

Cisco GS7000 4-Way Segmentable Node 1 GHz with 42/54 MHz Split

The Cisco® GS7000 4-Way Segmentable Node is the latest generation 1 GHz optical node platform. This platform allows independent segmentation and redundancy for both the forward and reverse paths in a reliable, cost-effective package.

The forward path of the GS7000 4-Way Segmentable Node launch amplifier can be initially deployed in non-segmented mode with a single broadcast optical receiver distributing common RF services to either four output ports (all high level) or six output ports (two high level and four lower level). The forward path can also be fully segmented by using four independent optical receivers that each feed their own output ports, or left/right segmented by using two independent optical receivers that each feed half of the node's output ports. Forward path optical redundancy is also supported via the use of optional redundant optical receivers. The type of forward path segmentation and/or redundancy is determined by the type of Forward Configuration Module installed.

The GS7000 Node's reverse path is equally flexible. Reverse traffic can be segmented or combined and routed to a maximum of 4 FP, DFB, CWDM, or DWDM reverse optical transmitters, or to advanced Baseband Digital Reverse optical transmitters as part of the bdr system. Reverse path optical redundancy is supported via the use of optional redundant optical transmitters. The type of reverse path segmentation and/or redundancy is determined by the type of Reverse Configuration Module installed. A Reverse Input Port is also provided for high frequency (5 - 210 MHz) reverse signal injection.

All optical transmitters and optical receivers used in the GS7000 have new high-profile module covers that include both a self-contained fiber pigtail storage area and an integrated pull ring for easier module installation and removal. Additionally, the GS7000 optical receiver is a new low-current design that dissipates less power and incorporates a two-state interstage RF attenuator switch for performance optimization.

Figure 1. GS7000 4-Way Segmentable Node with 42/54 MHz Split

Features

- Six port 1 GHz RF platform
- Uses GainMaker® type GaAs FET gain stages
- Uses standard GainMaker style accessories (i.e., attenuator pads, equalizers, diplexers and crowbar)
- Field accessible plug-in Forward Interstage Linear Equalizers, Forward / Reverse Configuration Modules, and Signal Directors
- 3-state reverse switch (on/off/-6 dB) allows each reverse input to be isolated for noise and ingress troubleshooting (status monitoring or local control module required)
- Auxiliary reverse injection (5 - 210 MHz) configurable on up to 2 ports
- Positions for up to 4 optical receivers and 4 optical transmitters in housing lid
- Optional low-cost sLocal Control Module may be installed in conjunction with a Redundant Forward

-
- Configuration Module to allow optical path redundancy when no status monitor is required
 - Optional Status Monitoring (ROSA[®] / TNCS or other compatible element management system required)
 - Fiber entry ports on both ends of housing lid
 - Fiber management tray and track provides easy access to fiber connections
 - Primary and redundant Power Supplies with passive load sharing
 - Spring loaded seizure assemblies allow coax connectors to be installed or removed without removing amplifier chassis or spring loaded mechanism from the rear of the housing base
 - Dual/Split AC powering

Optical Section Specifications

Optical Section - Forward Receiver Module	Units	GS7000 Low Current RX	Notes
Wavelength	nm	1310 and 1550	
Optical Input Range	mW dBm	0.5 to 1.6 -3 to +2	1
Pass Band	MHz	52-1002	
Frequency Response	dB	± 0.5	2
Tilt (± 1.0 dB)	dB	0	
Optical Input Test Point ($\pm 10\%$)	V DC	1V/mW	
Redundant Optical Rx Switching Threshold (± 1.0 dB)	dBm	-6	
Rx RF Output Level at 0 dBm Optical Rx Power	dBmV	Refer to charts (below)	3
Rx RF Output Test Point (± 1.0 dB)	dB	-20	

Receiver RF Output Level Vs Transmitter OMI – Rx switch in -6 dB setting

Receiver RF Output Level Vs Transmitter OMI – Rx switch in 0 dB setting

Notes for Optical Section Specifications:

- Receiver (Rx) has a 2-position RF attenuator switch (-6 dB and 0 dB). The -6 dB setting is used for 0 to +2 dBm optical Rx power, the 0 dB setting is used for -3 to 0 dBm Rx power.
- For forward receiver module only. Does not include frequency response contributions from forward optical transmitter.
- Minimum receiver RF output level for the stated transmitter percent OMI/ch. (Optical Modulation Index per channel), with receiver optical input power of 0 dBm, and specified Rx attenuator setting. To determine RF output levels at other optical input power, add (or subtract) 2 dB in RF level for each 1 dB increase (or decrease) in receiver optical input power.

For reverse optical transmitter and link performance, see the "Analog Reverse Optical Transmitters with Thermal Compensation" data sheet.

Unless otherwise noted, specifications reflect typical performance and are referenced to 68°F (20°C). Specifications are based upon measurements made in accordance with SCTE/ANSI standards (where applicable), using standard frequency assignments.

RF Section Specifications

General Station Performance	Units	Forward	Reverse	Notes

Frequency Response	dB	± 0.5	5
Internal Tilt (+/- 1 dB)	dB	0	5
Path to Path Isolation	dB	55	5
Noise Figure	dB	7.5	5

Notes:

- Forward performance is for station from output of optical Rx to node RF output port, with 0 dB pad in optical interface board (OIB), any forward configuration module, 0.5 dB interstage (I/S) pad, 15 dB linear I/S EQ, factory select output pad, and signal director jumper. Includes OIB losses.
- Reference output tilt and internal tilt are both "Linear" tilt.
- The forward reference output tilt specified is achieved via field installation of appropriate linear I/S EQ, in conjunction with the internal tilt of the launch amplifier and the tilt associated with the optical link (transmitter/receiver combination).
- Stated distortion performance is for launch amplifier section operated at reference output levels and tilts. Full station performance can be determined by combining optic performance and launch amplifier performance.
- Reverse performance is for station from reverse input port to input of reverse optical transmitter module, with 0 dB reverse input pad.
- "Digital" refers to 550 - 1002 MHz loading with QAM carriers at -6 dB relative to analog video carrier levels.
- X-mod (@ 15.75 kHz) specified using 100% synchronous modulation and frequency-selective measurement device.

Unless otherwise noted, specifications reflect typical performance and are referenced to 68°F (20°C). Specifications are based upon measurements made in accordance with SCTE/ANSI standards (where applicable), using standard frequency assignments.

Ordering Information

The GS7000 Node is available in a wide variety of configurations. The GS7000 Ordering Matrix provides ordering information for configured node stations. This page contains ordering information for required and optional accessories. Please consult with your Account Representative, Customer Service Representative, or Applications Engineer to determine the best configuration for your particular application.

Required Accessories	Part Number
Plug-in Pads (attenuators) – Available in 0.5 dB steps from 0 to 20 dB 1 required for each Optical Receiver Module installed in the node (for Optical Interface Board) 1 required for each Optical Transmitter Module installed in the node (for Optical Interface Board) 1 required for each Reverse input path activated (for Launch Amplifier)	589693 (0 dB) sequentially thru 589734 (20.5dB)
Optional Accessories	
Plug-in Forward Linear Equalizers – Available in 1.5 dB steps from 0 to 21 dB.	4007228 (0 dB)
Node shipped with 15 dB Linear Equalizers (4)* installed for 14.5dB of tilt to 1002 MHz (*4008787)	see table below
Plug-in Signal Directors – 2 required Node shipped with Jumpers installed to activate 4 RF output ports	4011907
Optional 2-Way Splitters are required to activate 5 or 6 RF output ports	4011908

Note: Configured nodes ship without reverse input pads and any of the pads on the OIB. All other standard accessories are shipped from the factory. Forward Launch Amp attenuator pads, (4) 15 dB linear Eqs, and (2) signal director jumpers are shipped with every configured node.
