NE/SA575DK low voltage compandor and NE/SA605DK/615DK high-performance low-power mixer FM IF system.

The NE/SA 575DK is a precision dual-gain control circuit designed for low-voltage applications. Compandors reduce noise and boost dynamic range in audio and communications products.

The NE/SA605DK/615DK incorporates a mixer/oscillator, two limiting intermediate frequency amplifiers, quadrature detector, muting, and logarithmic Received-Signal-Strength Indicator (RSSI).

20-Pin SSOP (.65)

20-Pin Plastic SOL

Signetics' SSOP offers the same highly reliable product characteristics at less than a third the size of the SOL package.

Quality and Reliability

SIGNETICS' QUALITY PROGRAM

In 1979, Signetics recognized that quality was becoming a major competitive issue, not only in the semiconductor business but also in other industries. Increases in the volume of products imported from the Far East (steel, automobiles, and consumer products) sent strong signals that new competitive forces were at work.

An investigation into a variety of quality programs was started. The company realized that quality improvement would require a contribution from all employees. Management commitment and participation, however, was recognized as the primary prerequisite for this program to work successfully. Resources required for the resolution of defects were under management control.

The "Signetics Quality Journey" from 1980 into the decade of the '90s is summarized in Table 1. In 1980 a program was developed which focused on quality management. Rearranging previous quality control philosophies, we developed a decentralized, distributed quality organization and simultaneously installed a Quality Improvement Process (QIP) based on the 14-Step improvement program advocated by Phil Crosby. The process was formally begun company-wide in 1981. Since then substantial progress has been made in every aspect of our operations. From incoming raw material conformance to improvements in clerical errors — every department and individual is involved and striving for Zero Defects. Zero Accept sampling plans and Zero Defects warranties are evidence of our ongoing commitment to and progress in quality. Over the past decade, Signetics has achieved a 90 fold improvement in product electrical quality, 30 fold improvement in product mechanical quality and a 20 fold improvement in product reliability. Signetics goal for the '90s is to be the industry leader in customer satisfaction, with products of Six Sigma Quality/Reliability and world class responsiveness to customer needs and wants.

Today the Total Quality Management (TQM) model is applied to the QIP, as illustrated in Figure 1, having a far-reaching impact on all aspects of our business. The customer is at the start (driver) and end (goal) of the TQM model which requires a driver, system, measures and goal. The customer is the primary driver. Leadership is provided by Quality Improvement Teams (QITs) which ensure that customer interaction occurs and that the organization supports the mission, QI policy and customer direction. TQM requires a clear set of management principles which mandate systems and measurements consistent with stated objectives. TQM endorses and utilizes the seven major examination categories of the U.S.A. Malcolm Baldrige National Quality Award. Together, the examination categories address all major components of an integrated, prevention based system built around continuous improvement and customer satisfaction.

ZERO DEFECTS WARRANTY

In the '80s, American industry demanded increased product quality of its IC suppliers in order to meet growing international competitive pressure. As a result of this quality focus, it became clear that what once was thought to be unattainable— Zero Defects—is, in fact, achievable.

Signetics offers a Zero Defects Warranty which states that we will take back an entire lot if a single defective part is found. This precedent setting warranty implemented in 1985 effectively ended the IC industry's "war of the AQLs" (Acceptable Quality Levels). The ongoing efforts of IC suppliers to reduce PPM (Parts Per Million) defect levels is now a competitive customer service measure. This intense commitment to quality provides an advantage to today's electronics OEM. That advantage can be summed up in four words: **Reduced Cost of Ownership**.

As IC customers look beyond purchase price to the total cost of doing business with a supplier, it is apparent that a quality-conscious supplier represents a viable cost reduction resource. Consistent high-quality circuits reduce requirements for expensive test equipment and personnel, and allow for smaller inventories, less rework, and fewer field failures. Programs such as Self Qualification and Ship-To-Stock implemented in 1984 and Cycle Time Management (CTM) implemented in 1989 help reduce cost of ownership.

STATISTICAL PROCESS CONTROL (SPC)

Although application of statistics in our process development and manufacturing activities goes back to the early 1970's, the corporate-wide emphasis on Statistical Process Control (SPC) did not come until mid-1984.

A natural evolution of our quality improvement process made introduction of SPC and other related programs an inevitable event. SPC was, therefore, introduced under the QIP umbrella. The Crosby definition of Quality, "Conformance To Requirements (Specification)" was expanded to include "Conformance To Specified Targets". The measurement definition of "continuous improvement" was expanded to include "Continuous Reduction of Variability Around the Specified Target".

Quality and Reliability

The objective of SPC is to institutionalize a systematic and scientific approach to business and manufacturing activities. This approach utilizes sound statistical theory. Managers are expected to be able to turn data into information and to make decisions solely on data (not perception).

The most critical and challenging aspect of implementing SPC is the establishment of a discipline within the operating areas so that decision making is fundamentally based on verifiable data and so that actions are documented. The other is the realization that statistical tools merely point out the problems but are not themselves solutions. The burden of action on the process is still on the shoulders of the person that implemented it. In order to implement SPC effectively, three steps are continually followed:

1. Documenting and understanding the process and using process flow charts and component diagrams.
 2. Establishing data collection systems and using SPC tools to identify process problems and opportunities for improvement.
 3. Acting on the process and establishing guidelines to monitor and maintain process control.
- Repeating steps 1-3 again.

These fundamentals are the basis of establishing specifications and operating philosophy with respect to SPC. We believe a solid foundation creates a permanent system and accelerates our quality improvement process.

Quality and Reliability

CYCLE TIME MANAGEMENT (CTM)

Cycle Time Management efforts are focused on Design-Development Process Responsiveness and Make-Market Process Responsiveness. Both are aimed at reducing the cycle time of tasks from current performance (Baseline) to entitlement (Using Existing Resources) then to improved entitlement and theoretical limit. Design-Development focuses on getting the right products and processes to production within the market window interval. Make-Market concentrates on getting product into the customers hands within Customer Lead Time Requirements. Cycle time management directly links to quality improvement in its requirement for task barrier identification at the root cause level and removal of those barriers (e.g. eliminating causes of rejects thereby eliminating rework or product sort). Also, the acceleration of results from reducing cycle time increases the frequency of events thereby increasing the cycles of learning required for quality improvement.

Quality and Reliability

DESIGN FOR MANUFACTURABILITY (DFM) AND SIX SIGMA

A by-product of CTM application to the Design-Development Process (DDP) is the Signetics proprietary DDP manual introduced in January 1991 followed by Cross Functional Team (CFT) training. The DDP applies to all product, package and technology groups in Signetics. CFT's are used to drive the project from planning phase until all objectives of the new product contract are met. The requirements for SPC, DFM and meeting Six Sigma objectives are contained in the DDP manual. The CFTs are responsible for assuring that DFM occurs with an objective of Six Sigma. A Six Sigma design means that any desired characteristic of a part has a yield of 99.9997% or a defect rate of 3.4PPM (C_p of 2 or C_{pk} of 1.5)

QUALITY PERFORMANCE

Our Quality Improvement Process has influenced our entire production cycle - from the purchases of raw materials to the shipment of finished product. The involvement of all areas of the company has resulted in impressive quality improvements. A traditional quality gauge is final electrical and visual/mechanical product defect levels as measured upon first submittal results at outgoing Quality Assurance gates; Estimated Process Quality. This is the PPM Level at our outgoing inspection for all accepted and rejected lots. (See Figures Figure 2. and Figure 3.) Current product shipments routinely record below 20PPM (Parts Per Million) electrical defect levels and 150PPM visual/mechanical defect levels. Since we utilize zero accept sampling on all finished production inspection, any lot with one or more rejects is 100 percent rejected.

The most meaningful measure in our product quality is how we measure up to our customer's expectations. Many customers routinely send us incoming inspection data or ratings on our products and services. In 1991, Signetics also implemented a formal annual customer survey to solicit inputs on Signetics performance to the dimension of performance deemed relevant by the customer. Signetics is very appreciative of the recognition given by customers. Since 1986, Signetics has received over 70 formal commendation plaques from customers in recognition of Quality, Delivery and Service. Due to this type of performance, a number of our customers have eliminated expensive incoming inspection testing and have subscribed to the Ship-to-Stock Program. (See Figure Figure 4..)

Figure 2. Electrical Product Quality Based on First Time Q.A. Submission Results

Quality and Reliability

Figure 3. Visual/Mechanical Product Quality Based on First Time Q.A. Submission Results

Figure 4. Signetics Ship-To-Stock Customer Growth

SHIP-TO-STOCK PROGRAM

Ship-to-Stock is a formal program developed at the request of our customers to help them reduce their costs by eliminating incoming test and inspection. Through close work with these customers in our quality improvement program, they became confident that our defect rates were so low that the redundancy of incoming inspections and testing was not only expensive, but unnecessary. They also saw that added component handling increased the potential of causing defects.

Quality and Reliability

Ship-to-Stock is a joint program between Signetics and a customer which formally certifies specific parts to go directly into the customer's assembly line or inventory. This program was developed at the request of several major manufacturers after they had worked with us and had a chance to experience the data exchange and joint corrective action occurring as part of our quality improvement program.

Manufacturers using large volumes of ICs, those who are evaluating Just-in-Time delivery programs, or those who want to reduce or avoid high-cost incoming inspection are strongly encouraged to participate in this worthwhile program. Contact your local sales representative for further assistance and information on how to participate in this program.

RELIABILITY ASSURANCE PROGRAMS

Focus on Product Reliability

From 1981 to 1984, continuing improvements in process and material quality had a significant impact on product reliability.

Since 1984, the company has intensified its effort to markedly improve product reliability. Corporate Reliability Engineering, Group and Plant Reliability Units and Manufacturing Engineering work jointly on numerous improvement activities. These focused activities enhance the reliability of future products by providing improved methods for reliability assessment, increased understanding of failure physics, advanced analytical techniques, and aid in the development of material and processes.

EARLY FAILURE RATE (EFR) FOCUS

In 1986 Signetics intensified the focus on Early Life Reliability because of the significant impact EFR failures have on end system reliability performance. This program, which has now become a standard element in our reliability monitoring activities, provides quality engineering with statistically significant definition of low level process related defects. From these data, focused failure mechanism corrective actions can be developed. Average EFR levels on a broad cross section of processes, have been reduced from 720FPM to less than 100FPM since the corrective action effort was initiated in 1986 (reference Figure Figure 5.). Details of that activity are available upon request.

RELIABILITY MEASUREMENT PROGRAMS

Comprehensive product and process qualification programs have been developed to assure that our customers are receiving highly reliable products for their critical applications. Additionally, ongoing reliability monitoring programs, SURE III and Product Monitor, sample standard production on a regularly established basis (see Table Table 2.).

Quality and Reliability

Table 2. Reliability Assurance Programs

Reliability Function	Typical Stress	Frequency
New Process Qualification	High Temperature Operating Life Temperature-Humidity, Biased, Static High Temperature Storage Life Pressure Pot Temperature Cycle	Each new wafer fab process
New Product Qualification	High Temperature Operating Life Temperature-Humidity, Biased, Static High Temperature Storage Life Pressure Pot Temperature Cycle Electrostatic Discharge Characterization	Each new product family
SURE III	High Temperature Operating Life Temperature-Humidity, Biased, Static Pressure Pot Temperature Cycle	Each fab process family, every four weeks
Product Monitor	Pressure Pot	Each plastic package type and technology family at each assembly plant, every week

DESCRIPTION OF STRESSES

High Temperature Operating Life

Static High Temperature Life (SHTL) stressing applies static DC bias to the device. This has specific merit in detecting ionic contamination problems which require continuous uninterrupted bias to drive contaminants to the silicon surface. The voltage bias must be maintained until the devices are cooled down to room temperature from the elevated life test temperature. Dynamic High Temperature Life (DHTL) stressing is not as effective in detecting such problems because the bias continuously changes, intermittently generating and healing the problem. For this reason, SHTL has typically been used as the accelerated life stress for Logic products. DHTL is useful for products such as memory and micro-processor/controller where a large portion of the area can only be accessed by dynamic means.

HTSL-High Temperature Storage Life

This stress exposes the parts to elevated temperatures (150°C-175°C) with no applied bias. For plastic packages, 175°C is the high end of its safe temperature region without accelerating untypical failure mechanisms. This test is intended to accelerate potential mechanical package-related failure mechanisms such as Gold-Aluminum bond integrity and other process instabilities.

THBS-Temperature-Humidity, Biased, Static

The accelerated temperature and humidity bias is performed at 85°C and 85% relative humidity (85°C/ 85% RH). In general, the worst case bias condition is the one which minimizes the device power dissipations and maximizes the applied voltages. Higher power dissipations tend to lower the humidity level at the chip surface and lessen the corrosion susceptibility.

TMCL-Temperature-Cycling, Air to Air

The device is cycled between the specified upper and lower temperature without power in an air or Nitrogen environment. Normal temperature extremes are -65°C and +150°C with a minimum 10 minute dwell and 5 minute transition per MIL-STD-883C, Method 1010.5, Condition C. This is a good test to measure the overall package to die mechanical compatibility, because the thermal expansion coefficients of the plastic are normally very much higher than those of the die and leadframe. However, for large die the stress may be too severe and induce failures that would not be expected in a real application.

PPOT-Pressure Pot

This stress exposes the devices to saturated steam at elevated temperature and pressure. The standard condition is 20 PSIG which occurs at a temperature of 127°C and 100% RH. The stress is used to test the moisture resistance of plastic encapsulated devices. The plastic encapsulant is not a moisture barrier and will saturate with moisture within 72 hours. Since the chip is not powered up the chip temperature and relative humidity will be the same as the autoclave once equilibrium is reached. Because the steam environment has an unlimited supply of moisture and ample temperature to catalyze thermally activated events, it is effective at detecting corrosion problems, contamination induced leakage problems, and general glassivation stability and integrity. It is also a good test for both package integrity (cracks in the package), and for die cracks (the moisture swells the plastic enough to stress the die; also the moisture causes leakage paths in the crack itself).

Quality and Reliability

PRODUCT AND PROCESS QUALIFICATION PROGRAMS

Qualification activity is centered around new products and processes and changes in products and processes. The goal is to assure that the products can meet the qualification requirements prior to general release, and on an ongoing basis to demonstrate conformance to those requirements. The nature and extent of reliability stressing required depends on the type of change and the amount of applicable reliability data available.

A full qualification may include Early Failure Rate (EFR), Intrinsic Failure Rate (IFR), and Environmental Endurance Stressing. Such stress plans are reserved for introductions or changes that involve new or untested material or processes and, as such should be subjected to the maximum reliability interrogation. This normally entails a full range of biased and unbiased temperature and humidity stresses along with thermo-mechanical stresses.

For changes that are of limited scope, the full range of qualification stressing may not be warranted. In these instances, the nature and extent of the change is examined and only those stresses which provide a valuable measure of the change, or those which will detect potential weakness, are performed.

SELF-QUAL PROGRAM (SQP)

Self-Qual, initiated in 1984, is a joint program between Signetics and a customer that formally communicates the qualification activities for a new or changed product, process, or material. The Self Qual process provides our customer's engineering groups an opportunity to participate in the development of the qualification plan. During the qualification process, customers may audit the project, and can receive interim updates of qualification progress. Upon completion, formal detailed engineering reports are provided.

The major impact to the customer comes from the reduced workload on the component engineering and qualification groups. These engineering resources generally divide their time between routine qualification activity and problem resolution on critical components. By eliminating the need to perform qualification for one of the basic supplier changes the customer component engineer can spend more of his time resolving the critical product issues. In addition, the total amount of stress hardware needed to perform qualification life tests and other environmental evaluations can be reduced, saving the customer facility costs and reducing operating expense.

Self-Qual is a no-risk proposition for the customer. Each Self-Qual proposal provides a detailed description of what we are changing and why. It includes a detailed plan of what we intend to do to establish the reliability of the products affected. If the customer wishes to have product added to the plan or select some additional stresses, or prefers alternative stress conditions, Signetics will do everything possible to accommodate those requests. After that, if the customer is still uncomfortable with the recommended change, they are under no obligation to accept our data, and they may also perform their own qualification program. Customers who are interested in participating in this program should contact their local sales representative or the Corporate Reliability Engineering department directly.

SURE III RELIABILITY MONITORING PROGRAM

In order to implement an improvement program, a standard measure of performance was needed. The results from the SURE III Reliability Monitoring Program are used as basic ongoing measures of product reliability performance. This program samples all generic families of products manufactured and utilizes standardized stress methods and test procedures. A measurement philosophy was adopted based on the premise of continual improvement toward our performance standard of zero defects. We also increased our standard Pressure Pot stress conditions from 15 PSIG/121°C to 20 PSIG/127°C. This reduced stress duration from 168 hours to 72 hours, and increased high volume sampling, which increased sensitivity to low defect levels. Our standard monitoring program, SURE III, includes the stress conditions as described in Table Table 3.. The continuous improvement results are shown in Figure Figure 6. Signetics Reliability Index as Failure Per Million (FPM). The FPM value includes all rejects from all accelerated stresses divided by total units submitted to all stresses. This is a relative number used to manage continuous reliability improvement. It should not be interpreted as an expected failure rate. Failure rate information is provided in the Signetics Product Reliability Summary Report available to all customers. In addition, the Signetics Reliability Handbook and the Signetics Process Technology and Manufacturing Facility Roadmap publications further define the rationale for methods used and the formation of process, product and package families.

Quality and Reliability

* Failures during product lifetime at customer less than 3.4PPM (6 Sigma)

Figure 6. Signetics Reliability Index

Table 3. SURE III Reliability Monitoring Program

Reliability Function	Stress Conditions	# UNITS
Static High Temperature Operating Life (SHTL)	$T_j \geq 150^\circ\text{C}$, $T_{\text{amb}} = 125^\circ\text{C}$ to 150°C , Biased condition = Static, $V_{\text{CC}} = \text{MAX}$, Duration = 1000 hours	135/150 Monthly
Temperature-Humidity, Biased, Static (THBS)	$T_{\text{amb}} = 85^\circ\text{C} \pm 3^\circ\text{C}$, Humidity = 85% RH $\pm 5\%$, Biased condition = Static, $V_{\text{CC}} = \text{MAX}$, Duration = 1000 hours	100 Monthly
Temperature Cycling (TMCL)	$T_{\text{amb}} = -65^\circ\text{C}$ ($+0^\circ\text{C}$ - 10°C) to $+150^\circ\text{C}$ ($+10^\circ\text{C}$ - 0°C), Air-to-Air, Dwell time = 10 minutes minimum each extreme, Biased condition = None, Duration = 1000 cycles for plastic package, 300 cycles for ceramic package	100 Monthly
Pressure Pot	$T_{\text{amb}} = 127^\circ\text{C} \pm 2^\circ\text{C}$, 20 PSIG ± 0.5 PSIG (PPOT). 100% saturated steam, Biased condition = None, Duration = 72 hours	100 Weekly
		435/450 per Family

NOTE: $V_{\text{CC}} = \text{MAX}$ is generally equal to $V_{\text{CC}} = \text{MAX}$ as specified in data handbook

PRODUCT MONITOR

In addition to the SURE III program, each assembly plant performs Pressure Pot (20PSIG, 127°C , 72hours) reliability monitors on a weekly basis for each molded package type by pin count. The purpose of this program is to monitor the consistency of the assembly operations for such attributes as molding quality and die attach and wire bond integrity. This data is reported back to manufacturing operations and corporate and group reliability and quality assurance departments by electronic mail each week.

Quality and Reliability

RELIABILITY EVALUATION

In addition to the product performance monitors encompassed in the SURE III program, Corporate and Group Reliability Engineering departments sustain a broad range of evaluation and qualification activities. Included in the engineering process are:

- Evaluation and qualification of new or changed materials, assembly/wafer-fab processes and equipment, product designs, facilities, and subcontractors.
- Devices or generic group failure rate studies.
- Advanced environmental stress development.
- Failure mechanism characterization and corrective action/prevention reporting.

The environmental stresses utilized in the engineering programs are similar to those utilized for the SURE III program; however, more highly accelerated conditions and extended durations typify these engineering projects. Additional stress systems such as biased pressure pot, power-temperature cycling, and cycle-biased temperature- humidity, are included in some evaluation programs.

STRESS FACILITY QUALITY

Quality improvement has reached all functional areas of the company, and the reliability stress laboratories are no exception. Corporate Reliability Laboratory (CRL) is one of the many areas where the benefits of the quality improvement process pays repeated dividends.

CRL utilizes stress which accelerate failure rates hundreds to thousands of times, requiring precision and control to make reliability data meaningful. Stress loading schedules are maintained with absolute regularity and chambers are never off-line beyond scheduled loading plans. Board currents are recorded prior to and at each interval on biased stresses, and monitoring of in-oven currents is conducted daily.

Thermal modeling of the Temperature Cycling systems has been accomplished and all loads are carefully weighed to ensure that thermal ramps are consistent.

Pressure Pot and Biased Pressure Pot systems utilize microprocessor controllers, and are accurate to within 0.1 degree centigrade. Saturation is guaranteed via automatic timing circuits, and a host of fail-safe controls ensure that test groups are never damaged.

Electrostatic discharge (ESD) handling precautions are standard procedures in the laboratories, and the occurrences of devices lost, zapped, or overstressed have become almost non-existent.

MANUFACTURING FACILITIES

Signetics, as part of a multinational corporation, utilize manufacturing facilities for wafer fabrication, package assembly, and test in three states and six overseas countries as shown in Table Table 4.. Wafer fabrication is performed in fabs which report to the Product Groups. Assembly operations in Utah, Korea, and Thailand report to the Vice President of Assembly Manufacturing Operations (AMO). Assembly subcontractors are scheduled and controlled through the AMO organization. Assembly subcontractors process all product to Signetics' specifications and materials. We have on-site quality assurance personnel at each subcontractor site to audit assembly processes and procedures.

TYPICAL IC MANUFACTURING FLOW

The manufacturing process for integrated circuits begins with wafer fabrication. The wafers are then electrically sorted, assembled, and tested prior to customer shipment. Quality assurance inspections are utilized throughout the manufacturing process.

Quality and Reliability

Table 4. Product Manufacturing

FACILITIES	DESIGNATION	LOCATION	PROCESS OR PACKAGE FAMILIES
Wafer Fabrication	Fab 01	Sunnyvale, California, USA	Bipolar, Linear, Junction Isolated and Quality Assurance
	Fab 21	Orem, Utah, USA	Bipolar Gold Doped, Schottky, Oxide Isolated, ECL, PLD and Quality Assurance

SPECIAL PROCESSING

SUPR II LEVEL B –

For our customers who require an infant mortality rate level less than that normally provided for our standard products (typically less than 1000PPM), we offer our Signetics Upgraded Product Reliability (SUPR) program.

Devices are burned-in per Signetics specification 850-227 schematics for a minimum of 21 hours at junction temperature between 155°C to 175°C. For a 1.0eV activation energy, 21 hours at 155°C is equivalent to 168 hours at 125°C.

Quality and Reliability

Following burn-in, all devices are cooled down under bias and tested within 96 hours. All devices are tested before and after burn-in, yield calculated and compared to Percent Defective Allowed (PDA). If a lot fails PDA, it is investigated and good units submitted to a second burn-in. All "SUPR II B" devices carry a "B" marking.

The SUPR program was introduced in 1972 to improve quality and reliability and was expanded in 1975 to SUPR II A which included the burn-in option, SUPR II B. With the implementation of the Signetics Quality Improvement Process in 1980, standard product quality levels and guarantees caught up and passed SUPR II. All processing, except for burn-in, is now standard. The Signetics standard warranty is Zero Defects.

"Evaluation of Early Failure Levels and The Effectiveness of Burn-In" is available upon request through your local sales office. This brochure is an aid for those users and purchasers of integrated circuits who need to make a decision regarding burn-in.

PUBLICATIONS

Signetics routinely publishes documents supporting the Quality and Reliability Improvement Process. The following significant documents are currently available.

IC Quality Series

Quality and Reliability Policy Manual (850-8000)

This manual is the starting point for understanding the policies of Signetics pursuant to constantly improving the high standards of quality and reliability in the manufacture of monolithic integrated circuits. Responsibilities and authority of organizations are defined along with governing specifications and operator instruction documents.

Signetics Total Quality Management

This booklet describes the TQM model, patterned after the U.S.A. Malcom Baldrige National Quality Award criteria and how the model is applied to the Signetics Quality Improvement Process.

Supplier Partnership Guide

This booklet defines Signetics philosophy, policy and requirements for establishing strategic partnerships with raw material suppliers.

Product Symbol Formats

This publication provides a guide for determining standard product symbol format and content for decoding inventory and product in field usage since 1980. Since date code 8717, Signetics has symbolized the assembly start computer Lot ID on commercial products providing full traceability back to start of wafer fabrication.

Quality Attributes EDI System

This manual defines system requirements for Electronic Data Interchange (EDI) of Quality Attributes (pass/fail) Data.

Monthly Product Outgoing Quality Summary Reports

Estimated Process Quality (EPQ) in PPM for electrical, visual/ mechanical and hermeticity by part number or by family.

Statistical Process Control

This booklet introduces the Signetics SPC system including terminologies, philosophy, organization, training and implementation strategy and status.

Ship-To-Stock Program

This booklet defines the "joint program" requirements of Signetics and the customer to formally certify specific products to go directly into the assembly line or inventory with reduced or no incoming inspection thereby reducing cost of ownership.

Customer Return Immediate Service Program (CRISP)

This booklet defines the joint responsibilities of Signetics and the customer to assure that correlation samples are investigated and results reported per the Signetics 1-4-5 cycle time commitments.

Quality and Reliability Improvement Process

This booklet tells the story of the 1980 Signetics Quality Improvement Program evolving into the Quality Improvement Process (QIP) which is the foundation of all Signetics efforts aimed at total customer satisfaction. The March 1988 publication describes the story. More recent booklets contain updated foils only, without much text.

IC Reliability Series

Signetics Reliability Handbook

This handbook is a detailed guide to Signetics Reliability Qualification and Monitoring activities. It includes reference sections that deal with the application and statistics of integrated circuit reliability issues.

Quality and Reliability

Product Reliability Summary

Yearly, SURE III monitoring data is summarized and published for all product families in a Product Reliability Summary. Summaries like this one provide a detailed overview of product family performance and estimates the reliability of those products in use conditions.

Quarterly Reliability Update

Detailed results, by part number, package type, date code, assembly location, and by stress and test interval are routinely published in the Signetics Quarterly Reliability Update. The "Update" is available at the end of each quarter, and contains the results of reliability monitors which completed during the previous quarter, plus approximately 3 years of history for each product family.

SMD Reliability (The Reliability and Durability of Surface Mount Packages)

In support of Signetics' leadership in Surface Mount Device (SMD) technology, we have published in-depth studies and evaluations on the reliability and durability of SMD packages. The Surface Mount Reliability report covers evaluation of products after exposure to the unique environments created by various SMD soldering and cleaning processes.

Process Technology and Manufacturing Facility Roadmap

This document defines the various process technologies in production in Signetics manufacturing facilities, and defines in detail, the fab and assembly processes and locations qualified to produce all released products.

Thermal Characteristics of Integrated Circuit Packages

This is a comprehensive collection of thermal characterization data for all packages manufactured by Signetics. Thermal resistance data to *Case*, and to *Ambient* are provided. Details on airflow effects and die size are included.

SSQP – Signetics Self-Qual Program-Reports

In addition to the regular publications of reliability monitor results, a special program for the publication of qualification proposals and final engineering reports has been in place since January of 1984. Self-Qual Reports are available on all major process changes and introductions, thereby reducing customer cost of ownership.

Evaluation of Early Failure Levels and the Effectiveness of Burn-In

This report provides results of the Signetics Early Failure Rate (EFR) program implemented in 1986 to identify and eliminate root causes of infant mortality and to aid users of IC components faced with a decision regarding Burn-In of purchased integrated circuits.

DATA AVAILABILITY

The previously referenced documents are available to all our customers. Many are available in your local sales office, or from:

Corporate Quality System Group
Mail Stop #35
811 East Arques Avenue
P. O. Box 3409
Sunnyvale, CA 94088-3409, USA

where you can be placed on a standard mailing list for all documentation which meet your requirement(s).

I²C-Bus ICs

I²C-BUS ICs (INTER INTEGRATED CIRCUIT BUS) – AN EXTENSIVE RANGE OF ICs WITH SIMPLE SERIAL INTERFACING

Our I²C-bus ICs represent an industry breakthrough in the field of microcontroller technology. Designed to exploit the similarities of various system designs in telecommunications, industrial electronics and consumer electronics, the I²C-bus concept is based on a 2-wire serial bus protocol.

On-chip interfacing allows the ICs to communicate directly with each other through a simple bidirectional 2-wire inter-IC bus (hence the term I²C-bus).

The I²C-bus ICs also solve the problem of interfacing digital control systems with more than one microcontroller, which is inherent to the digitalization that takes place in consumer products. And you also benefit greatly from such features as:

- Serial, bidirectional data transfers that can be made at up to 100kbits/s via only a data line (SDA) and a clock line (SCL)
- On-chip filtering which protects data from corruption by interference since it rejects frequencies above 100kHz
- The number of ICs that can be connected to the same 2-wire bus is limited only by a maximum bus capacitance of 400pF

DESIGNING A SYSTEM HAS NEVER BEEN EASIER

The I²C-bus circuits clip directly onto the I²C-bus without external interfacing. This allows you to modify or up-grade a system by adding or deleting functional blocks which correspond exactly to individual ICs. You can use the same ICs in many different applications. Large savings are made because the process:

- Simplifies stocking
- Cuts down on interconnecting and results in more competitively priced PCBs
- Requires fewer peripheral components
- Facilitates space saving to improve your manufacturing cost-effectiveness
- Improves system manufacturability by allowing for automated system alignment and adjustment
- Enhances system servability and testability

Military Product Process Levels

JAN Class B Qualified Products – JAN Qualified products are manufactured, processed and tested in a government certified facility to MIL-M-38510, and appropriate device slash sheet specifications. Design documentation, lot sampling plans, electrical test data and qualification data for each specific part type has been approved by the Defense Electronic Supply Center (DESC) and products appear on the DESC Qualified Products List (QPL-38510).

Military Drawing Products – DESC Selected Item Drawings (DESC Drawings) are interim standards for use prior to the publication of a JAN device slash sheet. Military Drawings fulfill the same purpose as DESC Drawings but are streamlined by references to compliant non-JAN device types as defined by MIL-STD-883, Paragraph 1.2.1.

Signetics Class B Standard Product – Class B standard product conforms to MIL-STD-883, general provisions of Para 1.2.1 (and its sub-paragraphs), except where noted by the suffix NC in the product part number. No other claims, expressed or implied, are made of equivalence to JAN product or to MIL-M-38510. Para 1.2 is not subject to interpretation, deviations, or omissions by Signetics or its customers. This product also conforms with JEDEC Publication 101.

Full compliance to MIL-STD-883 para 1.2 is only guaranteed on compliant product with seal date codes of 8501 and later. Electrical test requirements are as stated in the most current Signetics Product Specification Data Sheet.

- 100% final electrical tests include all Product Specification Data Sheet parameter limits, test conditions, and temperatures applicable to Subgroups 1, 2, 3, 7, and 9 of MIL-STD-883, Method 5004 for digital products, or those subgroups applicable for Linear Products.
- Group A sample electrical inspection tests include all final electrical subgroups as well as all other Product Specification Data Sheet parameters with specified minimum or maximum limits.
- End point electrical tests used for QCI inspection sampling (Groups C and D) are those Product Specification Data Sheet parameter limits, test conditions, and temperatures applicable to Subgroups 1, 2, and 3 per MIL-STD-883, Method 5005, except for Linear products for which Subgroup 1 only is applicable.

Signetics Standard Packages – All Military package case outlines and physical dimensions conform with the current revision MIL-M-38510, Appendix C, except for package types which are not included in that specification.

The physical dimensions for standard package types which are not included in Appendix C are assigned case outline letters according to JEDEC Publication 101 as follows: **U** = Leadless Chip Carriers; **X** = Dual-in-line packages; **Y** = Flat packages; **Z** = All other configurations.

A list of Signetics' products that are processed to Military specifications can be found within the Alphanumeric listing that begins on page 5-22.

Signetics Military Product Reference Guide is also available through your local sales office.

For JAN products, the part number is per MIL-M-38510.

Military Product Process Levels

For standard product, the part number is as listed in this Price Book.

For Military Drawing products, the part numbers are per the Drawing.

NOTE: The first two digits of the Drawing Number are the last two digits of the year of issue.

Ordering Information

When ordering use the JM38510 slash number, DESC Drawing and Standard Military product number (e.g. JM38510/31504BEA, 5962-8607101CA, 54F181/BJA). These are listed in the 'PART NUMBER' column of the Price Book.

Data Handbook Order Form 1991

Data handbook orders cannot be accepted unless they are prepaid. A check or money order made payable to Signetics must accompany this request. All shipping and handling charges are included in the cost of the books. **No returns on chargeable items.** Mail completed form to:

DIGITAL AUDIO/VIDEO

Desktop Video Chip Set

FEATURES

- Color video decoding
- Square pixels

– NTSC:

12.272727MHz, 640 pixels/line

– PAL, SECAM:

14.75MHz, 768 pixels/line

- 8 Bits Y:U:V 4:2:2

- Line-locked clock

BLOCK DIAGRAM

80C51 Microcontrollers for TV and Video

The MTV's screen refreshing is totally transparent to the CPU.

Signetics now offers more 80C51 derivatives than any other microcontroller supplier in the world. A recent addition is the 83C053/87C054, a highly integrated Microcontroller for Television and Video, called MTV for short.

The MTV serves as a universal solution for use wherever a video signal is present. It incorporates all the functions necessary to produce attractive, flexible on-screen displays of characters and icons.

The device integrates a powerful 80C51 microcontroller, an on-screen display module, display RAM and character ROM, pulse-width modulated outputs and a software-driven analog-to-digital converter.

This product not only replaces the two or more chips typically required to perform character display and control, but also provides more functions and flexibility than alternative solutions. And unlike the leading competition, the MTV's screen refreshing is totally transparent to the CPU, leaving it free to perform other functions.

Display features include:

- 128-character free-format display, with flexible start positions and end-of-line carriage return.
- Eight shadow modes. Full and partial character outlining to improve readability on light backgrounds.
- Choice of character colors on a character-by-character basis.
- Choice of background color or video on a character-by-character basis.
- Double-height, double-sized and condensed characters.
- Underlining capability.
- Programmable video polarities

Popular MTV applications include televisions and television systems such as VCRs, camcorders, medical imaging, industrial imaging, security systems, hotel in-room displays and video editing equipment.

Consumer Video Chip Set

FEATURES

- Color video decoding
- 13.5MHz, 720 pixels/line
- PAL, NTSC
- 7 Bits Y:U:V 4:1:1

BLOCK DIAGRAM

TDA8702 – 8-Bit Digital-to-Analog Converter

FEATURES

- 30MHz
- 250mW power dissipation
- Connects in a Flash

DIAGRAM

Product Spotlights

TDA8703/TDA8703T – 8-Bit High-Speed Analog-to-Digital Converter

FEATURES

- 8-bit resolution
- Sampling rate up to 40MHz
- High signal-to-noise ratio over a large analog input frequency range (7.1 effective bits at 4.43MHz full-scale input)
- Binary or two's complement 3-state TTL outputs
- Overflow/underflow 3-state TTL output
- TTL compatible digital inputs
- Low-level AC clock input signal allowed
- Internal reference voltage generator
- Power dissipation only 290mW (typical)
- Low analog input capacitance, no buffer amplifier required
- No sample and hold circuit required

BLOCK DIAGRAM

Product Spotlights

TDA8708 – 8-Bit Analog-to-Digital Converter for Composite Video, Luminance

FEATURES

- Sampling rate up to 30MHz
- Binary or two's complement 3-State TTL outputs
- Clamp and automatic gain control for composite video, blanking, synchronization, and luminance
- Three selectable inputs

TDA8709 – 8-Bit Analog-to-Digital Converter for Chrominance

FEATURES

- Sampling rate up to 30MHz
- Clamp to "16" or "128"
- Three selectable inputs

TDA7052 – 1 Watt Low Voltage Audio Power Amplifier

FEATURES

- No external components
- No switch-on or switch-off clicks
- Good overall stability
- Low power consumption
- No external heatsink required
- Short-circuit proof

LOGIC DIAGRAM

SAA7322/23 – Stereo Bitstream D/A Converter with Digital Filter

FEATURES

- Oversampling digital filter
- Bitstream 16-bit DAC
- Op amps for post filters
- De-emphasis network
- Dynamic range >93dB
- Requires no external adjustments
- Single 5V operation
- CMOS technology
- I_SS input format
- 44-pin quad flat pack

Product Spotlights

SAA7274 – Audio Digital Input Circuit (ADIC)

FEATURES

- I²S bus output
- Biphase audio signal (Satellite radio, compact disc and DAT)
- Converts digital audio signals in accordance with the IEC/EBU standards

SYSTEM SOLUTIONS

SAA7350 – 20-Bit Stereo Bitstream Digital-to-Analog Converter

FEATURES

- 20-bit resolution DAC
- 3rd order noise shaper
- Wide range of sampling rates
- Accepts variety of interface formats
- Differential mode output
- 5V single supply operation
- CMOS technology
- 44-pin quad flat pack

BLOCK DIAGRAM

80C51 Family Continues to Grow

Signetics' wide variety of 80C51 derivatives allows engineers to continue enhancing their product functionality and performance without changing software and development tools.

Signetics has extended the dimensions of performance of its 80C51 microcontroller family with the recent introduction of the 87C52 with 8K bytes EPROM, the 80C52 with 8K bytes ROM and the 80C32 without memory.

These new products demonstrate Signetics' commitment to continued expansion of its popular 80C51 family. In just one year the company has more than doubled its number of derivatives. Such a wide selection of derivatives from which to choose allows engineers to design across a broad range of product requirements. Everything from very basic applications to those requiring complex computation, A/D and sophisticated timing can be handled.

Signetics' wide variety of 80C51 derivatives allows engineers to continue enhancing their product functionality and performance without changing software and development tools.

The 8XC52 serves 8-bit users who may need more memory, increased functionality, or reduced space - - all from an affordable product. It is ideal for designers already using 80C51-family components in their products, as well as those developing new products from scratch.

The 87C52, 80C52 and 80C32 are available in several package options, including Quad Flat Packs (QFPs), which enable board space reductions of 50 to 80 percent.

The 8XC52 doubles the on-chip memory of the 8XC51 to 8K bytes of EPROM or ROM and 256-bytes of RAM. It includes an additional 16-bit timer, for a total of three. These added features result in improved performance and increased functionality without design modifications.

Signetics offers the most 80C51 derivatives in the world.

MICROCONTROLLERS

80C31/80C51/87C51 – CMOS Single-Chip, 8-Bit Microcontroller

FEATURES

- 8031/8051 compatible
 - $4K \times 8$ ROM (80C51)
 - $4K \times 8$ EPROM (87C51)
 - ROMless (80C31)
 - 128×8 RAM
 - Two 16-bit counter/timers
 - Full duplex serial channel
- Boolean processor
- Memory addressing capability
 - 64K ROM and 64K RAM
- Power control modes:
 - Idle mode
 - Power-down mode
- CMOS and TTL compatible
- Five speed ranges at $V_{CC} = 5V$
 - 12MHz, 16MHz, 20MHz, 24MHz, 30MHz
- Five package styles
- Extended temperature ranges
- OTP package available

BLOCK DIAGRAM

Product Spotlights

80/83/87C451 – CMOS Single-Chip, 8-Bit Microcontroller

FEATURES

- 80C51 based architecture
- 68-pin PLCC and 64-pin DIP packages:
 - Seven 8-bit I/O ports (PLCC version)
 - Six 8-bit ports and one 4-bit port (DIP version)
- Port 6 features:
 - 8 data pins
- 4 control pins
- Direct MPU bus interface
- Parallel printer interface
- On the microcontroller:
 - 4K × 8 ROM (83C451)
 - 4K × 8 EPROM (87C451)
 - ROMless version (80C451)
 - 128 × 8 RAM
 - Two 16-bit counter/timers
- Two external interrupts
- External memory addressing capability
 - 64k ROM and 64k RAM
- Low power consumption:
 - Normal operation: less than 24mA at 5V, 12MHz
 - Idle mode
 - Power-down mode

BLOCK DIAGRAM

Product Spotlights

80C528/83C528/87C528 – CMOS Single-Chip 8-Bit Microcontroller

FEATURES

- 80C51 instruction set
 - 32K × 8 ROM (83C528)
 - 32K × 8 EPROM (87C528)
 - ROMless (80C528)
 - 512 × 8 RAM
 - Memory addressing capability 64K ROM and 64K RAM
- Three 16-bit counter/timers
- On-chip watchdog timer
- Full duplex UART
- I²C serial interface
- Power control modes:
 - Idle mode
 - Power-down mode
 - Warm start from power-down
- CMOS and TTL compatible
- Speed range at $V_{DD} = 5V \pm 10\%$
 - 3.5 to 16MHz
- Extended temperature ranges
- OTP package available
- ROM/EPROM code protection

BLOCK DIAGRAM

Product Spotlights

80C550/83C550/87C550 – CMOS Single-Chip 8-Bit Microcontroller with A/D and Watchdog Timer

FEATURES

- 80C51 based architecture
 - 4K × 8 EPROM (87C550)/ROM (83C550)
 - 128 × 8 RAM
 - Eight channels of 8-bit A/D
 - Two 16-bit counter/timers
 - Watchdog timer
- Full duplex serial channel
- Boolean processor
- Memory addressing capability
 - 64K ROM and 64K RAM
- Power control modes:
 - Idle mode
 - Power-down mode
- CMOS and TTL compatible
- Speed range at $V_{CC} = 5V \pm 10\%$
 - 3.5 to 16MHz
- Four package styles
- Extended temperature ranges
- OTP package available

BLOCK DIAGRAM

Product Spotlights

80C652/83C652/87C652 – CMOS Single-Chip, 8-Bit Microcontroller

FEATURES

- 80C51 central processing unit
- 8K × 8 ROM expandable externally to 64K bytes (87C652 EPROM is not expandable)
- 256 × 8 RAM, expandable externally to 64K bytes
- Two standard 16-bit timer/counters
- Four 8-bit I/O ports
- I²C-bus serial I/O port with byte oriented master and slave functions
- Full-duplex UART facilities
- Power control modes
 - Idle mode
 - Power-down mode
- Five package styles
- Extended temperature ranges
- OTP package available

BLOCK DIAGRAM

Product Spotlights

83C654/87C654 – CMOS Single-Chip, 8-Bit Microcontroller

FEATURES

- 80C51 central processing unit
- 16K $\times$ 8 ROM expandable externally to 64K bytes
- 256 $\times$ 8 RAM, expandable externally to 64K bytes
- Two standard 16-bit timer/counters
- Four 8-bit I/O ports
- I²C-bus serial I/O port with byte oriented master and slave functions
- Full-duplex UART facilities
- Power control modes
- Idle mode
- Power-down mode
- Five package styles
- Extended temperature ranges
- OTP package available

BLOCK DIAGRAM

Product Spotlights

83C751/87C751 – CMOS Single-Chip 8-Bit Microcontroller

FEATURES

- 80C51 based architecture
- Inter-Integrated Circuit (I²C) serial bus interface
- Small package sizes
 - 24-pin DIP (300 mil "skinny DIP")
 - 28-pin PLCC
- 87C751 available in erasable quartz lid or one-time programmable plastic packages
- Wide oscillator frequency range
- Low power consumption:
 - Normal operation: less than 11mA @ 5V, 12MHz
 - Idle mode
 - Power-down mode
- 2K × 8 ROM (83C751)
2K × 8 EPROM (87C751)
- 64 × 8 RAM
- 16-bit auto reloadable counter/timer
- Fixed-rate timer
- Boolean processor
- CMOS and TTL compatible
- Well suited for logic replacement, consumer and industrial applications

BLOCK DIAGRAM

Product Spotlights

83C752/87C752 – CMOS Single-Chip 8-Bit Microcontroller with A/D, PWM

FEATURES

- Available in erasable quartz lid or One-Time Programmable plastic packages
- 80C51 based architecture
- Inter-integrated Circuit (I²C) serial bus interface
- Small package sizes
 - 28-pin DIP
 - 28-pin PLCC
- Wide oscillator frequency range
- Low power consumption:
 - Normal operation: less than 11mA @ 5V, 12MHz
 - Idle mode
 - Power-down mode
- 2K × 8 ROM (83C752) EPROM (87C752)
- 64 × 8 RAM
- 16-bit auto reloadable counter/timer
- 5-channel 8-bit A/D converter
- 8-bit PWM output/timer
- Fixed-rate timer
- Boolean processor
- CMOS and TTL compatible
- Well suited for logic replacement, consumer and industrial applications

BLOCK DIAGRAM

SCC68070 – 16-Bit Integrated Microprocessor

FEATURES

- CMOS technology
- 32-bit internal structure
- Enhanced bus error handling
- 4 decoded interrupt inputs
- 2 programmable interrupt inputs
- Decoded interrupt acknowledge
- Built-in clock generator – maximum 30MHz crystal
- On-chip MMU; supporting virtual memory
- 2-channel DMA controller
- I²C serial bus interface
- 16-bit timer/counter
- Two 16-bit match/count/capture registers
- Fully 68000 object code compatible
- Bus interface similar to 68000
- 56 powerful instruction types
- 5 basic data types
- 16Mbyte addressing range
- 14 addressing modes
- Memory mapped I/O
- Vectored and auto-vectored interrupts
- 7 internal interrupt levels
- Maximum internal clock frequency: 17.5MHz
- 84-pin PLCC package
- 120-pin Quad Flat Pack (QFP)

BLOCK DIAGRAM

83C053/83C054/87C054 – Microcontroller for Television and Video (MTV)

FEATURES

- 8192 × 8 masked ROM (83C053)
16384 × 8 masked ROM (83C054)
16384 × 8 OTPROM (87C054)
- 192 × 8 RAM
- On Screen Display (OSD) Controller
- Three digital video outputs
- Multiplexer/mixer and background intensity controls
- Flexible formatting with OSD New Line Option
- 128 × 10 display RAM
- 60 × 18 × 14 character generator ROM
- Eight text-shadowing modes
- Text color selectable per character
- Background color selectable per word
- Background color vs. video selectable per character
- Eight 6-bit pulse width modulators for analog voltage integration
- One 14-bit PWM for high-precision voltage integration
- D/A converter and comparator with three-input multiplexer
- Nine dedicated I/Os plus 28 port bits
- 15 port bits have alternate uses
- Four high-current open-drain port outputs
- 12 high-voltage (+12V) open drain outputs
- Programmable video input and output polarities
- 80C51 instruction set
- No external memory capability
- 42-pin shrunk DIP (0.07-inch center pins)
- High-speed CMOS technology
- 5V ± 10% operation

BLOCK DIAGRAM

PCD8584 – I²C-Bus Controller

FEATURES

- Parallel-bus/I²C-bus protocol converter
- Compatible with most parallel-bus processors including MAB8049, MAB8051, SCN68000 and Z80
- Automatic selection of bus interface
- Programmable Interrupt vector
- Multi-master capability
- I²C-bus monitor mode
- Long-distance mode
- Operating supply voltage 4.5 to 5.5V
- Operating temperature range -20 to 70°C

PCF84C430 – CMOS 8-Bit Microcontroller with On-Chip LCD Driver

DESCRIPTION

The PCF84C430 is a derivative of the PCF84CXX family of microcontrollers and is manufactured using CMOS technology. On-chip it includes an LCD driver supporting most Liquid Crystal Displays with up to 95 segments. The display driver can handle up to 12 numeric characters, or 6 alphanumeric characters. The supply voltage ranges

from 2.5 to 5.5 volts and is designed for battery-powered applications.

The PCF84C430 provides hand-held battery-powered products with an LCD display.

FEATURES

- On-chip LCD driver with 24 outputs
- 4K ROM bytes/128 RAM bytes

- I²C-bus hardware interface for serial data transfer on two separate lines
- 8-bit programmable timer/event counter
- Clock frequency 100kHz to 10MHz
- Single supply voltage from 2.5V to 5.5V

Product Spotlights

PCF8578 – LCD Row/Column Driver for Dot Matrix Graphic Displays

FEATURES

- Single chip LCD controller/driver
- Stand-alone or may be used with up to 32 PCF8579s (40,960 dots possible)
- 40 driver outputs, configurable as 32/8, 24/16, 16/24 or 8/32 rows/columns
- Selectable multiplex rates; 1:8, 1:16, 1:24 or 1:32
- Externally selectable bias configuration, 5 or 6 levels
- 1280-bit RAM for display data storage and scratch pad
- Display memory bank switching
- Auto-incremented data loading across hardware subaddress boundaries (with PCF8579)
- Provides display synchronization for PCF8579
- On-chip oscillator, requires only 1 external resistor
- Power-on reset blanks display
- Logic voltage supply range 2.5V to 6.0V
- Maximum LCD supply voltage 9V
- Low power consumption
- I²C-bus interface
- TTL/CMOS compatible
- Compatible with most microcontrollers
- Optimized pinning for single plane wiring in multiple device applications (with PCF8579)
- Space saving 56-lead plastic mini-pack
- Compatible with chip-on-glass technology

BLOCK DIAGRAM

PCF8579 – LCD Row/Column Driver for Dot Matrix Graphic Displays

FEATURES

- LCD column driver
- Used in conjunction with the PCF8578, this device forms part of a chip set capable of driving up to 40,960 dots
- 40 column outputs
- Selectable multiplex rates; 1:8, 1:16, 1:24 or 1:32
- Externally selectable bias configuration, 5 or 6 levels
- Easily cascadable for large applications (up to 32 devices)
- 1280-bit RAM for display data storage
- Display memory bank switching
- Auto-incremented data loading across hardware subaddress boundaries
- Power-on reset blanks display
- Logic voltage supply range 2.5V to 6.0V
- Maximum LCD supply voltage 9V
- Low power consumption
- I²C-bus interface
- TTL/CMOS compatible
- Compatible with most microcontrollers
- Optimized pinning for single plane wiring in multiple device applications
- Space saving 56-lead plastic mini-pack
- Compatible with chip-on-glass technology

FIXED FUNCTION LOGIC

74ABT241 – Octal Buffer/Line Driver (3-State)

FEATURES

- Octal bus interface
- 3-State buffers
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 4.6ns worst case propagation delay
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

74ABT244 – Octal Buffer/Line Driver (3-State)

FEATURES

- Octal bus interface
- 3-State buffers
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 4.6ns worst case propagation delay
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT245 – Octal Transceiver with Directional Pin (3-State)

FEATURES

- Octal bus interface
- 3-State buffers
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 4.6ns worst case propagation delay
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

74ABT273 – Octal Transceiver with Directional Pin (3-State)

FEATURES

- Eight edge-triggered D-type flip-flops
- Buffered common clock
- Buffered asynchronous Master Reset
- See 74ABT377 for clock enable version
- See 74ABT373 for transparent latch version
- See 74ABT374 for 3-State version
- 150MHz worst case f_{MAX}
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT373 – Octal D-Type Transparent Latch (3-State)

FEATURES

- 8-bit transparent latch
- 3-State output buffers
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 6.2ns worst case propagation delay
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT374 – Octal D-Type Flip-Flop; Positive-Edge Trigger (3-State)

FEATURES

- 8-bit positive edge triggered register
- 3-State output buffers
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 150MHz worst case f_{MAX}
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT377 – Octal D-Type Flip-Flop with Enable

FEATURES

- Ideal for addressable register applications
- 8-bit positive edge triggered register
- Enable for address and data synchronization applications
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 150MHz worst case f_{MAX}
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT534 – Octal D-Type Flip-Flop, Inverting (3-State)

FEATURES

- 8-bit positive edge triggered register
- 3-State output buffers
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 125MHz worst case f_{MAX}
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

74ABT541 – Octal Buffer/Line Driver (3-State)

FEATURES

- Octal bus interface
- Functions similar to the 74ABT241
- Provides ideal interface and increases fan-out of MOS Microprocessors
- Efficient pinout to facilitate PC board layout
- 3-State buffer outputs sink 64mA and source 32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 125MHz worst case f_{MAX}
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT543 – Octal Buffer/Line Driver (3-State)

FEATURES

- Combines 74ABT245 and 74ABT373 type functions in one device
- 8-bit octal transceiver with D-type latch
- Back-to-back registers for storage
- Separate controls for data flow in each direction
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- Worst case propagation delay is 6.9ns
- Worst case I_{CCZ} is 50 μ A

LOGIC DIAGRAM

74ABT544 – Octal Latched Transceiver with Dual Enable, Inverting

FEATURES

- Combines 74ABT245 and 74ABT373 type functions in one device
- 8-bit octal transceiver with D-type latch
- Back-to-back registers for storage
- Separate controls for data flow in each direction
- 3-State buffer outputs sink 64mA and source 32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- Worst case propagation delay is 6.4ns
- Worst case I_{CCZ} is 50 μ A

LOGIC DIAGRAM

Product Spotlights

74ABT573 – Octal D-Type Transparent Latch (3-State)

FEATURES

- 74ABT373 is a broadside pinout version of 74ABT373
- Inputs and outputs on opposite side of package allow easy interface to microprocessors
- 3-State outputs for bus interfacing common output enable
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 6.2ns worst case propagation delay
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

74ABT574 – Octal D Flip-Flop (3-State)

FEATURES

- 74ABT574 is a broadside pinout version of 74ABT374
- Inputs and outputs on opposite side of package allow easy interface to microprocessors
- Useful as an input or output port for microprocessors
- 3-State outputs for bus interfacing common output enable
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 150MHz worst case f_{MAX}
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

74ABT623 – Octal Transceiver with Dual Enable, Non-Inverting (3-State)

FEATURES

- Octal bidirectional bus interface
- 3-State buffers
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 4.6ns worst case propagation
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

74ABT646 – Octal Bus Transceiver/Register (3-State)

FEATURES

- Combines 74ABT245 and 74ABT374 type functions in one device
- Independent registers for A and B buses
- Multiplexed real-time and stored data
- Output sink 64mA and source 32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 6.9ns worst case propagation
- 50 μ A worst case I_{CCZ}

74ABT648 – Octal Bus Transceiver/Register, Inverting (3-State)

FEATURES

- Combines 74ABT245 and 74ABT374 type functions in one device
- Independent registers for A and B buses
- Multiplexed real-time and stored data
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 6.2ns worst case propagation
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT652 – Transceiver/Register, Non-Inverting (3-State)

FEATURES

- Independent registers for A and B buses
- Multiplexed real-time and stored data
- 3-State outputs
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 6.7ns worst case propagation
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT657 – Octal Transceiver with Parity Generator/Checker (3-State)

FEATURES

- Combinational functions in one package
- Low static and dynamic power dissipation with high speed and high output drive
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 5.5ns worst case propagation
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT863 – 9-Bit Bus Transceiver (3-State)

FEATURES

- Provides high performance bus interface buffering for wide data/address paths or buses carrying parity
- Buffered control inputs for light loading or increased fan-in as required with MOS microprocessors
- Broadside pinout compatible with AMD AM29863
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 6.3ns worst case propagation delay
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT2952 – Octal Registered Transceiver (3-State)

FEATURES

- 8-bit registered transceiver
- Independent registers for A and B buses
- AM2952 functional equivalent
- Outputs sink 64mA and source 32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 8.2ns worst case propagation
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

Product Spotlights

74ABT2953 – Octal Registered Transceiver, Inverting (3-State)

FEATURES

- 8-bit registered inverting transceiver
- Separate clock, clock enable and 3-State enable provided for each register
- AM2953 functional equivalent
- Outputs sink 64mA and source 32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model
- 8.2ns worst case propagation
- 50 μ A worst case I_{CCZ}

LOGIC DIAGRAM

74AC/ACT11240 – Octal Buffer/Line Driver, Inverting (3-State)

FEATURES

- Octal bus interface
- 3-State buffers
- Output capability: $\pm 24\text{mA}$
- CMOS (AC) and TTL (ACT) voltage level inputs
- 50Ω incident wave switching
- Center-pin V_{CC} and ground configuration to minimize high-speed switching noise
- I_{CC} category: MSI

LOGIC DIAGRAM

74AC/ACT11241 – Octal Buffer/Line Driver (3-State)

FEATURES

- Octal bus interface
- 3-State buffers
- Output capability: $\pm 24\text{mA}$
- CMOS (AC) and TTL (ACT) voltage level inputs
- 50Ω incident wave switching
- Center-pin V_{CC} and ground configuration to minimize high-speed switching noise
- I_{CC} category: MSI

74AC/ACT11244 – Octal Buffer/Line Driver (3-State)

FEATURES

- Octal bus interface
- 3-State buffers
- Output capability: $\pm 24\text{mA}$
- CMOS (AC) and TTL (ACT) voltage level inputs
- 50Ω incident wave switching
- Center-pin V_{CC} and ground configuration to minimize high-speed switching noise
- I_{CC} category: MSI

LOGIC DIAGRAM

74AC/ACT11245 – Octal Transceiver with Directional Pin (3-State)

FEATURES

- Octal bidirectional bus interface
- 3-State buffers
- Output capability: $\pm 24\text{mA}$
- CMOS (AC) and TTL (ACT) voltage level inputs
- 50Ω incident wave switching
- Center-pin V_{CC} and ground configuration to minimize high-speed switching noise
- I_{CC} category: MSI

LOGIC DIAGRAM

Product Spotlights

74AC/ACT11373 – Octal D-Type Transparent Latch (3-State)

FEATURES

- 8-bit transparent latch
- 3-State output buffers
- Common 3-State output enable
- Independent register and 3-State buffer operation
- Output capability: $\pm 24\text{mA}$
- CMOS (AC) and TTL (ACT) voltage level inputs
- 50Ω incident wave switching
- Center-pin V_{CC} and ground configuration to minimize high-speed switching noise
- I_{CC} category: MSI

LOGIC DIAGRAM

74AC/ACT11374 – Octal D-Type Flip-Flop; Positive-Edge Trigger (3-State)

FEATURES

- 3-State output buffers
- Common 3-State output enable
- Independent register and 3-State buffer operation
- Output capability: $\pm 24\text{mA}$
- CMOS (AC) and TTL (ACT) voltage level inputs
- 50Ω incident wave switching
- Center-pin V_{CC} and ground configuration to minimize high-speed switching noise
- I_{CC} category: MSI

LOGIC DIAGRAM

Product Spotlights

74F3893 – Quad Futurebus Backplane Transceiver (3-State + Open Collector)

FEATURES

- Quad backplane transceiver
- Drives heavily loaded backplanes with equivalent load impedances down to 10Ω
- Futurebus drivers sink 100mA
- Reduced voltage swing (1 volt) produces less noise and reduces power consumption
- High speed operation enhances performance of backplane buses and facilitates incident wave switching
- Compatible with IEEE 896 and IEEE 1194.1 Futurebus Standards
- Built-in precision band-gap (BG) reference provides accurate receiver threshold and improved noise immunity
- Glitch-free power up/power down operation on all outputs
- Pin and function compatible with NSC DS3893

LOGIC DIAGRAM

Product Spotlights

54/74F776 – Pi-Bus Transceiver

FEATURES

- Octal latched transceiver
- Drives heavily loaded backplanes with equivalent load impedances down to 10Ω
- High drive (100mA) open collector drivers on B-port
- Reduced voltage swing (1 volt) produces less noise and reduces power consumption
- High speed operation enhances performance of backplane buses and facilitates incident wave switching
- Compatible with Pi-Bus and IEEE 896 Futurebus Standards
- Built-in precision band-gap reference provides accurate receiver thresholds and improved noise immunity
- Controlled output ramp and multiple GND pins minimize ground bounce
- Glitch-free power up/power down operation
- Multiple package options
- Industrial temperature range available (-40°C to $+80^{\circ}\text{C}$)

LOGIC DIAGRAM

Product Spotlights

54F777 –Triple Bidirectional Latched Bus Transceiver (3-State + Open Collector)

FEATURES

- Latching transceiver
- High drive open collector output current with minimum output swing
- Compatible with Test Mode (TM) Bus specification
- Controlled output ramp
- Multiple package options

LOGIC DIAGRAM

V_{CC} = Pin 20
V_x = Pin 19

Product Spotlights

74F711A/711-1, 74F712A/712-1 – Multiplexers

FEATURES for 74F711A/711-1

- Consists of five 2-to-1 multiplexers
- High impedance PNP base inputs for reduced loading ($20\mu\text{A}$ in High and Low states)
- Designed for address multiplexing of dynamic RAM and other applications
- Output inverting/non-inverting option
- 74F711-1 offers 30Ω output impedance characteristics
- Outputs sink 64mA ('F711A only)

FEATURES for 74F712A/712-1

- Consists of five 3-to-1 multiplexers
- High impedance PNP base inputs for reduced loading ($20\mu\text{A}$ in High and Low states)
- Designed for address multiplexing of dynamic RAM and other applications
- 74F712-1 offers 30Ω output impedance characteristics
- Outputs sink 64mA ('F712A only)

LOGIC DIAGRAM

Product Spotlights

74F723A/723-1, 74F725A/725-1 – Multiplexers

FEATURES for 74F723A/723-1

- Consists of four 3-to-1 multiplexers
- High impedance PNP base inputs for reduced loading (20 μ A in High and Low states)
- Inverting or non-inverting data path capability by an Invertint (INV) input
- Designed for address multiplexing of dynamic RAM and other applications
- Multiple side pins for V_{CC} and GND to reduce lead inductance (improves speed and noise immunity)
- 3-State outputs sink 64mA ('F723 only)
- 74F723-1 offers 30 Ω output impedance characteristics

FEATURES for 74F725A/725-1

- Consists of four 4-to-1 multiplexers
- High impedance PNP base inputs for reduced loading (20 μ A in High and Low states)
- Equivalent to two 'F253s without 3-State
- Outputs sink 48mA ('F725A only)
- 74F725-1 offers 30 Ω output impedance characteristics

LOGIC DIAGRAM

Product Spotlights

74F1762 – Memory Address Multiplexer

FEATURES

- Provides refresh and multiplexed row and column addresses for DRAMs
- Addressing up to 4MBit DRAMs
- Compatible with 74F171 DIVC and other DRAM controllers
- High-performance outputs
- High-speed address multiplexing
- On-chip 11-bit refresh counter

LOGIC DIAGRAM

74F1763 – Intelligent DRAM Controller (IDC)

FEATURES

- DRAM signal timing generator
- Automatic refresh circuitry
- Selectable row address hold and RAS precharge times
- Facilitates page mode accesses
- Controls 1Mbit DRAMs
- Intelligent burst-mode refresh after page-mode access cycles

BLOCK DIAGRAM

Product Spotlights

74F1764/1765 74F1764-1/1765-1 – 1Megabit DRAM Dual-Ported Controller

FEATURES

- Allows two microprocessors to access the same bank of dynamic RAM
- Performs arbitration, signal timing, address multiplexing and refresh
- 10 address output pins allow direct control of up to 1Mbit dynamic RAMs
- External address multiplexing enables control of 4Mbit (or reater) dynamic RAMs
- Separate refresh clock allows adjustable refresh timing
- 74F1764/F1764-1 have on-chip 20-bit address input latch
- Allows control of dynamic RAMs with row access times down to 40ns
- 74F1764/F1765 output drivers designed for incident wave switching
- 74F1764-1/F1765-1 output drivers designed for first reflected wave switching

BLOCK DIAGRAM

74F5074 – Flip-Flop/Clock Driver

FEATURES

- Metastable immune characteristics
- Propagation delay skew and output to output skew guaranteed less than 1.5ns

- High source current ($I_{OH} = 15\text{mA}$) ideal for clock driver applications
- Pinout compatible with 74F74
- See 74F50728 for Synchronizing Cascaded D-Type Flip-Flop

- See 74F50729 for Synchronizing Dual D-Type Flip-Flop with Edge-Triggered Set and Reset
- See 74F50109 for Synchronizing Dual J-K Positive Edge-Triggered Flip-Flops

74F50109 – Flip-Flop/Clock Driver

FEATURES

- Metastable immune characteristics
- Propagation delay skew and output to output skew guaranteed less than 1.5ns

- High source current ($I_{OH} = 15\text{mA}$) ideal for clock driver applications
- Pinout compatible with 74F109
- See 74F5074 for Synchronizing Dual D-Type Flip-Flop

- See 74F50728 for Synchronizing Cascaded D-Type Flip-Flop
- See 74F50729 for Synchronizing Dual D-Type Flip-Flop with Edge-Triggered Set and Reset

Product Spotlights

74F50728 – Flip-Flop

FEATURES

- Metastable immune characteristics
- Propagation delay skew and output to output skew less than 1.5ns
- See 74F5074 for Synchronizing Dual D-Type Flip-Flop
- See 74F50109 for Synchronizing Dual J-K Positive Edge-Triggered Flip-Flops
- See 74F50729 for Synchronizing Dual D-Type Flip-Flop with Edge-Triggered Set and Reset
- Industrial temperature range available (-40°C to +85°C)

74F50729 – Flip-Flop/Clock Driver

FEATURES

- Metastable immune characteristics
- Propagation delay skew and output to output skew less than 1.5ns
- High source current ($I_{OH} = 15\text{mA}$) ideal for clock driver applications
- See 74F5074 for Synchronizing Dual D-Type Flip-Flop
- See 74F50109 for Synchronizing Dual J-K Positive Edge-Triggered Flip-Flops
- See 74F50728 for Synchronizing Cascaded Dual D-Type Flip-Flop

74F646/646A, 74F648/648A – Transceivers/Registers

FEATURES

- Combines 54F245 and 54F374 type functions in one chip
- High impedance base inputs for reduced loading (70 μA in High and Low states)
- Independent registers for A and B buses
- Multiplexed real-time and stored data
- Choice of non-inverting and inverting data paths
- Controlled ramp outputs for 'F646A/'F648A
- 3-State outputs
- 300 mil wide 24-pin (Slim Dip) package

LOGIC DIAGRAM

Product Spotlights

74F651/651A, 74F652/652A – Transceivers/Registers

FEATURES

- Combines 54F245 and 54F374 type functions in one chip
- High impedance base inputs for reduced loading ($70\mu\text{A}$ in High and Low states)
- Independent registers for A and B buses
- Multiplexed real-time and stored data
- Choice of non-inverting and inverting data paths
- 3-State outputs

LOGIC DIAGRAM

74HC/HCT5555 – Programmable Delay Timer with Oscillator

FEATURES

- Positive and negative edge triggered
- Retriggerable or non-retriggerable
- Programmable delay
minimum: 100ns
maximum: depends on input frequency and division ratio
- Divide by range of 2 to 2^{24}
- Direct reset terminates output pulse
- Very low power consumption in triggered start mode
- 3 oscillator operation modes:
RC oscillator
Crystal oscillator
External oscillator
- Device is unaffected by variations in temperature and V_{CC} , when using an external oscillator
- Automatic power-on reset
- Schmitt trigger action on both trigger inputs
- Direct drive for power transistor
- Output capability: 20mA
- I_{CC} category: MSI

BiCMOS Transceivers Slash Board Space

The MB2244 16-bit buffer line driver and the MB2245 16-bit transceiver pack increased functionality into half the board space previously required.

Two members of the industry's first family of Advanced BiCMOS interface logic devices featuring 16-bit word widths are now available from Signetics. The MB2244 16-bit buffer line driver and the MB2245 16-bit transceiver pack increased functionality into half the board space previously required. These MULTIBYTE™ products offer 64mA of output drive, zero static power dissipation and 4.6ns propagation times.

Such product advancements are particularly important because, as processor speeds increase and memory access times decrease, bus interface performance and function become more critical. And as bus widths increase to accelerate system performance, bus interface devices begin to crowd out other functions on the PC board.

However, the MULTIBYTE™ devices are available in 52-pin JEDEC-registered Quad Flat Packs (QFPs), which require only 174mm² of board space. Two equivalent 8-bit parts in DIPs need 480mm² and 310mm² is necessary for two SOLs. Surface-mount QFPs are expected to become the world-standard package of choice for high pin-count devices, due to their compact size and increased performance through uniform pin inductance.

Because MULTIBYTE™ products free valuable board real estate for other functions, they are ideal for high-density VME Bus and other applications requiring multiple bytes of functionality including high-performance personal computer applications and systems switching between 16- and 32-bit data buses. These devices can also enhance the speed and performance characteristics of the board.

The MB2244 and MB2245 will be followed by the MB2543 latched transceiver and the MB2646 16-bit registered transceiver. These parts are 16-bit BiCMOS versions of the standard '244, '245, '543, and '646 functions. A total of 20 functions are planned for introduction in the near future.

MULTIBYTE is a trademark of Signetics Company.

Product Spotlights

MB2241 – 16-Bit Buffer/Line Driver (3-State)

Preliminary Specification

FEATURES

- 16-bit bus interface
- Multiple V_{CC} and GND pins minimize switching noise
- 3-State buffers
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model

DESCRIPTION

The MB2241 high-performance BiCMOS device combines low static and dynamic power dissipation with high speed and high output drive.

The MB2241 device is a 16-bit buffer that is ideal for driving bus lines. The device features four Output Enables (1OE, 2OE, 3OE, 4OE), each controlling four of the 3-State outputs.

ORDERING INFORMATION

DESCRIPTION	TEMP. RANGE	ORDER CODE
52-Pin Plastic QFP	-40°C to +85°C	MB2241B

Product Spotlights

MB2244 – 16-Bit Buffer/Line Driver (3-State)

Objective Specification

FEATURES

- Double byte functionality
- 3-State outputs
- Output capability: +64mA/-32mA
- High signal integrity/low ground bounce
- Low simultaneous switching propagation delay degradation
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model

DESCRIPTION

The MB2244 high-performance Advanced BiCMOS device combines high speed, high output drive and low static and dynamic power dissipation.

The MB2244 device is a 16-bit buffer which operates identical to two industry standard '244 functions. It is ideal for driving bus lines or buffering memory address registers. The device contains four Output Enables (1OE, 2OE, 3OE, 4OE), each controlling four of the 3-State outputs.

MB2245 – Dual Octal Transceivers with Direction Pins (3-State)

Preliminary Specification

FEATURES

- 16-bit bidirectional bus interface
- Multiple V_{CC} and GND pins minimize switching noise
- 3-State buffers
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model

DESCRIPTION

The MB224 high-performance BiCMOS device combines low static and dynamic power dissipation with high speed and high output drive.

The MB2245 device is a dual octal transceiver featuring non-inverting 3-State bus compatible outputs in both send and receive directions. The control function implementation minimizes external timing requirements. The device

features two Output Enable ($1\overline{OE}$, $2\overline{OE}$) inputs for easy cascading and two Direction ($1DIR$, $2DIR$) inputs for direction control.

MB2541 – Dual Octal Buffer/Line Drivers (3-State)

Preliminary Specification

FEATURES

- 16-bit bus interface
- Multiple V_{CC} and GND pins minimize switching noise
- Provides Ideal interface and increases fan-out of MOS Microprocessors
- Efficient pinout to facilitate PC board layout
- 3-State buffer outputs sink 64mA and source 32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model

DESCRIPTION

The MB2541 high-performance BiCMOS device combines low static and dynamic power dissipation with high speed and high output drive.

The MB2541 has two octal buffers that are ideal for driving bus lines. The outputs are all capable of sinking 64mA and sourcing 32mA.

MB2623 – Dual Octal Transceiver with Dual Enable, Non-Inverting (3-State)

Preliminary Specification

FEATURES

- 16-bit bidirectional bus interface
- 3-State buffers
- Multiple V_{CC} and GND pins minimize switching noise
- Output capability: +64mA/-32mA
- Latch-up protection exceeds 500mA per JEDEC JC40.2 Std 17
- ESD protection exceeds 2000V per MIL STD 883C Method 3015.6 and 200V per Machine Model

DESCRIPTION

The MB2623 high-performance BiCMOS device combines low static and dynamic power dissipation with high speed and high output drive.

The MB2623 device is a dual octal transceiver featuring non-inverting 3-State bus compatible outputs in both send and receive directions. The MB2623 is designed for asynchronous two-way communication between data buses.

The control function implementation allows for maximum flexibility in timing.

This device allows data transmission from the A bus to the B bus or from the B bus to the A bus, depending upon the logic levels at the Enable Inputs ($\overline{nOEAB}$ and $\overline{nOEBA}$). The Enable inputs can be used to disable the device so that the buses are effectively isolated.

10149A – 1K-Bit ECL Bipolar PROM

FEATURES

- Address access time: 10ns max
- Power dissipation: 0.66mW/bit typ
- High-impedance inputs (50K Ω pulldown)
- One Chip Enable Input
- Open emitter outputs (50 Ω drive)
- On-chip address decoding
- No separate fusing pins
- Fully compatible with ECL 10K series

LOGIC DIAGRAM

100149A – 1K-Bit ECL Bipolar PROM

FEATURES

- Address access time: 10ns max
- Power dissipation: 0.66mW/bit typ
- High-impedance inputs (50K Ω pulldown)
- One Chip Enable Input
- Open emitter outputs (50 Ω drive)
- On-chip address decoding
- No separate fusing pins
- Fully compatible with ECL 100K series

LOGIC DIAGRAM

100124/100124A – Hex TTL-to-ECL Translator

FEATURES

- Typical propagation delay: 1.70ns

- Typical ECL supply current ($-I_{EE}$): 96mA for the 100124 and 71mA for the 100124A

- Typical TTL supply current (I_{TL}): 44mA for the 100124 and 10mA for the 100124A

100125 – Hex ECL-to-TTL Translator

FEATURES

- Typical propagation delay: 2.2ns

- Typical ECL supply current ($-I_{EE}$): 65mA

- Typical TTL supply current (I_{TL}): 75mA

Product Spotlights

100790 – 9-Bit Transceiver

FEATURES

- Typical propagation delay from input to output: 1.3ns
- Typical supply current ($-I_{EE}$): 240mA
- 3-State outputs eliminate bus impedance discontinuities and wire-OR problems
- 9-bit data width provides optimum handling of parity bit
- Drives 25Ω loads
- 4,000 Volt ESD protection for all pins

LOGIC DIAGRAM

Product Spotlights

100982 – Hex ECL-TTL Translating Transceiver with Registers

100984 – Quad ECL-TTL Translating Transceiver with Registers

FEATURES

- Typical propagation delay from clock to output: 3.5ns
- Typical ECL supply current ($-I_{ECL}$): 110mA
- Typical TTL supply current (I_{TTL}): 25mA
- Low logic level of ECL output doubles as a high impedance state
- ECL output drives 25Ω loads
- 4,000 Volt ESD protection for all pins
- Controlled edge rates for quieter bus operation

NOTE: Shaded area included only in 100982

PROGRAMMABLE LOGIC

PHD16N8-5 – Programmable High-Speed Decoder Logic ($16 \times 16 \times 8$)

DESCRIPTION

The PHD16N8-5 is an ultra fast Programmable High-speed Decoder featuring a 5ns maximum propagation delay. The architecture has been optimized using Philips Components-Signetics state-of-the-art bipolar oxide isolation process coupled with titanium-tungsten fuses to achieve superior speed in any design.

The PHD16N8-5 is a single level logic element comprised of 10 fixed inputs, 8 AND gates, and 8 outputs of which 6 are bidirectional. This gives the device the ability to have as many as 16 inputs. Individual 3-State control of all outputs is also provided.

The device is field-programmable, enabling the user to quickly generate custom patterns using standard programming equipment. Proprietary designs can be protected by programming the security fuse.

FEATURES

- Ideal for high speed system decoding
- Super high speed at 5ns t_{PD}
- 10 dedicated inputs
- 8 outputs
 - 6 bidirectional I/O
 - 2 dedicated outputs
- Security fuse to prevent duplication of proprietary designs.

- Individual 3-State control of all outputs
- Field-programmable on industry standard programmers
- Available in 20-pin Plastic DIP and 20-Pin PLCC

APPLICATIONS

- High speed memory decoders
- High speed code detectors
- Random logic
- Peripheral selectors
- Machine state decoders
- Footprint compatible to 16L8
- Fuse/Footprint compatible to TIBPAD

PLC415-16 – CMOS Programmable Logic Sequencer (17 × 68 × 8)

DESCRIPTION

The PLC415-16 PLD is a CMOS Programmable Logic Sequencer of the Mealy type. The PLC415-16 is a pin-for-pin compatible, functional superset of the PLS105 and PLUS405 Bipolar Programmable Logic Sequencer devices.

The PLC415 is ideally suited for high density, power sensitive controller functions. The Power Down feature provides true CMOS standby power levels of less than 100 μ A. The EPROM-based process technology supports operating frequencies of 16 to 20MHz. The PLC415-16 has been designed to accept both CMOS and TTL input levels to facilitate logic integration in almost any system environment.

The PLC415 architecture has been tailored for state machine functions. Both arrays are programmable, thus providing full interconnectability. Any one or all of the 64 AND transition terms can be connected to any (or all) of the 8 buried state and 8 output registers.

Two clock sources enable the design of 2 state machines on one chip. The J-K flip-flops provide the added flexibility of the toggle function which is indeterminate on S-R flip-flops. The programmable initialization feature supports asynchronous initialization of the state machine to any user defined pattern. Separate INIT functions and Output Enable functions are controllable either from the array or from an external pin.

The unique Complement Array feature supports complex ELSE transition statements with a single product term. The PLC415-16 has 2 Complement Arrays which allows the user to design two independent complement functions. this is particularly useful if two state machines have been implemented on one chip.

FEATURES

- Pin-for-Pin compatible, functional superset of PLS105/A and PLUS405 Logic Sequencers
- Zero standby power of less than 100 μ A (worst case)
 - Power dissipation at $f_{MAX} = 80mA$ (worst case)
- CMOS and TTL compatible
- Programmable asynchronous Initialization and OE functions
 - Controllable from AND array or external source
- 17 input variables
- 8 output functions
- 68 product terms
 - 64 transition terms
 - 4 control terms
- 8-bit State Register
- 8-bit Output Register
- 2 Transition Complement Arrays

- Multiple clocks
- Diagnostic test modes features for access to state and output registers
- Power-on preset of all registers to "1"
- J-K flip-flops
 - Automatic Hold states
- Security fuse
- 3-State outputs

APPLICATIONS

- Interface protocols
- Sequence detectors
- Peripheral controllers
- Timing generators
- Sequential circuits
- Elevator controllers
- Security locking systems
- Counters
- Shift registers

PLC42VA12 – CMOS Programmable Logic Sequencer ($42 \times 105 \times 12$)

DESCRIPTION

The new PLC42VA12 CMOS PLD from Signetics exhibits a unique combination of the two architectural concepts that revolutionized the PLD marketplace.

The Signetics unique Output Macro Cell (OMC) embodies all the advantages and none of the disadvantages associated with the "V" type Output Macro Cell devices. This new design, combined with added functionality of two programmable arrays, represents a significant advancement in the configurability and efficiency of multi-function PLDs.

The most significant improvement in the Output Macro Cell structure is the implementation of the register bypass function. Any of the 10 J-K/D registers can be individually bypassed, thus creating a combinatorial I/O path from the AND array to the output pin. Unlike other "V" type devices, the register in the PLC42VA12 Macro Cell remains fully functional as a buried register. Both the combinatorial I/O and buried register have separate input paths (from the AND array). In most V-type architectures, the register is lost as a resource when the cell is configured as a combinatorial I/O. This feature provides the capability to operate the buried register independently from the combinatorial I/O.

The PLC42VA12 is an EPROM-based CMOS device. Designs can be generated using Signetics SNAP 16 design software or one of several other commercially available JEDEC standard PLD design software packages.

FEATURES

- High-speed EPROM-based CMOS Multi-Function PLD
 - Super set of 22V10, 32VX10 and 20RA10 PAL[®] ICs
- Two fully programmable arrays eliminate "P-term Depletion"
 - Up to 64 P-terms per OR function
- Improved output macro cell structure
 - Individually programmable as:
 - * Registered output with feedback
 - * Registered input
 - * Combinatorial I/O with buried register
 - Bypassed registers are 100% functional with separate input and feedback paths
 - Individual Output Enable control functions
 - * From pin or AND array
- Eleven clock sources
- Register preload and diagnostic test mode features
- Security fuse

APPLICATIONS

- Mealy or Moore State Machines
 - Synchronous
 - Asynchronous
- Multiple, independent State Machines
- 10-bit ripple cascade
- Sequence recognition
- Bus protocol generation
- Industrial control
- A/D scanning

PLC18V8Z25/35/18V8ZI – Zero Standby Power Universal PAL®-Type Devices

DESCRIPTION

The PLC18V8Z35 and PLC18V8ZI are universal PAL-type devices featuring high performance and virtually zero-standby power for power sensitive applications. They are reliable, user-configurable substitutes for discrete TTL/CMOS logic. While compatible with TTL and HCT logic, the PLC18V8ZI can also replace HC logic over the V_{CC} range of 4.5 to 5.5V.

The PLC18V8Z is a two-level logic element comprised of 10 inputs, 74 AND gates (product terms) and 8 output Macro cells.

Each output features an "Output Macro Cell" which can be individually configured as a dedicated input, a combinatorial output, or a registered output with internal feedback. As a result, the PLC18V8Z is capable of emulating all common 20-pin PAL devices to reduce documentation, inventory, and manufacturing costs.

A power-up reset function and a Register Preload function have been incorporated in the PLC18V8Z architecture to facilitate state machine design and testing.

With a standby current of less than 100 μ A and active power consumption of 1.5mA/MHz, the PLC18V8Z is ideally suited for power sensitive applications in battery operated/backed portable instruments and computers.

The PLC18V8Z is also processed to industrial requirements for operation over an extended temperature range of -40°C to +85°C and supply voltage of 4.5V to 5.5V.

FEATURES

- 20-pin Universal Programmable Array Logic
- Virtually zero standby power
- Functional replacement for Series 20 PAL devices
 - $I_{OL} = 24mA$
- High-performance CMOS EPROM cell technology
 - Erasable
 - Reconfigurable
 - 100% testable
- 25/35ns propagation delay (comm)
- 25/40ns propagation delay (Industrial)
- Up to 18 inputs and 8 input/output macro cells
- Programmable output polarity
- Power-up reset on all registers
- Register preload capability

- Synchronous Preset/Asynchronous Reset
- Security fuse to prevent duplication of proprietary designs
- Design support provided using Signetics SLICE or SIMPALII software development packages and other CAD tools for PLDS
- Available in 300mil-wide DIP with quartz window, plastic DIP (OTP) or PLCC (OTP)

APPLICATIONS

- Battery powered instruments
- Laptop and pocket computers
- Industrial control
- Medical Instruments
- Portable communications equipment

PLUS405-37/-45/-55 – Field-Programmable Logic Sequencers (16 × 64 × 8)

DESCRIPTION

The PLUS405 devices are bipolar, programmable state machines of the Mealy type. Both the AND and the OR array are user-programmable. All 64 AND gates are connected to the 16 external dedicated inputs ($I_0 - I_{15}$) and to the feedback paths of the 8 on-chip State Registers ($Q_{P0} - Q_{P7}$). Two complement arrays support complex IF-THEN-ELSE state transitions with a single product term (input variables C_0, C_1).

All state transition terms can include True, False and Don't Care states of the controlling state variables. All AND gates are merged into the programmable OR array to issue the next-state and next-output commands to their respective registers. Because the OR array is programmable, any one or all of the 64 transition terms can be connected to any or all of the State and Output Registers.

All state ($Q_{P0} - Q_{P7}$) and output ($Q_{F0} - Q_{F7}$) registers are edge-triggered, clocked J-K flip-flops, with Asynchronous Preset and Reset options. The PLUS405 architecture provides the added flexibility of the J-K toggle function which is indeterminate on S-R flip-flops. Each register may be individually programmed such that a specific Preset-Reset pattern is initialized when the initialization pin is raised to a logic level "1". This feature allows the state machine to be asynchronously initialized to known internal state and output conditions prior to proceeding through a sequence of state transitions. Upon power-up, all registers are unconditionally preset to "1". If desired, the initialization input pin (INIT) can be converted to an Output Enable (OE) function as an additional user-programmable feature. Availability of two user-programmable clocks allows the user to design two independently clocked state machine functions consisting of four state and four output bits each.

FEATURES

- 50, 58 and 62.5MHz minimum guaranteed clock rates
- 37, 45 and 55MHz minimum guaranteed operating frequencies ($1/(t_{IS1} + t_{CKO1})$)
- Functional superset of PLS105/105A
- Field-programmable (Ti-W fusible link)
- 16 input variables
- 8 output functions
- 64 transition terms
- 8-bit State Register
- 8-bit Output Register
- 2 transition Complement Arrays
- Multiple clocks
- Programmable Asynchronous Initialization or Output Enable

- Power-on preset of all registers to "1"
- "On-chip" diagnostic test mode features for access to state and output registers
- 950mW power dissipation (typ.)
- TTL compatible
- J-K or S-R flip-flop functions
- Automatic "Hold" states
- 3-State outputs

APPLICATIONS

- Interface protocols
- Sequence detectors
- Peripheral controllers
- Timing generators
- Sequential circuits
- Elevator controllers
- Security locking systems
- Counters
- Shift registers

PLUS173B/D/-10 – Programmable Logic Arrays (22 × 42 × 10)

DESCRIPTION

The PLUS173 PLDs are high speed, combinatorial Programmable Logic Arrays. The Signetics state-of-the-art Oxide Isolated Bipolar fabrication process is employed to produce propagation delays as short as 10ns.

The 24-pin PLUS173 devices have a programmable AND array and a programmable OR array. Unlike PAL ® devices, 100% product term sharing is supported. Any of the 32 logic product terms can be connected to any or all of the 10 output OR gates. Most PAL ICs are limited to 7 AND terms per OR function; the PLUS173 devices can support up to 32 input wide OR functions.

The polarity of each output is user-programmable as either Active-High or Active-Low, thus allowing AND-OR or AND-NOR logic implementation. This feature adds an element of design

flexibility, particularly when implementing complex decoding functions.

The PLUS173 devices are user-programmable using one of several commercially available, industry standard PLD programmers.

FEATURES

- I/O propagation delays (worst case)
 - PLUS173B – 15ns max.
 - PLUS173D – 12ns max.
 - PLUS173-10 – 10ns max.
- Functional superset of 20L10 and most other 24-pin combinatorial PAL devices
- Two programmable arrays
 - Supports 32 input wide OR functions
- 12 inputs
- 10 bidirectional I/O
- 42 AND gates

- 32 logic product terms
- 10 direction control terms
- Programmable output polarity
 - Active-High or Active-Low
- Security fuse
- 3-State outputs
- PLUS 173B/D – Power dissipation: 750mW (typ.)
- PLUS 173-10 – Power dissipation: 850mW (typ.)
- TTL compatible

APPLICATIONS

- Random logic
- Code converters
- Fault detectors
- Function generators
- Address mapping
- Multiplexing

PML2552 – Programmable Macro Logic

FEATURES

- Full connectivity
- Scan test
- Power down mode
- Power on reset
- 100% testable
- High-Speed and Standard versions
- SNAP development system
 - Supports third-party schematic entry formats
 - Macro library
 - Versatile netlist format for design portability
 - Logic, timing, and fault simulation
- TTL compatible
- Power dissipation (TTL) = 630mW
- Power dissipation (CMOS) = 525mW
- Security fuse
- Reprogrammable

STRUCTURE

- 112 possible foldback NAND gates:
 - 96 internal NAND
 - 16 from the I/O macros
- 114 additional logic terms
- 53 possible inputs (with programmable polarity)
 - 29 dedicated inputs
 - 24 bidirectional I/Os
- 24 bidirectional pins
- 52 flip-flops
- 24 possible outputs with individual Output Enable control (8 with programmable polarity)
- Multiple independent clocks
- 20 Buried JK-type flip-flops with foldback (JKFFs):

- 10 JKFFs with one shared preset signal and one shared clocked signal originating from the clock array.
- 10 JKFFs with 10 independent clock signals originating from the clock array and 10 independent clear signals
- 258 inputs per NAND gate
- Bypassable Input D-type flip-flop (DFFs)/Combinatorial Inputs:
 - 16 DFFs/combinatorial inputs
 - DFFs clocked in two groups of eight
 - DFFs not bypassed in unprogrammed state
 - Independent bypass fuse on each DFF
- Inputs/bypassable D-type flip-flop outputs/foldback NAND gates:
 - 16 output DFFs/combinatorial inputs/outputs with individual Output Enable control
 - DFFs clocked in two groups of eight
 - DFFs not bypassed in unprogrammed state
 - Independent bypass fuse on each DFF
 - The DFF can be used as an internal DFF or an internal foldback NAND gate.
- Combinatorial inputs:
 - 9 dedicated inputs to the NAND array
 - 3 inputs optional to NAND array and/or clock array
 - 1 input optional to NAND array and/or clock array, and/or clock of Input D Flip-Flops (Group B)

- Separate clock array:
 - Separate clock array for JKFFs clock inputs
 - 4 inputs to clock array originate from NAND array
 - 4 inputs (with programmable polarity) directly from input pins
 - 10 inputs from Q outputs of JKFFs with clear
- Dedicated clocks:
 - One dedicated clock for input DFFs (Group A)
 - Two dedicated clocks for output DFFs
- Scan test feature:
 - Scan chain is implemented through the 20 buried JKFFs and 16 output DFFs
 - Pins SCI, SCM, and CKE1 are used to operate the scan test
- Power down mode
 - Dedicated pin (PD) freezes the circuit when brought to logic "1". The circuit remains in the same state prior to the logic "0" to logic "1" transition of the "PD" pin.
 - When in the power down mode, the SCI pin acts as the 3-State pin for the 24 outputs.
- Power on reset:
 - All flip-flops (16 input DFFs, 20 buried JKFFs, and 16 output DFFs) are reset to logic "0" after V_{CC} power on.

PROPAGATION DELAYS

- Delay per internal NAND gate = 15ns (typ)

SNAP 16 – Programmable Logic Development Software

FEATURES

- Schematic entry available using Data I/O SNAP-DASH™* or OrCAD SDT III™
- State equation entry
- Boolean equation entry
- Netlist entry
- Capability to design in one or any combination of formats
- Device independent, netlist based design platform
- Full support for the PML product line
- Philips LESIM 5-State gate array simulator:
 - Logic and fault simulation
 - Model extraction and timing simulation
 - Synthetic logic analyzer format
 - Stimuli entry in waveform format
- Freezing of selected Critical paths
- Cell library for PML functions
- Capability to create user defined macros
- Full documentation of design and simulation results in waveform format
- JEDEC fusemap compiler and device programmer interface

TELECOMMUNICATIONS/RF

Cellular Radio Chip Set

UMA1000/10/12/14 NE605/5750/5751 PCF8282/8XC552 (UMA1010/1012 1990 only)

COMPONENTS

- NE605 – Low Power Single Chip FM System
- NE5750 – Audio Processor - Companding and Amplifier
- NE5751 – Audio Processor - Filter and Control Section
- UMA1000 – Data Processor for Cellular Radio

- UMA1014 – Low-Power Universal Synthesizer for Radio Communication
- S80C552 – Single Chip 8-Bit Microcontroller with A/D, Capture/Compare Timer, with High-Speed Outputs, PWM

FEATURES

- 6 key ICs for maximum integration
- Integrated filters, amplifiers, and companders to reduce off-chip components
- Designed for minimum current consumption, i.e., maximum use of standby modes, low current IC design
- I²C serial control bus

CELLULAR RADIO CHIP SET SCHEMATIC

- Highly Integrated Solution
- Low Current
- Extensive Application Support
 - Demo Boards
 - Software
 - Manuals
 - Schematics
- Simple Architecture
 - I²C Serial Control Bus
 - Double Sided Board
 - Board can be folded in half
- Complete Solution
 - Mark 2A Board
 - Keyboard/Display
 - Handset
 - RS232 Interface

APPLICATIONS

- Cellular Telephone
- Cellular Radio
- Cellular Modem
- Mobile FAX
- Surveillance/Security
- Medical Communications
- Laptop Computers

ORDERING INFORMATION

DESCRIPTION	ORDER CODE
Signetics Cellular Chip Set Phone Mark 2A	PSCCSPH2A-MS

The Signetics Cellular Chip Set is the world's first complete chip set commercially available. This complete system, in conjunction with your design, revolutionizes the cellular radio marketplace. The board can virtually be copied onto your system as a complete cellular solution. Whether your application is in portable RF Modems and FAX's or you need remote diagnostics capabilities this kit can help you design. It significantly reduces your design and development cycle and at a fraction of the cost.

The complete Cellular Demo Kit contains a chip set of 12 ICs, a tested demo board with all the hardware and firmware, documentation, schematics, RS-232 interface board, keyboard, handset and display. The chip set handles the processing of data, audio, the receiver, the switching of channels and the transmitter. The following is a list of the parts and the functions they perform:

- **UMA1000DT DPROC** - Handles data processing
- **UMA1014DT Synthesizer** - Handles the channel selection on both the receiver and transmitter (Two per system, TX and RX)
- **NE605DK FM IF System** - Handles the receiver portion of the system
- **NE5750D APROC** - Handles audio processing
- **NE5751D APROC** - Handles audio processing
- **PCB80C552 Microcontroller** - Controls the complete cellular board
- **27C512 EPROM** - Stores the "Test Harness" program along with the firmware for the phone functions.
- **FCB61C65 8K × 8 Static Ram** - Stores scratch pad information
- **NE5234D Quad Op-Amp** - Controls the TX power amp level
- **74HC573D Latch** - Memory address latch

To obtain your Signetics Cellular Chip Set Demo Kit call 800-227-1817, Ext. 900 today for your local sales office or for more information on Signetics RF Communication products, see our BRC in the back of the directory.

NE/SA606 – Low Voltage High-Performance Mixer FM IF System

DESCRIPTION

The NE/SA606 is a high performance monolithic low-power FM IF system incorporating a mixer/oscillator, two limiting intermediate frequency amplifiers, quadrature detector, logarithmic received signal strength indicator (RSSI), voltage regulator, audio and RSSI op amps. The NE/SA606 is available in 20-lead dual-in-line plastic, 20-lead SOL (surface-mounted miniature package) and 20-lead SSOP package.

The NE606 was designed for portable communication applications and will function down to 2.85V. The RF section is similar to the famous NE605. The audio and RSSI outputs have amplifiers with access to the feedback path. This enables the designer to level adjust the outputs or add filtering.

FEATURES

- Low power consumption: 3.5mA typical at 3V
- Mixer input to >150MHz
- Mixer conversion power gain of 12dB at 45MHz
- XTAL oscillator effective to 150MHz (L.C. oscillator or external oscillator can be used at higher frequencies)
- 102dB of IF Amp/Limiter gain
- 2MHz limiter small signal bandwidth
- Temperature compensated logarithmic Received Signal Strength Indicator (RSSI) with a 90dB dynamic range
- Low external component count; suitable for crystal/ceramic/LC filters
- Excellent sensitivity: $0.31\mu\text{V}$ into 50Ω matching network for 12dB SINAD (Signal to Noise and Distortion ratio) for 1kHz tone with RF at 45MHz and IF at 455kHz
- SA606 meets cellular radio specifications
- Audio output internal op amp
- RSSI output internal op amp
- Internal op amps with rail-to-rail outputs

PIN CONFIGURATION

APPLICATIONS

- Portable cellular radio FM IF
- Cordless telephones
- RF level meter
- Spectrum analyzer
- Instrumentation
- FSK and ASK data receivers
- Log amps
- High performance communication receiver
- Single conversion VHF receivers
- Wireless systems

Product Spotlights

NE/SA607 – Low Voltage High-Performance Mixer FM IF System

DESCRIPTION

The NE/SA607 is a high performance monolithic low-power FM IF system incorporating a mixer/oscillator, two limiting intermediate frequency amplifiers, quadrature detector, logarithmic received signal strength indicator (RSSI), voltage regulator, audio and RSSI op amps. The NE/SA607 is available in 20-lead dual-in-line plastic, 20-lead SOL (surface-mounted miniature package) and 20-lead SSOP package.

The NE607 was designed for portable communication applications and will function down to 2.85V. The RF section is similar to the famous NE605. The audio output has an internal amplifier with the feedback pin accessible. The RSSI output is buffered. The NE607 also has an extra limiter output. This signal is buffered from the output of the limiter and can be used to perform frequency check. This is accomplished by comparing a reference frequency with the frequency check signal using a comparator to a varactor or PLL at the oscillator inputs.

FEATURES

- Low power consumption: 3.5mA typical at 3V
- Mixer input to >150MHz
- Mixer conversion power gain of 12dB at 45MHz
- XTAL oscillator effective to 150MHz (L.C. oscillator or external oscillator can be used at higher frequencies)
- 102dB of IF Amp/Limiter gain
- 2MHz limiter small signal bandwidth
- Temperature compensated logarithmic Received Signal Strength Indicator (RSSI) with a 90dB dynamic range
- Low external component count; suitable for crystal/ceramic/LC filters
- Excellent sensitivity: $0.31\mu\text{V}$ into 50Ω matching network for 12dB SINAD (Signal to Noise and Distortion ratio) for 1kHz tone with RF at 45MHz and IF at 455kHz
- SA607 meets cellular radio specifications
- Audio output internal op amp
- RSSI output internal op amp
- Internal op amps with rail-to-rail outputs
- Buffered frequency check output

PIN CONFIGURATION

APPLICATIONS

- Portable cellular radio FM IF
- Cordless telephones
- RF level meter
- Spectrum analyzer
- Instrumentation
- FSK and ASK data receivers
- Log amps
- Low voltage high performance communication receiver
- Single conversion VHF receivers
- Wireless systems

NE/SA575 – Low Voltage Comparator

FEATURES

- Operating voltage range from 3V to 7V
- Reference voltage of $100\text{mV}_{\text{RMS}} = 0\text{dB}$
- One dedicated summing op amp per channel and two extra uncommitted op amps
- 600Ω drive capability
- Single or split operation
- Wide input/output swing capability
- Available in SSOP

APPLICATIONS

- Portable communications
- Cellular radio
- Cordless telephone
- Consumer audio
- Portable broadcast mixers
- Wireless microphones
- Modems
- Electric organs
- Hearing aids

NE/SA575 – BLOCK DIAGRAM AND TEST CIRCUIT

NE577 & NE578 Industry's Lowest-Power Compandors

Popular Applications

Look for the low-power compandors in the following types of equipment:

- *High-performance portable communications systems*
- *Cellular radios*
- *Cordless telephones*
- *Consumer audio, such as automotive CD players*
- *Wireless microphones*
- *Modems*
- *Electrical organs/musical instruments*
- *Hearing aids*

Signetics recently announced two new power saving compandors for portable communication equipment such as cellular radios, cordless telephones and wireless microphones. The new compandors, named the NE577 and NE578, typically draw 50% less power than any other compandor currently available in the world.

In audio and communications products, a compandor's function is to maintain a signal's integrity so that it remains clear when it emerges on the other end. Essentially, the compandor prevents noise distortion introduced by the medium the signal passes through during transmission, translation or recording.

To maintain signal integrity, a compandor combines two processing functions – compression and expansion – into one device. The compressor portion of a compandor reduces the size of the original signal so that it can be transmitted, translated or recorded, as required by its particular application. The expander works in reverse, restoring a compressed signal to its original range, while reducing noise.

The NE577 and the NE578 are the latest additions to Signetics' family of six compandor ICs. They were developed to meet the low-voltage low-power operating requirements necessitated by today's increasing demand for battery-powered consumer audio products.

"In addition to low power consumption, Signetics' customers will find that these new compandors can also reduce the number of external components and improve the performance of their products," explained Michael Sera, Product Marketing Manager. "The net result is smaller, lighter, and more efficient mobile communication systems."

Both products are available in production quantities in either DIP or SO surface mounted packages.

Application diagram shows a compandor's function

NE/SA577 – Unity Gain Level Programmable Low Power Compandor

DESCRIPTION

The NE/SA577 is a unity gain level programmable compandor designed for low power applications. The NE577 is internally configured as an expander and a compressor to minimize external component count.

The NE577 is available in a 14-pin plastic DIP and an SO package.

FEATURES

- Operating voltage range: 1.8V to 7V
- Low power consumption (1.4mA @ 3.6V)
- 0dB level programmable (10mV_{RMS} to 1.0V_{RMS})
- Over 90dB of dynamic range
- Wide input/output swing capability (rail-to-rail)
- Low external component count
- SA577 meets cellular radio specifications
- ESD hardened

APPLICATIONS

- High performance portable communications
- Cellular radio
- Cordless telephone
- Consumer audio
- Wireless microphones
- Modems
- Electric organs
- Hearing aids
- Automatic level control (ALC)

NE/SA578 – Unity Gain Level Programmable Low Power Compador

DESCRIPTION

The NE/SA578 is a unity gain level programmable compandor designed for low power applications. The NE578 is internally configured as an expander and a compressor to minimize external component count.

The summing amplifiers of the NE578 have 600Ω drive capability and the inverting input of the compressor amplifier is accessible through Pin 9 for summing multiple external signals. Power Down/Mute function is active low and requires an open collector output logic configuration at Pin 8. If Power Down/Mute is not needed, Pin 8 should be left open. When the part is muted, supply current drops to 170μA at 3.6V. The NE578 is available in a 16-pin plastic DIP and an SO package.

FEATURES

- Operating voltage range: 1.8V to 7V
- Low power consumption (1.4mA @ 3.6V)

- 0dB level programmable (10mV_{RMS} to 1.0V_{RMS})
- Over 90dB of dynamic range
- Wide input/output swing capability
- Low external component count
- SA578 meets cellular radio specifications
- ESD hardened
- Power Down mode ($I_{CC} = 170\mu A$ @ 3.6V)
- Mute function
- Multiple external summing capability
- 600Ω drive capability
- Modems
- Electric organs
- Hearing aids
- Automatic level control (ALC)

APPLICATIONS

- High performance portable communications
- Cellular radio
- Cordless telephone
- Consumer audio
- Wireless microphones

NE/SA5209 – Wideband Variable Gain Amplifier

DESCRIPTION

The NE5209 represents a breakthrough in monolithic amplifier design featuring several innovations. This unique design has combined the advantages of a high speed bipolar process with the proven Gilbert architecture.

The NE5209 is a linear broadband RF amplifier whose gain is controlled by a single DC voltage. The amplifier runs off a single 5 volt supply and consumes only 40mA. The amplifier has high impedance (1kW) differential inputs. The output is 50W differential. Therefore, the 5209 can simultaneously perform AGC, impedance transformation, and the balun functions.

The dynamic range is excellent over a wide range of gain setting. Furthermore, the noise performance degrades at a comparatively slow rate as the gain is reduced. This is an important feature when building linear AGC systems.

FEATURES

- Gain to 1.5GHz
- 850MHz bandwidth
- High impedance differential input
- 50Ω differential output
- Single 5V power supply
- 0 - 1V gain control pin
- >60dB gain control range at 200MHz
- 26dB maximum gain differential
- Exceptional $V_{\text{CONTROL}}/V_{\text{GAIN}}$ linearity
- 7dB noise figure minimum
- Full ESD protection
- Easily cascadable

APPLICATIONS

- Linear AGC systems
- Very linear AM modulator
- RF balun
- Cable TV multi-purpose amplifier
- Fiber optic AGC
- RADAR
- Cellular communications

PIN CONFIGURATION

- User programmable fixed gain block
- Video
- Satellite receivers

PCD3346 – Single Chip 8-Bit Microcontroller

FEATURES

- 8-bit CPU, ROM, EEPROM, RAM, I/O in a single 28-lead DIL or SO package
- 4K ROM bytes
- 128 RAM bytes
- 256 bytes EEPROM
- 20 quasi-bidirectional I/O port lines
- 2 x 8-bit programmable timers
- Two test inputs: one of which is also the external interrupt input (CE/T_O)
- Single-level vectored interrupts: external, timer/event counter, serial I/O data via an existing port line and clock via a dedicated line)
- Clock frequency 450kHz to 10MHz
- Over 80 instructions (based on MAB8048) all of 1 or 2 cycles
- Single supply voltage from 2.5V to 6.0V
- STOP and IDLE mode
- On-chip oscillator with output drive capability for peripherals (e.g. PCD3312 DTMF generator)
- Individual mask configuration of all port lines for: pull-up, push-pull or open drain
- Power-on reset circuit and low supply voltage detection
- Individual mask selection of reset state for all ports
- Operating temperature range: -25 to +70°C

PCD3349 – CMOS 8-Bit Microcontroller with On-Chip DTMF Generator

GENERAL DESCRIPTION

The PCD3349 is a single-chip 8-bit microcontroller fabricated in CMOS and is a member of the PCD3343 family. It has an on-chip dual tone multi-frequency (DTMF) generator and other features for application in telephone sets.

FEATURES

- Single supply voltage from 2.5 to 6.0 volts
- Low standby voltage and current
- 8048-based instruction
- On-chip DTMF tone generator
- 4096 ROM bytes
- 224 RAM bytes
- Single-level vectored interrupts: external, timer/event counter
- Clock frequency 3.58MHz
- 20 quasi-bidirectional I/O port lines
- 8-bit programmable timer/event counter
- 28-lead DIL or SO package

BLOCK DIAGRAM – ELECTRONIC FEATUREPHONE WITH COMMON LINE INTERFACE

10BASE-T Transceiver Surpasses the Competition

The NE86C92 offers advanced features over competitive products without the corresponding price increase one would expect.

Users can easily upgrade their products without having to alter board layout.

Signetics has added a premier new product to its Ethernet line, an advanced CMOS 10BASE-T transceiver called the NE86C92. It implements the IEEE 802.3 10BASE-T standard, which specifies a 10Mb/sec Ethernet LAN using unshielded twisted-pair wiring.

The NE86C92 offers advanced features over competitive products without the corresponding price increase one would expect. It requires the lowest operating power consumption and the least external support components of any similar device on the market.

This new product allows for automatic selection between the 10BASE-T transceiver and the AUI (Attachment Unit Interface). This eliminates the need for end users to remove interface cards to change jumpers when switching between the twisted-pair wiring and a remote MAU (Medium Access Unit).

Additional NE86C92 features include polarity detection with automatic correction, smart squelch on both the receiver and the transmitter, on-chip LED drivers for all status indicating signals (transmit, receive, polarity reversal, collision, jabber), and a highly reliable crystal controlled oscillator.

The NE86C92 fits into AT&T sockets so it can be used as an upgrade to AT&T's T7220 transceiver. In many cases current T7220 users can easily upgrade their products to incorporate the advanced features of the NE86C92 without having to alter board layout. Because of its reduced power consumption and component count, the NE86C92 will also serve as a preferred choice over AT&T's upcoming T7220A.

DATA COMMUNICATIONS

Ethernet Transceivers NE8392A, NE86C92

NE8392A – COAXIAL TRANSCEIVER INTERFACE

- Compatible with Ethernet II, IEEE 802.3 10base5 and 10base2, and ISO 8802/3 interface specifications
- Integrates all transceiver electronics except signal and power isolation
- Heartbeat generator can be externally disabled for operation as IEEE 802.3 compatible repeaters
- Full ESD protection
- Power-on reset prevents glitches on coaxial cable during power up.
- Standard 16-pin DIP with special lead frame minimizes the operating die temperature

NE86C92 – TWISTED-PAIR TRANSCEIVER INTERFACE

- Compatible with IEEE 802.3 10BASE-T specifications
- Integrates all transceiver functions, with selectable heartbeat and link test generators
- Twisted-pair polarity detection and automatic correction
- Smart squelch on all data inputs
- Internal transmitter pre-distortion generator
- Supports automatic selection between AUI and RJ-45 connections
- Five LED status signals with on-chip drivers for transmit, receive and link integrity, collision, jabber status and twisted pair polarity reversal
- Advanced CMOS process uses single 5V supply
- Extremely low power operation: 24mA typical idle current

TYPICAL BOARD COMPONENTS FOR ETHERNET CARD

SCN68562/SCN26562 – Dual Universal Serial Communications Controller (DUSCC)

FEATURES

General Features

- SCN26562 is fully compatible with Intel
- SCN68562 is fully compatible with Motorola
- Dual full-duplex synchronous/asynchronous receiver and transmitter
- Multiprotocol operation
 - BOP: HDLC/ADCCP, SDLC, SDLC loop, X.25 or X.75 link level, etc.
 - COP: BISYNC, DDCMP
 - ASYNC: 5 - 8 bits plus optional parity
- Four character receiver and transmitter FIFOs
- 0 to 4MHz data rate
- Programmable bit rate for each receiver and transmitter selectable from:
 - 16 fixed rates: 50 to 38.4k baud
 - One user-defined rate derived from programmable counter/timer
 - External 1X or 16X clock
 - Digital phase-locked loop
- Programmable data transfer mode: polled, interrupt, DMA, wait
- DMA interface
 - Compatible with Signetics' SCB68430 Direct Memory Access Interface (DMAI) and other DMA controllers
 - Half- or full-duplex operation
 - Single or dual address data transfers
 - Automatic frame termination on counter/timer terminal count or DMA DONE
- Interrupt capabilities

- Daisy chain option
- Vector output (fixed or modified by status)
- Programmable internal priorities
- Maskable interrupt conditions
- Multifunction programmable 16-bit counter/timer
 - Bit rate generator
 - Event counter
 - Count received or transmitted characters
 - Delay generator
 - Automatic bit length measurement
- Modem controls
 - RTS, CTS, DCD, and up to four general purpose I/O pins per channel
 - CTS and DCD programmable autoenables for Tx and Rx
 - Programmable interrupt on change of CTS or DCD

Asynchronous Mode Features

- Character length: 5 to 8 bits
- Odd or even parity, no parity, or force parity
- Up to two stop bits programmable in 1/16-bit increments
- 1X or 16X Rx and Tx clock factors
- Parity, overrun, and framing error detection
- False start bit detection
- Start bit search 1/2 bit time after framing error detection
- Break generation with handshake for counting break characters
- Detection of start and end of received break

Character-Oriented Protocol Features

- Character length: 5 to 8 bits
- Odd or even parity, no parity, or force parity
- LRC or CRC generation and checking
- Optional opening PAD transmission
- SYN detection and optional stripping
- SYN or MARK linefill on underrun
- Parity, FCS, overrun, and underrun error detection
- BISYNC Features
 - EBCDIC or ASCII header, test and control messages
 - SYN, DLE stripping
 - EOM (End Of Message) detection and transmission
 - Auto transparency mode switching
 - Auto hunt after receipt of EOM sequence (with closing PAD check after EOT or NAK)

Bit-Oriented Protocol Features

- Character length: 5 to 8 bits
- Detection and transmission of residual character: 0 - 7 bits
- Automatic switch to programmed character length for 1 field
- Zero insertion and deletion
- Optional opening PAD transmission
- ABORT, ABORT-FLAGS, or FCS-FLAGS line fill on underrun
- Extended address and control fields
- CRC generation and checking
- SDLC loop mode capability

SC26C94/68C94 – Quad Universal Asynchronous Receiver/Transmitter (QUART)

FEATURES

- Four Signetics industry-standard UARTs
- Eight byte receive FIFOs for each UART
- Programmable data format:
 - 5 to 8 data bits plus parity
 - Odd, even, no parity or force parity
 - 1, 1.5 or 2 stop bits programmable in 1/16-bit increments
- Baud rate for the receiver and transmitter selectable from:
 - 18 fixed rates: 50 to 38.4K baud
 - Non-standard rates to 230.4K baud
 - User-defined rates from the programmable counter/timer associated with each of two blocks
- External 1x or 16x clock
- Parity, framing, and overrun error detection
- False start bit detection
- Line break detection and generation
- Programmable channel mode
 - Normal (full-duplex), automatic echo, local loop back, remote loopback
- Eight byte transmit FIFOs for each UART
- Programmable interrupt priorities
- Identification of highest priority interrupt
- Global interrupt register set provides data from interrupting channel
- Vectored interrupts with programmable vector format
- IACKN and DTACKN signals
- Built-in baud rate generator with choice of 18 rates
- Four I/O pins per UART for modem controls, clocks, etc.
- Power down mode
- High-speed CMOS technology
- 52-pin PLCC and 48-pin DIP
- Commercial and industrial temperature ranges available
- On-chip crystal oscillator
- TTL compatible
- Single +5V power supply with low power mode
- Two multifunction programmable 16-bit counter/timers
- 1MHz 16x mode operation
- 30ns data bus release time
- “Watch Dog” timer for each receiver

SCC68692 – Dual Asynchronous Receiver/Transmitter (DUART)

DESCRIPTION

The Signetics SCC68692 Dual Universal Asynchronous Receiver/Transmitter (DUART) is a single-chip CMOS-LSI communications device that provides two full-duplex asynchronous receiver/transmitter channels in a single package. It is compatible with other S68000 family devices and can also interface easily with other microprocessors. The DUART can be used in a polled or interrupt driven systems.

The operating mode and data format of each channel can be programmed independently. Additionally, each receiver and transmitter can select its operating speed as one of eighteen fixed baud rates, a 16X clock derived from a programmable counter/timer, or an external 1X or 16X clock. The baud rate generator and counter/timer can operate directly from a crystal or from external clock inputs. The ability to independently program the operating speed of the receiver and transmitter make the DUART particularly attractive for dual-speed channel applications such as clustered terminal systems.

Each receiver is quadruple buffered to minimize the potential of receiver overrun or to reduce interrupt overhead in interrupt driven systems. In addition, a flow control capability is provided to disable a remote DUART transmitter when the receiver buffer is full.

Also provided on the SCC68692 are a multipurpose 6-bit input port and a multipurpose 8-bit output port. These can be used as general purpose I/O ports or can be assigned specific functions (such as clock inputs or status/interrupt outputs) under program control.

FEATURES

- S68000 bus compatible
- Dual full-duplex asynchronous receiver/transmitters
- Quadruple buffered receiver data register
- Programmable data format:
 - 5 to 8 data bits plus parity
 - Odd, even, no parity or force parity
 - 1, 1.5 or 2 stop bits programmable in 1/16-bit increments
- Programmable baud rate for each receiver and transmitter selectable from:
 - 18 fixed rates: 50 to 38.4K baud
 - One user-defined rate derived from programmable counter/timer
 - External 1X or 16X clock
- Parity, framing, and overrun error detection
- False start bit detection
- Line break detection and generation
- Programmable channel mode
 - Normal (full-duplex)
 - Automatic echo
 - Local loopback
 - Remote loopback
- Multi-function 6-bit input port
 - Can serve as clock or control inputs
 - Change of state detection on four inputs
- Multi-function 8-bit output port
 - Individual bit set/reset capability
 - Outputs can be programmed to be status/interrupt signals
- Versatile Interrupt system
 - Single interrupt output with eight maskable interrupting conditions
 - Interrupt vector output on interrupt acknowledge
 - Output port can be configured to provide a total of up to six separate wire-ORable interrupt outputs
- Maximum data transfer rates: 1X – 1Mb/s, 16X – 125Kb/s
- Automatic wake-up mode for multidrop applications
- Start-end break interrupt/status
- Detects break which originates in the middle of a character
- On-chip crystal oscillator
- Power down mode
- Receiver timeout mode
- Commercial and Industrial temperature range versions
- TTL compatible
- Single +5V power supply

SCC2692 – Dual Asynchronous Receiver/Transmitter (DUART)

DESCRIPTION

The Signetics SCC2692 Dual Universal Asynchronous Receiver/Transmitter (DUART) is a single-chip CMOS-LSI communications device that provides two full-duplex asynchronous receiver/transmitter channels in a single package. It interfaces directly with microprocessors and may be used in a polled or interrupt driven system.

The operating mode and data format of each channel can be programmed independently. Additionally, each receiver and transmitter can select its operating speed as one of eighteen fixed baud rates, a 16X clock derived from a programmable counter/timer, or an external 1X or 16X clock. The baud rate generator and counter/timer can operate directly from a crystal or from external clock inputs. The ability to independently program the operating speed of the receiver and transmitter make the DUART particularly attractive for dual-speed channel applications such as clustered terminal systems.

Each receiver is quadruply buffered to minimize the potential of receiver overrun or to reduce interrupt overhead in interrupt driven systems. In addition, a flow control capability is provided to disable a remote DUART transmitter when the receiver buffer is full.

Also provided on the SCC2692 are a multipurpose 7-bit input port and a multipurpose 8-bit output port. These can be used as general purpose I/O ports or can be assigned specific functions (such as clock inputs or status/interrupt outputs) under program control.

The SCC2692 is available in three package versions: 40-pin and 28-pin, 0.6" wide, DIPs and a 44-pin PLCC.

FEATURES

- **Dual full-duplex asynchronous receiver/transmitters**
- **Quadruple buffered receiver data register**
- **Programmable data format**
 - 5 to 8 data bits plus parity
 - Odd, even, no parity or force parity
 - 1, 1.5 or 2 stop bits programmable in 1/16-bit increments
- **Programmable baud rate for each receiver and transmitter selectable from:**
 - 18 fixed rates: 50 to 38.4k baud
 - One user-defined rate derived from programmable counter/timer
 - External 1X or 16X clock
- **Parity, framing, and overrun error detection**
- **False start bit detection**
- **Line break detection and generation**
- **Programmable channel mode**
 - Normal (full-duplex)
 - Automatic echo
 - Local loopback
 - Remote loopback
- **Multi-function 7-bit input port**
 - Can serve as clock or control inputs
 - Change of state detection on four inputs
- **Multi-function 8-bit output port**
 - Individual bit set/reset capability
 - Outputs can be programmed to be status/interrupt signals
- **Versatile interrupt system**
 - Single interrupt output with eight maskable interrupting conditions
 - Output port can be configured to provide a total of up to six separate wire-ORable interrupt outputs
- **Maximum data transfer rates:**
 - 1X - 1Mb/s, 16X - 125Kb/s
- **Automatic wake-up mode for multidrop applications**
- **Start-end break Interrupt/status**
- **Detects break which originates in the middle of a character**
- **On-chip crystal oscillator**
- **Power down mode**
- **Receiver timeout mode**
- **Commercial and industrial temperature range versions**
- **TTL compatible**
- **Single +5V power supply**

SCC2698B – Enhanced Octal Universal Asynchronous Receiver/Transmitter (DUART)

DESCRIPTION

The SCC2698B Enhanced Octal Universal Asynchronous Receiver/Transmitter (Octal UART) is a single chip MOS-LSI communications device that provides eight full-duplex asynchronous receiver/transmitter channels in a single package. It is fabricated with CMOS technology which combines the benefits of high density and low power consumption.

The operating speed of each receiver and transmitter can be selected independently as one of eighteen fixed baud rates, a 16X clock derived from a programmable counter/timer, or an external 1X or 16X clock. The baud rate generator and counter/timer can operate directly from a crystal or from external clock inputs. The ability to independently program the operating speed of the receiver and transmitter make the Octal UART particularly attractive for dual-speed channel applications such as clustered terminal systems.

The receiver is quadruple buffered to minimize the potential of receiver overrun or to reduce interrupt overhead in interrupt driven systems. In addition, a handshaking capability is provided to disable a remote UART transmitter when the receiver buffer is full.

The UART provides a power-down mode in which the oscillator is frozen but the register contents are stored. This results in reduced power consumption on the order of several magnitudes. The Octal UART is fully TTL compatible and operates from a single +5V power supply.

The SCC2698B is an upwardly compatible version of the 2698A Octal UART. In PLCC packaging, it is enhanced by the addition of receiver ready or FIFO full status outputs, and transmitter empty status outputs for each channel on 16 multipurpose I/O pins. The multipurpose I/O pins of the SCC2698B were inputs only on the SCC2698A.

FEATURES

- Eight full-duplex asynchronous receiver/transmitters
- Quadruple buffered receiver data register
- Programmable data format:
 - 5 to 8 data bits plus parity
 - Odd, even, no parity or force parity
 - 1, 1.5 or 2 stop bits programmable in 1/16-bit increments

- Baud rate for the receiver and transmitter selectable from:
 - 18 fixed rates: 50 to 38.4K baud
 - Non-standard rates to 115.2K baud
 - User-defined rates from the programmable counter/timer associated with each of four blocks
 - External 1X or 16X clock
- Parity, framing, and overrun error detection
- False start bit detection
- Line break detection and generation
- Programmable channel mode
 - Normal (full-duplex), automatic echo, local loop back, remote loopback
- Four multi-function programmable 16-bit counter/timers
- Four interrupt outputs with eight maskable interrupting conditions for each output
- Receiver ready/FIFO full and transmitter ready status available on 16 multi-function pins in PLCC package
- On-chip crystal oscillator
- TTL compatible
- Single +5V power supply with low power mode

INDUSTRIAL

NE/SA5234 – Matched Quad High-Performance Low-Voltage Operational Amplifier

DESCRIPTION

The NE/SA5234 is a matched, low voltage, high performance quad operational amplifier. Among its unique input and output characteristics is the capability for both input and output rail-to-rail operation, particularly critical in low voltage applications. The output swings to less than 50mV of both rails across the entire power supply range.

The NE/SA5234 is capable of delivering 5.5V peak-to-peak across a 600Ω load and will typically draw only 700μA per amplifier. The bandwidth is 2.5MHz and the 1% settling time is 1.4μs.

FEATURES

- Wide common-mode input voltage range: 250mV beyond both rails
- Output swing within 50mV of both rails
- Functionality to 1.8V typical
- Low current consumption: 700μA per amplifier

- $\pm 15\text{mA}$ output current capability
- Unity gain bandwidth 2.5MHz
- Slew rate: $0.8\text{V}/\mu\text{S}$
- Low noise: $25\text{nV}/\sqrt{\text{Hz}}$
- Electrostatic discharge protection
- Short-circuit protection
- Output Inversion prevention

APPLICATIONS

- Automotive electronics
 - Test and measurement
 - Medical monitors and diagnostics
 - Remote meters
- Audio equipment
- Security systems
- Communications

27C256 – 256K CMOS UV Erasable PROM (32K × 8)

FEATURES

- CMOS/NMOS microcontroller and microprocessor compatible
 - Universal 28- or 32-Pin memory site, 2-line control
- Low power consumption
- Noise Immunity features
 - $\pm 10\%$ V_{CC} tolerance
 - Maximum latch-up immunity through epitaxial processing
- Fast, reliable intelligent programming
 - 12.5V V_{PP} , HCMOS 11-E compatible

LOGIC DIAGRAM

27C512 – 512K CMOS UV Erasable PROM (64K × 8)

27HC641 – 64K-Bit CMOS PROM (8K × 8)

FEATURES

- Address access times 55ns and 70ns
- Max operating I_{CC} of 110mA
- 3-State outputs
- Direct replacement of Bipolar PROMs
- Programmed on Industry standard EPROM programmers
- Fully TTL compatible

SCC2691	Universal Asynchronous Receiver/Transmitter (UART)-CMOS	A28, D24, N24
SCC2692	Dual Universal Asynchronous Receiver/Transmitter (DUART)-CMOS	A44, F28, F40, N28, N40
SCC68692	Dual Universal Asynchronous Receiver/Transmitter(DUART)-CMOS, 68000 series bus interface	A44, F40, N40
SC26C94	Quad Universal Asynchronous Receiver/Transmitter	N48, A52
SC68C94	Quad Universal Asynchronous Receiver/Transmitter	N48, A52
SCC2698B	Enhanced Octal Universal Asynchronous Receiver/Transmitter (Octal-DUART)-CMOS	A84, N64
SCN26542	Dual Multiprotocol Serial Controller (DMSC)-general purpose bus interface	A52, N40
SCN26562	Dual Universal Serial Communications Controller (DUSCC)-general purpose bus interface	A52, N48
SCN68542	Dual Multiprotocol Serial Controller (DMSC)-68000 Series bus interface	A52, N40
SCN68562	Dual Universal Serial Communications Controller (DUSCC)-68000 Series bus interface	A52, N48
FIBER OPTIC RECEIVERS		
NE/SA/SE5205	Wideband High Frequency Amplifier	D, FE, N
NE/SE521	High-Speed Dual Differential Comparator/Sense Amp	D, F, N
NE/SE522	High-Speed Dual Differential Comparator/Sense Amp	D, F, N
NE/SE527	Voltage Comparator	D, N
NE/SE529	Voltage Comparator	D, N
NE/SE5539	Ultra High Frequency Operational Amplifier	D, F, N
NE/SE564	Phase-Locked Loop	D, F, N
NE/SA568A	150MHz Phase-Locked Loop	D, N
NE/SE592	Video Amplifier	D8, D14, N8, N14, F14
NE5204	Wideband High Frequency Amplifier	D, N
NE5210	Transimpedance Amplifier (280 MHz)	D
NE/SA5211	Transimpedance Amplifier (150 MHz)	D
NE5212A	Transimpedance Amplifier (140 MHz)	D
NE/SA5214	Fiber Optic Postamplifier with Link Status Indicator	D
NE/SA5217	Fiber Optic Postamplifier with Link Status Indicator	D
NE/SA5224	Fiber Optic Postamplifier with Link Status Indicator 100K ECL	D
NE/SA5225	Fiber Optic Postamplifier with Link Status Indicator 10K ECL	D
LAN		
NE8392A	Ethernet Coaxial Transceiver	N
NE86C92	10BASE-T Transceiver	D, N

PCF2100P, T	40-Segment LCD Driver	D, N
PCF2110P, T	60-Segment LCD Driver and 2 LED	D, N
PCF2111P, T	LCD Duplex Driver 64-Segments	D, N
PCF2112P, T	LCD Driver 32-Segments	D, N
PCF8566P, T	24, 48, 72, 96-Segment LCD Driver	D
PCF8576T	40, 80, 120, 160-Segment LCD Driver	D
PCF8577P, T	32/64-Segment LCD Driver	D, N
SAA1064P	4-Bit LED Driver (I ² C)	N
DRIVERS		
NE/SA594	Vacuum Fluorescent Display Driver	D, F, N
NE5090	Addressable Relay Driver	D, N
NE587	LED Decoder/Driver	N
NE5090	Addressable Relay Drivers	N
NE590	Addressable Peripheral Drivers	F, N
NE591	Addressable Peripheral Drivers	F, N
I²C/CLIPS		
PCA8582BP	256 x 8 EEPROM; 500K E/W Cycles, -40 to +125°C	N
PCF8570P, T	256 x 8-Bit Static RAM	D, N
PCF8571P, T	128 x 8 Static RAM	D, N
PCF8573P, T	Clock/Calendar w/Serial I/O	D, N
PCF8574AP, T	8-Bit Remote I/O Expander	D, N
PCF8574P, T	8-Bit Remote I/O Expander	D, N
PCF8581P, T	128 x 8 EEPROM; 10K E/W Cycles	D, N
PCF8581CP, T	128 x 8 EEPROM; 10K E/W Cycles, 2.5V	D, N
PCF8582CP, T	256 x 8 EEPROM; 500K E/W Cycles, 2.5V	D, N
PCF8582EP, T	256 x 8 EEPROM; 100K E/W Cycles	D, N
PCF8583P, T	Clock I/O with 256 x 8 RAM, I ² C	D, N
PCD8584P, T	Parallel Bus to I ² C Converter	D, N
PCF8591P, T	ADC/DAC with I ² C	D, N
TDA8444T	Octal 6-Bit DAC	D
MOTOR CONTROLLER/VOLTAGE DETECTOR		
HEF4752VP	AC Motor Control Circuit	N
PCF1252-0 thru 9	Micropower Voltage Detector	D, N
TDA5142T	Brushless DC Motor Driver Requires External FETS	D
TDA5143T	Brushless DC Motor Driver 0.6 Amp Output Drive	D
TDA5144AT	Brushless DC Motor Driver 1.8 Amp Output Drive	D
TDA5145	Brushless DC Motor Driver Bidirectional Driver	D
TDA1023	TRIAC Control	D, N
SAMPLE-AND-HOLD		
LF198/298/398	Sample-and-Hold Amplifier	D, FE, N
NE/SE5537	Sample-and-Hold Circuit	D, FE, N
SPEECH SYNTHESIS/VOICE/SOUND		
OM8210	Speech Encoding System	PC Board
PCF8200	Single-Chip CMOS Male/Female Speech Synthesizer	N
SAA1099	Stereo Sound Generator for Sound Effects and Music Synthesis	N

10100	16	Quad 2-Input NOR Gate	F, N
10101	16	Quad OR/NOR Gate	F, N
10102	16	Quad 2-Input NOR Gate	D, F, N
10103	16	Quad 2-Input OR Gate	F, N
10104	16	Quad 2-Input AND Gate	D, F, N
10105	16	Triple 2-3-2-Input OR/NOR Gate	D, F, N
10106	16	Triple 4-3-3-Input NOR Gate	F, N
10107	16	Triple 2-Input Exclusive-OR/Exclusive-NOR Gate	D, F, N
10108	16	Dual 4-Input AND/NAND Gate	F, N
10109	16	Dual 4-5-Input OR/NOR Gate	D, F, N
10110	16	Dual 3-Input/3-Output OR Gate, Line Driver	F, N
10111	16	Dual 3-Input/3-Output NOR Gate, Line Driver	F, N
10113	16	Quad Exclusive-OR Gate with Enable	F, N
10114	16	Triple Differential Line Receiver	F, N
10115	16	Quad Differential Line Receiver	F, N
10116	16	Triple Differential Line Receiver	D, F, N
10117	16	Dual 2-Wide 2-3-Input OR-AND/OR-AND-INVERT Gate	D, F, N
10118	16	Dual 2-Wide 3-Input OR-AND Gate	F, N
10124	16	Quad TTL to ECL Translator	D, F, N
10125	16	Quad ECL to TTL Translator	D, F, N
10129	16	Quad TTL to ECL Translator	F, N
10130	16	Dual D-Type Latch	F, N
10131	16	Dual D-Type Master-Slave Flip-Flop	D, F, N
10132	16	Dual 2-Input Multiplexer with Latches	F, N
10133	16	Quad D-Type Latch with Output Enables	F, N
10134	16	Dual 2-Input Multiplexer with Latches	F, N
10135	16	Dual J-K Master-Slave Flip-Flop	F, N
10136	16	Universal Hexadecimal Counter	F, N
10137	16	Universal Decade Counter	F, N
10141	16	4-Bit Universal Shift Register	F, N
10149	16	256 × 4 PROM (20ns)	F
10149A	16	256 × 4 PROM (10ns)	F
10158	16	Quad 2-Input Multiplexer, NINV	F, N
10159	16	Quad 2-Input Multiplexer, INV	F, N
10160	16	12-Bit Parity Generator/Checker	F, N
10161	16	3-Bit Decoder with Enables (1-of-8 Outputs Low)	F, N
10162	16	3-Bit Decoder with Enables (1-of-8 Outputs High)	F, N

Product Information

Logic Products (Cont.)			
DEVICE TYPE	PIN #	DESCRIPTION	PACKAGE CODES
10K ECL SERIES (Cont.)			
10164	16	8-Input Multiplexer with Enable Input	D, F, N
10165	16	8-Input Priority Encoder	F, N
10171	16	Dual 2-Bit Decoder (1-of-4 Lines Low)	F, N
10172	16	Dual 2-Bit Decoder (1-of-4 Lines High)	F, N
10173	16	Quad 2-Input Multiplexer with Latched Outputs	F, N
10174	16	Dual 4-to-1 Multiplexer with Enable	F, N
10175	16	Quint D-Latch w/Common Reset	F, N
10176	16	Hex D-Type Master-Slave Flip-Flop	F, N
10179	16	Carry Look-Ahead Block-Arithmetic Functions	F, N
10180	16	Dual 2-Operand Adder/Subtractor	F, N
10181	24	4-Bit Arithmetic Logic Unit/Function Generator	F, N (600mil-wide DIP)
10188	16	Hex Buffer with Enable, NINV	D, F, N
10189	16	Hex Inverter with Enable	F, N
10192	16	Quad Differential Line Driver	F, N
10210	16	Dual 3-Input/3-Output (High Speed Version) OR Gate	F, N
10211	16	Dual 3-Input/3-Output (High Speed Version) NOR Gate	F, N
10216	16	Triple Differential OR/NOR Line Receiver (High Speed Version)	F, N
10231	16	Dual D-Type Master-Slave Flip-Flop (High Speed Version)	F, N
10H20EV8	24	ECL, PAL, 20 × 90 × 8	F
100K ECL SERIES			
100101	24	Triple 5-Input OR/NOR Gate	A, F, Y
100102	24	Quint 2-Input OR/NOR Gate	A, F, Y
100107	24	Quint Exclusive-OR/NOR Gate	A, F, Y
100112	24	Quad Driver	A, F, Y
100113	24	Quad Driver	A, F, Y
100114	24	Quint Differential Receiver	A, F, Y
100117	24	Triple OR-AND/NAND Gate	A, F, Y
100118	24	5-Wide OR-AND/NAND Gate	A, F, Y
100122	24	9-Bit Buffer	A, F, Y
100123	24	Hex Bus Driver	A, F, Y
100124	24	Hex TTL-to-ECL Translator	A, F, Y
100125	24	Hex ECL-to-TTL Translator	A, F, Y
100126	24	9-Bit Back Plane Driver	A, F, Y
100131	24	Triple D Flip-Flop (350MHz)	A, F, Y
100136	24	Counter/Shift Register	A, F, Y
100141	24	8-Bit Shift Register	A, F, Y
100149	16	256 × 4 PROM (20ns)	F
100149A	16	256 × 4 PROM (10ns)	F
100149B	16	256 × 4 PROM (5ns)	F
100150	24	Hex D-Latch	A, F, Y
100151	24	Hex D Flip-Flop	A, F, Y
100155	24	Quad Multiplexer/Latch	A, F, Y
100158	24	Shift Matrix	A, F, Y
100160	24	Dual Generator/8-Bit Comparator	A, F, Y
100163	24	Dual 8-Input Multiplexer	A, F, Y

100K ECL SERIES (Cont.)			
100164	24	16-Input Multiplexer	A, F, Y
100165	24	Universal Priority Encoder	A, F, Y
100166	24	9-Bit Comparator	A, F, Y
100170	24	Universal Demultiplexer Decoder	A, F, Y
100171	24	Triple 4-Input Multiplexer	A, F, Y
100175	16	5-Bit Latched 100K/10K Translator	F
100179	24	Carry Look-Ahead Generator	A, F, Y
100180	24	6-Bit Adder	A, F, Y
100181	24	4-Bit ALU Binary/Decimal	A, F, Y
100231	24	Triple D Flip-Flop (400MHz)	A, F, Y
100255	16	TTL-100K Translating Transceiver	F
100790	28	9-Bit 25Ω Transceiver, 3-State	A
100982	28	6-Bit Registered Translating Transceiver, 25Ω	A
100984	28	4-Bit Registered Translating Transceiver, 25Ω	A
100990	28	9-Bit 25Ω Transceiver, 3-State	A
10020EV8	24	ECL PAL, 20 × 90 × 8	F, A

DEVICE TYPE	DESCRIPTION	PACKAGE CODES
LSI		
N2960	Error Detection/Correction Unit	N
N2964B	Dynamic Memory Controller	N
N3001	Microprogram Control Unit	N
N3002	Central Processing Unit	N
N74LS1801	Encoder/Decoder	F
N74LS1802	Serializer/Deserializer	A
N8X41	Auto Directional Bus Transceiver	N (600mil-wide)
N8X60	FIFO RAM Controller (4K)	F, N
N8X01A	CRC Generator Checker	N
N8X02A	Control Store Sequencer	N
N9401	CRC Generator Checker	N
N9403	Expandable FIFO Buffer Memory	N
74F410	Register Stack-16 x 4 RAM	N
74F764	DRAM Dual-Ported Controller w/Latch (100MHz)	A, N
74F764-1	DRAM Dual-Ported Controller w/Latch	A, N
74F765	DRAM Dual-Ported Controller (100MHz) without address input latch	A, N
74F765-1	DRAM Dual-Ported Controller without address input latch	A, N
74F1762	1MBit DRAM Address Controller	A, N
74F1763	1MBit Intelligent DRAM Controller	A, N
74F1764	1MBit DRAM Dual-Ported Controller (100MHz)	A, N
74F1764-1	1MBit DRAM Dual-Ported Controller (100MHz)	A, N
74F1765	1MBit DRAM Dual-Ported Controller (100MHz) without address input latch	A, N
74F1765-1	1MBit DRAM Dual-Ported Controller (100MHz)	A, N
74F1766	Burst Mode DRAM Controller	A, N
74ABT4764	4MBit Programmable DRAM Controller	D, N

Product Information

COM = Complexity:

S = Small Scale Integration (SSI)

M = Medium Scale Integration (MSI)

L = Large Scale Integration (LSI)

DEVICE TYPE	PIN #	DESCRIPTION	PACKAGE CODES
HIGH-SPEED CMOS (Cont.)			
HC/HCT244*	20	Octal Buffer, 3-State	D, N
HC/HCT245*	20	Octal Transceiver, 3-State	D, N
HC/HCT251	16	8-Input Multiplexer, 3-State	D, N
HC/HCT253*	16	Dual 4-Input Multiplexer, 3-State	D, N
HC/HCT257*	16	Quad 2-Input Multiplexer, 3-State	D, N
HC/HCT258	16	Quad 2-to-1 Data Selector/Multiplexer, 3-State	D, N
HC/HCT259	16	8-Bit Addressable Latch	D, N
HC266		See HC7266	D, N
HC/HCT273*	20	Octal D-Type Flip/Flop w/Clear; Positive-Edge Trigger	D, N
HC/HCT280	14	9-Bit Odd/Even Parity Generator/Checker	D, N
HC/HCT283	16	4-Bit Binary Full Adder w/Fast Carry	D, N
HC/HCT297	16	Digital Phase-Locked Loop Filter	D, N
HC/HCT299*	16	8-Bit Universal Shift Register, 3-State	D, N
HC/HCT354*	20	8-Input Multiplexer/Register, 3-State	D, N
HC/HCT356*	20	8-Input Multiplexer/Register, 3-State	D, N
HC/HCT365*	16	Hex Buffer, 3-State	D, N
HC/HCT366*	16	Hex Inverting Buffer, 3-State	D, N
HC/HCT367*	16	Hex Buffer, 3-State	D, N
HC/HCT368*	16	Hex Inverting Buffer, 3-State	D, N
HC/HCT373*	20	Octal Transparent Latch, 3-State	D, N
HC/HCT374*	20	Octal D-Type Flip/Flop; Positive-Edge Trigger, 3-State	D, N
HC/HCT377	20	Octal D-Type Flip/Flop w/Data Enable; Positive-Edge Trigger	D, N
HC/HCT390	16	Dual Decade Ripple Counter	D, N
HC/HCT393	14	Dual 4-Bit Binary Ripple Counter	D, N
HC/HCT423	16	Dual Retriggerable Monostable Multivibrator	D, N
HC/HCT533*	20	Octal Transparent Inverting Latch, 3-State	D, N
HC/HCT534*	20	Octal D-Type Inverting Flip/Flop; Positive-Edge Trigger, 3-State	D, N
HC/HCT540*	20	Octal Inverting Buffer, 3-State	D, N
HC/HCT541*	20	Octal Buffer, 3-State	D, N
HC/HCT563*	20	Octal Transparent Inverting Latch, 3-State	D, N
HC/HCT564*	20	Octal D-Type Inverting Flip/Flop; Positive-Edge Trigger, 3-State	D, N
HC/HCT573*	20	Octal Transparent Latch, 3-State	D, N
HC/HCT574*	20	Octal D-Type Flip/Flop; Positive-Edge Trigger, 3-State	D, N
HC/HCT583	16	BCD Adder	D, N
HC/HCT595	16	8-Bit Serial-In/Serial or Parallel-Out Shift Register w/ Output Latches (3-State)	D, N
HC/HCT597	16	8-Bit Shift Register w/Input Latches	D, N
HC/HCT640*	20	Octal Inverting Transceiver, 3-State	D, N
HC/HCT643*	20	Octal True/Inverting Transceiver, 3-State	D, N
HC/HCT646*	24	Octal Transceiver/Register, 3-State	D, N
HC/HCT648*	24	Octal Inverting Transceiver/Register, 3-State	D, N
HC/HCT670*	16	4 x 4 Register File, 3-State	D, N
HC/HCT688	20	8-Bit Magnitude Comparator	D, N
HC/HCT4002	14	Dual 4-Input NOR Gate	D, N
HC/HCT4015	16	Dual 4-Bit Serial-In/Parallel-Out Shift Register	D, N
HC/HCT4016	14	Quad Bilateral Switch	D, N

* Types with bus driver output stage

Product Information

Logic Products (Cont.)			
DEVICE TYPE	PIN #	DESCRIPTION	PACKAGE CODES
HIGH-SPEED CMOS (Cont.)			
HC/HCT4017	16	Johnson Decade Counter w/10 Decoded Outputs	D, N
HC/HCT4020	16	14-Stage Binary Counter	D, N
HC/HCT4024	14	7-Stage Binary Counter	D, N
HC/HCT4040	16	12-Stage Binary Counter	D, N
HC/HCT4046A	16	Phase-Locked Loop w/VCO	D, N
HC4049	16	Hex Inverting High-to-Low Level Filter	D, N
HC4050	16	Hex High-to-Low Level Shifter	D, N
HC/HCT4051	16	8-Channel Analog Multiplexer/Demultiplexer	D, N
HC/HCT4052	16	Dual 4-Channel Analog Multiplexer/Demultiplexer	D, N
HC/HCT4053	16	Triple 2-Channel Analog Multiplexer/Demultiplexer	D, N
HC/HCT4059	24	Programmable Divide-by-n Counter	D, N
HC/HCT4060	16	14-Stage Ripple-Carry Binary Counter	D, N
HC/HCT4066	14	Quad Bilateral Switch	D, N
HC/HCT4067	24	16-Channel Analog Multiplexer/Demultiplexer	D, N
HC/HCT4075	14	Triple 3-Input OR Gate	D, N
HC/HCT4094	16	8-Stage Shift-and-Store Bus Register	D, N
HC/HCT4316	16	Quad Bilateral Switch	D, N
HC/HCT4351	20	8-Channel Analog Multiplexer/Demultiplexer w/Latch	D, N
HC/HCT4352	20	Dual 4-Channel Analog Multiplexer/Demultiplexer w/Latch	D, N
HC/HCT4353	20	Triple 2-Channel Analog Multiplexer/Demultiplexer w/Latch	D, N
HC/HCT4510	16	BCD Up/Down Counter	D, N
HC/HCT4511	16	BCD to 7-Segment Latch/Decoder/Driver	D, N
HC/HCT4514	24	1-of-16 Decoder/Demultiplexer w/Input Latches	D, N
HC/HCT4515	24	1-of-16 Decoder/Demultiplexer w/Input Latches	D, N
HC/HCT4516	16	Binary Up/Down Counter	D, N
HC/HCT4518	16	Dual BCD Counter	D, N
HC/HCT4520	16	Dual 4-Bit Binary Counter	D, N
HC/HCT4538	16	Dual Retriggerable Precision Monostable Multivibrator	D, N
HC/HCT4543	16	BCD to 7-Segment Latch/Decoder/Driver for LCDs	D, N
HC/HCT5555	16	Programmable Delay Timer with Oscillator	D, N
HC/HCT6323A	8	Programmable Ripple Counter with Oscillator; 3-State)	D
HC/HCT7030	28	9-Bit x 16-Word Exp. FIFO Register	D, N
HC/HCT7046A	16	Phase-Locked Loop w/Lock Detector	D, N
HC/HCT7080	20	16-Bit Odd/Even Parity Generator/Checker	D, N
HCT7174	16	Hex D-Type Flip/Flop with Reset, Positive Edge-Triggered, Open Drain Outputs	D, N
HC/HCT7245*	20	Octal Bus Schmitt Trigger Transceiver; 3-State	D, N
HC7266	14	Quad 2-Input Exclusive-NOR Gate	D, N
HCT7273	20	Octal D-Type Flip/Flop with Reset, Positive Edge-Triggered Open Drain Outputs	D, N
HC/HCT7403	16	4-Bit x 64-Word FIFO Register; 3-State	D, N
HCHCT7404	20	5-Bit x 64-Word FIFO Register; 3-State	D, N
HC/HCT7540	20	Octal Schmitt Trigger Inverting Buffer, 3-State	D, N
HC/HCT7541	20	Octal Schmitt Trigger Buffer, 3-State	D, N
HC/HCT7597	16	8-Bit Shift Register w/Input Latches	D, N
HC/HCT7731	16	Quad 64-Bit Static Shift Register	D, N

* Types with bus driver output stage

SCC68070 (Cont.)		120-pin QFP (Ext temp, 15MHz) 84-pin PLCC (Com temp, 17.5MHz) 120-pin QFP (Com temp, 17.5MHz)	SCC68070ACB SCC68070CDA84 SCC68070CDB
SCC66470	Video & System Controller	120-pin Plastic QFP (Com temp) 120-pin QFP (Ext. temp)	SCC66470CAB SCC66470AAB
SM68070SK	MicroCore Evaluation Board	SCC68070, SCC66470, ROM, RAM, UART, I ² C, Software	SM68070SK
SBE68070	SCC68070 Single Board Emulator	SCC68070 SCC66470 EPROM, RAM, UART, I ² C, Software, Probe	SBE68070SD
PROPRIETARY BIPOLAR			
N8X305	8-Bit MCU	A, N	N8X305N
N8X310	Interrupt Controller	N	N8X310N
N8X371	Transparent I/O Port	N	N8X371N
N8X372	Addressable I/O Port	N	N8X372N
N8X376	Addressable I/O Port	N	N8X375
N8X401	8-Bit MCU	N	N8X401N
8X400A S1SS	Fortress 8X400 Cross-Assembler	Not Applicable	N8X400 S1SS
8X400 KT1SK	8X400 Proto System	Not Applicable	8X400 KT1SK
8X300 KT1SK	8X300 Proto System	Not Applicable	8X300 KT1SK
8X300 KT2SK	8X300 Proto Memory Expansion	Not Applicable	8X300 KT2SK
8X300A S1SS	MCCAP-Microcontroller Cross-Assembler program	Not Applicable	8X300A S1SS
8X300A S3SS	MCCAP-Microcontroller Cross-Assembler for MS-DOS systems	Not Applicable	8X300A S3SS

Product Information

Programmable Logic Devices

To support the Philips/Signetics PLD product line, we offer two powerful design software packages. SLICE, a menu driven PC based design package, is available at no charge and allows the first-time user to immediately produce a working PLD design. It features Boolean and state equation entry, a fuse table editor, a test vector editor and is upwards compatible to SNAP.

For the high-end designs we offer SNAP. SNAP is a device independent, netlist-based development software environment. It offers Boolean and state equation entry, direct netlist entry, waveform entry as well as interfaces to schematic capture packages like OrCAD and Futurenet. It features the Espresso minimizer, a fuse table editor, and a Boolean equations extractor. The Philips 5-state gate array simulator "LESIM" provides unsurpassed accuracy in functional, fault, timing simulation and logic analysis.

PAL-Type = Programmable Array Logic (Fixed OR Array)-Type

PHD = Programmable High-Speed Decoder

PLA = Programmable Logic Array

PLS = Programmable Logic Sequencer

PML = Programmable Macro Logic

OUTPUTS:

C = Combinatorial output

R = Registered output

I/O = Combinatorial I/O

R I/O = Registered I/O

NOTES: $t_{MAX} = 1/(t_{IS} + t_{CKO})$ worst case

* Includes control product terms

♦ Product terms per NAND gate

PAL is a trademark of AMD/MMI.

PML is a trademark of Philips Components-Signetics.

Power Products		
DEVICE TYPE	DESCRIPTION	PACKAGE CODES
MOTOR CONTROL		
NE/SA/SE5570	3-Phase Brushless DC Motor Driver	D, N
NE5044	Programmable Seven-Channel RC Encoder	D, N
μA723/C	Precision Voltage Regulator	D, F, N
POWER SUPPLY		
NE/SE5560	SMPS Control Circuit	D, N
NE/SE5561	SMPS Control Circuit	D, N
NE/SE5562	SMPS Control Circuit, Single Output	D, F, N
NE5568	SMPS Controller	D, N
UC3842	SMPS Control Circuit, Current Mode	D, N

RF Communications Products		
DEVICE TYPE	DESCRIPTION	PACKAGE CODES
MC1496/1596	Balanced Modulator/Demodulator	F, N
MC3361	Low Power FM IF	D, N
NE568A	150MHz Phase-Locked Loop	D, N
NE570	Compandor	D, F, N
NE612A	Low Power VHF/Mixer/Oscillator	D, N
NE/SA5200	Dual Gain Stage FM Amplifier	D
NE/SA5204	Wideband High Frequency Amplifier	D, N
NE/SA5209	Variable Gain RF Amplifier	D, N

PCF84C81P, T	CMOS Microcontroller with I ² C, 8K, 256 Bytes	D, N
PCF84C85P, T	CMOS Microcontroller with I ² C, 8K, 256 Bytes, 32 I/O	D, N
PCF84C121T	CMOS Microcontroller with EEPROM, 1.5K, 64 Bytes	D
PCF84C270P, T	CMOS Microcontroller with Cap, Keyboard Interface	D, N
PCF84C271P, T	CMOS Microcontroller with Mech, Keyboard Interface	D, N
PCF84C430T	CMOS Microcontroller with I ² C, with LCD Driver	D
PCF84C470P, T	CMOS Microcontroller with Cap Keyboard Interface	D, N
PCF84C633P	CMOS Microcontroller with LCD Driver	N
PCF84C640P	CMOS Microcontroller with I ² C (TV Tuning)	N

Video Products

PART NUMBER	DESCRIPTION	PACKAGE CODES
TUNERS/TUNING SYSTEMS		
SAB3035	FLL Tuning and Control Circuit (Eight D/A Converters)	N
SAB3036	FLL TV Tuning Circuit	N
SAB3037	FLL TV Tuning Circuit (Four D/A Converters)	N
SAB6456, T	1GHz Divide by 64 or 256 Prescaler	D, N
TDA5030A, T	VHF Mixer/Oscillator (VHF Tuner IC)	D, N
TDA5330T	VHF/UHF Mixer-Oscillator	D
TSA5511, T	Digital Synthesizer for TV with Prescaler	D, N
REMOTE CONTROL SYSTEMS		
SAA3007P, T	IR Transmitter (2K Commands, 455kHz)	D, N
SAA3010P, T	IR Transmitter (2K Commands, Low Voltage)	D, N
SAA3049P, T	IR Remote Control Decoder	D, N
TDA3047P, T	IR Preamplifier	D, N
TDA3048P, T	IR Preamplifier	D, N
TELEVISION SUBSYSTEMS		
TDA4501	Small-Signal Subsystem IC for Color TV	N
TDA4502	Complete Video IF IC with Vertical & Horizontal Sync	N
TDA4503	Small-Signal Subsystem for Monochrome TV	N
TDA4505	Small-Signal Subsystem for Color TV	N
VIDEO IF		
TDA8340	Video IF Amplifier and Demodulator, AFT, NPN Tuners	N
TDA8341N	Video IF Amplifier and Demodulator, AFT, NPN Tuners	N
SOUND IF AND SPECIAL AUDIO DECODING		
TDA2545A	Quasi-Split Sound IF System	N
TDA2546A	Quasi-Split Sound IF and Sound Demodulator	N

Product Information

Video Products (Cont.)		
PART NUMBER	DESCRIPTION	PACKAGE CODES
SYNC PROCESSING AND GENERATION/VERTICAL DETECTION		
SAA1101P, T	Universal Sync Generator	D, N
TDA2577A	Sync Circuit w/ Vertical Oscillator & Driver (w/ Neg. Horiz. Output)	N
TDA2578A	Sync Circuit w/ Vertical Oscillator & Driver (w/ Neg. Horiz. Output)	N
TDA2579	Synchronization Circuit (with Horizontal Output)	N
TDA2593	Horizontal Combination	N
TDA2594	Horizontal Combination	N
TDA2595	Horizontal Combination	N
TDA2653A	Vertical Deflection Circuit with Oscillator	U
TDA3653B/C	Vertical Deflection	U
TDA3654	Vertical Deflection	U
TDA8433	Deflection Processor	N
ANALOG COLOR DECODING, ENCODING, AND SWITCHING		
TDA3505	Chroma Control Circuit	N
TDA3507	Chroma Control Circuit	N
TDA3566	PAL/NTSC Decoder with RGB Inputs	N
TDA3567	NTSC Color Decoder	N
TDA4555	Multistandard Color Decoder	N
TDA4565	Color Transient Improvement Circuit (CTI)	N
TDA4570	NTSC Color Difference Decoder	N
TDA4580	Video Control Combination Circuit with Automatic Cut-off Control	N
TDA4650	PAL/NTSC/SECAM Decoder	N
TDA4660	Switched Capacitor Delay Line	N
TDA4670	Picture Signal Improvement	N
TDA4680	Video Processor	N
TDA8440	Audio/Video Switch	N
TDA8442	Quad DAC (I ² C) for Color Decoder	N
TDA8443, A	RGB/YUV Matrix Switch	N
TDA9045	Gain Control, Video Switch	N
DIGITAL COLOR DECODING AND ENCODING		
SAA7151AP	8-Bit Digital PAL/NTSC/SECAM Decoder	A
SAA7157	Clock Generator for SAA7151	N
SAA7191WP	8-Bit Digital PAL/NTSC/SECAM Decoder	A
SAA7192WP	Digital Color Space Converter	A
SAA7197, T	Clock Generator for SAA7191	D, N
SAA7199WP	Digital PAL/NTSC Encoder	A
SAA9051WP	7-Bit Digital PAL/NTSC Decoder	A
SAA9056	Digital SECAM Decoder	N
SAA9057AP, T	Clock Generator for SAA9051	D, N
SAA9060P	Video Processor with DACs	N
HIGH SPEED DATA CONVERTERS		
TDA8702, T	8-Bit Digital-to-Analog Converter	D, N
TDA8703, T	8-Bit Analog-to-Digital Converter	D, N
TDA8708, T	8-Bit Video Analog-to-Digital Converter	D, N
TDA8709, T	8-Bit Video Analog-to-Digital Converter	D, N
TDE8715D	8-Bit Analog-to-Digital Converter	F
TDA8713, T2	8-Bit Analog-to-Digital Converter	D, N

SMD Product Listing

ADC0803C	8-BIT A/D CONVERTER 0 TO 70°C	SO-20
ADC0803LC	8-BIT A/D CONVERTER -40 TO +85°C	SO-20
ADC0804C	8-BIT A/D CONVERTER 0 TO 70°C	SO-20
ADC0804LC	8-BIT A/D CONVERTER -40 TO +85°C	SO-20
ADC0820CNE	8-BIT CMOS A/D CONVERTER	SO-20
AM26LS30C	RS-422/RS-423 LINE DRIVER	SO-16
AM26LS30I	RS-422/423 LNE DRIVER -40 TO +85°C	SO-16
AM26LS31C	QUAD HIGH SPEED LINE DRIVER	SO-16
AM26LS31I	QUAD HIGH SPEED LINE DRIVER	SO-16
AM26LS32C	QUAD HIGH SPEED DIFF RECEIVER	SO-16
AM26LS32I	QUAD HIGH SPEED DIFF RECEIVER	SO-16
AM6012	12-BIT D/A CONVERTER	SO-20
AU2902	AUTO QUAD OP AMP -40 TO +125°C	SO-14
AU2904	AUTO DUAL OP AMP -40 TO +125°C	SO-8
DAC-08E	8-BIT D/A CONVERTER	SO-16
FCB61C65L-70	SRAM 70NS SOG LOW POWER 8K × 8	SO-28
FCB61C65LL70	SRAM 70NS SOG LOW POWER 8K × 8	SO-28
FCB61C65LL85	SRAM 85NS INDTEMP S06 8K × 8	SO-28
HEF4000BT	DUAL 3-INPUT NOR GATE & INVERTER	SO-14
HEF4001BT	QUADRUPLE 2-INPUT NOR GATE	SO-14
HEF4002BT	DUAL 4-INPUT NOR GATE	SO-14
HEF4006BT	18-STAGE STATIC SHIFT REGISTER	SO-14
HEF4007UBT	DUAL COMPLEMENTARY PRE-INVERTER	SO-14
HEF4008BT	4-BIT BINARY FULL ADDER	SO-16
HEF40097BT	3-STAGE HEX NON-INVERTING BUFFER	SO-16
HEF40098BT	3-STAGE HEX INVERTING BUFFER	SO-16
HEF40106BT	HEX SCHMITT TRIGGER	SO-14
HEF4011BT	QUADRUPLE 2-INPUT NAND GATE	SO-14
HEF4011UBT	QUAD 2-INPUT NAND GATE: UNBUFFERED	SO-14
HEF4012BT	DUAL 4-INPUT NAND GATE	SO-14
HEF4013BT	DUAL D-TYPE FLIP-FLOP	SO-14
HEF4014BT	8-BIT STATIC SHIFT REGISTER	SO-16
HEF4015BT	DUAL 4-BIT STATIC SHFT REGISTER	SO-16
HEF4016BT	QUADRUPLE BILATERAL SWITCHES	SO-14
HEF40161BT	4-BIT SYNCHRON BINARY COUNTER	SO-16
HEF40163BT	4-BIT SYNCHRON BINARY COUNTER	SO-16
HEF4017BT	5-STAGE JOHNSON COUNTER	SO-16
HEF40174BT	HEX D-TYPE FLIP-FLOP	SO-16
HEF40175BT	QUADRUPLE D-TYPE FLIP-FLOP	SO-16
HEF4018BT	PRESETTABLE DIVIDE-BY-N COUNTER	SO-16
HEF4019BT	QUADRUPLE 2-INPUT MULTIPLEXER	SO-16
HEF40192BT	4-BIT UP/DOWN DECADE COUNTER	SO-16
HEF40193BT	4-BIT UP/DOWN BINARY COUNTER	SO-16
HEF40195BT	4-BIT UNIVERSAL SHIFT REGISTER	SO-16
HEF4020BT	14-STAGE BINARY COUNTER	SO-16
HEF4021BT	8-BIT STATIC SHIFT REGISTER	SO-16
HEF4022BT	4-STAGE DIV-BY-8 JOHNSON COUNTER	SO-16
HEF4023BT	TRIPLE 3-INPUT NAND GATE	SO-14
HEF4024BT	7-STAGE BINARY COUNTER	SO-14

SMD Product Listing

HEF40244BT	OCTAL BUFFER W/ 3-STATE OUTPUTS	SO-20
HEF4025BT	TRIPLE 3-INPUT NOR GATE	SO-14
HEF4027BT	DUAL JK FLIP-FLOP	SO-16
HEF4028BT	1-OF-10 DECODER	SO-16
HEF4029BT	SYN UP/DOWN BIN DECADE COUNTER	SO-16
HEF4030BT	QUADRUPLE EXCLUSIVE-OR GATE	SO-14
HEF4035BT	4-BIT UNIVERSAL SHIFT REGISTER	SO-16
HEF40373BT	OCTAL TRANSPARENT LATCH W/ 3-STATE OUTPUTS	SO-20
HEF40374BT	OCTAL D-TYPE FLIP/FLOP W/ 3-STATE OUTPUTS	SO-20
HEF4040BT	12-STAGE BINARY COUNTER	SO-16
HEF4042BT	QUADRUPLE D-LATCH	SO-16
HEF4043BT	QUAD R/S LATCH W/ 3-STATE OUTPUTS	SO-16
HEF4044BT	QUAD R/S LATCH W/ 3-STATE OUTPUTS	SO-16
HEF4046BT	PHASE LOCKED LOOP	SO-16
HEF4047BT	MONOSTABLE/ASTABLE MULTIVIBRATOR	SO-14
HEF4049BT	HEX INVERTING BUFFERS	SO-16
HEF4050BT	HEX NON-INVERTING BUFFERS	SO-16
HEF4051BT	8-CHANNEL MUX/DEMUX	SO-16
HEF4052BT	DUAL 4-CHANNEL MUX/DEMUX	SO-16
HEF4053BT	TRIPLE 2-CHANNEL MUX/DEMUX	SO-16
HEF4059BT	PROGRAMMABLE DIVIDE-BY-N COUNTER	SO-24
HEF4060BT	14-STAGE RC BIN COUNTER/DIV W/ OSC.	SO-16
HEF4066BT	QUADRUPLE BILATERAL SWITCHES	SO-14
HEF4067BT	16-CHANNEL MUX/DEMUX	SO-24
HEF4068BT	8-INPUT NAND GATE	SO-14
HEF4069UBT	HEX INVERTER	SO-14
HEF4070BT	QUADRUPLE EXCLUSIVE-OR GATE	SO-14
HEF4071BT	QUADRUPLE 2-INPUT OR GATE	SO-14
HEF4072BT	DUAL 4-INPUT OR GATE	SO-14
HEF4073BT	TRIPLE 3-INPUT AND GATE	SO-14
HEF4075BT	TRIPLE 3-INPUT OR GATE	SO-14
HEF4076BT	QUAD D-REGISTER 3-STATE	SO-16
HEF4077BT	QUADRUPLE EXCLUSIVE-NOR GATE	SO-14

N74F3893	QUAD FUTUREBUS TRANSCEIVER	PLCC-20
N74F393	DUAL BINARY RIPPLE COUNTER	SO-14
N74F395	4-BIT CASCADABLE SHIFT REGISTER 3-STATE	SO-16
N74F398	4-BIT FLIP/FLOP TRUE AND COMP OUTPUT	SO-20
N74F399	4-BIT FLIP/FLOP TRUE AND COMP OUTPUT	SO-16
N74F40	DUAL 4-INPUT NAND BUFFER	SO-14
N74F412	OCTAL BUFFERED LATCH	SO-24
N74F432	OCTAL BUFFERED LATCH	SO-24
N74F455	OCTAL INV BUFFER W/PARITY	SO-24
N74F456	OCTAL NON-INV BUFFER W/ PARITY	SO-24
N74F50109	METASTABLE IMMUNE D & N PKGS	SO-16
N74F50728	METASTABLE IMMUNE D & N PKGS	SO-14
N74F50729	METASTABLE IMMUNE D & N PKGS	SO-14
N74F5074	METASTABLE IMMUNE D & N PKGS	SO-14
N74F51	DUAL 2-WIDE 2INPUT AOI GATE	SO-14
N74F521	8-BIT IDENT COMPARATOR	SO-20
N74F524	8-BIT REGISTER COMPARATOR	SO-20
N74F5300	FIBER OPTICS LED DRIVER	SO-8
N74F5302	FIBER OPTIC DUAL LED DRIVER	SO-14
N74F533	OCTAL 3-STATE LATCH INVERTING	SO-20
N74F534	OCTAL D FLIP/FLOP 3-STATE INVERTING	SO-20
N74F537	1-OF-10 DECODER 3-STATE	SO-20
N74F538	1-OF-8 DECODER 3-STATE	SO-20
N74F539	DUAL 1-OF-4 DECODER 3-STATE	SO-20
N74F540	OCTAL 3-STATE DRIVER/BUFFER	SO-20
N74F541	OCTAL 3-STATE DRIVER/BUFFER	SO-20
N74F543	OCTAL TRANSCEIVER BIDIRECTIONAL LATCH	SO-24
N74F544	OCTAL TRANSCEIVER BIDIRECTIONAL LATCH	SO-24
N74F545	OCTAL BUS TRANSCEIVER	SO-20
N74F547	OCTAL DECODER/MUX W/ LATCHES	SO-20

SMD Product Listing

N74F548	OCT DECODER/MUX W/ ACKNOWLEDGE	SO-20
N74F552	OCT REG TRANSCEIVER W/PARITY/ST FLAGS	SO-28
N74F563	OCTAL D-TYPE LATCH	SO-20
N74F564	OCTAL D FLIP/FLOP	SO-20
N74F568	4-BIT BCD DECADE UP/DOWN COUNTER	SO-20
N74F569	4-BIT BINARY UP/DOWN COUNTER	SO-20
N74F573	OCTAL D-TYPE LATCH	SO-20
N74F574	OCTAL D FLIP/FLOP	SO-20
N74F579	8-BIT COUNTER COMMON I/O, 3-STATE	SO-20
N74F582	4-BIT BCD ALU	SO-24
N74F583	4-BIT BCD ADDER	SOL-16
N74F588	GPIB COMPATIBLE OCTAL TRANSCEIVER	SO-20
N74F595	8-BIT SHIFT REGISTER W/ LATCH	SO-16
N74F597	8-BIT SHIFT REGISTER W/ LATCH	SO-16
N74F604	DUAL 8-BIT LATCH 3-STATE	SO-28
N74F605	DUAL 8-BIT LATCH O/C	SO-28
N74F620	OCTAL BUS TRANSCEIVER 3-STATE	SO-20
N74F621	OCTAL BUS TRANSCEIVER O/C	SO-20
N74F622	OCTAL BUS TRANSCEIVER O/C	SO-20
N74F623	OCTAL BUS TRANSCEIVER 3-STATE	SO-20
N74F64	AND/OR-INVERT GATE	SO-14
N74F640	OCTAL BUS TRANSCEIVER	SO-20
N74F641	OCTAL BUS TRANSCEIVER (O/C)	SO-20
N74F642	OCTAL BUS TRANSCEIVER	SO-20
N74F646	OCTAL BUS TRANSCEIVER AND REGISTER	SO-24

74HC583	BCD ADDER	SO-16
74HC597	8-BIT SHIFT REGISTER W/INPUT LATCH	SO-16
74HC640	OCTAL 3-STATE TRANSCEIVER, INV	SO-20

SMD Product Listing

74HC643	OCTAL TRUE/INVERTING TRANSCEIVER 3-STATE	SO-20
74HC646	OCTAL TRANSCEIVER/REGISTER	SO-24
74HC648	OCT INVERTING TRANSCEIVER/REGISTER 3-STATE	SO-24
74HC670	4 × 4 REGISTER FILE 3-STATE	SO-16
74HC688	8-BIT MAGNITUDE COMPARATOR	SO-20
74HC7030	64 WORD × 9-BIT FIFO	SO-28
74HC7046A	PHASED-LOCKED LOOP W/LOCK	SO-16
74HC7266	QUAD 2-INPUT EXCLUSIVE-NOR GATE	SO-14
74HC73	DUAL J-K MASTER SLAVE FLIP/FLOP	SO-14
74HC74	DUAL D-TYPE EDGE TRIGGER FLIP/FLOP	SO-14
74HC75	4-BIT BISTABLE LATCH	SO-16
74HC7540	OCTAL SCHMITT TRIGGER BUFFER/LINE DRIVER INV	SO-20
74HC7541	OCTAL SCHMITT TRIGGER BUFFER/LINE DRIVER N/INV	SO-20
74HC85	4-BIT MAGNITUDE COMPARATOR	SO-16
74HC86	QUAD 2-INPUT EXCLUSIVE-OR GATE	SO-14
74HC9014	NINE WIDE BUFFER W/SCHMITT TRIGGER	SO-20
74HC9114	NINE WIDE BUFFER W/SCHMITT TRIGGER	SO-20
74HC9115	NINE WIDE BUFFER W/SCHMITT TRIGGER	SO-20
74HC93	4-BIT BINARY COUNTER	SO-14

N74S189	64-BIT RAM (16 × 4) TS	N74365A	HEX BUFFER W/ COMMON ENABLE 3-STATE
N74S194	4-BIT SHIFT REGISTER	N74366A	HEX INVERT W/ COMMON ENABLE 3-STATE
N74S195	4-BIT PARALLEL SHIFT REGISTER	N74367A	HEX BUFFER, 4-BIT & 2-BIT, 3-STATE
N74S20	DUAL 4-INPUT NAND GATE	N74368A	HEX INVERT, 4-BIT & 2-BIT, 3-STATE
N74S225	FIFO	N7437	QUAD 2-INPUT NAND BUFFER
N74S240	OCTAL 3-STATE BUFFER	N7438	QUAD 2-INPUT NAND BUFFER OC
N74S241	OCTAL 3-STATE BUFFER	N7439	QUAD 2-INPUT NAND BUFFER OC
N74S244	OCTAL 3-STATE DRIVER	N7440	DUAL 4-INPUT NAND BUFFER
N74S251	3-STATE DATA SELECTOR/MUX	N7445	BCD/DEC DECODER/DRIVER
N74S253	DUAL 4-TO-1 DATA SELECTOR/MUX	N7451	DUAL 2-WIDE 2 INPUT AOI GATE
N74S257	QUAD 2-TO-1 DATA SELECTOR/MUX	N7474	DUAL D-TYPE EDGE-TRIGGERED FLIP/FLOP
N74S258	QUAD 2-TO-1 DATA SELECTOR/MUX	N7485	4-BIT MAGNITUDE COMPARATOR
N74S260	DUAL 5-INPUT NOR GATE	N7486	QUAD 2-INPUT EXCLUSIVE OR GATE
N74S273	OCTAL D FLIP/FLOP	N7490	DECADE COUNTER
N74S280	9-BIT ODD/EVEN PARITY GENERATOR CHECKER	N7492	DIVIDE-BY-TWELVE COUNTER
N74S301	256-BIT RAM (256 × 1) OC	N7493	4-BIT BINARY COUNTER
N74S32	QUAD 2-INPUT OR GATE	N8T09	QUAD 3-STATE BUS DRIVER
N74S37	QUAD 2-INPUT NAND BUFFER	N8T13	DUAL LINE DRIVER
N74S373	OCTAL 3-STATE LATCH	N8T20	BIDI MONOSTABLE (DIFFIN)
N74S374	OCTAL D-FLIP/FLOP, 3-STATE	N8T23	DUAL IBM 360/370 INTF DRIVER
N74S38	QUAD 2-INPUT NAND BUFFER OC	N8T24	TRIPLE IBM 360/370 INTF RECEIVER
N74S40	DUAL 4-INPUT NAND BUFFER	N8T26A	QUAD BUS DRIVER/RECEIVER, 3-STATE
N74S51	DUAL 2-WIDE 2-INPUT AOI GATE	N8T34	QUAD BUS TRANSCEIVER
N74S534	OCTAL D-FLIP/FLOP, 3-STATE	N8T37	HEX BUS RECEIVER W/ HYSTERESIS
N74S64	4-2-3-2 INPUT AOI GATE	N8T38	QUAD BUS TRANSCEIVER OC
N74S74	DUAL D-TYPE EDGE-TRIGGER FLIP/FLOP	N8T95	HEX BUFFER W/ COMMON ENABLE, 3-STATE
N74S85	4-BIT MAGNITUDE COMPARATOR	N8T96	HEX INVERT W/ COMMON ENABLE, 3-STATE
N74S86	QUAD 2-INPUT EXCLUSIVE OR GATE	N8T97	HEX BUFFER, 4-BIT & 2-BIT, 3-STATE
N7400	QUAD 2-INPUT NAND GATE	N8T98	HEX INVERT, 4-BIT & 2-BIT, 3-STATE
N7402	QUAD 2-INPUT NOR GATE	N8X01A	CRC GENERATOR CHECKER
N7403	QUAD 2-INPUT NAND GATE OC	N8X305	8-BIT BIPOLAR MICROCONTROLLER
N7404	HEX INVERTER	N8X310	INTERRUPT CONTROL CO-PROCESSOR
N7405	HEX INVERTER OC	N8X320	8/16-BIT I/O REGISTER ARRAY
N7406	HEX INV BUFFER/DRIVER OC	N8X350	2048-BIT 8 × 300 RAM (256 × 8) TS
N7407	HEX BUFFER/DRIVER OC	N8X371	8-BIT BIDIRECTIONAL I/O PORT
N7408	QUAD 2-INPUT AND GATE	N8X372	8-BIT I/O PORT
N7410	TRIPLE 3-INPUT NAND GATE	N8X372-000	8-BIT I/O PORT
N74121	MONOSTABLE MULTIVIBRATOR	N8X372-001	8-BIT I/O PORT
N74123	RETRIG MONOSTABLE MULTI	N8X372-002	8-BIT I/O PORT
N74125	QUAD 3-STATE BUS BUFFER	N8X372-003	8-BIT I/O PORT
N74126	QUAD 3-STATE BUS BUFFER	N8X372-004	8-BIT I/O PORT
N7414	HEX SCHMITT TRIGGER	N8X372-005	8-BIT I/O PORT
N74145	BCD TO DEC DECODER/DRVR OC	N8X372-006	8-BIT I/O PORT
N74150	16 TO 1 MUX	N8X372-007	8-BIT I/O PORT
N74154	4 TO 16 DECODER/DEMUX	N8X372-008	8-BIT I/O PORT
N74157	QUAD 2-IN DATA SELECTOR	N8X372-009	8-BIT I/O PORT
N74158	QUAD 2-IN DATA SELECTOR	N8X372-010	8-BIT I/O PORT
N7416	HEX INV BUFFER/DRIVER OC	N8X372-011	8-BIT I/O PORT
N74164	8-BIT SIPO S/R	N8X372-012	8-BIT I/O PORT
N74166	8-BIT SHIFT REGISTER	N8X372-013	8-BIT I/O PORT
N7417	HEX BUFFER/DRIVER OC	N8X372-014	8-BIT I/O PORT
N74174	HEX D-TYPE FLIP/FLOP WITH CLEAR	N8X372-015	8-BIT I/O PORT
N74175	QUAD D-TYPE EDGE TRIGGERED FLIP/FLOP	N8X376	8-BIT I/O PORT
N74192	SYNC DECADE UP/DOWN COUNTER	N8X376-005	8-BIT I/O PORT
N74193	SYNC 4-BIT UP/DOWN COUNTER	N8X376-006	8-BIT I/O PORT
N74194	4-BIT BIDIRECTIONAL S/R	N8X376-014	8-BIT I/O PORT
N74199	8-BIT SHIFT REGISTER	N8X376-015	8-BIT I/O PORT
N7420	DUAL 4-INPUT NAND GATE	N8X401	8-BIT MCU
N7425	DUAL 4-INPUT NOR W/STORAGE	N8X41	AUTO DIR BUS TRANSCEIVER
N7426	QUAD 2-INPUT NAND GATE OC	N8X60	FIFO RAM CONTROLLER
N7432	QUAD 2-INPUT OR GATE	N82HS195	16K PROM (4096 × 4) TS 45NS
N7433	QUAD 2-INPUT NOR BUFFER	N82HS195A	16K PROM (4096 × 4) TS 35NS

PLS173/BLA	PLD FPLA 22 × 42 × 10	54F126/BCA	BUFFER
PLS179/BLA	FIELD PROG LOGIC SEQUENCER	54F126/BDA	BUFFER
UA733/BCA	DIFFERENTIAL VIDEO AMPLIFIER	54F126/B2A	BUFFER
26LS31/BEA	QUAD DIFF LINE DRIVER	54F138/BEA	1-OF-8 DECODER/DEMUX
26LS31/BFA	QUAD DIFF LINE DRIVER	54F138/BFA	1-OF-8 DECODER/DEMUX
26LS31/B2A	QUAD DIFF LINE DRIVER	54F138/B2A	1-OF-8 DECODER/DEMUX
26LS32/BEA	QUAD HIGH SPEED DIFF RECEIVER	54F139/BEA	DUAL 1-OF-4 DECODER/DEMUX
26LS32/BFA	QUAD HIGH SPEED DIFF RECEIVER	54F139/B2A	DUAL 1-OF-4 DECODER/DEMUX
26LS32/B2A	QUAD HIGH SPEED DIFF RECEIVER	54F14/BCA	HEX SCHMITT TRIGGER
26LS32A/BEA	QUAD HIGH SPEED DIFF RECEIVER	54F14/BDA	HEX SCHMITT TRIGGER
26LS32A/BFA	QUAD HIGH SPEED DIFF RECEIVER	54F14/B2A	HEX SCHMITT TRIGGER
26LS32A/B2A	QUAD HIGH SPEED DIFF RECEIVER	54F148/BEA	8-TO-3 PRIORITY ENCODER
26LS33/BEA	QUAD HIGH SPEED RECEIVER	54F154/BLA	4-TO-16 DECODER/DEMUX
26LS33A/BEA	QUAD HI-SPEED RECEIVER	54F157A/BEA	QUAD 2-IN DATA SELECTOR INV
2681/BQA	DUART	54F157A/BFA	QUAD 2-IN DATA SELECTOR INV
2681/BUA	DUART	54F157A/B2A	QUAD 2-IN DATA SELECTOR INV
2681/BXA	DUART	54F158A/BEA	QUAD 2-INPUT MULTIPLEXER
2692/BQA	CMOS DUART	54F161A/BEA	SYNC 4-BIT BINARY COUNTER
2692/BXA	DUAL UART	54F161A/BFA	SYNC 4-BIT BINARY COUNTER
27C256/BXA-20	256K CMOS EPROM 200NS	54F161A/B2A	SYNC 4-BIT BINARY COUNTER
27C256/BXA-25	256K CMOS EPROM 250NS	54F163A/BEA	SYNC 4-BIT BINARY COUNTER
27C64A/BXA-20	64K CMOS EPROM 200NS	54F163A/BFA	SYNC 4-BIT BINARY COUNTER
27C64A/BXA-25	64K CMOS EPROM 250NS	54F163A/B2A	SYNC 4-BIT BINARY COUNTER
27HC641/BJA-70	64K EPROM 70NS	54F164/BCA	8 BIT SIPO SHIFT REG.
27HC641/BJAOT-70	64K EPROM 70NS	54F169/BEA	SYNC BINARY 4 BIT UP/DOWN COUNTER
27HC641/B3A-70	64K EPROM 70NS	54F173/BEA	QUAD 3-STATE D-TYPE FLIP/FLOP
27HC641/B3AOT-55	64K EPROM 55NS OTP	54F174/BEA	HEX D FLIP/FLOP WITH CLEAR
27HC641/B3AOT-70	64K EPROM 70NS OTP	54F175/BEA	QUAD D-TYPE FLIP/FLOP
5018/BWA	8 BIT D/A CONVERTER VOLT OUT	54F181/BLA	4-BIT ARITHMETIC LOGIC UNIT
5205/BPA	HI FREQUENCY OP AMP	54F190/BEA	DECADE UP/DOWN COUNTER
521/BCA	HIGH SPEED COMPARATOR	54F193/BEA	4-BIT BINARY UP/DOWN COUNTER
521/BDA	HIGH SPEED COMPARATOR	54F194/BEA	4-BIT SHIFT REGISTER
5212/BPA	FIBER OPTIC TRANSIMPEDANCE AMP	54F194/B2A	4-BIT SHIFT REGISTER
522/BCA	HIGH SPEED DUAL DIFF COMP	54F198/BLA	8 BIT SHIFT REGISTER
527/BCA	VOLTAGE COMPARATOR	54F20/BCA	DUAL 4-INPUT NAND GATE
527/BDA	VOLTAGE COMPARATOR	54F20/B2A	DUAL 4-INPUT NAND GATE
529/BCA	HIGH SPEED COMPARATOR	54F240/BRA	OCTAL 3-STATE BUFFER
529/BDA	HIGH SPEED COMPARATOR	54F240/B2A	OCTAL 3-STATE BUFFER
54F00/BCA	QUAD 2-INPUT NAND GATE	54F241/BRA	OCTAL BUS/LINE DRIVER
54F00/BDA	QUAD 2-INPUT NAND GATE	54F244/BRA	OCTAL BUS/LINE DRIVER
54F00/B2A	QUAD 2-INPUT NAND GATE	54F244/BSA	OCTAL BUS/LINE DRIVER
54F02/BCA	QUAD 2-INPUT NOR GATE	54F244/B2A	OCTAL BUS/LINE DRIVER
54F02/B2A	QUAD 2-INPUT NOR GATE	54F245/BRA	OCTAL BUS TRANCEIVER
54F04/BCA	HEX INVERTER	54F245/BSA	OCTAL BUS TRANCEIVER
54F04/BDA	HEX INVERTER	54F245/B2A	OCTAL BUS TRANCEIVER
54F04/B2A	HEX INVERTER	54F253/BEA	DUAL 4-INPUT MULTIPLEXER
54F08/BCA	QUAD 2-INPUT AND GATE	54F253/B2A	DUAL 4-INPUT MULTIPLEXER
54F08/BDA	QUAD 2-INPUT AND GATE	54F257A/BEA	QUAD 2-TO-1 MUX (3-STATE)
54F08/B2A	QUAD 2-INPUT AND GATE	54F257A/BFA	QUAD 2-TO-1 MUX (3-STATE)
54F10/BCA	TRIPLE 3-INPUT NAND GATE	54F258A/BEA	QUAD 2-TO-1 MUX (3-STATE)
54F109/BEA	DUAL J-K FLIP/FLOP	54F259/BEA	8-BIT ADDRESSABLE LATCH
54F109/B2A	DUAL J-K FLIP/FLOP	54F269/BLA	8-BIT BIDIRECTIONAL BINARY COUNTER
54F11/BCA	TRIPLE 3-INPUT AND GATE	54F269/B3A	8-BIT BIDIRECTIONAL BINARY COUNTER
54F11/BDA	TRIPLE 3-INPUT AND GATE	54F273/BRA	OCTAL D-TYPE FLIP/FLOP
54F11/B2A	TRIPLE 3-INPUT AND GATE	54F273/BSA	OCTAL D-TYPE FLIP/FLOP
54F112/BEA	DUAL J-K FLIP/FLOP	54F280A/BCA	9-BIT ODD/EVEN PAR GEN CHECKER

Alphanumeric Product Listing

54F280A/B2A	9-BIT ODD/EVEN PAR GEN CHECKER	54LS08/BDA	QUAD 2-INPUT AND GATE
54F280B/BCA	9-BIT ODD/EVEN PARITY GEN	54LS10/BCA	TRIPLE 3-INPUT NAND GATE
54F280B/BDA	9-BIT ODD/EVEN PARITY GEN	54LS125/BCA	QUAD 3-STATE BUS BUFFER
54F280B/B2A	9-BIT ODD/EVEN PARITY GEN	54LS138/BEA	1-OF-8 DECODER/DEMUX
54F299/BRA	OCTAL SHIFT/STORAGE REGISTER	54LS138/B2A	1-OF-8 DECODER/DEMUX
54F299/B2A	OCTAL SHIFT/STORAGE REGISTER	54LS14/BCA	HEX SCHMITT TRIGGER
54F3037/BEA	QUAD 2-IN NAND TRANS LINE DRIVER	54LS14/BDA	HEX SCHMITT TRIGGER
54F32/BCA	QUAD 2-INPUT OR GATE	54LS154/BJA	1-OF-16 DECODER/DEMUX
54F32/BDA	QUAD 2-INPUT OR GATE	54LS161A/BEA	4-BIT BINARY COUNTER
54F32/B2A	QUAD 2-INPUT OR GATE	54LS163A/BEA	SYNC 4-BIT BINARY COUNTER
54F367/BEA	HEX BUFFER 4 BIT AND 2 BIT, 3-STATE	54LS164/BCA	8-BIT SIPO S/R
54F367/BFA	HEX BUFFER, 4-BIT & 2-BIT, 3-STATE	54LS164/BDA	8-BIT SIPO S/R
54F37/BCA	QUAD 2-INPUT NAND-BUFFER	54LS173/BEA	QUAD 3-STATE D-TYPE FLIP/FLOP
54F37/BDA	QUAD 2-INPUT NAND BUFFER	54LS174/BEA	HEX D-TYPE FLIP/FLOP WITH CLEAR
54F373/BRA	OCTAL 3-STATE LATCH	54LS174/BFA	FLIP/FLOP
54F373/B2A	OCTAL 3-STATE LATCH	54LS175/BEA	QUAD D-TYPE EDGE-TRIG FLIP/FLOP
54F374/BRA	OCTAL D-FLIP/FLOP 3-STATE	54LS191/BEA	SYNC BINARY UP/DOWN COUNTER
54F374/B2A	OCTAL D-FLIP/FLOP 3-STATE	54LS193/BEA	DUAL BINARY UP/DOWN COUNTER
54F38/BCA	QUAD 2-INPUT NAND BUFFER O/C	54LS20/BCA	DUAL 4-INPUT NAND GATE
54F38/B2A	QUAD 2-INPUT NAND BUFFER	54LS20/BDA	DUAL 4-INPUT NAND GATE
54F398/BRA	4-BIT FLIP/FLOP TRUE AND COMP OUTPUT	54LS240/BRA	OCTAL INV BUFFER (3-STATE)
54F399/BEA	4-BIT FLIP/FLOP TRUE AND COMP OUTPUT	54LS241/BRA	OCTAL 3-STATE BUFFER
54F432/B2A	OCTAL BUFFERED LATCH	54LS244/BRA	MIL DWG 7705701RA
54F455/BKA	OCTAL INV BUFFER W/PARITY	54LS244/BSA	OCTAL BUFFER, 3-STATE
54F455/B2A	OCTAL INV BUFFER W/PARITY	54LS245/BRA	OCTAL TRANSCEIVER
54F5074/BCA	METASTABLE IMMUNE D FLIP/FLOP	54LS245/B2A	OCTAL TRANSCEIVER, 3-STATE
54F5074/BDA	METASTABLE IMMUNE D FLIP/FLOP	54LS257A/BEA	QUAD 2 TO 1 MUX (3-STATE)
54F5074/B2A	METASTABLE IMMUNE D FLIP/FLOP	54LS273/BRA	OCTAL D FLIP/FLOP
54F51/BCA	DUAL 2-WIDE 2-INPUT AOI GATE	54LS365A/BEA	HEX BUFFER W/COMMON ENABLE
54F521/BRA	8-BIT IDENT COMPARATOR	54LS367A/BEA	HEX BUFFER, 4-BIT & 2-BIT
54F538/BRA	1-OF-8 DECODER (3-STATE)	54LS367A/BFA	HEX BUFFER, 4-BIT & 2-BIT
54F538/B2A	1-OF-8 DECODER (3-STATE)	54LS373/BRA	OCTAL 3-STATE LATCH
54F543/BKA	OCTAL LATCHED TRANSCEIVER	54LS373/B2A	OCTAL 3-STATE LATCH
54F543/B2A	OCTAL LATCHED TRANSCEIVER	54LS374/BRA	OCTAL REGISTER
54F543/B3A	OCTAL LATCHED TRANSCEIVER	54LS374/BSA	OCTAL REGISTER
54F544/B2A	OCT TRANS BIDIRECT LATCH	54LS377/BRA	OCTAL D-TYPE FLIP/FLOP W/ENABLE
54F573/BRA	OCTAL D-LATCH, BROADSIDE PINOUT	54LS393/BCA	DUAL BINARY RIPPLE COUNTER
54F574/BRA	OCTAL D FLIP/FLOP, BROADSIDE PINOUT	54LS395A/BEA	4-BIT CASCADABLE S/R 3-STATE
54F579/BRA	8-BIT UP/DOWN COUNTER	54LS74A/BCA	DUAL D-TYPE EDGE TRIGGERED FLIP/FLOP
54F64/BCA	AND/OR-INVERT GATE	54LS74A/BDA	DUAL D-TYPE EDGE TRIGGERED FLIP/FLOP
54F64/B2A	AND/OR INVERT GATE	54LS85/BEA	4-BIT MAGNITUDE COMPARATOR
54F640/BRA	OCTAL BUS TRANSCEIVER	54LS86/BCA	QUAD 2-INPUT EXCLUSIVE OR GATE
54F640/B2A	OCTAL BUS TRANSCEIVER	54LS86/BDA	QUAD 2-INPUT EXCLUSIVE OR GATE
54F646A/BLA	OCTAL BUS TRANS/ REG NINV	54LS86/B2A	QUAD 2-INPUT EXCLUSIVE OR GATE
54F655A/BLA	OCTAL INVERTER BUFFER W/PARITY	54S00/BCA	QUAD 2-INPUT NAND GATE
54F656A/BLA	OCTAL NON-INV BUFFER W/PARITY	54S00/BDA	QUAD 2-INPUT NAND GATE
54F657/BLA	OCTAL BUFFER W/PARITY GEN/CHER	54S02/BCA	QUAD 2-INPUT NOR GATE
54F676/BLA	16-BIT SHIFT REGISTER SIPO	54S02/BDA	QUAD 2-INPUT NOR GATE
54F74/BCA	DUAL D-TYPE EDGE TRIGGER	54S04/BCA	HEX INVERTER
54F74/BDA	DUAL D-TYPE EDGE TRIGGER	54S04/BDA	HEX INVERTER
54F74/B2A	DUAL D-TYPE EDGE TRIGGER	54S08/BCA	QUAD 2-INPUT AND GATE
54F776/BXA	P1-BUS TRANSCEIVER	54S08/BDA	QUAD 2-INPUT AND GATE
54F776/BYA	P1-BUS TRANSCEIVER	54S10/BCA	TRIPLE 3-INPUT NAND GATE
54F776/B3A	P1-BUS TRANSCEIVER	54S10/BDA	TRIPLE 3-INPUT NAND GATE
54F777/BRA	TM-BUS TRANSCEIVER	54S11/BCA	TRIPLE 3-INPUT AND GATE
54F777/BSA	TM-BUS TRANSCEIVER	54S112/BEA	DUAL J-K NEG EDGE FLIP/FLOP
54F777/B2A	TM BUS TRANSCEIVER	54S112/BFA	DUAL J-K NEG EDGE FLIP/FLOP
54LS00/BCA	QUAD 2-INPUT NAND-GATE	54S133/BEA	13-INPUT NAND GATE
54LS00/BDA	QUAD 2-INPUT NAND-GATE	54S138/BEA	3-TO-8 DECODER/DEMUX
54LS02/BCA	QUAD 2-INPUT NOR GATE	54S140/BCA	DUAL 4-INPUT NAND LINE DRIVER
54LS02/BDA	QUAD 2-INPUT NOR GATE	54S140/BDA	DUAL 4-INPUT NAND LINE DRIVER
54LS04/BCA	HEX INVERTER	54S140/B2A	DUAL 4-INPUT NAND LINE DRIVER
54LS04/BDA	HEX INVERTER	54S151/BEA	8-TO-1 MUX
54LS08/BCA	QUAD 2-INPUT AND GATE	54S151/BFA	8-TO-1 MUX
