OUR MISSION

We strive to provide the highest quality products and customer service with the goal of creating lifelong Maxxis customers. Anchored by a strong commitment to our values, we form close partnerships with our stakeholders, and together we work to consistently exceed our customers' expectations.

From design to production, from the factory floor to your favorite road or trail, Maxxis products lead the way in technological advances. For bicycle, automotive, light truck, ATV, motorcycle, kart, trailer and lawn & garden, Maxxis provides the quality customers have come to depend on.

Total customer satisfaction has been Maxxis' guiding purpose since 1967. Working toward this goal has built Maxxis into the successful, worldwide company it is today. Champions around the world choose Maxxis because they know that our extensive product research, unique designs and rigorous testing standards produce tires that will elevate riders to the next level.

MAXXIS BICYCLE TIRE SAFETY

ITEM INFORMATION

- ❖ Consult your owner's manual for specific tire information.
- ❖ Clearance around tires must be maintained. Increasing tire size may require an increased rim width. Inspect tires closely for sufficient clearance.
- ❖ Always wear protective eyewear when installing inner tubes or tires.
- ❖ When replacing tires, be sure to also replace the inner tubes. Stretched inner tubes can crease and fail due to thinning of the inner tube rubber.
- ❖ Consult your bicycle professional for correct rim strip replacement.
- ❖ Make sure your tube size markings match the tire size.
- ❖ Use tire only for designated terrain, on an appropriate bicycle and using proper safety equipment at all times.
- ❖ Follow tire pressure guidelines located on your tire.
- ❖ Check tire pressure before every ride.
- ❖ Check your valve cores for damage. If valve cores are damaged, replace them.
- ❖ Check your tires for damage before and after riding. Punctured, cracked, bulging or blistered tires should be replaced immediately. If not replaced, damage can result in sudden and complete tire failure.
- ❖ Check to ensure that the beads of the tires are fully and evenly seated around the entire circumference of the rims before every ride.
- ❖ After replacing worn tires, take time to become acquainted with the handling and performance of your new tires.
- ❖ Do not cut, sipe or otherwise modify your tires.
- ❖ Check for broken or damaged spokes and replace as necessary.
- ❖ Replace bent or damaged rims or wheels immediately.
- ❖ Liquid sealants should only be used in the following types of tires: Tubeless Road, Tubular, and Tubeless Ready. The use of liquid sealants in any other Maxxis tire will void the warranty.
- ❖ Tube-type tires should only be used in conjunction with an inner tube on an approved rim.
- ❖ Do not store tires in direct sunlight for extended periods of time.
- ❖ Allowing tires to stand in oil, gasoline or other chemicals may have an adverse effect on the rubber compounds of the tire.
- ❖ Failure to follow these guidelines can result in accelerated tread wear and may cause catastrophic tire failure.

BASIC TIRE CONSTRUCTION

CASING

SINGLE-PLY CASING

One layer of nylon wrapped from bead to bead. A single-ply casing conforms well to the terrain and is lighter weight.

DOWNHILL (DH) CASING

Two layers of casing material are used from bead to bead, providing additional protection and sidewall stiffness for downhill applications.

THREADS PER INCH (TPI)

The number of threads that cross through one square inch of a single ply of the tire's casing. Lower TPI gives better puncture, cut and abrasion resistance but is heavier. Higher TPI conforms better to the terrain, offering a smoother, more comfortable ride while reducing the weight of the tire.

Maxxis TPI ratings are the threads-per-inch of a single casing ply, as compared to some competitor TPI ratings.

BEAD

TUBELESS READY

The function of the bead is to keep the tire in contact with the rim while the tire is inflated.

WIRE BEAD

A rigid metal wire is utilized as bead material in applications where ultimate strength is needed and transportability is not a factor.

FOLDABLE BEAD

Foldable beads also keep the tire secured to the rim but are lighter weight and easily transported. The bead is made of spun aramid or Kevlar® fibers.

CARBON FIBER BEAD

A flexible material with greater strength to withstand the forces exerted by a high-pressure road tire.

Tubeless tires provide the rider with many benefits: the ability to run lower air pressures, which improves traction; lower rolling resistance when compared to a tube-type tire; and less chance of flattening since there is no tube. Maxxis Tubeless Ready (TR) tires provide the benefits of a UST tubeless tire without the weight penalty.

Liquid sealants should only be used in the following types of tires: Tubeless Road, Tubular, and Tubeless Ready. The use of liquid sealants in any other Maxxis tire will void the warranty.

NYLON BREAKER

The nylon breaker is a reinforcement option that offers protection from punctures directly under the tread area. The nylon breaker is available in select road tires.

SILKSHIELD

SilkShield offers protection from bead to bead whereas Silkworm is found under the tread only. SilkShield provides an additional level of protection for sidewalls in addition to under the tread.

MAXXSHIELD

MaxxShield represents the ultimate in flat protection. We begin with our SilkShield bead to bead protection and add our K2 (Kevlar Composite) layer under the tread for unparalleled durability.

MAXX PROTECT

A poly-fiber material positioned between the tire tread and the casing. With varying thicknesses of 0.9mm - 1.5mm, MaxxProtect is designed to maximize puncture resistance in select hybrid models.

KEVLAR® INSIDE

A Kevlar® material positioned between the tire tread and the casing. Similar to MaxxProtect technology, Kevlar® Inside varies in thickness and provides optimal puncture protection.

KEVLAR® COMPOSITE

Available in select tires, this Maxxis-exclusive fabric provides greater puncture protection than both standard Kevlar® and Vectran®. The addition of this lightweight and supple material ensures that ride quality and performance remain unsurpassed.

SILKWORM

Silkworm Technology is an exclusive material incorporated into the casing of select models, increasing puncture and tear resistance. Silkworm is featured under the tread as a breaker (denoted as Silkworm.)

EXO

An extremely cut-resistant and abrasion-resistant material added to the sidewalls of select mountain tires. This densely woven fabric is also lightweight and highly flexible, ensuring that the performance of the tire remains unaffected. Choose EXO Protection for exceptionally rocky, treacherous trails where the chance of sidewall cuts and abrasions is high.

L.U.S.T

Maxxis mountain tubeless tires, certified to UST standards, featuring Lightweight Ultimate Sidewall Technology (L.U.S.T.). This technology offers better puncture resistance, improved air retention, better longevity and lower weight than previous tubeless technologies. By adding a thin fabric layer to the sidewall, covered in a special airtight rubber compound, Maxxis created a casing that is lighter, tougher and holds air better.

BUTYL INSERT

An extra piece of butyl rubber that extends from the bead of a downhill tire up into the sidewall. The butyl insert helps prevent pinch flats, protects the rim from hard hits and adds sidewall stability.

BUTYL INSERT

TUBULAR

A traditional tire construction in which the tire casing is sewn or wrapped around an inner tube. These types of tires must be glued or taped onto tubular-specific rims.

PUNCTURE PROTECTION LAYER

CASING

INNER TUBE

CLOTH BASE TAPE

RADIAL ROAD

A radial construction orients the casing threads perpendicular to the direction of rotation. This allows the sidewall to easily bend and flex, resulting in a very compliant and supple ride.

PUNCTURE PROTECTION LAYER

RADIAL CONSTRUCTION

TUBELESS ROAD

Tubeless technology that combines a carbon fiber bead for strength and a butyl inner liner for air retention to eliminate the need for an inner tube. The puncture protection layer helps prevent damage from road debris. Choose Maxxis tubeless road tires for the ultimate road experience.

PUNCTURE PROTECTION LAYER

BUTYL INNER LINER

RUBBER COMPOUNDS

The most important part of a tire is arguably the rubber compound within the tread. By changing the amounts of various components of the rubber formula, engineers can make two identical looking tires perform completely differently. A list of the Maxxis compounds and their distinct characteristics is below.

SINGLE

One compound throughout the tread optimized for longevity and performance.

DUAL

Two compounds used within the tread of select tires to offer lower rolling resistance and increased cornering grip.

SUPER TACKY A special low rebound, high traction compound used in select mountain tires.

PHOTO: WRAGG

3C TRIPLE COMPOUND ROAD

Triple Compound road technology utilizes three distinct silica compounds in different locations within the tread of the tire. The center compound is optimized for exceptional treadwear and low rolling resistance. The progressively softer shoulder compounds provide increased grip while cornering. Choose a Triple Compound Maxxis road tire for the ultimate in tire handling in all conditions.

3C TRIPLE COMPOUND MOUNTAIN

Maxxis 3C Triple Compound mountain technology uses a harder, longer lasting base layer and two progressively softer top layers in order to optimize traction and stability. Maxxis offers three different configurations of our 3C Triple Compound mountain technology: Maxx Speed, Maxx Terra and Maxx Grip.

MAXX SPEED Used primarily in cross country and enduro tires, the two compounds in the outer layer are specially formulated to reduce rolling resistance and optimize treadwear and traction.

MAXX TERRA An intermediate compound configuration used in select mountain tires. 3C Maxx Terra is softer and offers more traction than 3C Maxx Speed, yet provides better treadwear and less rolling resistance than Maxx Grip.

MAXX GRIP A new name for the downhill 3C compound configuration that you have come to know and trust. 3C Maxx Grip offers the ultimate in grip and slow rebound properties for unparalleled traction in downhill applications.

- 120-TPI CASING
- 3C TRIPLE COMPOUND TECHNOLOGY
- K2 (KEVLAR COMPOSITE) PUNCTURE PROTECTION (UNDER TREAD)
- SILKWORM PUNCTURE PROTECTION (UNDER TREAD)

The Campione is the race-specific tubular tire from Maxxis. The supple, high-TPI casing provides the ultimate in ride quality and feel, while the three compounds used in the tread lower rolling resistance and increase cornering grip. And because its Kevlar® Composite (K2) breaker outperforms both Vectran® and regular Kevlar® breakers, the Campione will get you to the finish line. The Campione is the obvious choice for the traditional road racer.

- M6R
- TUBULAR
- 3C TRIPLE COMPOUND TECHNOLOGY
- PRO ROAD COMPETITION TIRE

Our goal with the Campione TT was to create our lightest tubular race tire to date. We started with the proven tread pattern, casing, and 3C Triple Compound of the Campione, but removed any added puncture protection. The result is a lighter weight tire, with a very supple ride, perfect for use in time trials or on the velodrome.

THE WORD

The 25c Campione tubular tire is far and away the best tire I've ever raced. I use it for every race and in ALL conditions.

Rob Britton, Team Smartstop

PRO TIP

Take your time when gluing tubular tires. A little extra attention will give you a securely mounted tire with no wobbles or hops. Or, just take them to your local mechanic!

FORZA

- ❖ MBS
- ❖ TUBULAR SPORT TRAINING TIRE
- ❖ 60-TPI CASING
- ❖ DUAL-COMPOUND RUBBER
- ❖ SILKWORM PUNCTURE PROTECTION (UNDER TREAD)

The Forza is the tubular tire for sport training. The casing provides the optimal mixture of performance and durability, and the dual-compound tread ensures that the tire will last for many miles, yet still grip hard when needed most. The proprietary Silkworm breaker makes the Forza extremely resistant to cuts and punctures. Choose the Forza if you prefer the feel of tubulars every day.

THE WORD

The 25c tubulars are the nicest tires I have ridden. They give us all an edge to our racing, especially in the rain. I wouldn't want to rail a sharp corner in the final sprint of a race without these tires on my bike.

*Team Smartstop, Kris Dahl
(Current Canadian U23 Time Trial National Champion)*

--------	-------	----------	---------------	---------------------

- M217RU
- TUBELESS READY ROAD RACING TIRE
- CARBON FIBER BEAD
- DUAL-COMPOUND
- ONE70 TECHNOLOGY

Building on the legacy of our original Padrone road tubeless tire is the Padrone-TR (Tubeless Ready). Using Maxxis' TR technology from our mountain bike tires along with a ONE70 (170 TPI) casing and a carbon fiber bead, we were able to create a race-ready tubeless road tire weighing just 260g for a 23c size! The Padrone-TR also features our SilkShield technology, protecting the tire from bead to bead.

PRO TIP

Some tire and rim combinations can make for a very tight-fitting bead. A little bit of dish soap and water can really ease the mounting process. Make sure to clean any excess soap off of braking surfaces (rims or rotors) before riding.

RACING	SPORT	TRAINING	URBAN COMMUTE	PUNCTURE PROTECTION
1	2	3	4	5

- M215
- ONE70 TECHNOLOGY
- PRO ROAD COMPETITION TIRE

The Relix TT is Maxxis' lowest rolling resistance road tire to date! It features our most supple ONE70 (170 TPI) casing and our fastest rolling rubber compound. The Relix TT is ideally suited for racing triathlons, time trials, and on the track. Due to its extremely light weight, the Relix TT is recommended only for race applications.

PRO TIP

If you keep a spare tube in a saddle bag or hydration pack, be sure to check it at least once a season. It's possible for loose tools, keys, friction, etc. to cause a puncture. Putting your spare tube inside a small plastic bag will go a long way toward protecting it.

- 2-PLY NYLON BREAKER PUNCTURE PROTECTION
- PRO ROAD COMPETITION TIRE

The Columbiere is designed for true road racing enthusiasts. The Columbiere's slick design with subtle siping allows racers to cover ground in any condition with plenty of confidence.

- M210
- SILKWORM PUNCTURE PROTECTION
- PRO ROAD COMPETITION TIRE

Named after the rugged mountain range in Italy, the Dolomites was designed as a do-it-all competition road tire. With a lightweight 120 TPI casing and dual-compound rubber, the Dolomites is at home tackling big climbs and the descents afterwards. With our under-tread Silkworm puncture protection, the Dolomites can hold its own on rough roads.

THE WORD

This year is the first time I've ever ridden Maxxis tires, and I've been really impressed! At our training camp, I gave a fresh set of Columbiere tires a go on an unknown, dusty, twisty descent. To my enjoyment, I was able to fly through the corners! Even on one of the trickier corners that I misjudged, the tires were superb and held on to the road! (Actually, they saved me from some laughs from my new mates!) Most of our races have been on the Forza Tubulars, and those babies have been bomb-proof! The Silkworm puncture protection has kept me rolling, while many of the other riders have been relegated to the roadside.

Jonathon Frater, Jelly Belly pb Maxxis

PRO TIP

Road grit can work its way into the casing of a tire, eventually causing a puncture. That's why it's important to check for debris after a ride, especially if it's been raining.

ROULER

PART #	SIZE	ETRTO	TPI	BEAD	WEIGHT	COMPOUND	MAX PSI	COLOR	TECH

1	2	3	4	5

- ❖ **M3D**
- ❖ **PRO ROAD COMPETITION TIRE**
- ❖ **SILKWORM PUNCTURE PROTECTION**

A lightweight, supple and race-ready tire, the Rouler features a 120 TPI casing for a smooth ride, a Silkworm breaker for puncture protection and a dual-compound tread pattern for improved cornering performance.

**PRO TIP**

For training, consider going with a 25c or even 28c tire if your frame can accommodate them. The increased volume does wonders for ride comfort, especially on long days in the saddle.

DETONATOR

- ❖ **SILKWORM PUNCTURE PROTECTION AVAILABLE**
- ❖ **TRAINING TIRE**

With its dual-compound tread pattern, the Maxxis Detonator provides a durable training tire with a race pedigree. Softer silica compound on the outer edges of the tire allows for great traction in a variety of road conditions. The Detonator is durable enough to provide plenty of winter miles, yet supple and grippy enough to race on in the summer.

RE-FUSE

- ❖ M200
- ❖ DIAMOND-KNURLED SLICK DESIGN
- ❖ MAXXSHIELD PUNCTURE PROTECTION

Our most popular training tire, providing excellent training and commuting dependability. The Re-Fuse will rack up plenty of road miles in all riding conditions.

THE WORD

Riding up at our cabin in the deep Colorado mountains is always an adventure. With limited road choices, we are often on dirt roads with hours between car sightings. I have to count on my tires to get me back home, especially before the thunderstorms come in. My Maxxis Re-Fuse road tires continue to impress me, even when the road starts to look more like an ATV trail.

				1 2 3 4			

- M209RU
- FAST-ROLLING RAMPED CENTER KNOBS
- SHEDS MUD QUICKLY
- AGGRESSIVE SIDE KNOBS FOR CONTROLLED CORNERING
- TUBELESS READY (TR)

The Mud Wrestler offers outstanding performance in wet conditions so common to this grueling race discipline. The center knobs are continuously ramped to roll fast, while the aggressive side knobs cut through the nastiest mud and snow. The Mud Wrestler sheds mud with ease thanks to its open tread design. If you are looking for an all-conditions race tire, then the Mud Wrestler is for you.

PRO TIP

Dropping your tire pressure by just a few PSI can really help with traction in wet, sloppy conditions. The tire will more easily conform to the surface, offering a larger contact patch and boosting your confidence!

RACING	SPORT	TRAINING	URBAN COMMUTE	PUNCTURE PROTECTION
--------	-------	----------	---------------	---------------------

- M2017
- VARIOUS PUNCTURE PROTECTION OPTIONS
- REFLECTIVE STRIPE FOR ADDED VISIBILITY

The Overdrive II is the next step in the evolution of our popular Overdrive series of commuter/trekking tires. The smooth center rolls quickly along pavement, and the textured shoulders offer a bit more cornering grip in looser conditions. For added visibility while commuting in the morning fog or late evening, the Overdrive II features a reflective strip integrated into the sidewall. To top it all off, the Overdrive II uses either our MaxxShield or Silkworm puncture protection for the ultimate in flat prevention.

PRO TIP

Choosing a tire with a reflective stripe on the sidewall helps make you more visible when riding at night or in low-light conditions.

						3 4	1 2 3 4

- M336RU
- SEMI-SLICK
- EXO PROTECTION AVAILABLE
- TUBELESS READY (TR)

The Maxxis Tread Lite was designed to be a speed demon in dry conditions. The tire features a file tread pattern in the center with a low knob height to keep rolling resistance to a minimum. Ample side knobs provide grip in the corners and the 120 TPI tubeless ready casing offers a compliant, but durable ride. The Tread Lite is your choice for XC racing on dry, hardpack courses.

PRO TIP

If you're using a liquid sealant, be sure to check it regularly. Over time it will dry out, and if you get a puncture, your tire won't be able to seal. If you can't hear a little bit of sloshing around inside your tire, it may be time to add some new sealant.

ASPEN

PART #	SIZE	ETRTO	TPI	BEAD	WEIGHT	COMPOUND	MAX PSI	TECH

The majority of kids' mountain bike tires are either overweight or under-gunned. The Sniper from Maxxis is the exception. The center knobs are ramped to decrease rolling resistance, but the aggressive side knobs will boost any little shredder's confidence in the turns. The Sniper uses our lightweight SilkShield material for puncture protection from bead-to-bead.

THE WORD

If you only have one bike and you're looking for a do-it-all tire, the Maxxis Ikon has the most bang for your buck.

Take your bike from the pump track, to the jumps, to the trails and never question your control.

Brandon Semenuk

- MEDIUM KNOB HEIGHT
- IDEAL FOR TECHNICAL XC RACE COURSES
- 3C MAXX SPEED AVAILABLE
- TUBELESS READY (TR)

The Ardent Race tire from Maxxis is ideally suited for technical XC race courses and endurance-length events. With its medium-height tread, the Ardent Race bridges the gap between the XC-oriented Ikon and the trail-oriented Ardent. The center knobs are ramped to reduce rolling resistance, and the side knobs are angled and stepped to provide great biting traction in corners. Choose the Ardent Race for your next demanding XC race or epic trail ride.

- ✦ HIGH-VOLUME CASING
- ✦ AGGRESSIVE TREAD DESIGN
- ✦ EXCELLENT PERFORMER IN WET CONDITIONS
- ✦ TUBELESS READY (TR) AVAILABLE

An aggressive tread on a high-volume casing, designed with great traction in mind. The Ardent doesn't forget the racer, with large block-style side knobs offering numerous edges for high-speed cornering. The center tread, while ideal for braking and accelerating traction, also features ramped knobs to minimize rolling resistance. With a wide variety of size offerings, the Ardent captures every mountain rider's needs.

HIGH ROLLER

PART #	SIZE	ETRTO	TPI	BEAD	WEIGHT	COMPOUND	MAX PSI	TECH

						1 2 3 4	1 2 3 4

- **M119**
- **RAMPED KNOB DESIGN**
- **VERSATILE PERFORMANCE**

One of our most popular and versatile mountain tires, the High Roller's ramped leading edges roll fast, while the side lugs offer stability at higher speeds and a sharp edge to hold corners. The grooved center knobs provide straight-line control. The High Roller's tread design translates well to all mountain bike disciplines including downhill, cross country and freeride.

THE WORD

For a balance of control and durability on slippery trails, I like to run a softer MaxxTerra compound tire in front and a harder MaxxSpeed compound tire in the rear.

Geoff Kabush, Scott-Irox Racing

The DH version of the Maxxis Shorty was an instant favorite of our World Cup DH racers. The single-ply version offers trail riders the same traction in a much lighter package. All trail versions of the Shorty feature our Tubeless Ready casing and 3C MaxxTerra compound. EXO sidewall protection is available as an option for each size.

THE WORD

Since switching to Maxxis Tubeless-ready tires across the Pivot line, the most difficult thing for us to decide is which tires to run for each application, as Maxxis offers such an incredible variety of tread patterns that work well in a wide variety of applications. Most tire brands have maybe one or two popular tread patterns. With Maxxis, every tire is a winner.

Chris Cocalis, President of Pivot Cycles

Our downhill athletes face a wide variety of terrain and conditions over the course of a season. For dry and hardpack courses, Maxxis has developed the Griffin. The tread pattern is less aggressive than other tires in our line, but still uses the durable casing Maxxis DH tires are known for. The knobs are smaller and more tightly spaced, with heavily ramped leading edges to keep rolling resistance down on tracks with lots of pedaling.

- **3C MAXX GRIP AND SUPER TACKY AVAILABLE**

The High Roller's ramped leading edges roll fast, while the side lugs offer stability at speed and a sharp edge to hold corners. The grooved center knobs provide straight-line control. The High Roller's tread design translates well to all mountain bike disciplines including downhill, cross country and freeride.

- **OPEN TREAD DESIGN**
- **IMPROVED BRAKING AND TRACTION**
- **3C MAXX GRIP AND SUPER TACKY AVAILABLE**

An open and aggressive tread design gives the High Roller II excellent soil penetration and mud-clearing ability. A square profile provides a solid, consistent feel across the knobs. Modified knobs on the shoulder and center improve braking performance and traction on hard surfaces. When gravity pulls you downhill, rely on the High Roller II to keep you upright.

Today's World Cup downhill tracks are steep, technical monsters with ever-changing conditions. Our pros needed a mid-spike tire that could handle dry, loose, blown-out corners as well as a bit of mud. The Shorty is that tire. A high-volume, dual-ply downhill casing makes the Shorty a more versatile option than a dedicated mud spike like our Wet Scream. Large, tall and slightly staggered side knobs penetrate loose soil to provide predictable, stable cornering at warp speeds.

Designed for the muddiest downhill race course in the world: Les Gets, France. Not for your local trail, the Wetscream is intended for competition use only, on professionally maintained courses. When the course turns ugly, trust the Wetscream to carry you to victory.

THE WORD

It's really important to experiment with different tire pressures to find what's best for you. It can make a huge difference in the way the trail feels. I usually recommend running 3-4 more PSI in the back than the front.

- 110-PSI HIGH AIR-PRESSURE RATED

It almost feels like cheating: The foldable bead and lightweight materials allow tricks to flow so much easier – without the extra weight to throw around. High pressure and dual-compound tread make landings stick at any angle. Maxxis used these technologies and more to produce the Grifter – simply the best freestyle tire ever.

THE WORD

I think of the Grifter as my riding buddy that, no matter what trick or spot, is always having a good session. At 80 PSI for a street session or 110 for a mega-ramp, they are always confidently right at home. Kind of like my favorite riding buddies, they almost seem to whispering 'Don't worry about it, you've got this!'
