Customer Support

Technical Assistance

If you need assistance installing or troubleshooting your device, please contact us by using one of the methods below:

Knowledge Base: www.hasknowledgebase.com

Our knowledge Base provides thousands of immediate solutions. If the knowledge Base cannot help, our Technical Support Portal (see below) provides an easy way to report your problem or ask your question.

Technical Support Portal: www.hsmsupportportal.com

The technical Support Portal not only allows you to report your problem, but it also provides immediate solutions to your technical issues by searching our Knowledge Base. With the Portal, you can submit and track your questions online and send and receive attachments.

Web form: www.hsmcontactsupport.com

You can contact our technical support team directly by filling out our online support. Enter your contact details and the description of the question/problem.

Telephone: www.honeywellaidc.com/locations

For our latest contact information, please check our website at the link above.

Product Service and Repair

Honeywell International Inc. provides service for all of its products through service centers throughout the world. To obtain warranty or non-warranty service, please visit www.honeywellaidc.com and select **Support>Contact Service and Repair** to see your region's instructions on who to obtain a Return Material Authorization (RMA#). You should do this prior to returning the product.

Limited Warranty

Refer to www.honeywellaidc.com/warranty_information for your product's warranty information.

Send Feedback

Your feedback is crucial to the continual improvement of documentation. To provide feedback about this manual, contact the Honeywell Technical Communications department at ACSHSMTechnicalCommunications@Honeywell.com.

Getting Started

About This Manual

This User's Guide provides installation and programming instructions for the HF510 corded area-imaging scanner. Product specifications, dimensions, warranty, and customer support information are also included.

Honeywell barcode scanners are factory programmed for the most common terminal and communications settings. If you need to change these settings, programming is accomplished by scanning the bar codes in this guide.

An asterisk (*) next to an option indicates the default setting.

Unpacking Your Device

After you open the shipping carton containing the product, take the following steps:

- Check for damage during shipment. Report damage immediately to the carrier who delivered the carton.
- Make sure the items in the carton match your order.
- Save the shipping container for later storage or shipping.

Connecting the Device

Connecting with USB

A scanner can be connected to the USB port of a computer.

1. Connect the appropriate interface cable to the device first, then to the computer.

HF510 USB Connection:

2. The scanner beeps.
 3. Verify the scanner operation by scanning a barcode from the [Sample Symbols](#) in the back of this manual.
- The unit defaults to a USB PC Keyboard.

Connecting with RS232 Serial Port

1. Turn off power to the terminal/computer.
2. Connect the appropriate interface cable to the device.

Note: For the scanner to work properly, you must have the correct cable for your type of terminal/computer.

HF510

RS232 Serial Port Connection:

Note: The power supply must be ordered separately, if needed.

3. Plug the serial connector into the serial port on your computer. Tighten the two screws to secure the connector to the port.
4. Once the scanner has been fully connected, power up the computer.

This interface programs 115,200 baud, 8 data bits, no parity, and 1 stop bit.

Barcode Configuration Guide

Your new scanner has been configured at the factory with a set of default communication protocol. Since many host systems have unique formats and protocol requirements, Honeywell provides a wide range of configurable features that may be selected with the use of this barcode configuration guide.

Once the configuration is completed, the scanner stores the settings into the Flash and the settings won't lose when the power is turned off.

Symbol Key	
* (asterisk)	Default Feature
~ (tilde)	Feature requires the Multi-Code Configuration Method, See section "Barcode Configuration Method".

Barcode Configuration Methods

This scanner can be barcode configured in two ways: the Single-Code Method and the Multi-Code Method.

Single-Code Method

Most features can be enabled or disabled using the Single-Code Method.

1. Power up the scanner.
2. Scan the barcode(s) for the desired feature(s).
3. Observe a multi-tones, "save setting" beep that indicates the configuration has been saved.

Multi-Code Method

All features can be enabled or disabled using the Multi-Code Method.

A features marked with a "~" requires the Multi-Code Method.

1. Power up the scanner.
2. Scan the Enter/Exit Configuration Mode barcode. [3 beeps]
3. Scan the barcode(s) for the desired feature(s). [1 beep]
4. Scan the Enter/Exit Configuration Mode barcode [3 beeps] and save new configuration.

Enter/Exit Configuration Mode

Note: To abort a configuration change, power off the scanner before scanning the Enter/Exit Configuration Mode barcode.

Factory Default Settings

This selection erases all your settings and resets the scanner to the original factory defaults.

Scan the Recall Default barcode. This will erase all previous settings and return to the scanner's factory default settings.

Recall Default

Get Firmware Revision Number

Scan the following barcode, scanner will output the software revision number.

Firmware Revision

Get Product Serial Number

Scan the following barcode, scanner will output the product serial number. It's a unique number to each unit.

Product Serial Number

Operating Modes Settings

Streaming Presentation Mode

Note: In this mode, the unit will keep to scan and decode bar code symbols all the time. Bar code data will be output in a format determined by the selected terminal interface. In the case where a menu bar code symbol is decoded, the scanner will switch operation to the respective mode.

Presentation Mode

Note: In this mode, the unit work with optical trigger to detect barcode symbol. When optical trigger is trigger on, it will start to scan and decode bar code symbols. When optical trigger is trigger off, the unit will enter a power save mode and stop decoding. the Bar code data will be output in a format determined by the selected terminal interface.

Programming the Interface

Introduction

This chapter describes how to program your system for the desired interface.

Currently the scanner support three kinds of communication interface, RS232, USB HID and USB Serial.

You can scan the following barcodes to switch the scanner into specific interface.

You should also change the cable after that.

(1) **RS232**

RS232 Interface

(2) **USB HID**

USB HID Interface

(3) **USB Serial**

USB Serial Interface

Note: No extra configuration (e.g., baud rate) is necessary.

RS232 Settings

Factory default settings of RS232 interface are in the below table.

Option	Setting
Baud Rate	115,200 bps
Data Format	8 data bits, no parity bit, 1 stop bit

1. Baud Rates

A “Baud” or “Baud Rate” is the speed at which data is transmitted. Select a Baud for the scanner that matched the host device.

*115200

57600

38400

19200

9600

4800

2400

1200

600

300

2. Parity Features

A parity bit is an extra data bit used for help catch data transmission errors. The scanner's parity must match the host's parity.

*No Parity

Odd Parity

Even Parity

3. Data/Stop Bits

Choose the number of bits transmitted for each character.

7 Data Bits

*8 Data Bits

*1 Stop Bits

2 Stop Bits

4. Hardware Handshaking

When enable this feature, scanner will output a Request to Send (RTS) signal and wait for a Clear to Send(CTS) signal before transmitting data.

Enable RTS/CTS Handshaking

*Disable RTS/CTS Handshaking

*Character RTS/CTS
Activate/Deactivate RTS
signal for each character.

Message RTS/CTS
Activate RTS before sending the first
character and leave it active until
after the last character has been
transmitted.

Invert RTS Polarity

*Standard RTS Polarity

Invert CTS Polarity

*Standard CTS Polarity

Activate RTS, Do not wait
for CTS.

*Activate RTS,wait for CTS

5. Software Handshaking

Enable XON/XOFF Handshaking

The scanner will stop transmission whenever an XOFF(ASCII 13H) is received. Transmission will resume after an XON(ASCII 11H) is received.

*Disable XON/XOFF Handshaking

*Note: When Disabled this feature, please do not transfer XOFF(ASCII 13H) to the scanner. The may cause the scanner abnormal.
If sent, transfer DC2(ASCII 12H) can recover the scanner.*

ACK/NAK Feature

If enable this feature, after transmitting data, wait for an ACK(06H) or a NAK(15H) response from the host.
If ACK is received, the scanner will beep 1 time and complete the communications cycle and looks for more barcodes.
If NAK is received, retransmit the last set of barcode data and waits for ACK/NAK again.

Enable ACK/NAK

*Disable ACK/NAK

Support BEL/CAN in ACK/NAK

*Ignore BEL/CAN in ACK/NAK

If enable this feature, when BEL(07H) is received, the scanner beeps 3 times and exits the communications loop.
If a CAN(18H) is received, then the scanner will exit the communications loop silently.

Enable 5 Retries on
ACK/NAK Time Out

Allow up to 5 NAK
Retransmissions of the data
Before dropping out of the
Communications loop.

*Disable 5 Retries on
ACK/NAK Time Out

Do not limit retransmission
To 5 NAK cycles.

*Note: The ACK/NAK Time Out value equals to the communication time outs value.
Please refer to the section "Communication Time Out Options".*

Input/Output Settings

Illumination LED Setup

Use these codes to control illumination LED ON/OFF.

Illumination LED ON

Illumination LED OFF

Illumination LED Level

Use these codes to control illumination level

Low level

Mid level

High level

Illumination LED Mode

Use these codes to control illumination mode

Normal

Cellphone

Pure cellphone

Same Symbol Time Outs

These numbers determine the length of time before a barcode can be rescanned after it is removed from the scan field. Single code fixed settings in msec of No,50,100,200,750,1200(1.2 sec),2000(2.0 sec) and infinite are available. User configurable values can be set in user-configurable increments of 50 msec to 6350 msec (6.35 sec).

Note: This feature only take effect in Presentation Mode.

No Same Symbol Time Out

Same Symbol Time Out 100 msecs

Same Symbol Time Out 200 msecs

* Same Symbol Time Out 750 msecs

Same Symbol Time Out 1200 msecs

Same Symbol Time Out 2000 msec

Infinite Same Symbol Time Out

The scanner will not repetitively Scan the same barcode.

~ Variable Same Symbol Time Out

Using the Multi-Code Method, scan this barcode and a code byte sequence from section "Code Byte Usage" to set the same symbol time-out duration. Values range from 001 to 127(50 to 6350 msec).

Inter-Character Data Transmission Delays

Use these codes to select the amount of delay between sending data characters and “Bar Code” records from the scanner to the host. This helps prevent the scanner from overflowing host input buffers.

*1 msec Inter-Character Delay

10 msec Inter-Character Delay

25 msec Inter-Character Delay

~ Variable msec
Inter-Character Delay

Scan this barcode and sequence of code bytes in Section “Code Byte Usage” to set the delay. Delay range can be set from 1 to 255 msec.
Refer to the Multi-Code Configuration Method.

Note: This feature only applies for RS232 Interface.

Communication Time Out Options

Enable Communications Time Outs

*Disable Communications Time Outs

~ Variable Communications Time Out
Unit: 50 ms.

* Default Communications Time Out (2 secs)

Short Communications Time Out (1 sec)

Long Communications Time Out (4 secs)

Three Beeps on Time Out

* No Beeps on Time Out

Razzberry Tone on Time Out

* No Razzberry Tone on Time Out

HF510 Scanner Product Specifications

Parameter	Specification
Mechanical	
Height	1.28 in. (32.5mm)
Length	8.58 in. (218.0mm)
Width	1.65 in. (42.0mm)
Weight	1.96 oz. (55.5g)
Electrical	
Input Voltage	4.5 - 5.5VDC
Operating Power	2.25W (450mA @ 5VDC)
Standby Power	1.25W (250mA @ 5VDC)
Illumination LED	White emitting color
Aiming	624nm peak wavelength
Environmental	
Operating Temperature	14°F to 122°F (-10°C to 50°C)
Storage Temperature	-40°F to 158°F (-40°C to 70°C)
Humidity	0 to 95% relative humidity, non-condensing
Drop	Withstands 1.5m drops (2 times)
Environmental Sealing	IP40
Light Levels	0 to 100,000 lux
ESD	10kV Air, 6kV contact
Image	
Image Size	640 x 480 pixels
Scan Performance	
Pitch, Skew	+55°, +65°
Motion Tolerance: Presentation Mode	up to 1.2m/s (47 in/s) per second for 13 mil UPC-a barcode
Symbol Contrast	35%
Depth of Field	
Typical Performance	
10 mil Code 39	15 - 40mm (0.6 - 1.6in.)
13 mil UPC-A	15- 110mm (0.6 - 4.3in.)
20mil Code 39	18- 150mm (0.7 - 5.9in.)
20mil QR	12- 90mm (0.5 - 3.5in.)
Guaranteed Performance	
5 mil Code 39	20- 30mm (0.8 - 1.2in.)
13 mil UPC-A	20- 100mm (0.8 - 3.9in.)
20mil Code 39	20- 120mm (0.8 - 4.7in.)
20mil QR	18- 70mm (0.7 - 2.7in.)

Mounting Specifications

The HF510 has three M3*0.5mm threaded inserts on the bottom, four M2*0.4mm threaded inserts on the right and left of the scanner for mounting with screws.

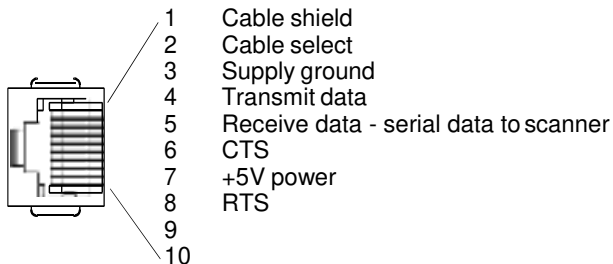

Standard Cable Pinouts

Note: The following pin assignments are not compatible with Youjie legacy products. Use of a cable with improper pin assignments may lead to damage to the unit. Use of any cables not provided by the manufacturer may result in damage not covered by your warranty.

Maintenance and Troubleshooting

Repairs

Repairs and/or upgrades are not to be performed on this product. These services are to be performed only by an authorized service center (see [Technical Assistance](#) on page Customer Support).

Maintenance

Your device provides reliable and efficient operation with a minimum of care. Although specific maintenance is not required, the following periodic checks ensure dependable operation:

Cleaning the Device

Reading performance may degrade if the scanner's window is not clean. If the window is visibly dirty, or if the scanner isn't operating well, clean the window with a soft cloth or lens tissue dampened with water (or a mild detergent- water solution). If a detergent solution is used, rinse with a clean lens tissue dampened with water only.

The scanner housing may also be cleaned the same way.

Caution:

Do not submerge the scanner in water. The scanner's housing is not watertight.

Do not use abrasive wipes or tissues on the scanner's window – abrasive wipes may scratch the window. Never use solvents (e.g., alcohol or acetone) on the housing or window – solvents may damage the finish or the window.

Inspecting Cords and Connectors

Inspect the interface cable and connector for wear or other signs of damage. A badly worn cable or damaged connector may interfere with scanner operation. Contact your distributor for information about cable replacement. Cable replacement instructions are on [page Customer Support](#).

Replacing Cable in the Scanner

The standard interface cable is attached to the scanner with a 10-pin modular connector. When properly seated, the connector is held in the scanner by a flexible retention tab. The interface cable is designed to be field replaceable.

- Order replacement cables from Honeywell or from an authorized distributor.
- When ordering a replacement cable, specify the cable part number of the original interface cable.

Troubleshooting the Scanner

The scanner automatically performs self-tests whenever you turn it on. If your scanner is not functioning properly, review the following Troubleshooting Guide to try to isolate the problem.

Is the power on?

If the white LED isn't illuminated, check that:

- The cable is connected properly.
- The host system power is on (if external power isn't used).

Is the scanner having trouble reading your symbols?

If the scanner isn't reading symbols well, check that the scanner window is clean and that the symbols:

- Aren't smeared, rough, scratched, or exhibiting voids.
- Aren't coated with frost or water droplets on the surface.
- Are enabled in the scanner or in the decoder to which the scanner connects.

Is the bar code displayed but not entered?

The bar code is displayed on the host device correctly, but you still have to press a key to enter it (the Enter/Return key or the Tab key, for example).

- You need to program a suffix. Programming a suffix enables the scanner to output the bar code data plus the key you need (such as "CR") to enter the data into your application. Refer to [CR/LF Suffix Setting](#) beginning on page 4-1 for further information.

Does the scanner read the bar code incorrectly?

If the scanner reads a bar code, but the data is not displayed correctly on the host screen:

- The scanner may not be programmed for the appropriate terminal interface.
For example, you scan "12345" and the host displays "@es%."

Reprogram the scanner with the correct Plug and Play bar code. See [Programming the Interface](#) beginning on page 2-1.

- The scanner may not be programmed to output your bar code data properly.
For example, you scan "12345" and the host displays "A12345B."

Reprogram the scanner with the proper symbology selections. See [Chapter 5](#).

The scanner won't read your bar code at all.

1. Scan the sample bar codes in the back of this manual. If the scanner reads the sample bar codes, check that your bar code is readable.
Verify that your bar code symbology is enabled (see [Chapter 5](#)).

If the scanner still can't read the sample bar codes, scan [All Symbologies](#) (see [Chapter 5](#)).

If you aren't sure what programming options have been set in the scanner, or if you want the factory default settings restored, refer to [Factory Default Settings](#) on page 1-5.

Code Byte Usage

User configurable prefixes, symbol length and other features that use these code bytes for configuration, require that the scanner be in configuration mode.

Scan the Enter/Exit Configuration Mode barcode before starting the configuration cycle.

Single code configuration mode does not work for these multi-code sequences.

Enter/Exit Configuration Mode

Example

Use configurable inter-character delays in section “Inter-Character Data Transmission Delays” can be saved into the scanner by scanning the 3 digit decimal equivalent of the ASCII character into the appropriate character location with the code byte barcodes.

To set the inter-character delay to 15ms scan the following barcodes in order:

1. Enter/Exit Configuration Mode (3 beeps)
2. Configurable “~ Variable msec Inter-Character Delay” (1 beep)
3. Code Byte 0 (1 beep)
4. Code Byte 1 (2 beeps)
5. Code Byte 5 (3 beeps)
6. Enter/Exit Configuration Mode (3 beeps)

ASCII Conversion Chart (Code Page 1252)

In keyboard applications, ASCII Control Characters can be represented in 3 different ways, as shown below. The CTRL+X function is OS and application dependent. The following table lists some commonly used Microsoft functionality. This table applies to U.S. style keyboards. Certain characters may differ depending on your Country Code/PC regional settings.

Non-printable characters		ASCII control		Keyboard Control + ASCII (CTRL+X) Mode	
DEC	HEX	Char		Windows Mode Control + X Mode On (KBDCAS2)	
DEC	HEX	Char	Control + X Mode Off (KBDCAS0)	CTRL + X	CTRL + X function
0	00	NUL	Reserved	CTRL+ @	
1	01	SOH	NP Enter	CTRL+ A	Select all
2	02	STX	Caps Lock	CTRL+ B	Bold
3	03	ETX	ALT Make	CTRL+ C	Copy
4	04	EOT	ALT Break	CTRL+ D	Bookmark
5	05	ENQ	CTRL Make	CTRL+ E	Center
6	06	ACK	CTRL Break	CTRL+ F	Find
7	07	BEL	Enter / Ret	CTRL+ G	
8	08	BS	(Apple Make)	CTRL+ H	History
9	09	HT	Tab	CTRL+ I	Italic
10	0A	LF	(Apple Break)	CTRL+ J	Justify
11	0B	VT	Tab	CTRL+ K	hyperlink
12	0C	FF	Delete	CTRL+ L	list, left align
13	0D	CR	Enter / Ret	CTRL+ M	
14	0E	SO	Insert	CTRL+ N	New
15	0F	SI	ESC	CTRL+ O	Open
16	10	DLE	F11	CTRL+ P	Print
17	11	DC1	Home	CTRL+ Q	Quit
18	12	DC2	PrtScn	CTRL+ R	
19	13	DC3	Backspace	CTRL+ S	Save
20	14	DC4	Back Tab	CTRL+ T	
21	15	NAK	F12	CTRL+ U	
22	16	SYN	F1	CTRL+ V	Paste
23	17	ETB	F2	CTRL+ W	

Non-printable characters		ASCII control	Keyboard Control + ASCII (CTRL+X) Mode		
DEC	HEX	Char	Control + X Mode Off (KBDCAS0)	Windows Mode Control + X Mode On (KBDCAS2)	
				CTRL + X	CTRL + X function
24	18	CAN	F3	CTRL+ X	
25	19	EM	F4	CTRL+ Y	
26	1A	SUB	F5	CTRL+ Z	
27	1B	ESC	F6	CTRL+ [
28	1C	FS	F7	CTRL+ \	
29	1D	GS	F8	CTRL+]	
30	1E	RS	F9	CTRL+ ^	
31	1F	US	F10	CTRL+ -	
127	7F	␣	NP Enter		

Lower ASCII Reference Table

Note: Windows Code page 1252 and lower ASCII use the same characters.

ISO 2022/ISO 646 Character Replacements

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the bar code being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, select the code page with which the bar codes were created. The data characters should then appear properly.

Code Page Selection Method/Country	Standard	Keyboard Country	Honeywell Code Page Option
United States (standard ASCII)	ISO/IEC 646-IRV	n/a	1
Automatic National Character Replacement	ISO/IEC 2022	n/a	2 (default)
Binary Code page	n/a	n/a	3
<i>Default "Automatic National Character replacement" will select the below Honeywell Code Page options for Code 128, Code 39 and Code 93.</i>
