A12.7 Direct-Inward-Dialing (DID) Service

A12.7.1 General

A. DID service permits calls incoming to a PBX system, Telephone Answering Service, or other Customer Premises Equipment requiring outpulsing-of-digits from the network to reach a specific station line without the assistance of an attendant. DID service is provided subject to the availability of facilities and telephone numbers and other conditions as specified in A2.3.1 and Section A15.

B. The rates specified herein are in addition to the rates shown elsewhere in the Guidebook for the services with which this offering is associated (e.g. central office PBX trunks, access lines, Sharing and Resale of Exchange Service, etc).

C. DID service is optionally available with Identified Outward Dialing (IOD) service and includes central office switching equipment necessary for in-dialing from the network directly to stations associated with customer premises switching equipment. Subscribers to DID service will be required to maintain an adequate number of DID trunks as determined by the Company in order to provide "quality" grade of service and prevent Network degradation.

D. The service must be provided on all lines in a trunk group arranged. Where DID is required on more than one group of trunks or central office lines, each such group shall be considered as a separate DID service.

E. The assignment of telephone numbers and the sequence of the numbers assigned to a DID service is made at the discretion of the Company. Where the equipment configuration requires the assignment of blocks of telephone numbers or where the customer requests additional blocks of telephone numbers held in reserve for future use, rates and charges as shown in A12.7.2 are applicable for each unused Non-Consecutive number or block of telephone numbers. The Company does not guarantee to provide DID numbers arranged in a consecutive manner. If the DID numbers provided can not be arranged in a consecutive manner, they will still be provided at rates and charges for consecutive numbers. When a number is removed from an existing consecutive DID group, the installation charge and monthly rates for Non-Consecutive DID apply to the remaining numbers. If a customer requesting Non-Consecutive DID numbers does not have DID service at the time the Non-Consecutive DID numbers are requested, a minimum of 20 Non-Consecutive DID numbers must be ordered.

F. When equipment or service of a special type arrangement is requested and provided, rates and charges are based on costs involved to meet the individual requirements of each case.

G. Operational characteristics of interface signals between the Company-provided facilities and the customer-provided switching equipment must conform to the terms and conditions the Company considers necessary to maintain proper standards of service as specified in other sections of this Guidebook.

H. The Company shall not be responsible to the customer or authorized user or joint user if changes in protection criteria or in any of the facilities, operations, or procedures of the Company render any of the facilities provided by a customer, authorized user, or joint user obsolete or require modification or alternation of such equipment or system or otherwise affect its use or performance.

I. Listings will be provided in accordance with the terms and conditions of Section A6. for PBX trunks. DID numbers furnished herein are not entitled to listings without charge. Where clients of a subscriber to DID service have no local exchange service but want to list one of these numbers, "Joint User Services", in Section A3., (or "Sharing and Resale of Basic Local Exchange Services" in Section A23.) will be applicable. Note 2: This feature allows a customer to temporarily prevent the transmission of that customer's Directory Number and/or Directory Name and thus control their availability to the called party. The transmission of the Directory Number and/or Directory Name can be temporarily prevented on an as needed basis by dialing a preassigned access code prior to making a call. This action must be repeated each time a call is made to prevent the transmission of the Directory Number and/or Directory Name.

Note 3: Applies per additional 6 port conference circuit preceding.

BellSouth Centrex ISDN supports simultaneous transmission of voice, data, and packet services on the same exchange access line Calling/Called Number Delivery, Calling Name Delivery in equipped 5ESS and EWSD® switches, Call Hold and Intercom are included with this service. BellSouth Centrex ISDN is available only for use with BellSouth Centrex service. BellSouth Centrex ISDN provides access to the telephone network through a Basic Rate Digital Subscriber Line (DSL) Access Arrangement. Basic Rate Digital Subscriber Line (DSL) Access Arrangement will allow transmission on one or two 64 Kbps (B) channels and one 16 Kbps (D) channel at the service delivery point.

B. B channel circuit switched services offer up to 64 Kbps intra-office transmission of voice or data. This option permits the customer to utilize either circuit voice or data transmission paths on a per call selection basis. Transmission on the B channel will be circuit switched at 64 Kbps within the switch and/or equipped facilities between ISDN compatible central offices. ISDN interconnection to non-ISDN equipped central offices will be potentially subjected to analog transmission or sub-rated to 56 Kbps. This option includes one directory number (DN) per user access.

The ISDN Standard Features rate element is required for each B channel circuit switched user access.

A12.26.1 General (Cont'd)

E. The following parameters may be provided with Packet Switched B channel and D channel Services:

Each B channel packet terminal will be provided logical channels up to the technical capability of the serving central office. Each logical channel can carry an independent call with throughput of up to 64 Kbps.

Each D channel packet terminal will be provided logical channels up to the technical capabilities of the serving central office. Each logical channel can carry an independent call with throughput of up to 9.6 Kbps. Each logical channel may be established as one of the following types:

- Two-Way Switched Virtual Circuit (default)

- One-Way Incoming Switched Virtual Circuit

- One-Way Outgoing Switched Virtual Circuit

1. Flow Control Parameter Negotiation - This parameter negotiates on a per call basis the flow control parameters. This consists of automatic negotiation of the maximum packet size and window size for each direction of data transmission.

2. Throughput Class Negotiation - This parameter allows the calling station to request specific throughput classes in the call request packet for both directions of data transmission.

3. Recognized Private Operation Agency (RPOA) Selection - This parameter allows an ISDN user to specify an interLATA carrier (IC) for packet-switching on a per-call basis when the customers want it different from presubscribed IC.

4. Interexchange Packet - Preselect - This parameter allows an ISDN user to specify an interLATA carrier for packet switching at the time of subscription.

5. Fast Select Option - This parameter permits user data to be passed in the call set up packets of a virtual call.

6. Reverse Charging Option - This parameter permits the data communications equipment to transmit incoming calls requesting reverse charging to the user. The user must be subscribed to the destination line for X.25 Reverse Charge calls to be completed. If not, the call requesting reverse charging is refused.

F. BellSouth Centrex ISDN Service will consist of the following components:

- BellSouth Centrex Service Common Equipment
