Description of use

T valve bodies

T valve bodies are preferably welded into ring mains with the outlet in a vertical direction. This allows the working medium to be drawn off or fed almost deadleg free.

Features

- EHEDG-certified GEMÜ seal system
- Made from block material, no welds in the media wetted area (i. e. reduction of validation times)
- Compact design, GMP-compliant design
- Grades of surface finish: Internal contour mechanically polished and/or electropolished down to Ra 0.25 µm
- Standard valve body material 1.4435 (316L), other materials on request
- Standard connections are butt weld spigots, clamps and sterile connections, other connections on request
- Available with manual, pneumatic or motorized operators

T valve bodies for sampling

Body version "A"

Dimension example for diaphragm size 10

This particular design is used to take samples from large ring mains ($\geq$ DN 50). A very good deadleg ratio is achieved as a result of the optimized contour. In comparison to the ring main cross section, the outlet branch has a small nominal size ($\leq$ DN 15) and is provided with a diaphragm valve with a diaphragm size of 8 or 10.

Features

- Cavity fully shaped, deadleg ratio $< 1 \times D$
- Compact design
- Optimal draining if installed at an angle
