

Wall shelves

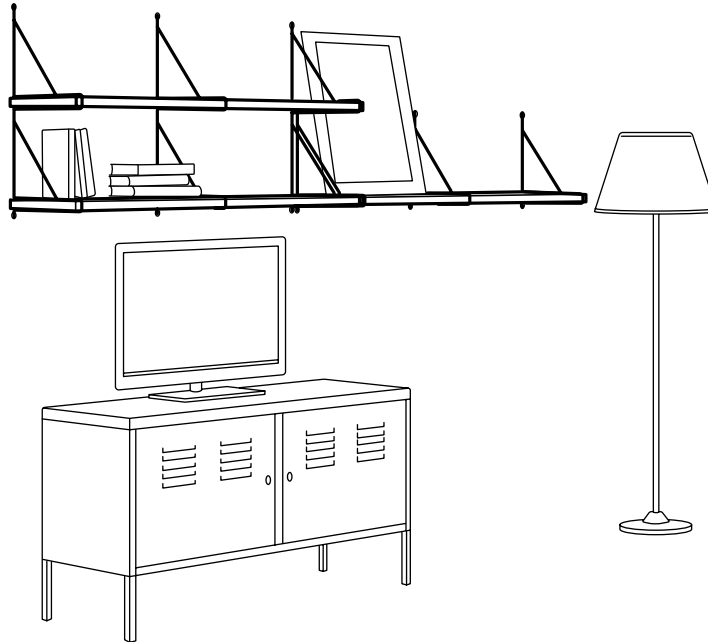

SAFETY

Different wall materials require different types of fixing devices. Use fixing devices suitable for the walls in your home, sold separately. If you are uncertain about what type of fixing devices to use, please contact your local hardware store.

GOOD TO KNOW

The shelves hold 10 kg when supported by two brackets and 20 kg when supported by three. We recommend that you use three brackets with the 120 cm long shelf when possible.

This is to prevent the risk of the shelf slanting. Spread the weight evenly on the shelf.

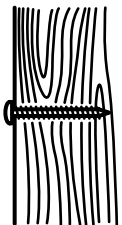

Shelves for every need

With the different shelves and brackets you have the flexibility to create your own personal solution that fits any space. From small to big, in odd spaces, on narrow walls or over furniture. The shelves are suitable for all rooms in the home, except for wet rooms, so feel free to be creative.

WALL ANCHORING GUIDE

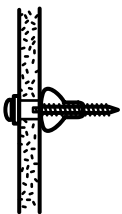

We all want our homes to be a safe place. With the right anchoring device, your wall shelf will be a safe place for your favourite things. Here are some things to think about when installing your wall shelf.

- It's the anchoring devices to the brackets that determine how steady and stable your wall shelf will be.
- Different wall materials require different types of anchoring devices – that's why we don't include them with our brackets. Instead, it's important that you choose anchoring devices that are suitable for your wall.

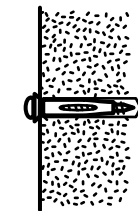

Wall Material: Drywall or plaster with available wood stud.

Anchoring device: Screw inserted directly into stud. For example, a 5 mm screw provided with IKEA FIXA plug and screw set.

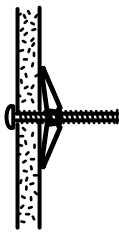

Wall Material: Drywall or plaster without available wood stud.

Anchoring device: Plug with screw. For example, an 8 mm plug provided with IKEA FIXA plug and screw set.

Wall Material: Masonry.

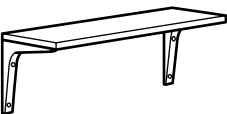

Anchoring device: Plug with screw. For example, an 8 mm plug provided with IKEA FIXA plug and screw set.

Anchoring device hollow wall: Toggle-style

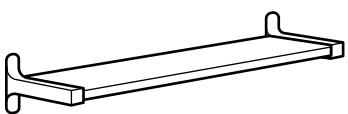

COMBINATIONS
