

CGNM/ CGNM-3552
D3 WiFi MoCA Gateway

User's Guide

Version 2.0 - 2015

About This User's Guide

Intended Audience

This manual is intended for people who want to configure the CGNM/ CGNM-3552's features via its Graphical User Interface (GUI).

How to Use this User's Guide

This manual contains information on each the CGNM/ CGNM-3552's GUI screens, and describes how to use its various features.

- ▶ Use the [CGNM Overview](#) on page 13 to see an overview of the topics covered in this manual.
- ▶ Use the [Table of Contents](#) (page 1), [List of Figures](#) (page 1) and [List of Tables](#) (page 1) to quickly find information about a particular GUI screen or topic.
- ▶ Use the [Index](#) (page 1) to find information on a specific keyword.
- ▶ Use the rest of this User's Guide to see in-depth descriptions of the CGNM/ CGNM-3552's features.

Related Documentation

- ▶ **Quick Installation Guide:** see this for information on getting your CGNM/ CGNM-3552 up and running right away. It includes information on system requirements, package contents, the installation procedure, and basic troubleshooting tips.

- ▶ **Online Help:** each screen in the CGNM/ CGNM-3552's Graphical User Interface (GUI) contains a **Help** button. Click this button to see additional information about configuring the screen.

Document Conventions

This User's Guide uses various typographic conventions and styles to indicate content type:

- ▶ Bulleted paragraphs are used to list items, and to indicate options.
- 1 Numbered paragraphs indicate procedural steps.

NOTE: Notes provide additional information on a subject.

Warnings provide information about actions that could harm you or your device.

Product labels, field labels, field choices, etc. are in **bold** type. For example:

Select **UDP** to use the User Datagram Protocol.

A mouse click in the Graphical User Interface (GUI) is denoted by a right angle bracket (>). For example:

Click **Settings > Advanced Settings**.

means that you should click **Settings** in the GUI, then **Advanced settings**.

A key stroke is denoted by square brackets and uppercase text. For example:

Press [ENTER] to continue.

Customer Support

For technical assistance or other customer support issues, please consult your Hitron representative.

Default Login Details

The CGNM/ CGNM-3552's default IP address and login credentials are as follows. For more information, see [Login into the CGNM](#) on page 22.

Table 1: [Default Credentials](#)

IP Address	192.168.0.1
Username	cusadmin
Password	password

1

Introduction

This chapter introduces the CGNM/ CGNM-3552 and its GUI (Graphical User Interface).

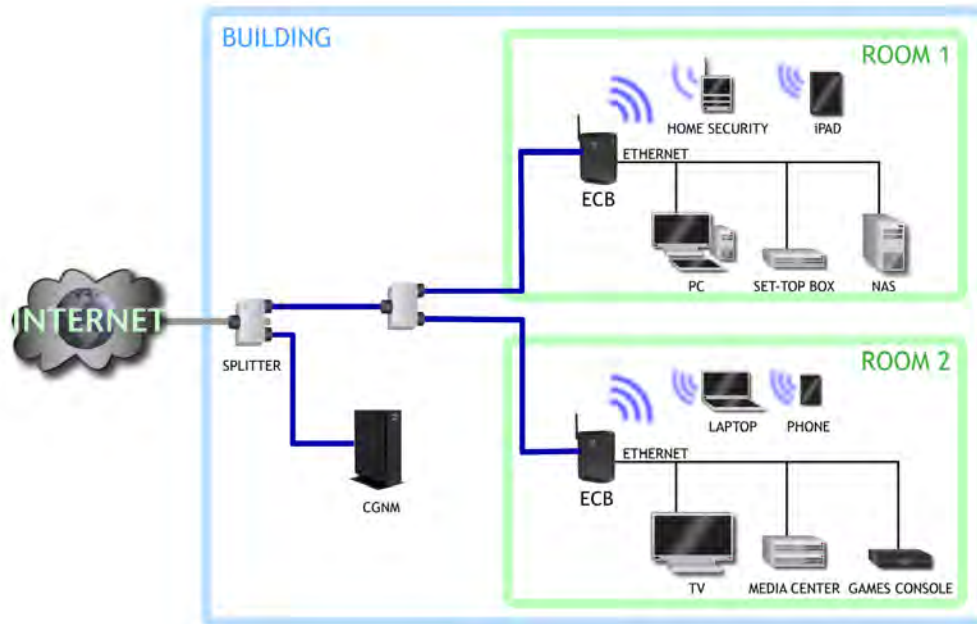

1.1 CGNM/ CGNM-3552 Overview

Your CGNM/ CGNM-3552 is a NAT-capable cable modem and wireless access point that allows you to connect your computers, wireless devices, and other network devices to one another, and to the Internet via the cable connection.

The CGNM/ CGNM-3552 must be placed vertically on its stand, should not be positioned in either wall-mount or horizontal.

Figure 1: Application Overview

1.1.1 Key Features

The CGNM/ CGNM-3552 provides:

- ▶ MoCA 2.0 high-performance entertainment networking providing real throughput of 480Mbps in baseline mode
- ▶ High-performance Internet connection via the CATV port (F-type RF connector). For 24x8 models (DOCSIS 3.0 24-channel downstream, 8-channel upstream), the download speed can be up to 960 Mbps (megabits per second). For 32x8 models (DOCSIS 3.0 32-channel downstream, 8-channel upstream) such as CGNM-3552 and CGNM-3550, the download speed can be up to 1200Mbps.
- ▶ Full dual-stack IPv4/IPv6 support for routing and firewall (DSLite and 6RD)
- ▶ Local Area Network connection via four 10/100/1000 Mbps Ethernet ports
- ▶ Dynamic Host Configuration Protocol (DHCP) for devices on the LAN
- ▶ LAN troubleshooting tools (Ping and Traceroute)
- ▶ IEEE 802.11a/b/g/n/ac concurrent dual band (2.4GHz and 5GHz) wireless MIMO (Multiple-In, Multiple-Out) networking, allowing speeds of up to 450Mbps+1300Mbps PHY data rate.

- ▶ Wireless security: WEP, WPA-PSK and WPA2-PSK encryption, WiFi Protected Setup (WPS) push-button and PIN configuration, MAC filtering,
- ▶ Wired security: stateful inspection firewall with intrusion detection system, IP and MAC filtering, port forwarding and port triggering, De-Militarized Zone (DMZ)
- ▶ Settings backup and restore
- ▶ Secure configuration interface, accessible by Web browser

1.2 Hardware Connections

This section describes the CGNM/ CGNM-3552's physical ports and buttons.

Figure 2: Hardware Connections

Table 2: Hardware Connections

WPS	<p>Press this button to begin the WiFi Protected Setup (WPS) Push-Button Configuration (PBC) procedure.</p> <p>Press the PBC button on your wireless clients in the coverage area within two minutes to enable them to join the wireless network.</p> <p>See WPS on page 79 for more information.</p>
USB	<p>The CGNM/ CGNM-3552 provides two USB 2.0 host ports on the rear, allowing you to plug in USB flash disks for mounting and sharing through the LAN interfaces via the Samba protocol (network neighborhood).</p> <p>The CGNM/ CGNM-3552 supports the following Windows file systems:</p> <ul style="list-style-type: none"> ▶ FAT16 ▶ FAT32 ▶ NTFS <p> USB devices must not drain more than 500mA from the USB port. USB devices requiring more than 500mA should be provided with their own power source(s).</p>
Reset	<p>Use this button to reboot or reset your CGNM/ CGNM-3552.</p> <ul style="list-style-type: none"> ▶ Press the button and hold it for less than five seconds to reboot the CGNM/ CGNM-3552. The CGNM/ CGNM-3552 restarts, using your existing settings. ▶ Press the button and hold it for more than five seconds to delete all user-configured settings and restart the CGNM/ CGNM-3552 using its factory default settings. See Factory Default Resetting the CGNM/ CGNM-3552 on page 14 for more information on resetting the CGNM/ CGNM-3552. <p>NOTE: Unless you previously backed-up the CGNM/ CGNM-3552's configuration settings prior to resetting the CGNM/ CGNM-3552, the settings cannot be recovered.</p>

Table 2: Hardware Connections

LAN1	Use these ports to connect your computers and other network devices, using Category 5 or 6 Ethernet cables with RJ45 connectors.
LAN2	
LAN3	
LAN4	
CABLE	Use this to connect to the Internet and coax network via an F-type RF cable.
POWER	<p>Use this to connect to the 12v/2.5A power adapter that came with your CGNM/ CGNM-3552.</p> <p> NEVER use another power adapter with your CGNM/ CGNM-3552. Doing so could harm your CGNM/ CGNM-3552.</p> <p>Figure 3: Power Adaptor</p> 

1.3 LEDs

This section describes the CGNM/ CGNM-3552's LEDs (lights).

Figure 4: LEDs

Table 3: LEDs

LED	STATUS	DESCRIPTION
POWER 	Off	The CGNM/ CGNM-3552 is not receiving power.
	On	The CGNM/ CGNM-3552 is receiving power.

Table 3: LEDs

DS 	Green, blinking	The CGNM/ CGNM-3552 is searching for a downstream frequency on the CABLE connection.
	Green, steady	The CGNM/ CGNM-3552 has successfully located and locked onto a downstream frequency on the CABLE connection.
	Blue, blinking	The CGNM/ CGNM-3552 is ranging on the downstream frequency.
	Blue, steady	Downstream frequency is locked or online with channel bonding.
	Off	There is no downstream activity on the CABLE connection.
US 	Green, blinking	The CGNM/ CGNM-3552 is searching for an upstream frequency on the CABLE connection.
	Green, steady	The CGNM/ CGNM-3552 has successfully located and locked onto an upstream frequency on the CABLE connection.
	Blue, blinking	The CGNM/ CGNM-3552 is ranging on the upstream frequency.
	Blue, steady	Upstream frequency is locked or online with channel bonding.
	Off	There is no upstream activity on the CABLE connection.
STATUS 	Blinking	The CGNM/ CGNM-3552's cable modem is registering with the service provider's CMTS.
	On	The CGNM/ CGNM-3552's cable modem has successfully registered with the service provider and is ready for data transfer.
LAN 	Off	No device is connected to one of the LAN ports.
	Green, blinking	A device is connected to one of the LAN ports and is transmitting or receiving data.
	Green, steady	A device is connected to one of the LAN ports but is not transmitting or receiving data.

Table 3: LEDs

WIRELESS (2.4GHZ) 	Off	The 2.4GHz wireless network is not enabled.
	Green, steady	The 2.4GHz wireless network is enabled, and no data is being transmitted or received over the 2.4GHz wireless network.
	Green, blinking	The 2.4GHz wireless network is enabled, and data is being transmitted or received over the 2.4GHz wireless network.
WIRELESS (5GHZ) 	Off	The 5GHz wireless network is not enabled.
	Green, steady	The 5GHz wireless network is enabled, and no data is being transmitted or received over the 5GHz wireless network.
	Green, blinking	The 5GHz wireless network is enabled, and data is being transmitted or received over the 5GHz wireless network.
MoCA 	Off	The CABLE port is not connected to a coax socket, or the CABLE port is connected to a coax socket, but no other MoCA device has been detected on the coax network.
	Green, steady	Another MoCA device has been detected on the coax network, and the CGNM/ CGNM-3552 has successfully made a connection.
	Green, blinking	Data is being transferred to or from the CGNM/ CGNM-3552 over the coax network.

When you turn on the CGNM/ CGNM-3552, the LEDs light up in the following order:

- 1 POWER
- 2 DS
- 3 US
- 4 STATUS
- 5 The **LAN** LED lights up as soon as there is activity on the LAN ports, the **WIRELESS** LEDs light up once the wireless network is ready, and the **MoCA** LED lights up once a connected device is detected.

1.4 IP Address Setup

Before you log into the CGNM/ CGNM-3552's GUI, your computer's IP address must be in the same subnet as the CGNM/ CGNM-3552. This allows your computer to communicate with the CGNM/ CGNM-3552.

NOTE: See [IP Addresses and Subnets](#) on page 33 for background information.

The CGNM/ CGNM-3552 has a built-in DHCP server that, when active, assigns IP addresses to computers on the LAN. When the DHCP server is active, you can get an IP address automatically. The DHCP server is active by default.

If your computer is configured to get an IP address automatically, or if you are not sure, try to log in to the CGNM/ CGNM-3552 (see [GUI Overview](#) on page 12).

- ▶ If the login screen displays, your computer is already configured correctly.
- ▶ If the login screen does not display, either the CGNM/ CGNM-3552's DHCP server is not active or your computer is not configured correctly. Follow the procedure in [Manual IP Address Setup](#) on page 10 and set your computer to get an IP address automatically. Try to log in again. If you cannot log in, follow the manual IP address setup procedure again, and set a specific IP address as shown. Try to log in again.

NOTE: If you still cannot see the login screen, your CGNM/ CGNM-3552's IP settings may have been changed from their defaults. If you do not know the CGNM/ CGNM-3552's new address, you should return it to its factory defaults. See [Factory Default Resetting the CGNM/ CGNM-3552](#) on page 14. Bear in mind that ALL user-configured settings are lost.

1.4.1 Manual IP Address Setup

By default, your CGNM/ CGNM-3552's local IP address is **192.168.0.1**. If your CGNM/ CGNM-3552 is using the default IP address, you should set your computer's IP address to be between **192.168.0.2** and **192.168.0.254**.

NOTE: If your CGNM/ CGNM-3552 DHCP server is active, set your computer to get an IP address automatically in step 5. The CGNM/ CGNM-3552 assigns an IP address to your computer. The DHCP server is active by default.

Take the following steps to manually set up your computer's IP address to connect to the CGNM/ CGNM-3552:

NOTE: This example uses Windows XP; the procedure for your operating system may be different.

- 1 Click **Start**, then click **Control Panel**.
- 2 In the window that displays, double-click **Network Connections**.
- 3 Right-click your network connection (usually **Local Area Connection**) and click **Properties**.
- 4 In the **General** tab's **This connection uses the following items** list, scroll down and select **Internet Protocol (TCP/IP)**. Click **Properties**.
- 5 You can get an IP address automatically, or specify one manually:
 - ▶ If your CGNM/ CGNM-3552's DHCP server is active, select **Get an IP address automatically**.
 - ▶ If your CGNM/ CGNM-3552's DHCP server is active, select **Use the following IP address**. In the **IP address** field, enter a value between **192.168.0.2** and **192.168.0.254** (default). In the **Subnet mask** field, enter **255.255.255.0** (default).

NOTE: If your CGNM/ CGNM-3552 is not using the default IP address, enter an IP address and subnet mask that places your computer in the same subnet as the CGNM/ CGNM-3552.

- 6 Click **OK**. The **Internet Protocol (TCP/IP)** window closes. In the **Local Area Connection Properties** window, click **OK**.

Your computer now obtains an IP address from the CGNM/ CGNM-3552, or uses the IP address that you specified, and can communicate with the CGNM/ CGNM-3552.

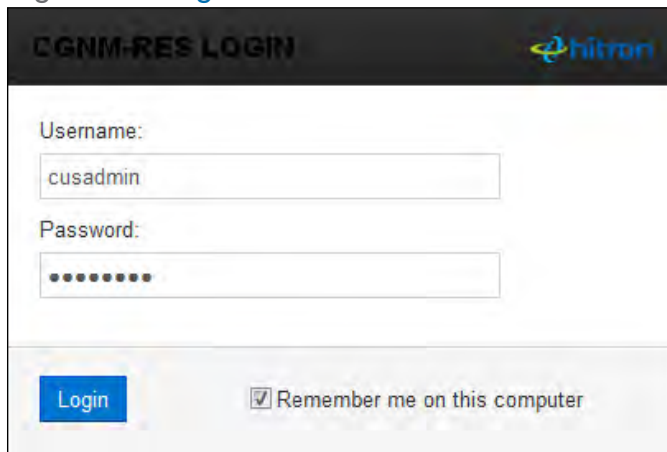

1.5 Login into the CGNM/ CGNM-3552

Take the following steps to login into the CGNM/ CGNM-3552's GUI.

NOTE: You can login into the CGNM/ CGNM-3552's GUI via the wireless interface. However, it is strongly recommended that you configure the CGNM/ CGNM-3552 via a wired connection on the LAN.

- 1 Open a browser window.
- 2 Enter the CGNM/ CGNM-3552's IP address (default **192.168.0.1**) in the URL bar. The **Login** screen displays.

Figure 5: Login

- 3 Enter the **Username** and **Password**. The default login username is **cusadmin**, and the default password is **password**.

NOTE: The Username and Password are case-sensitive; “password” is not the same as “Password”.

- 4 Click **Login**. The **Overview** screen displays (see [The Overview Screen](#) on page 40).

1.6 GUI Overview

This section describes the CGNM/ CGNM-3552's GUI.

Figure 6: GUI Overview

Table 4: GUI Overview

Primary Navigation Bar	Use this section to move from one part of the GUI to another, select the language and your login account.
Secondary Navigation Bar	Use this section to move from one related screen to another.
Main Window	Use this section to read information about your CGNM/ CGNM-3552's configuration, and make configuration changes.

1.7 Factory Default Resetting the CGNM/ CGNM-3552

When you reset the CGNM/ CGNM-3552 to its factory defaults, all user-configured settings are lost, and the CGNM/ CGNM-3552 is returned to its initial configuration state.

There are two ways to reset the CGNM/ CGNM-3552:

- ▶ Press the **RESET** button on the CGNM/ CGNM-3552, and hold it in for 5 seconds or longer.
- ▶ Click **Admin > Device Reset**. In the screen that displays, click the **Factory Reset** button.

After the operation, the CGNM/ CGNM-3552 turns off and on again, using its factory default settings.

NOTE: Depending on your CGNM/ CGNM-3552's previous configuration, you may need to re-configure your computer's IP settings; see [IP Address Setup](#) on page 10.

2

Setup Wizard

This chapter describes the CGNM/ CGNM-3552's setup wizard, which displays when you click **Setup Wizard** in the toolbar. It contains the following sections:

- ▶ [Setup Wizard Overview](#) on page 1
- ▶ [The Setup Wizard Screen](#) on page 1
- ▶ [The Welcome Screen](#) on page 2
- ▶ [The Setting Password Screen](#) on page 3
- ▶ [The Wireless Settings Screen](#) on page 4
- ▶ [The Summary Screen](#) on page 5

2.1 Setup Wizard Overview

Your CGNM/ CGNM-3552 possess a setup wizard that allows you to rapidly configure its most important settings, including password and wireless settings.

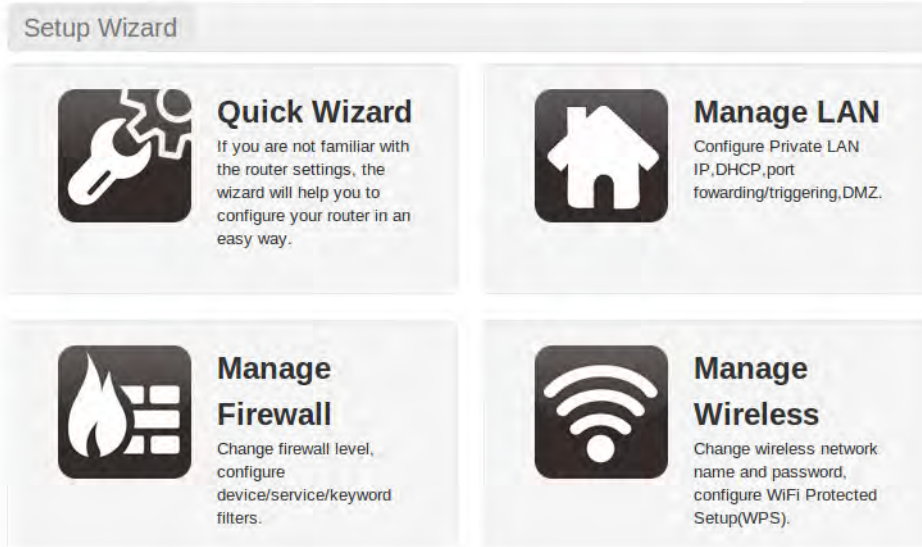

2.2 The Setup Wizard Screen

This section describes the CGNM/ CGNM-3552's Setup Wizard Screen.

Figure 7: The Setup Wizard Screen

Setup Wizard

This is a setup wizard for the device

© 2014 Hitron Technologies Inc.. All rights reserved.

The following table describes the labels in this screen.

Table 5: The Setup Wizard Screen

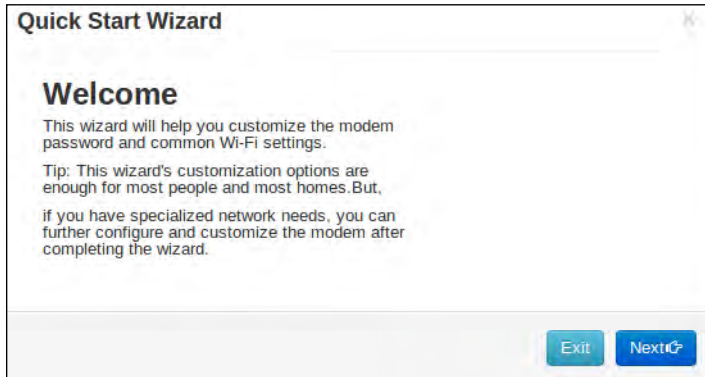

Quick Wizard	Click to customize the CGNM/ CGNM-3552's password and common Wi-Fi settings.
Manage LAN	Click to manage the CGNM/ CGNM-3552's firewall settings. See The LAN Setup Screen on page 58.
Manage Firewall	Click to manage the CGNM/ CGNM-3552's firewall settings. See The Firewall Screen on page 103.
Manage Wireless	Click to manage the CGNM/ CGNM-3552's wireless settings. See The Basic Settings Screen on page 80.

2.3 The Welcome Screen

This screen displays the welcome message of the Quick Wizard.

Click **Quick Wizard**. The following screen displays.

Figure 8: The Quick Wizard: Welcome Screen

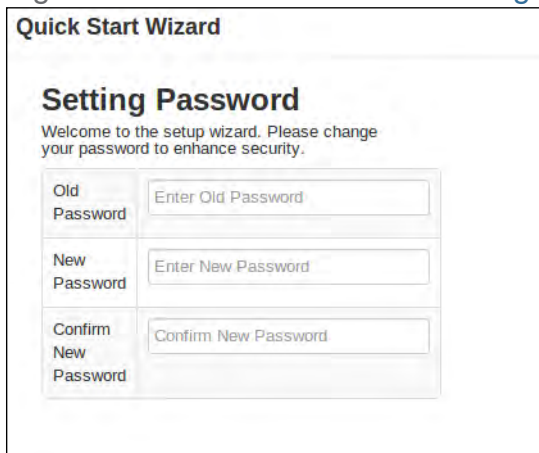

2.4 The Setting Password Screen

Use this screen to customize the CGNM/ CGNM-3552's password settings.

Click **Next** in the **Quick Wizard: Welcome Screen**. The following screen displays.

NOTE: It is strongly recommended that you change the CGNM/ CGNM-3552's password from its factory default.

Figure 9: The Quick Wizard: Setting Password Screen

The following table describes the labels in this screen.

Table 6: The Setup Wizard: Setting Password Screen

Old Password	Enter the password with which you currently log into the CGNM/ CGNM-3552 for this account.
New Password	Enter and re-enter the password you want to use to log into the CGNM/ CGNM-3552 for this account.
Confirm New Password	
Exit	Click this to return the fields in this screen to their last-saved values without saving your changes.
Prev	Click this to return to the previous screen.
Next	Click this to continue to the next screen.

2.5 The Wireless Settings Screen

Use this screen to configure the CGNM/ CGNM-3552's wireless settings.

Click **Next** in the **Quick Wizard: Setting Password** screen. The following screen displays.

Figure 10: The Quick Wizard: Wireless Settings Screen

Quick Start Wizard

Wireless Settings
Please configure your Wireless settings.

Primary SSID: CGNM-0858

Security Type: Encrypted (WPAPSK/WPA2PSK)

Security Key: 251147017635

The following table describes the labels in this screen.

Table 7: The Setup Wizard: Wireless Settings Screen

Primary SSID	Enter the name that you want to use for your CGNM/ CGNM-3552's wireless network. This is the name that identifies your network, and to which wireless clients connect.
Security Type	Use this field to apply security encryption to your wireless network. <ul style="list-style-type: none">▶ Select Open to use no wireless security. Anyone can join the network.▶ Select Encrypted to require people who want to access your wireless network to use a password. Then, enter the password you want to use in the Security Key field that displays.
Exit	Click this to return the fields in this screen to their last-saved values without saving your changes.
Prev	Click this to return to the previous screen.
Next	Click this to continue to the next screen.

2.6 The Summary Screen

Use this screen to view the CGNM/ CGNM-3552's settings.

Click **Next** in the **Quick Wizard: Wireless Settings** screen. The following screen displays.

Figure 11: The Setup Wizard: Summary Screen

Quick Start Wizard

Summary
Please confirm the changes that will be applied to the device

Password	
New Password	Password Not Changed

Wireless Configuration	
Primary SSID Name	CGNM-0858
Security Mode	WPA/WPA2 - TKIP/AES
Wireless Secure Key	251147017635

If you are happy with the settings, click **Finish**. The following confirmation message displays.

Figure 12: The Setup Wizard: Summary Screen

NOTE: If you changed the **Primary SSID Name** or **Wireless Secure Key**, make sure you keep a note of the new details.

Alternatively, click **Prev** to make further changes to the wizard's fields.

3

Status

This chapter describes the screens that display when you click **Status** in the toolbar. It contains the following sections:

- ▶ [Status Overview](#) on page 1
- ▶ [The Overview Screen](#) on page 9
- ▶ [The System Information Screen](#) on page 13
- ▶ [The DOCSIS Provisioning Screen](#) on page 15
- ▶ [The DOCSIS WAN Screen](#) on page 16
- ▶ [The DOCSIS Event Screen](#) on page 19
- ▶ [The Wireless Screen](#) on page 21
- ▶ [The MoCA Screen](#) on page 24

3.1 Status Overview

This section describes some of the concepts related to the **Status** screens.

3.1.1 DOCSIS

The Data Over Cable Service Interface Specification (DOCSIS) is a telecommunications standard that defines the provision of data services (Internet access) over a traditional cable TV (CATV) network.

Your CGNM/ CGNM-3552 supports DOCSIS version 3.0.

3.1.2 IP Addresses and Subnets

Every computer on the Internet must have a unique Internet Protocol (IP) address. The IP address works much like a street address, in that it identifies a specific location to which information is transmitted. No two computers on a network can have the same IP address.

3.1.2.1 IP Address Format

IP addresses consist of four octets (8-bit numerical values) and are usually represented in decimal notation, for example **192.168.1.1**. In decimal notation, this means that each octet has a minimum value of 0 and a maximum value of 255.

An IP address carries two basic pieces of information: the “network number” (the address of the network as a whole, analogous to a street name) and the “host ID” (analogous to a house number) which identifies the specific computer (or other network device).

3.1.2.2 IP Address Assignment

IP addresses can come from three places:

- ▶ The Internet Assigned Numbers Agency (IANA)
- ▶ Your Internet Service Provider
- ▶ You (or your network devices)

IANA is responsible for IP address allocation on a global scale, and your ISP assigns IP addresses to its customers. You should never attempt to define your own IP addresses on a public network, but you are free to do so on a private network.

In the case of the CGNM/ CGNM-3552:

- ▶ The public network (Wide Area Network or WAN) is the link between the cable connector and your Internet Service Provider. Your CGNM/ CGNM-3552's IP address on this network is assigned by your service provider.

- ▶ The private network (in routing mode - see [Routing Mode](#) on page 6) is your Local Area Network (LAN) and Wireless Local Area Network (WLAN), if enabled. You are free to assign IP addresses to computers on the LAN and WLAN manually, or to allow the CGNM/ CGNM-3552 to assign them automatically via DHCP (Dynamic Host Configuration Protocol). IANA has reserved the following blocks of IP addresses to be used for private networks only:

Table 8: [Private IP Address Ranges](#)

FROM...	...TO
10.0.0.0	10.255.255.255
172.16.0.0	172.31.255.255
192.168.0.0	192.168.255.255

If you assign addresses manually, they must be within the CGNM/ CGNM-3552's LAN subnet.

3.1.2.3 Subnets

A subnet (short for sub-network) is, as the name suggests, a separate section of a network, distinct from the main network of which it is a part. A subnet may contain all of the computers at one corporate local office, for example, while the main network includes several offices.

In order to define the extent of a subnet, and to differentiate it from the main network, a subnet mask is used. This “masks” the part of the IP address that refers to the main network, leaving the part of the IP address that refers to the sub-network.

Each subnet mask has 32 bits (binary digits), as does each IP address:

- ▶ A binary value of **1** in the subnet mask indicates that the corresponding bit in the IP address is part of the main network.
- ▶ A binary value of **0** in the subnet mask indicates that the corresponding bit in the IP address is part of the sub-network.

For example, the following table shows the IP address of a computer (**192.168.1.1**) expressed in decimal and binary (each cell in the table indicates one octet):

Table 9: [IP Address: Decimal and Binary](#)

192	168	0	1
11000000	10101000	00000000	00000001

The following table shows a subnet mask that “masks” the first twenty-four bits of the IP address, in both its decimal and binary notation.

Table 10: Subnet Mask: Decimal and Binary

255	255	255	0
11111111	11111111	11111111	00000000

This shows that in this subnet, the first three octets (**192.168.1**, in the example IP address) define the main network, and the final octet (**1**, in the example IP address) defines the computer's address on the subnet.

The decimal and binary notations give us the two common ways to write a subnet mask:

- ▶ Decimal: the subnet mask is written in the same fashion as the IP address: **255.255.255.0**, for example.
- ▶ Binary: the subnet mask is indicated after the IP address (preceded by a forward slash), specifying the number of binary digits that it masks. The subnet mask **255.255.255.0** masks the first twenty-four bits of the IP address, so it would be written as follows: **192.168.1.1/24**.

3.1.3 DHCP

The Dynamic Host Configuration Protocol, or DHCP, defines the process by which IP addresses can be assigned to computers and other networking devices automatically, from another device on the network. This device is known as a DHCP server, and provides addresses to all the DHCP client devices.

In order to receive an IP address via DHCP, a computer must first request one from the DHCP server (this is a broadcast request, meaning that it is sent out to the whole network, rather than just one IP address). The DHCP server hears the requests, and responds by assigning an IP address to the computer that requested it.

If a computer is not configured to request an IP address via DHCP, you must configure an IP address manually if you want to access other computers and devices on the network. See [IP Address Setup](#) on page 10 for more information.

By default, the CGNM/ CGNM-3552 is a DHCP client on the WAN (the CATV connection). It broadcasts an IP address over the cable network, and receives one from the service provider. By default, the CGNM/ CGNM-3552 is a DHCP server on the LAN; it provides IP addresses to computers on the LAN which request them.

3.1.4 DHCP Lease

“DHCP lease” refers to the length of time for which a DHCP server allows a DHCP client to use an IP address. Usually, a DHCP client will request a DHCP lease renewal before the lease time is up, and can continue to use the IP address for an additional period. However, if the client does not request a renewal, the DHCP server stops allowing the client to use the IP address.

This is done to prevent IP addresses from being used up by computers that no longer require them, since the pool of available IP addresses is finite.

3.1.5 MAC Addresses

Every network device possesses a Media Access Control (MAC) address. This is a unique alphanumeric code, given to the device at the factory, which in most cases cannot be changed (although some devices are capable of “MAC spoofing”, where they impersonate another device’s MAC address).

MAC addresses are the most reliable way of identifying network devices, since IP addresses tend to change over time (whether manually altered, or updated via DHCP).

Each MAC address displays as six groups of two hexadecimal digits separated by colons (or, occasionally, dashes) for example **00:AA:FF:1A:B5:74**.

NOTE: Each group of two hexadecimal digits is known as an “octet”, since it represents eight bits.

Bear in mind that a MAC address does not precisely represent a computer on your network (or elsewhere), it represents a network device, which may be part of a computer (or other device). For example, if a single computer has an Ethernet card (to connect to your CGNM/ CGNM-3552 via one of the **LAN** ports) and also has a wireless card (to connect to your CGNM/ CGNM-3552 over the wireless interface) the MAC addresses of the two cards will be different. In the case of the CGNM/ CGNM-3552, each internal module (cable modem module, Ethernet module, wireless module, etc.) possesses its own MAC address.

3.1.6 Routing Mode

When your CGNM/ CGNM-3552 is in routing mode, it acts as a gateway for computers on the LAN to access the Internet. The service provider assigns an IP address to the CGNM/ CGNM-3552 on the WAN, and all traffic for LAN computers is sent to that IP address. The CGNM/ CGNM-3552 assigns private IP addresses to LAN computers (when DHCP is active), and transmits the relevant traffic to each private IP address.

NOTE: When DHCP is not active on the CGNM/ CGNM-3552 in routing mode, each computer on the LAN must be assigned an IP address in the CGNM/ CGNM-3552's subnet manually.

When the CGNM/ CGNM-3552 is not in routing mode, the service provider assigns an IP address to each computer connected to the CGNM/ CGNM-3552 directly. The CGNM/ CGNM-3552 does not perform any routing operations, and traffic flows between the computers and the service provider.

Routing mode is not user-configurable; it is specified by the service provider in the CGNM/ CGNM-3552's configuration file.

3.1.7 Configuration Files

The CGNM/ CGNM-3552's configuration (or config) file is a document that the CGNM/ CGNM-3552 obtains automatically over the Internet from the service provider's server, which specifies the settings that the CGNM/ CGNM-3552 should use. It contains a variety of settings that are not present in the user-configurable Graphical User Interface (GUI) and can be specified only by the service provider.

3.1.8 Downstream and Upstream Transmissions

The terms "downstream" and "upstream" refer to data traffic flows, and indicate the direction in which the traffic is traveling. "Downstream" refers to traffic from the service provider to the CGNM/ CGNM-3552, and "upstream" refers to traffic from the CGNM/ CGNM-3552 to the service provider.

3.1.9 Cable Frequencies

Just like radio transmissions, data transmissions over the cable network must exist on different frequencies in order to avoid interference between signals.

The data traffic band is separate from the TV band, and each data channel is separate from other data channels.

3.1.10 Modulation

Transmissions over the cable network are based on a strong, high frequency periodic waveform known as the “carrier wave.” This carrier wave is so called because it “carries” the data signal. The data signal itself is defined by variations in the carrier wave. The process of varying the carrier wave (in order to carry data signal information) is known as “modulation.” The data signal is thus known as the “modulating signal.”

Cable transmissions use a variety of methods to perform modulation (and the “decoding” of the received signal, or “demodulation”). The modulation methods defined in DOCSIS 3 are as follows:

- ▶ **QPSK**: Quadrature Phase-Shift Keying
- ▶ **QAM**: Quadrature Amplitude Modulation
- ▶ **QAM TCM**: Trellis modulated Quadrature Amplitude Modulation

In many cases, a number precedes the modulation type (for example **16 QAM**). This number refers to the complexity of modulation. The higher the number, the more data can be encoded in each symbol.

NOTE: In modulated signals, each distinct modulated character (for example, each audible tone produced by a modem for transmission over telephone lines) is known as a symbol.

Since more information can be represented by a single character, a higher number indicates a higher data transfer rate.

3.1.11 TDMA, FDMA and SCDDMA

Time Division Multiple Access (TDMA), Frequency Division Multiple Access (FDMA) and Synchronous Code Division Multiple Access (SCDDMA) are channel access methods that allow multiple users to share the same frequency channel.

- ▶ TDMA allows multiple users to share the same frequency channel by splitting transmissions by time. Each user is allocated a number of time slots, and transmits during those time slots.

- ▶ FDMA allows multiple users to share the same frequency channel by assigning a frequency band within the existing channel to each user.
- ▶ SCDDMA allows multiple users to share the same frequency channel by assigning a unique orthogonal code to each user.

3.1.12 The Multimedia over Coax Alliance

The Multimedia over Coax Alliance (MoCA) is a non-profit technology alliance, which defines a set of specifications for the delivery of high-speed data, such as HD video, over your building's existing co-axial cabling network. Co-axial, or coax (pronounced "ko-axe") cable is already incorporated into most buildings for the transmission of RF signals, traditionally for relaying television broadcasts from a TV antenna, satellite or cable box to individual televisions around the building.

MoCA devices allow you use the coax cable network as an extension of your building's existing IP network, which includes both wired (Ethernet) and wireless (WiFi) traffic. Because they bridge the two networks, they are known as Ethernet-to-Coax Bridges, or ECBs.

Figure 13: Bridging the Gap Between IP and Coaxial Networks

MoCA traffic on the coax network does not interfere with existing broadcasts from cable, telco, IPTV or satellite service providers, as it makes use of a previously-unused segment of the RF spectrum. The medium is ideal for real-time applications, providing high data throughput (100Mbps~1Gbps) with low latency, jitter or data loss. Also, coax cabling is generally better-shielded than IP networking media, especially wireless.

Applications to which MoCA networking is well-suited include:

- ▶ Video on Demand (VoD)

- ▶ Multi-room, multi-camera Digital Video Recording (DVR)
- ▶ Gaming (LAN or online multiplayer)
- ▶ Internet video
- ▶ Home automation
- ▶ Video conferencing

3.2 The Overview Screen

Use this screen to see general information about your CGNM/ CGNM-3552's hardware, its software, and its connection to the Internet.

NOTE: Most of the information that displays in this screen is for troubleshooting purposes only. However, you may need to use the MAC Address information when setting up your network.

Click **Status > Overview**. The following screen displays.

The following table describes the labels in this screen.

Table 11: [The Status: Overview Screen](#)

System Overview	
Hardware Version	This displays the version number of the CGNM/ CGNM-3552's physical hardware.
Software Version	This displays the version number of the software that controls the CGNM/ CGNM-3552.
Gateway Serial Number	This displays a number that uniquely identifies the device.
System Time	This displays the current date and time.
LAN Up Time	This displays the time the LAN has been online.
WAN Up Time	This displays the time the WAN has been online.
WAN IP	This field displays the CGNM/ CGNM-3552's IP address on the WAN (Wide Area Network) interface.
WAN DNS	This field displays the DNS server IP used by the WAN side.
Wireless Overview	
(SSID)	This displays the 2.4 GHz wireless network's Service Set Identifier. This is the name of the wireless network, to which wireless clients connect.
Broadcast SSID	This field displays Enabled when the 2.4 GHz wireless network's SSID is being broadcast, and displays Disabled when it is not.
Security Mode	This displays the type of security the CGNM/ CGNM-3552's 2.4 GHz wireless network is currently using.
Security Key	This displays the password for the CGNM/ CGNM-3552's 2.4 GHz wireless network.
(SSID 5 GHz)	This displays the 5 GHz wireless network's Service Set Identifier. This is the name of the wireless network, to which wireless clients connect.
Broadcast SSID	This field displays Enabled when the 5 GHz wireless network's SSID is being broadcast, and displays Disabled when it is not.
Security Mode	This displays the type of security the CGNM/ CGNM-3552's 5 GHz wireless network is currently using.
Security Key	This displays the password for the CGNM/ CGNM-3552's 5 GHz wireless network.

Table 11: The Status: Overview Screen (continued)

Service Filter	
Filter Status	This displays Active when a Service Filter is Enabled.
Host Name	This displays the name for the application for which you want to create the rule.
Protocol	This field displays the protocol or protocols to which this filtering rule applies: <ul style="list-style-type: none"> ▶ Transmission Control Protocol (TCP) ▶ User Datagram Protocol (UDP)
Port Range	This displays the start and end port for which this filtering rule applies.
Managed Time	This displays the start (From) and end (To) of the time period during which this rule applies, on the specified Managed Weekdays .
Managed Weekdays	This displays the days of the week on which this rule applies.
Trusted PC List	
Device Name	This displays the name of the trust device connected.
IP Address	This displays the IP address of the trust network device connected.
Status	This displays whether or not the service filter rule is enabled to the trust device connected.
Device Filter	
Block Rules Status	This displays the status of the devices listed. <ul style="list-style-type: none"> ▶ Allow All: ignore the Managed Devices list and let all devices connect to the CGNM/ CGNM-3552. ▶ Allow: permit only devices you added to the Managed Devices list to access the CGNM/ CGNM-3552 and the network. All other devices are denied access. ▶ Deny: permit all devices except those you added to the Managed Devices list to access the CGNM/ CGNM-3552 and the network. The specified devices are denied access.
Host Name	This displays the name of each network device in the list.

Table 11: The Status: Overview Screen (continued)

MAC Address	This displays the Media Access Control (MAC) address of each network device in the list.
Managed Time	This displays the start (From) and end (To) of the time period during which the device is managed, on the specified Managed Weekdays .
Managed Weekdays	This displays the days of the week on which the device is managed.
Keyword Filter	
Keywords Status	This displays Active when a Keyword Filter is Enabled.
Keyword	Enter the keyword that you want to block. The CGNM/ CGNM-3552 examines both the page's URL (Internet address) and its page content (text).
Blocked Time	Use these fields to specify the period during which the rule should be applied. Enter the start time in the From fields, using twenty-four hour notation, and enter the end time in the To fields.
Blocked Weekdays	Use these fields to specify the times at which the keyword should be blocked. A red background indicates that the rule will be applied (access will be blocked), and a green background indicates that the device will not be applied (access will not be blocked). Click a day to toggle the rule on or off for the relevant day.
Trusted PC List	
Device Name	This displays the name of each network device connected.
IP Address	This displays the IP address of each network device connected.
Rule Status	This displays whether or not the keyword filter rule is enabled to the trust device connected.

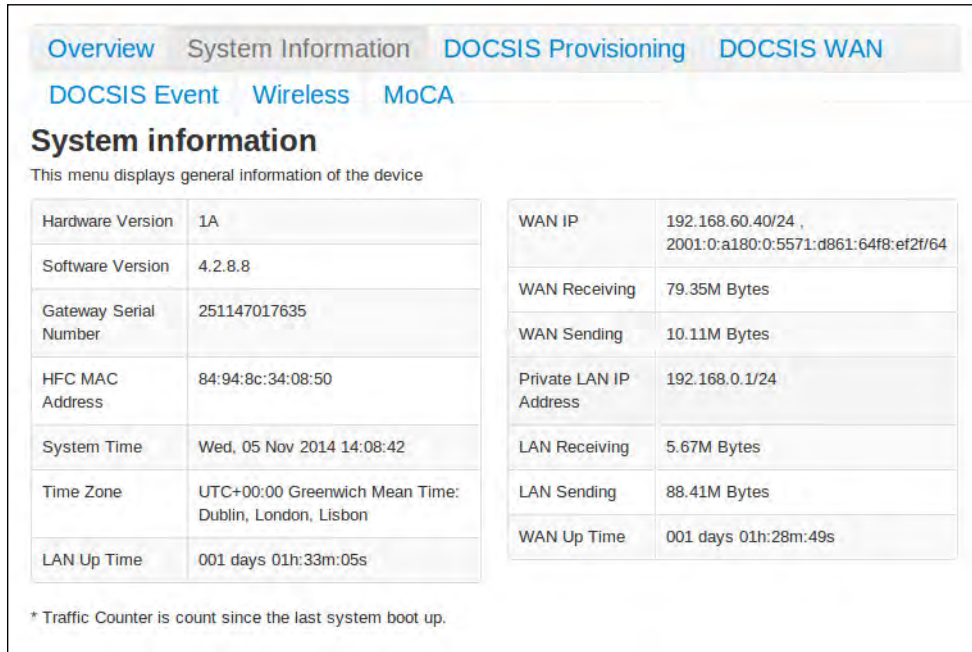

3.3 The System Information Screen

Use this screen to see general information about your CGNM/ CGNM-3552's hardware, its software, and its connection to the Internet.

NOTE: Most of the information that displays in this screen is for troubleshooting purposes only. However, you may need to use the MAC Address information when setting up your network.

Click **Status > System Information**. The following screen displays.

Figure 15: The Status: System Information Screen

System information	
This menu displays general information of the device	
Hardware Version	1A
Software Version	4.2.8.8
Gateway Serial Number	251147017635
HFC MAC Address	84:94:8c:34:08:50
System Time	Wed, 05 Nov 2014 14:08:42
Time Zone	UTC+00:00 Greenwich Mean Time: Dublin, London, Lisbon
LAN Up Time	001 days 01h:33m:05s
WAN IP	192.168.60.40/24 , 2001:0:a180:0:5571:d861:64f8:ef2f/64
WAN Receiving	79.35M Bytes

LAN Receiving	5.67M Bytes
LAN Sending	88.41M Bytes
WAN Up Time	001 days 01h:28m:49s

* Traffic Counter is count since the last system boot up.

The following table describes the labels in this screen.

Table 12: The Status: System Information Screen

Hardware Version	This displays the version number of the CGNM/ CGNM-3552's physical hardware.
Software Version	This displays the version number of the software that controls the CGNM/ CGNM-3552.
Gateway Serial Number	This displays a number that uniquely identifies the device.
HFC MAC Address	This displays the Media Access Control (MAC) address of the CGNM/ CGNM-3552's RF module. This is the module that connects to the Internet through the Cable connection.
System Time	This displays the current date and time.
Time Zone	Use display the time zone when the ToD Function enabled.
LAN Up Time	This displays the time the LAN has been online.
WAN IP	This field displays the CGNM/ CGNM-3552's IP address on the WAN (Wide Area Network) interface.

Table 12: The Status: System Information Screen (continued)

WAN Receiving	This displays the number of bytes that the WAN is receiving.
WAN Sending	This displays the number of bytes that the WAN is sending.
Private LAN IP Address	Use this field to define the IP address of the CGNM/ CGNM-3552 on the LAN.
LAN Receiving	This displays the number of bytes that the LAN is receiving.
LAN Sending	This displays the number of bytes that the LAN is sending.
WAN Up Time	This displays the time the WAN has been online.

3.4 The DOCSIS Provisioning Screen

This screen displays the steps successfully taken to connect to the Internet over the **Cable** connection.

Use this screen for troubleshooting purposes to ensure that the CGNM/ CGNM-3552 has successfully connected to the Internet; if an error has occurred you can identify the stage at which the failure occurred.

Click **Status > DOCSIS Provisioning**. The following screen displays.

Figure 16: The Status: DOCSIS Provisioning Status Screen

Overview	System Information	DOCSIS Provisioning	DOCSIS WAN
DOCSIS Event	Wireless	MoCA	
DOCSIS Provisioning Status			
This menu displays the connectivity status of the modem and its boot state

The following table describes the labels in this screen.

Table 13: The Status: DOCSIS WAN Screen

DOCSIS Overview	
Network Access	This displays whether or not your service provider allows you to access the Internet over the CABLE connection. <ul style="list-style-type: none"> ▶ Permitted displays if you can access the Internet. ▶ Denied displays if you cannot access the Internet.
IP Address	This displays the CGNM/ CGNM-3552's WAN IP address. This IP address is automatically assigned to the CGNM/ CGNM-3552.
Subnet Mask	This displays the CGNM/ CGNM-3552's WAN subnet mask.
Gateway IP	This displays the IP address of the device to which the CGNM/ CGNM-3552 is connected over the CABLE interface.

Table 13: The Status: DOCSIS WAN Screen (continued)

DHCP Lease Time	This displays the time that elapses before your device's IP address lease expires, and a new IP address is assigned to it by the DHCP server.
Downstream Overview	
NOTE: The downstream signal is the signal transmitted to the CGNM/ CGNM-3552.	
Port ID	This displays the ID number of the downstream connection's port.
Frequency (MHz)	This displays the actual frequency in Megahertz (MHz) of each downstream data channel to which the CGNM/ CGNM-3552 is connected.
Modulation	This displays the type of modulation that each downstream channel uses.
Signal Strength (dBmV)	This displays the power of the signal of each downstream data channel to which the CGNM/ CGNM-3552 is connected, in dBmV (decibels above/below 1 millivolt).
Channel ID	This displays the ID number of each channel on which the downstream signal is transmitted.
Signal Noise Ratio (dB)	This displays the Signal to Noise Ratio (SNR) of each downstream data channel to which the CGNM/ CGNM-3552 is connected, in dB (decibels).
Upstream Overview	
NOTE: The upstream signal is the signal transmitted from the CGNM/ CGNM-3552.	
Port ID	This displays the ID number of the upstream connection's port.
Frequency (MHz)	This displays the actual frequency in Megahertz (MHz) of each upstream data channel to which the CGNM/ CGNM-3552 is connected.
Modulation	This displays the type of modulation that each upstream channel uses.
Signal Strength (dBmV)	This displays the power of the signal of each upstream data channel to which the CGNM/ CGNM-3552 is connected, in dBmV (decibels above/below 1 millivolt).

Table 13: The Status: DOCSIS WAN Screen (continued)

Channel ID	This displays the ID number of each channel on which the upstream signal is transmitted.
BandWidth	This displays the BandWidth of each upstream channel to which the CGNM/ CGNM-3552 is connected.

3.6 The DOCSIS Event Screen

Use this screen to discover information about:

- ▶ The nature of the upstream and downstream connection between the CGNM/ CGNM-3552 and the device to which it is connected through the **CABLE** interface.
- ▶ IP details of the CGNM/ CGNM-3552's WAN connection.

Click **Status** > **DOCSIS Event**. The following screen displays.

Figure 18: The Status: DOCSIS Event Screen

Overview System Information DOCSIS Provisioning DOCSIS WAN				
DOCSIS Event Wireless MoCA				
Docsis Logs The docsis event logs is shown here

<input type="button" value="Clear"/>				

The following table describes the labels in this screen.

Table 14: The Status: DOCSIS Event Screen

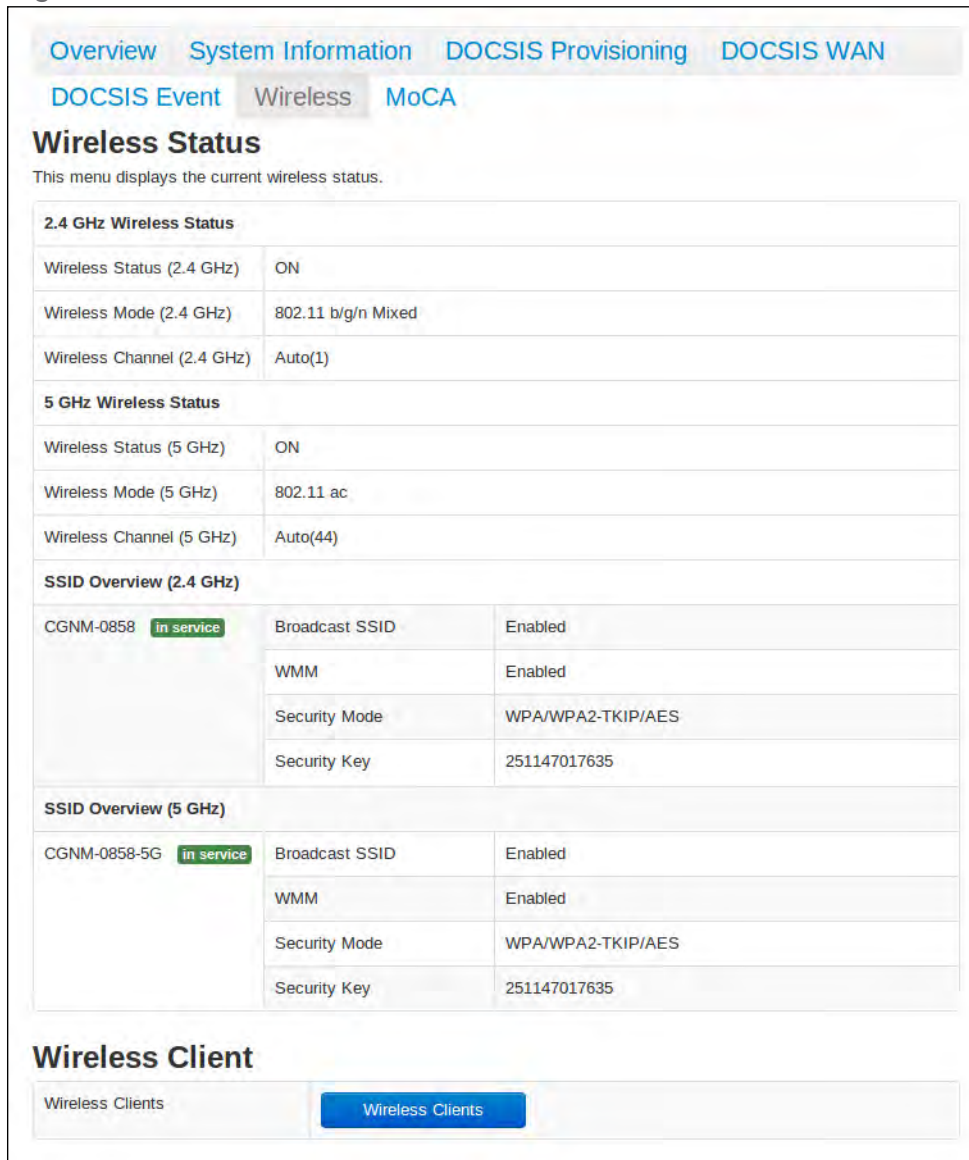

No.	This displays the arbitrary, incremental index number assigned to the DOCSIS event.
Time	This displays the time and date of the DOCSIS event.
Type	This displays the type of the DOCSIS event. NOTE: The definitions of the type of DOCSIS event follow DOCSIS's specification accordingly.
Priority	This displays the priority of the DOCSIS event. NOTE: The definitions of the priority of DOCSIS event follow DOCSIS's specification accordingly.
Event	This displays a description of the DOCSIS event.

3.7 The Wireless Screen

Use this screen to view general information about the CGNM/ CGNM-3552's WiFi-related settings. You can modify many of the fields in this screen using the **Wireless > Basic Setting** screen; see [The Basic Settings Screen](#) on page 80

Click **Status > Wireless**. The following screen displays.

Figure 19: The Status: Wireless Screen

The screenshot shows the 'Wireless Status' screen. At the top, there are navigation tabs: Overview, System Information, DOCSIS Provisioning, DOCSIS WAN, DOCSIS Event, Wireless (selected), and MoCA. Below the tabs, the title 'Wireless Status' is displayed, followed by a brief description: 'This menu displays the current wireless status.'

The main content is organized into several sections:

- 2.4 GHz Wireless Status:**
 - Wireless Status (2.4 GHz): ON
 - Wireless Mode (2.4 GHz): 802.11 b/g/n Mixed
 - Wireless Channel (2.4 GHz): Auto(1)
- 5 GHz Wireless Status:**
 - Wireless Status (5 GHz): ON
 - Wireless Mode (5 GHz): 802.11 ac
 - Wireless Channel (5 GHz): Auto(44)
- SSID Overview (2.4 GHz):**
 - CGNM-0858 in service
 - Broadcast SSID: Enabled
 - WMM: Enabled
 - Security Mode: WPA/WPA2-TKIP/AES
 - Security Key: 251147017635
- SSID Overview (5 GHz):**
 - CGNM-0858-5G in service
 - Broadcast SSID: Enabled
 - WMM: Enabled
 - Security Mode: WPA/WPA2-TKIP/AES
 - Security Key: 251147017635

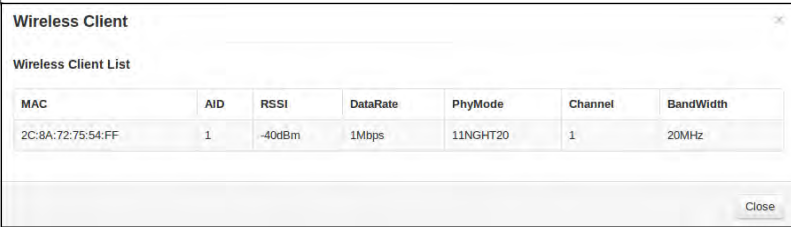

At the bottom of the screen, there is a section titled 'Wireless Client' with a 'Wireless Clients' button.

The following table describes the labels in this screen.

Table 15: [The Status: Wireless Status Screen](#)

2.4GHz Wireless Status	
Wireless Status	This field displays ON when the CGNM/ CGNM-3552's 2.4 GHz wireless network is active, and displays OFF when it is inactive.
Wireless Mode	This displays the type of 2.4 GHz wireless network that the CGNM/ CGNM-3552 is using.
Wireless Channel	This displays the wireless channel on which the CGNM/ CGNM-3552's 2.4 GHz wireless network is transmitting and receiving.
5GHz Wireless Status	
Wireless Status (5GHz)	This field displays ON when the CGNM/ CGNM-3552's 5 GHz wireless network is active, and displays OFF when it is inactive.
Wireless Mode (5GHz)	This displays the type of 5 GHz wireless network that the CGNM/ CGNM-3552 is using.
Wireless Channel (5GHz)	This displays the wireless channel on which the CGNM/ CGNM-3552's 5 GHz wireless network is transmitting and receiving.
SSID Overview (2.4GHz)	
(SSID)	This displays the 2.4 GHz wireless network's Service Set Identifier. This is the name of the wireless network, to which wireless clients connect.
Broadcast SSID	This field displays Enabled when the 2.4 GHz wireless network's SSID is being broadcast, and displays Disabled when it is not.
WMM	This field displays Enabled when the 2.4 GHz wireless network, and displays Disabled when it is not.
Security Mode	This displays the type of security the CGNM/ CGNM-3552's 2.4 GHz wireless network is currently using.
Security Key	This displays the password for the CGNM/ CGNM-3552's 2.4 GHz wireless network.
SSID Overview (5GHz)	
(SSID)	This displays the 5 GHz wireless network's Service Set Identifier. This is the name of the wireless network, to which wireless clients connect.

Table 15: The Status: Wireless Status Screen (continued)

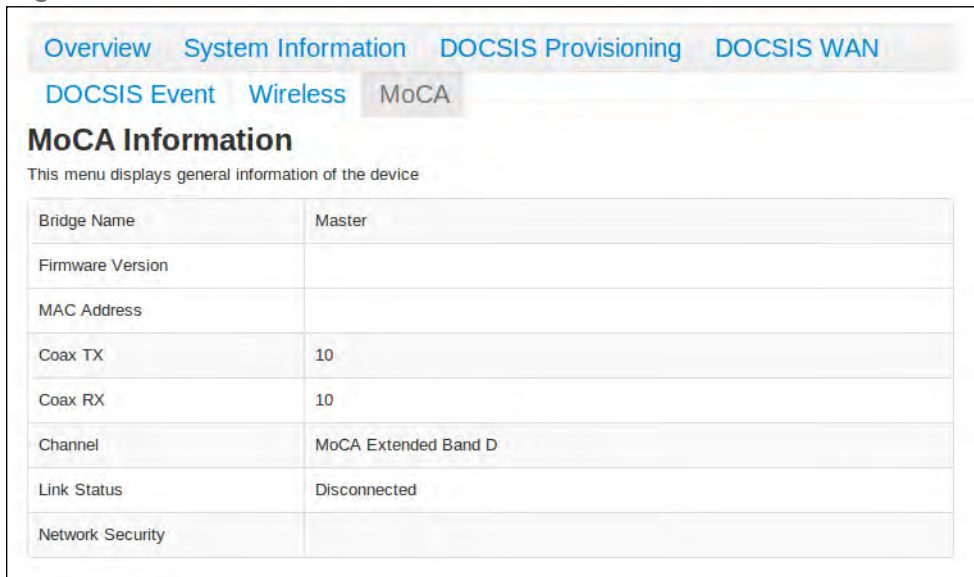

Broadcast SSID	This field displays Enabled when the 5 GHz wireless network's SSID is being broadcast, and displays Disabled when it is not.
WMM	This field displays Enabled when the 5 GHz wireless network, and displays Disabled when it is not.
Security Mode	This displays the type of security the CGNM/ CGNM-3552's 5 GHz wireless network is currently using.
Security Key	This displays the password for the CGNM/ CGNM-3552's 5 GHz wireless network.
Wireless Client	<p>This displays the wireless client of the CGNM/ CGNM-3552's wireless network.</p> <p>Figure 20: Wireless Client List</p> 
MAC	This displays the MAC (Media Access Control) address of each wireless client connected to the device's wireless network.
AID	This displays the AID (Association ID) of each wireless client connected to the device's wireless network.
RSSI	This field display the Received Signal Strength Indication from each wireless client connected to the device's wireless network.
DateRate	This displays the transfer speed of each wireless client connected to the device's wireless network.
PhyMode	This displays the Physical Mode (IEEE 802.11a,b,g or n) of each wireless client connected to the device's wireless network.
Channel	This displays the wireless channel on which the device is connected.
BandWidth	This displays the bandwidth (20/40MHz) of each wireless client connected to the device's wireless network.

3.8 The MoCA Screen

Use this screen to view general information about the CGNM/ CGNM-3552's MoCA-related settings. You can modify many of the fields in this screen using the **Basic > MoCA** screen; see [The MoCA Screen](#) on page 72

Click **Status > MoCA**. The following screen displays.

Figure 21: The Status: MoCA Information Screen

The screenshot shows a web interface with navigation tabs: Overview, System Information, DOCSIS Provisioning, DOCSIS WAN, DOCSIS Event, Wireless, and MoCA. The MoCA tab is selected. Below the tabs is the title 'MoCA Information' and a subtitle 'This menu displays general information of the device'. A table displays the following information:

Bridge Name	Master
Firmware Version	
MAC Address	
Coax TX	10
Coax RX	10
Channel	MoCA Extended Band D
Link Status	Disconnected
Network Security	

The following table describes the labels in this screen.

Table 16: The Status: MoCA Information Screen

Bridge Name	This displays the name of this CGNM/ CGNM-3552 in your MoCA network. Each CGNM/ CGNM-3552 receives an individual, unique bridge name.
Firmware Version	This displays the version number of the firmware currently running on your CGNM/ CGNM-3552's MoCA module
IP Address	This displays the IP address of the CGNM/ CGNM-3552's MoCA module, which is visible to devices accessing the CGNM/ CGNM-3552 via the Ethernet ports.

MAC Address	This displays the MAC address of the CGNM/ CGNM-3552's MoCA module, which is visible to devices accessing the CGNM/ CGNM-3552 via the Ethernet ports.
Coax TX	This displays the transmission (TX) power of the CGNM/ CGNM-3552 on the cable network, from 0 (extremely weak) to 10 (extremely strong).
Coax RX	This displays the strength of the signal that the CGNM/ CGNM-3552 is receiving (RX) on the cable network, from 0 (extremely weak) to 10 (extremely strong).
Channel	<p>This displays the radio frequency (RF) channel on which the CGNM/ CGNM-3552 is transmitting and receiving over the cable network.</p> <p>The channel number displays, followed by the channel's frequency in MHz.</p>
Link Status	This displays whether or not the CGNM/ CGNM-3552 is connected over the cable network.
Network Security	This displays the type of security that the cable network is using (56-bit DES or 128-bit AES).

4

Basic

This chapter describes the screens that display when you click **Basic** in the toolbar. It contains the following sections:

- ▶ [Basic Overview](#) on page 1
- ▶ [The LAN Setup Screen](#) on page 3
- ▶ [The Gateway Function Screen](#) on page 6
- ▶ [The Port Forwarding Screen](#) on page 7
- ▶ [The Port Triggering Screen](#) on page 11
- ▶ [The DMZ Screen](#) on page 14
- ▶ [The DNS Screen](#) on page 16
- ▶ [The MoCA Screen](#) on page 17

4.1 Basic Overview

This section describes some of the concepts related to the **Basic** screens.

4.1.1 WAN and LAN

A Local Area Network (LAN) is a network of computers and other devices that usually occupies a small physical area (a single building, for example). Your CGNM/ CGNM-3552's LAN consists of all the computers and other networking devices connected to the **LAN 1~4** ports. This is your private network (in routing mode - see [Routing Mode](#) on page 6).

The LAN is a separate network from the Wide Area Network (WAN). In the case of the CGNM/ CGNM-3552, the WAN refers to all computers and other devices available on the cable connection.

By default, computers on the WAN cannot identify individual computers on the LAN; they can see only the CGNM/ CGNM-3552. The CGNM/ CGNM-3552 handles routing to and from individual computers on the LAN.

4.1.2 LAN IP Addresses and Subnets

IP addresses on the LAN are controlled either by the CGNM/ CGNM-3552's built-in DHCP server (see [The LAN Setup Screen](#) on page 51), or by you (when you manually assign IP addresses to your computers).

For more information about IP addresses and subnets in general, see [The LAN Setup Screen](#) on page 51.

4.1.3 DNS and Domain Suffix

A domain is a location on a network, for instance **example.com**. On the Internet, domain names are mapped to the IP addresses to which they should refer by the Domain Name System. This allows you to enter "www.example.com" into your browser and reach the correct place on the Internet even if the IP address of the website's server has changed.

Similarly, the CGNM/ CGNM-3552 allows you to define a **Domain Suffix** to the LAN. When you enter the domain suffix into your browser, you can reach the CGNM/ CGNM-3552 no matter what IP address it has on the LAN.

4.1.4 Debugging (Ping and Traceroute)

The CGNM/ CGNM-3552 provides a couple of tools to allow you to perform network diagnostics on the LAN:

- ▶ **Ping:** this tool allows you to enter an IP address and see if a computer (or other network device) responds with that address on the network. The name comes from the pulse that submarine SONAR emits when scanning for underwater objects, since the process is rather similar. You can use this tool to see if an IP address is in use, or to discover if a device (whose IP address you know) is working properly.

- ▶ Traceroute: this tool allows you to see the route taken by data packets to get from the CGNM/ CGNM-3552 to the destination you specify. You can use this tool to solve routing problems, or identify firewalls that may be blocking your access to a computer or service.

4.1.5 Port Forwarding

Port forwarding allows a computer on your LAN to receive specific communications from the WAN. Typically, this is used to allow certain applications (such as gaming) through the firewall, for a specific computer on the LAN. Port forwarding is also commonly used for running a public HTTP server from a private network.

You can set up a port forwarding rule for each application for which you want to open ports in the firewall. When the CGNM/ CGNM-3552 receives incoming traffic from the WAN with a destination port that matches a port forwarding rule, it forwards the traffic to the LAN IP address and port number specified in the port forwarding rule.

NOTE: For information on the ports you need to open for a particular application, consult that application's documentation.

4.1.6 Port Triggering

Port triggering is a means of automating port forwarding. The CGNM/ CGNM-3552 scans outgoing traffic (from the LAN to the WAN) to see if any of the traffic's destination ports match those specified in the port triggering rules you configure. If any of the ports match, the CGNM/ CGNM-3552 automatically opens the incoming ports specified in the rule, in anticipation of incoming traffic.

4.1.7 DMZ

In networking, the De-Militarized Zone (DMZ) is a part of your LAN that has been isolated from the rest of the LAN, and opened up to the WAN. The term comes from the military designation for a piece of territory, usually located between two opposing forces, that is isolated from both and occupied by neither.

4.2 The LAN Setup Screen

Use this screen to:

- ▶ View information about the CGNM/ CGNM-3552's connection to the WAN
- ▶ Configure the CGNM/ CGNM-3552's LAN IP address, subnet mask and domain suffix
- ▶ Configure the CGNM/ CGNM-3552's internal DHCP server
- ▶ Define how the CGNM/ CGNM-3552 assigns IP addresses on the LAN
- ▶ See information about the network devices connected to the CGNM/ CGNM-3552 on the LAN.

Click **Basic** > **LAN Setup**. The following screen displays.

Figure 22: The Basic: LAN Setup Screen

LAN Setup
Gateway Function
Port Forwarding
Port Triggering

DNS
MoCA

Private LAN Setting

Private LAN IP Address	<input type="text" value="192.168.0.1"/>
Subnet Mask	<input type="text" value="255.255.255.0"/>
LAN DHCP Status	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled <input type="radio"/> DHCP Reservation
Lease Time:	<input type="text" value="1 week"/>
DHCP Start IP	<input type="text" value="192.168.0.10"/>
DHCP End IP	<input type="text" value="192.168.0.200"/>

Connected Devices

Host Name	IP Address	MAC Address	Type	Interface	Status	Renew
hitron-ThinkCentre-M81	192.168.0.10	44:37:E6:52:6E:7D	DHCP-IP	Ethernet	Active	<input type="button" value="Renew"/>
	2001:0:f180:300:b147:2058:ab27:8570		Self-assigned	Ethernet	Active	<input type="button" value="Renew"/>
	fe80::4637:e6ff:fe52:6e7d		Self-assigned	Ethernet	Active	<input type="button" value="Renew"/>

The following table describes the labels in this screen.

Table 17: [The Basic: LAN Setup Screen](#)

Private LAN Setting	
Private LAN IP Address	Use this field to define the IP address of the CGNM/ CGNM-3552 on the LAN.
Subnet Mask	Use this field to define the LAN subnet. Use dotted decimal notation (for example, 255.255.255.0).
LAN DHCP Status	Use this field to configure whether or not the CGNM/ CGNM-3552's DHCP server is active. <ul style="list-style-type: none">▶ To turn the DHCP server on, click Enabled.▶ To turn the DHCP server off, click Disabled.
Lease Time	This displays the time that elapses before your device's IP address lease expires, and a new IP address is assigned to it by the DHCP server.
DHCP Start IP	Use this field to specify the IP address at which the CGNM/ CGNM-3552 begins assigning IP addresses to devices on the LAN (when DHCP is enabled).
DHCP End IP	Use this field to specify the IP address at which the CGNM/ CGNM-3552 stops assigning IP addresses to devices on the LAN (when DHCP is enabled). NOTE: Devices requesting IP addresses once the DHCP pool is exhausted are not assigned an IP address.
Save Changes	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.
Connected Devices	
Host Name	This displays the name of each network device connected on the LAN.
IP Address	This displays the IP address of each network device connected on the LAN.
MAC Address	This displays the Media Access Control (MAC) address of each network device connected on the LAN.

Table 17: The Basic: LAN Setup Screen (continued)

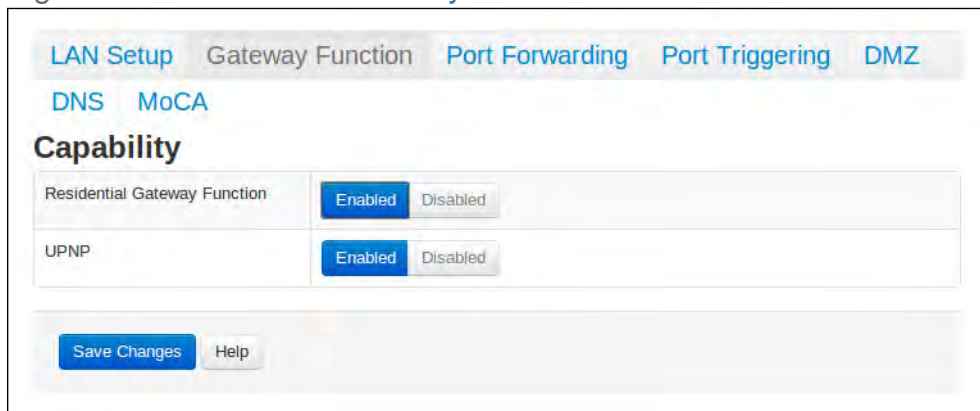

Type	This displays whether the device's IP address was assigned by DHCP (DHCP-IP), or self-assigned .
Interface	This displays whether the device is connected on the LAN (Ethernet) or the WLAN (Wireless(x) , where x denotes the wireless mode; b , g or n).
Status	This displays Active when a device is connected.
Renew	Click this to obtain the connected device's information again.

4.3 The Gateway Function Screen

Use this screen to configure gateway function. You can turn port triggering on or off and configure new and existing port triggering rules.

Click **Basic > Gateway Function**. The following screen displays.

Figure 23: The Basic: Gateway Function Screen

The following table describes the labels in this screen.

Table 18: The Basic: Gateway Function Screen

Residential Gateway Function	Use this field to turn gateway function on or off. <ul style="list-style-type: none"> ▶ Select Enabled to turn gateway function on. ▶ Select Disabled to turn gateway function off.
UPNP	Use this field to turn UPNP on or off. <ul style="list-style-type: none"> ▶ Select Enabled to turn UPNP on. ▶ Select Disabled to turn UPNP off.

Table 18: The Basic: Gateway Function Screen (continued)

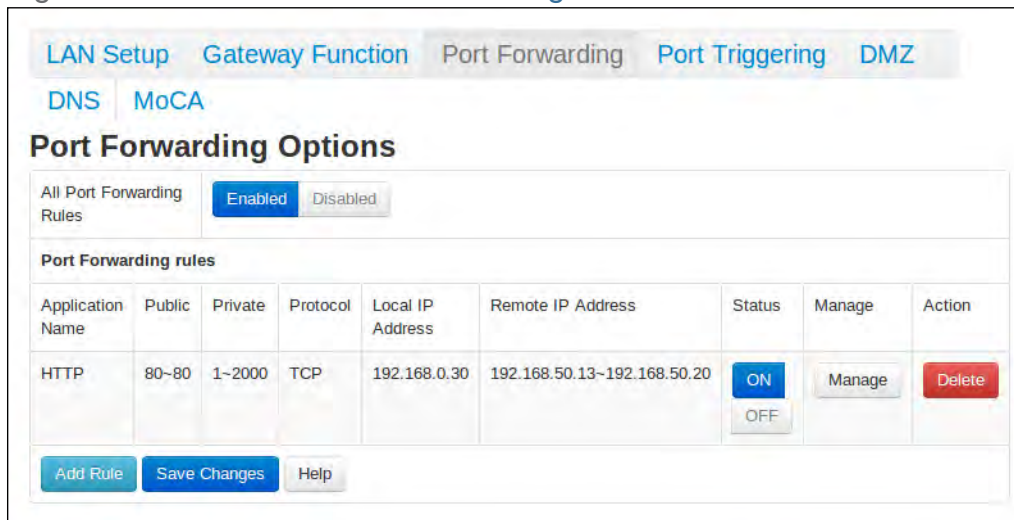

Save Changes	Click this to save your changes to the fields in this screen.
Help	Click this to see information about the fields in this screen.

4.4 The Port Forwarding Screen

Use this screen to configure port triggering. You can turn port triggering on or off and configure new and existing port triggering rules.

Click **Basic** > **Port Forwarding**. The following screen displays.

Figure 24: The Basic: Port Forwarding Screen

The following table describes the labels in this screen.

Table 19: The Basic: Port Forwarding Screen

All Port Forwarding Rules	Use this field to turn port forwarding on or off. <ul style="list-style-type: none"> ▶ Select Enabled to turn all port forwarding rules on. ▶ Select Disabled to turn all port forwarding rules off.
Port Forwarding Rules	
Application Name	This displays the name you assigned to the rule when you created it.
Public	This field displays the incoming port range. These are the ports on which the CGNM/ CGNM-3552 received traffic from the originating host on the WAN.

Table 19: The Basic: Port Forwarding Screen (continued)

Private	This field displays the port range to which the CGNM/ CGNM-3552 forwards traffic to the device on the LAN.
Protocol	This field displays the protocol or protocols to which this rule applies: <ul style="list-style-type: none"> ▶ Transmission Control Protocol (TCP) ▶ User Datagram Protocol (UDP) ▶ Transmission Control Protocol and User Datagram Protocol (TCP/UDP) ▶ Generic Routing Encapsulation (GRE) ▶ Encapsulating Security Protocol (ESP)
Local IP Address	This displays the IP address of the computer on the LAN to which traffic conforming to the rule's conditions is forwarded.
Remote IP Address	This displays the IP address range on the WAN from which traffic is forwarded (if configured).
Status	Use this field to turn port forwarding rule on or off.
Manage	Use this field to Edit a port forwarding rule. Port forwarding must first be set to Enabled . See Adding or Editing a Port Forwarding Rule on page 8 for information on the screen that displays.
Action	Use this field to Delete a port forwarding rule. The deleted rule's information cannot be retrieved.
Add Rule	Click this to define a new port forwarding rule. Port forwarding must first be set to Enabled . See Adding or Editing a Port Forwarding Rule on page 8 for information on the screen that displays.
Save Changes	Click this to save your changes to the fields in this screen.
Help	Click this to see information about the fields in this screen.

4.4.1 Adding or Editing a Port Forwarding Rule

- ▶ To add a new port forwarding rule, click **Add Rule** in the **Basic > Port Forwarding** screen.
- ▶ To edit an existing port forwarding rule, click **Manage** in the **Basic > Port Forwarding** screen.

NOTE: Ensure that **Enabled** is selected in the **Basic > Port Forwarding** screen in order to add or edit port forwarding rules.

The following screen displays.

Figure 25: The Basic: Port Forwarding Add/Edit Screen

Add a rule for port forwarding services by user

Port Forwarding rules

Common Application	HTTP
Application Name	HTTP
Protocol	TCP
Public Port Range	80 ~ 80
Private Port Range	1 ~ 2000
Local IP Address	192.168.0.30
Remote IP	Any Specific
Remote IP Range	192.168.50.13 ~ 192.168.50.20
Rule Status	ON OFF

The following table describes the labels in this screen.

Table 20: The Basic: Port Forwarding Add/Edit Screen

Common Application	Use this field to select the application for which you want to create a port forwarding rule, if desired.
Application Name	Enter a name for the application for which you want to create the rule. NOTE: This name is arbitrary, and does not affect functionality in any way.

Table 20: The Basic: Port Forwarding Add/Edit Screen

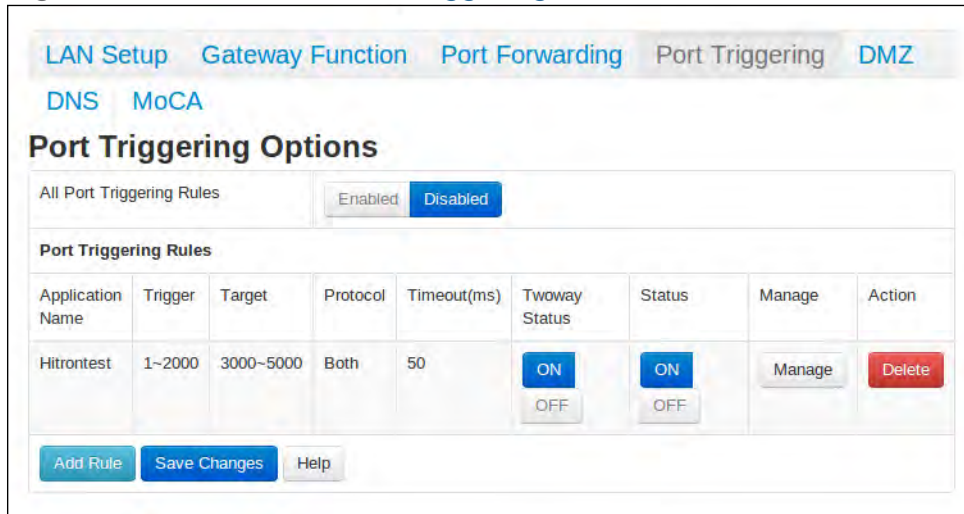

Protocol	<p>Use this field to specify whether the CGNM/ CGNM-3552 should forward traffic via:</p> <ul style="list-style-type: none"> ▶ Transmission Control Protocol (TCP) ▶ User Datagram Protocol (UDP) ▶ Transmission Control Protocol and User Datagram Protocol (TCP/UDP) ▶ Generic Routing Encapsulation (GRE) ▶ Encapsulating Security Protocol (ESP) <p>NOTE: If in doubt, leave this field at its default (TCP/UDP).</p>
Public Port Range	<p>Use these fields to specify the incoming port range. These are the ports on which the CGNM/ CGNM-3552 receives traffic from the originating host on the WAN.</p> <p>Enter the start port number in the first field, and the end port number in the second field.</p> <p>To specify only a single port, enter its number in both fields.</p>
Private Port Range	<p>Use these fields to specify the ports to which the received traffic should be forwarded.</p> <p>Enter the start port number in the first field. The number of ports must match that specified in the Public Port Range, so the CGNM/ CGNM-3552 completes the second field automatically.</p>
Local IP Address	Use this field to enter the IP address of the computer on the LAN to which you want to forward the traffic.
Remote IP	Use this field to configure the IP address range on the WAN from which traffic is forwarded.
Remote IP Range	
Rule Status	Use this field to turn port forwarding rule on or off.
Apply	Click this to save your changes to the fields in this screen.
Close	Click this to return to the Port Forwarding screen without saving your changes to the port forwarding rule.

4.5 The Port Triggering Screen

Use this screen to configure port triggering. You can turn port triggering on or off and configure new and existing port triggering rules.

Click **Basic > Port Triggering**. The following screen displays.

Figure 26: The Basic: Port Triggering Screen

The screenshot shows the 'Port Triggering Options' screen. At the top, there are navigation tabs: LAN Setup, Gateway Function, Port Forwarding, Port Triggering (selected), and DMZ. Below these are sub-tabs for DNS and MoCA. The main content area is titled 'Port Triggering Options'. It features a section for 'All Port Triggering Rules' with a toggle switch currently set to 'Disabled'. Below this is a table titled 'Port Triggering Rules' with the following columns: Application Name, Trigger, Target, Protocol, Timeout(ms), Tway Status, Status, Manage, and Action. A single rule is listed with Application Name 'Hitrontest', Trigger '1~2000', Target '3000~5000', Protocol 'Both', Timeout(ms) '50', Tway Status 'ON', Status 'ON', and Action buttons 'Manage' and 'Delete'. At the bottom of the screen are buttons for 'Add Rule', 'Save Changes', and 'Help'.

The following table describes the labels in this screen.

Table 21: The Basic: Port Triggering Screen

All Port Triggering Rules	Use this field to turn all port triggering rules on or off. <ul style="list-style-type: none"> ▶ Select Enabled to turn all port triggering rules on. ▶ Select Disabled to turn all port triggering rules off.
Port Triggering Rules	
Application Name	This displays the arbitrary name you assigned to the rule when you created it.
Trigger	This displays the range of outgoing ports. When the CGNM/ CGNM-3552 detects activity (outgoing traffic) on these ports from computers on the LAN, it automatically opens the Target ports.
Target	This displays the range of triggered ports. These ports are opened automatically when the CGNM/ CGNM-3552 detects activity on the Trigger ports from computers on the LAN.

Table 21: The Basic: Port Triggering Screen (continued)

Protocol	This displays the protocol of the port triggering rule (TCP , UDP or Both).
Timeout (ms)	This displays the time (in milliseconds) after the CGNM/CGNM-3552 opens the Target ports that it should close them.
Twoway Status	Usually a port triggering rule works for two IP addresses; when a rule is enabled, other IPs will also be allowed to use the rule as a trigger.
Status	Use this field to turn the rule On or Off .
Manage	Use this field to Edit a port triggering rule.
Action	Use this field to Delete a port triggering rule.
Add Rule	Click this to define a new port triggering rule. Port triggering must first be set to Enabled . See Adding or Editing a Port Triggering Rule on page 12 for information on the screen that displays.
Save Changes	Click this to save your changes to the fields in this screen.
Help	Click this to see information about the fields in this screen.

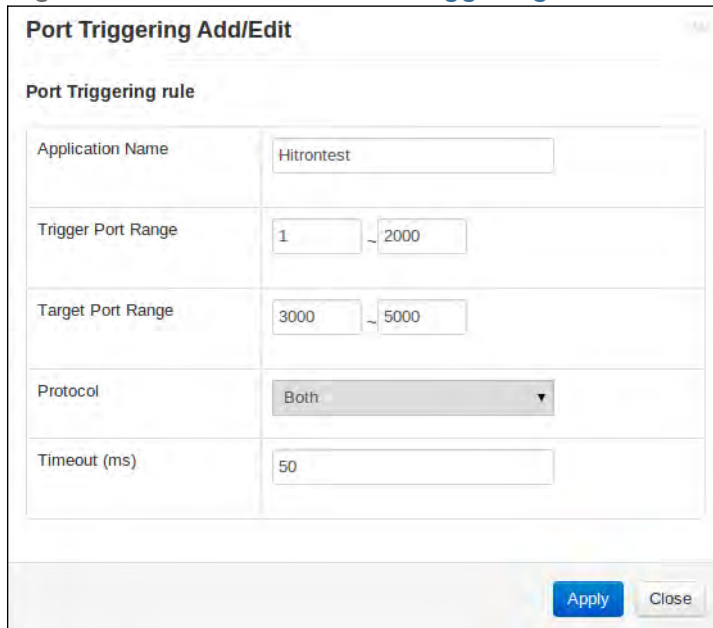

4.5.1 Adding or Editing a Port Triggering Rule

- ▶ To add a new port triggering rule, click **Add Rule** in the **Basic > Port Triggering** screen.
- ▶ To edit an existing port triggering rule, click **Manage** in the **Basic > Port Triggering** screen.

NOTE: Ensure that **Enabled** is selected in the **Basic > Port Triggering** screen in order to add or edit port triggering rules.

The following screen displays.

Figure 27: The Basic: Port Triggering Add/Edit Screen

The following table describes the labels in this screen.

Table 22: The Basic: Port Triggering Add/Edit Screen

Application Name	Enter a name for the application for which you want to create the rule. NOTE: This name is arbitrary, and does not affect functionality in any way.
Trigger Port Range	Use these fields to specify the trigger ports. When the CGNM/ CGNM-3552 detects activity on any of these ports originating from a computer on the LAN, it automatically opens the Target ports in expectation of incoming traffic. Enter the start port number in the first field, and the end port number in the second field. To specify only a single port, enter its number in both fields.

Table 22: The Basic: Port Triggering Add/Edit Screen

Target Port Range	<p>Use these fields to specify the target ports. The CGNM/ CGNM-3552 opens these ports in expectation of incoming traffic whenever it detects activity on any of the Trigger ports. The incoming traffic is forwarded to these ports on the computer connected to the LAN.</p> <p>Enter the start port number in the first field, and the end port number in the second field.</p> <p>To specify only a single port, enter its number in both fields.</p>
Protocol	<p>Use this field to specify whether the CGNM/ CGNM-3552 should activate this trigger when it detects activity via:</p> <ul style="list-style-type: none">▶ Transmission Control Protocol (TCP)▶ User Datagram Protocol (UDP)▶ Transmission Control Protocol and User Datagram Protocol (Both) <p>NOTE: If in doubt, leave this field at its default (Both).</p>
Timeout (ms)	<p>Enter the time (in milliseconds) after the CGNM/ CGNM-3552 opens the Target ports that it should close them.</p>
Apply	<p>Click this to save your changes to the fields in this screen.</p>
Close	<p>Click this to return to the screen without saving your changes to the port forwarding rule.</p>

4.6 The DMZ Screen

Use this screen to configure your network's Demilitarized Zone (DMZ).

NOTE: [Only one device can be on the DMZ at a time.](#)

Click **Basic > DMZ**. The following screen displays.

Figure 28: The Basic: DMZ Screen

The following table describes the labels in this screen.

Table 23: The Basic: DMZ Screen

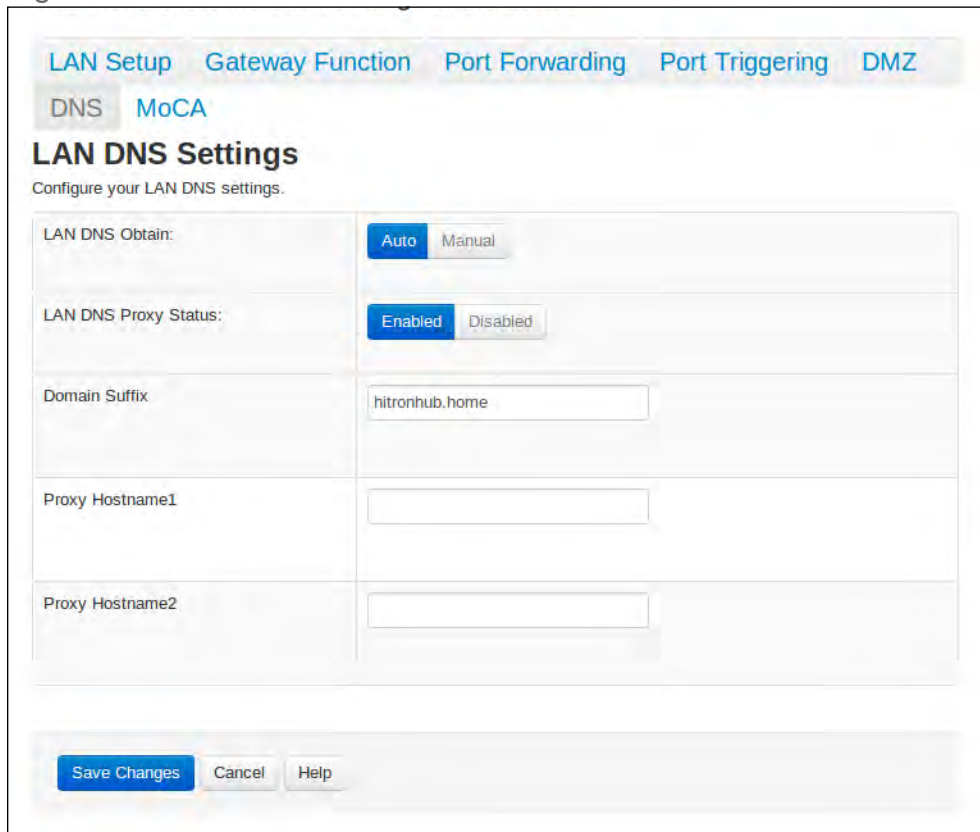

Enable DMZ	Use this field to turn the DMZ on or off. <ul style="list-style-type: none"> ▶ Select Enabled to turn the DMZ on. ▶ Select Disabled to turn the DMZ off. Computers that were previously in the DMZ are now on the LAN.
DMZ Host	Enter the IP address of the computer that you want to add to the DMZ.
Connected Devices	Click this to see a list of the computers currently connected to the CGNM/ CGNM-3552 on the LAN. Figure 29: Connected Device Info
Save Changes	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.

4.7 The DNS Screen

Use this screen to configure your LAN DNS settings.

Click **Basic > DNS**. The following screen displays.

Figure 30: The Basic: DNS Screen

The following table describes the labels in this screen.

Table 24: The Basic: DNS Screen

LAN DNS Obtain	Use this field to obtain the DNS automatically or manually. <ul style="list-style-type: none"> ▶ Select Auto to obtain the DNS automatically. ▶ Select Manual to obtain the DNS manually.
LAN DNS Proxy Status	Use this field to turn the DNS Proxy on or off. <ul style="list-style-type: none"> ▶ Select Enabled to turn the DNS Proxy on. ▶ Select Disabled to turn the DNS Proxy off.

Table 24: The Basic: DNS Screen (continued)

Domain Suffix	Use this field to define the domain that you can enter into a Web browser (instead of an IP address) to reach the CGNM/ CGNM-3552 on the LAN.
Proxy Hostname1	Enter the Hostname of the computer that you want to add to the DNS manually.
Proxy Hostname2	Enter the Hostname of the computer that you want to add to the DNS manually.
Save Changes	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.

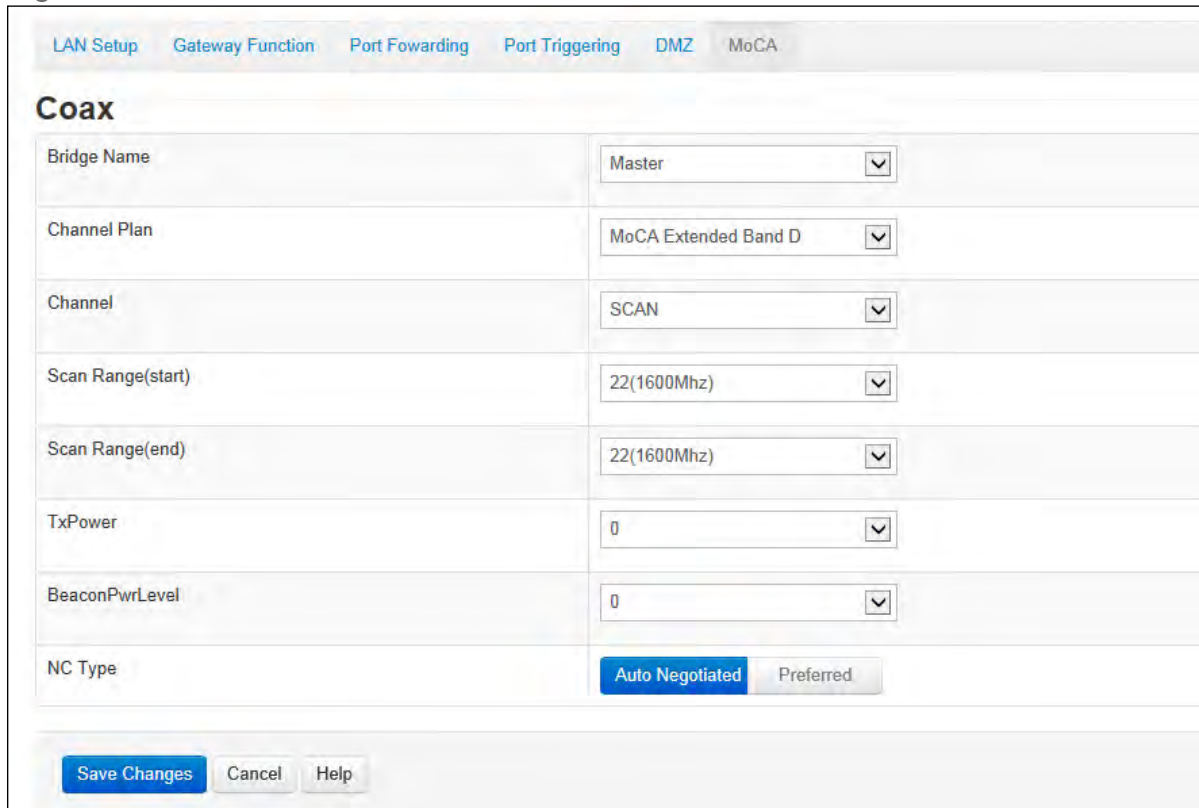

4.8 The MoCA Screen

Use this screen to view and make changes to the CGNM/ CGNM-3552's cable network settings.

NOTE: Do not change any of the settings in this screen unless you have a good reason to do so!

Click **Basic > MoCA**. The following screen displays.

Figure 31: The Basic: MoCA Screen

Coax	
Bridge Name	Master
Channel Plan	MoCA Extended Band D
Channel	SCAN
Scan Range(start)	22(1600Mhz)
Scan Range(end)	22(1600Mhz)
TxPower	0
BeaconPwrLevel	0
NC Type	<input checked="" type="radio"/> Auto Negotiated <input type="radio"/> Preferred

The following table describes the labels in this screen.

Table 25: The Basic: MoCA Screen

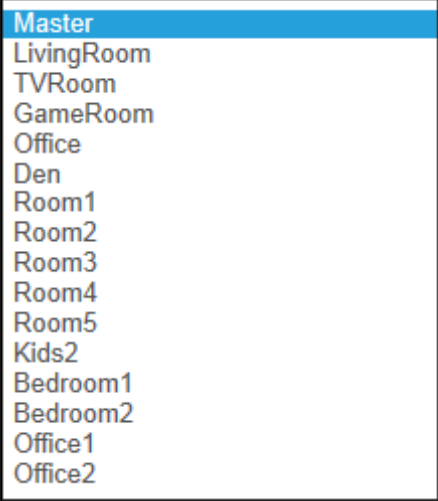

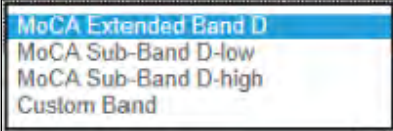

Bridge Name	<p>Use this field to modify the name of the CGNM/ CGNM-3552 on the network. This allows you to identify the specific device by the room in which it is installed when you assign a unique Bridge Name to each device on the MoCA network.</p> <p>Select the room type from the drop-down list.</p> <p>Figure 32: Bridge Name Options</p> 
Channel Plan	<p>The MoCA specification defines several channel plans for communication on the cable network (see The Multimedia over Coax Alliance on page 8). This field allows you to select the channel plan that you want the CGNM/ CGNM-3552 to use.</p> <p>Select the channel plan that you wish to use from the dropdown list.</p> <p>Figure 33: Channel Plan</p> 

Table 25: The Basic: MoCA Screen (continued)

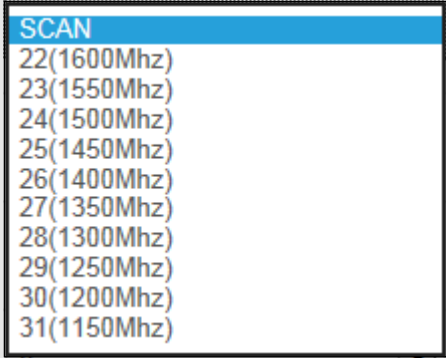

Channel	<p>Use this field to define the channel on which you want the CGNM/ CGNM-3552 to communicate on the cable network, dependent on the Channel Plan that you selected.</p> <p>Select the channel plan that you wish to use from the dropdown list. If you select SCAN, ensure that you also configure the Scan Range (Start) and Scan Range (End) fields.</p> <p>Figure 34: Channel</p> 
Scan Range (Start)	<p>If you selected SCAN in the Channel field, use this field to select a channel at which the CGNM/ CGNM-3552 should start scanning for a connection on the cable network.</p>
Scan Range (End)	<p>If you selected SCAN in the Channel field, use this field to select a channel at which the CGNM/ CGNM-3552 should stop scanning for a connection on the cable network.</p>
TxPower	<p>Use this field to set the power at which the CGNM/ CGNM-3552 transmits (TX) over the cable network, from 0 to 10.</p>

Table 25: The Basic: MoCA Screen (continued)

BeaconPwLevel	Use this field to set the CGNM/ CGNM-3552's beacon power on the cable network, from 0 to 10 . The MoCA beacon allows other devices on the cable network to detect the CGNM/ CGNM-3552.
NC Type	<p>Each MoCA network has a Network Coordinator (NC) which acts as a manager for all the other devices on the cable network.</p> <ul style="list-style-type: none">▶ By default, the NC is chosen from the pool of MoCA devices based on its suitability (signal strength, etc.) To base NC status on merit, or if you have specified another device as “preferred” and do not want the CGNM/ CGNM-3552 to compete with it, select Auto-negotiated.▶ When one device is set to be the “preferred” NC, it will be the NC whenever it is available on the network (if multiple devices are “preferred”, the most suitable one will be chosen). Select Preferred to add the CGNM/ CGNM-3552 to the preferred group.

5

Wireless

This chapter describes the screens that display when you click **Wireless** in the toolbar. It contains the following sections:

- ▶ [Wireless Overview](#) on page 1
- ▶ [The Basic Settings Screen](#) on page 4
- ▶ [The Access Control Screen](#) on page 15

5.1 Wireless Overview

This section describes some of the concepts related to the **Wireless** screens.

5.1.1 Wireless Networking Basics

Your CGNM/ CGNM-3552's wireless network is part of the Local Area Network (LAN), known as the Wireless LAN (WLAN). The WLAN is a network of radio links between the CGNM/ CGNM-3552 and the other computers and devices that connect to it.

5.1.2 Architecture

The wireless network consists of two types of device: access points (APs) and clients.

- ▶ The access point controls the network, providing a wireless connection to each client.

- ▶ The wireless clients connect to the access point in order to receive a wireless connection to the WAN and the wired LAN.

The CGNM/ CGNM-3552 is the access point, and the computers you connect to the CGNM/ CGNM-3552 are the wireless clients.

5.1.3 Wireless Standards

The way in which wireless devices communicate with one another is standardized by the Institute of Electrical and Electronics Engineers (IEEE). The IEEE standards pertaining to wireless LANs are identified by their 802.11 designation. There are a variety of WLAN standards, but the CGNM/ CGNM-3552 supports the following (in order of adoption - old to new - and data transfer speeds - low to high):

- ▶ IEEE 802.11b
- ▶ IEEE 802.11g
- ▶ IEEE 802.11n

5.1.4 Service Sets and SSIDs

Each wireless network, including all the devices that comprise it, is known as a Service Set.

NOTE: Depending on its capabilities and configuration, a single wireless access point may control multiple Service Sets; this is often done to provide different service or security levels to different clients.

Each Service Set is identified by a Service Set Identifier (SSID). This is the name of the network. Wireless clients must know the SSID in order to be able to connect to the AP. You can configure the CGNM/ CGNM-3552 to broadcast the SSID (in which case, any client who scans the airwaves can discover the SSID), or to “hide” the SSID (in which case it is not broadcast, and only users who already know the SSID can connect).

5.1.5 Wireless Security

Radio is inherently an insecure medium, since it can be intercepted by anybody in the coverage area with a radio receiver. Therefore, a variety of techniques exist to control authentication (identifying who should be allowed to join the network) and encryption (signal scrambling so that only authenticated users can decode the transmitted data). The sophistication of each security method varies, as does its effectiveness. The CGNM/ CGNM-3552 supports the following wireless security protocols (in order of effectiveness):

- ▶ **WEP** (the Wired Equivalency Protocol): this protocol uses a series of “keys” or data strings to authenticate the wireless client with the AP, and to encrypt data sent over the wireless link. WEP is a deprecated protocol, and should only be used when it is the only security standard supported by the wireless clients. WEP provides only a nominal level of security, since widely-available software exists that can break it in a matter of minutes.
- ▶ **WPA-PSK** (WiFi Protected Access - Pre-Shared Key): WPA was created to solve the inadequacies of WEP. There are two types of WPA: the “enterprise” version (known simply as WPA) requires the use of a central authentication database server, whereas the “personal” version (supported by the CGNM/ CGNM-3552) allows users to authenticate using a “pre-shared key” or password instead. While WPA provides good security, it is still vulnerable to “brute force” password-guessing attempts (in which an attacker simply barrages the AP with join requests using different passwords), so for optimal security it is advised that you use a random password of thirteen characters or more, containing no “dictionary” words.
- ▶ **WPA2-PSK**: WPA2 is an improvement on WPA. The primary difference is that WPA uses the Temporal Key Integrity Protocol (TKIP) encryption standard (which has been shown to have certain possible weaknesses), whereas WPA2 uses the stronger Advanced Encryption Standard (AES) in the Counter mode with Cipher block chaining Message authentication code Protocol (CCMP), which has received the US government's seal of approval for communications up to the Top Secret security level. Since WPA2-PSK uses the same pre-shared key mechanism as WPA-PSK, the same caveat against using insecure or simple passwords applies.

5.1.5.1 WPS

WiFi-Protected Setup (WPS) is a standardized method of allowing wireless devices to quickly and easily join wireless networks, while maintaining a good level of security. The CGNM/ CGNM-3552 provides two methods of WPS authentication:

- ▶ **Push-Button Configuration (PBC):** when the user presses the **PBC** button on the AP (either a physical button, or a virtual button in the GUI), any user of a wireless client that supports WPS can press the corresponding **PBC** button on the client within two minutes to join the network.
- ▶ **Personal Identification Number (PIN) Configuration:** all WPS-capable devices possess a PIN (usually to be found printed on a sticker on the device's housing). When you configure another device to use the same PIN, the two devices authenticate with one another.

Once authenticated, devices that have joined a network via WPS use the WPA2 security standard.

5.1.6 WMM

WiFi MultiMedia (WMM) is a Quality of Service (QoS) enhancement that allows prioritization of certain types of data over the wireless network. WMM provides four data type classifications (in priority order; highest to lowest):

- ▶ Voice
- ▶ Video
- ▶ Best effort
- ▶ Background

If you wish to improve the performance of voice and video (at the expense of other, less time-sensitive applications such as Internet browsing and FTP transfers), you can enable WMM. You can also edit the WMM QoS parameters, but are advised to do so unless you have an extremely good reason to make the changes.

5.2 The Basic Settings Screen

Use this screen to configure your CGNM/ CGNM-3552's basic 2.4GHz and 5GHz wireless settings. You can turn the wireless modules on or off, select the wireless mode and channel, and configure the wireless networks' SSID settings.

The CGNM/ CGNM-3552 has separate concurrent dual band 2.4GHz and 5GHz wireless networks:

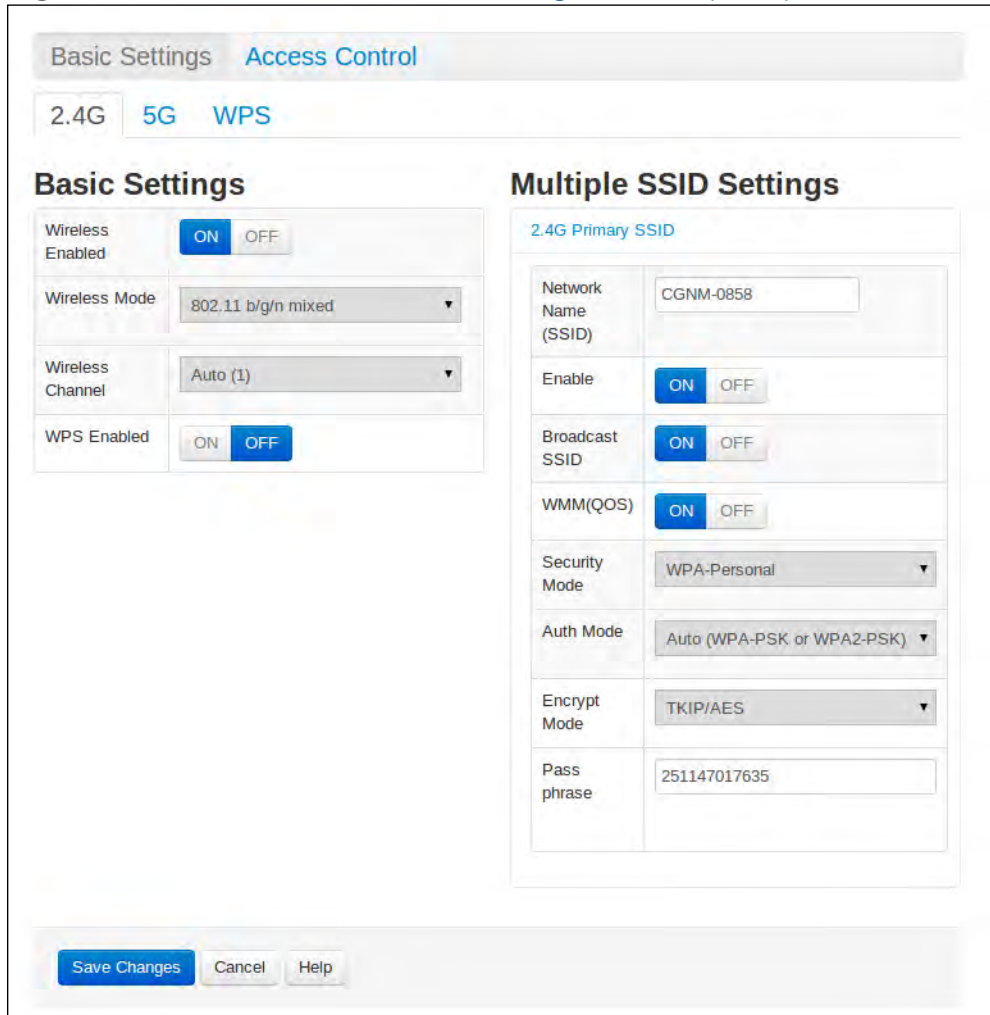

- ▶ To configure the CGNM/ CGNM-3552's 2.4GHz wireless network, click **Wireless > Basic Settings**, then click the **2.4G** tab. See [2.4G Settings](#) on page 5 for information on the screen that displays.
- ▶ To configure the CGNM/ CGNM-3552's 5GHz wireless network, click **Wireless > Basic Settings**, then click the **5G** tab. See [5G Settings](#) on page 9 for information on the screen that displays.

5.2.1 2.4G Settings

Use this screen to configure the CGNM/ CGNM-3552's 2.4GHz wireless network.

Click **Wireless > Basic Settings**, then click the **2.4G** tab. The following screen displays.

Figure 35: The Wireless: Basic Settings Screen (2.4G)

The screenshot shows the 'Basic Settings' screen for the 2.4GHz wireless network. At the top, there are tabs for 'Basic Settings' (selected) and 'Access Control'. Below this, there are three tabs: '2.4G' (selected), '5G', and 'WPS'. The screen is divided into two main sections: 'Basic Settings' and 'Multiple SSID Settings'.

Basic Settings:

- Wireless Enabled: ON OFF
- Wireless Mode: 802.11 b/g/n mixed
- Wireless Channel: Auto (1)
- WPS Enabled: ON OFF

Multiple SSID Settings (2.4G Primary SSID):

- Network Name (SSID): CGNM-0858
- Enable: ON OFF
- Broadcast SSID: ON OFF
- WMM(QoS): ON OFF
- Security Mode: WPA-Personal
- Auth Mode: Auto (WPA-PSK or WPA2-PSK)
- Encrypt Mode: TKIP/AES
- Pass phrase: 251147017635

At the bottom of the screen, there are three buttons: 'Save Changes', 'Cancel', and 'Help'.

The following table describes the labels in this screen.

Table 26: The Wireless: Basic Settings Screen (2.4G)

Basic Settings	
Wireless Enabled	<p>Use this field to turn the 2.4GHz wireless network on or off.</p> <ul style="list-style-type: none"> ▶ Select ON to enable the wireless network. ▶ Select OFF to disable the wireless network.
Wireless Mode	<p>Select the type of 2.4GHz wireless network that you want to use:</p> <ul style="list-style-type: none"> ▶ 802.11 B/G Mixed: use IEEE 802.11b and 802.11n ▶ 802.11 11N Only: use IEEE 802.11n ▶ 802.11 B/G/N Mixed: use IEEE 802.11b, 802.11g and 802.11n ▶ 802.11 G/N Mixed: use IEEE 802.11g and 802.11n <p>NOTE: Only wireless clients that support the network protocol you select can connect to the wireless network. If in doubt, use 11B/G/N (default).</p>
Wireless Channel	<p>Select the 2.4GHz wireless channel that you want to use, or select Auto to have the CGNM/ CGNM-3552 select the optimum channel to use.</p> <p>NOTE: Use the Auto setting unless you have a specific reason to do otherwise.</p>
WPS Enabled	<p>Use this field to turn Wifi Protected Setup (WPS) on or off on the 2.4GHz network.</p> <ul style="list-style-type: none"> ▶ Select ON to enable WPS. ▶ Deselect OFF to disable WPS.
Multiple SSID Settings	
Primary SSID	Click this to view settings for the main 2.4GHz SSID.
Network Name (SSID)	<p>Enter the name that you want to use for this SSID. This is the name that identifies your network, and to which wireless clients connect.</p> <p>NOTE: It is suggested that you change the SSID from its default, for security reasons.</p>

Table 26: The Wireless: Basic Settings Screen (2.4G) (continued)

Enable	Use this field to enable or disable the SSID. <ul style="list-style-type: none">▶ Select ON to enable the SSID.▶ Deselect OFF to disable the SSID.
Broadcast SSID	Use this field to make this SSID visible or invisible to other wireless devices. <ul style="list-style-type: none">▶ Select ON if you want your network name (SSID) to be public. Anyone with a wireless device in the coverage area can discover the SSID, and attempt to connect to the network.▶ Select OFF if you do not want the CGNM/ CGNM-3552 to broadcast the network name (SSID) to all wireless devices in the coverage area. Anyone who wants to connect to the network must know the SSID.
WMM (QoS)	Use this field to apply WiFi MultiMedia (WMM) Quality of Service (QoS) settings to this SSID. <ul style="list-style-type: none">▶ Select ON to enable WMM QoS on this SSID.▶ Select OFF to disable WMM QoS on this SSID.

Table 26: The Wireless: Basic Settings Screen (2.4G) (continued)

Security Mode	<p>Select the type of security that you want to use.</p> <ul style="list-style-type: none"> ▶ Select Open to use no security. Anyone in the coverage area can enter your network. ▶ Select WEP to use the Wired Equivalent Privacy security protocol. ▶ Select WPA to use the WiFi Protected Access (Personal) security protocol. ▶ Select WPA2 to use the WiFi Protected Access 2 (Personal) security protocol. ▶ Select WPA/WPA2 to use both the WPA and the WPA2 security protocols; clients that support WPA2 connect using this protocol, whereas those that support only WPA connect using this protocol. <p>NOTE: Due to inherent security vulnerabilities, it is suggested that you use WEP only if it is the only security protocol your wireless clients support. Under almost all circumstances, you should use one of the WPA options.</p>
Auth Mode	<p>Select the type of security authentication the device should use.</p>
Encryption Mode	<p>Select the type of encryption you want to use. The options that display depend on the Security Mode you selected.</p> <p>WEP:</p> <ul style="list-style-type: none"> ▶ Select WEP64 to use a ten-digit security key. ▶ Select WEP128 to use a twenty-six-digit security key. <p>WPA, WPA2 and WPA/WPA2:</p> <ul style="list-style-type: none"> ▶ Select TKIP to use the Temporal Key Integrity Protocol. ▶ Select AES to use the Advanced Encryption Standard. ▶ Select TKIP/AES to allow clients using either encryption type to connect to the CGNM/ CGNM-3552.

Table 26: The Wireless: Basic Settings Screen (2.4G) (continued)

Pass Phrase	Enter the security key or password that you want to use for your wireless network. You will need to enter this key into your wireless clients in order to allow them to connect to the network.
Save Changes	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.

5.2.2 5G Settings

Use this screen to configure the CGNM/ CGNM-3552's 5GHz wireless network.

Click **Wireless > Basic Settings**, then click the **5G** tab. The following screen displays.

Figure 36: The Wireless: Basic Settings Screen (5G)

The following table describes the labels in this screen.

Table 27: The Wireless: Basic Settings Screen (5G)

Basic Settings	
Wireless Enabled	Use this field to turn the 5GHz wireless network on or off. <ul style="list-style-type: none"> ▶ Select ON to enable the wireless network. ▶ Select OFF to disable the wireless network.

Table 27: The Wireless: Basic Settings Screen (5G) (continued)

Wireless Mode	<p>Select the type of 5GHz wireless network that you want to use:</p> <ul style="list-style-type: none"> ▶ 802.11n 5g: use IEEE 802.11n 5GHz. <p>NOTE: At the time of writing IEEE 802.11n is the only 5GHz network type available.</p> <p>NOTE: Only wireless clients that support the network protocol you select can connect to the wireless network.</p>
Channel Bandwidth	Select the 5GHz wireless channel bandwidth that you want to use.
Wireless Channel	<p>Select the 5GHz wireless channel that you want to use, or select Auto to have the CGNM/ CGNM-3552 select the optimum channel to use.</p> <p>NOTE: Use the Auto setting unless you have a specific reason to do otherwise.</p>
WPS Enabled	<p>Use this field to turn WiFi Protected Setup (WPS) on or off on the 5GHz network.</p> <ul style="list-style-type: none"> ▶ Select ON to enable WPS. ▶ Deselect OFF to disable WPS.
Multiple SSID Settings	
Multiple SSID	Click this to view settings for the main 5GHz SSID.
Network Name (SSID)	<p>Enter the name that you want to use for this SSID. This is the name that identifies your network, and to which wireless clients connect.</p> <p>NOTE: It is suggested that you change the SSID from its default, for security reasons.</p>
Enable	<p>Use this field to enable or disable the SSID.</p> <ul style="list-style-type: none"> ▶ Select ON to enable the SSID. ▶ Deselect OFF to disable the SSID.

Table 27: The Wireless: Basic Settings Screen (5G) (continued)

Broadcast SSID	<p>Use this field to make this SSID visible or invisible to other wireless devices.</p> <ul style="list-style-type: none"> ▶ Select ON if you want your network name (SSID) to be public. Anyone with a wireless device in the coverage area can discover the SSID, and attempt to connect to the network. ▶ Select OFF if you do not want the CGNM/ CGNM-3552 to broadcast the network name (SSID) to all wireless devices in the coverage area. Anyone who wants to connect to the network must know the SSID.
WMM (QoS)	<p>Use this field to apply WiFi MultiMedia (WMM) Quality of Service (QoS) settings to this SSID.</p> <ul style="list-style-type: none"> ▶ Select ON to enable WMM QoS on this SSID. ▶ Select OFF to disable WMM QoS on this SSID.
Security Mode	<p>Select the type of security that you want to use.</p> <ul style="list-style-type: none"> ▶ Select Open to use no security. Anyone in the coverage area can enter your network. ▶ Select WEP to use the Wired Equivalent Privacy security protocol. ▶ Select WPA to use the WiFi Protected Access (Personal) security protocol. ▶ Select WPA2 to use the WiFi Protected Access 2 (Personal) security protocol. ▶ Select WPA/WPA2 to use both the WPA and the WPA2 security protocols; clients that support WPA2 connect using this protocol, whereas those that support only WPA connect using this protocol. <p>NOTE: Due to inherent security vulnerabilities, it is suggested that you use WEP only if it is the only security protocol your wireless clients support. Under almost all circumstances, you should use one of the WPA options.</p>
Auth Mode	<p>Select the type of security authentication the device should use.</p>

Table 27: The Wireless: Basic Settings Screen (5G) (continued)

Encryption Mode	Select the type of encryption you want to use. The options that display depend on the Security Mode you selected. WEP: <ul style="list-style-type: none"> ▶ Select WEP64 to use a ten-digit security key. ▶ Select WEP128 to use a twenty-six-digit security key. WPA, WPA2 and WPA/WPA2: <ul style="list-style-type: none"> ▶ Select TKIP to use the Temporal Key Integrity Protocol. ▶ Select AES to use the Advanced Encryption Standard. Select TKIP/AES to allow clients using either encryption type to connect to the CGNM/ CGNM-3552.
Pass Phrase	Enter the security key or password that you want to use for your wireless network. You will need to enter this key into your wireless clients in order to allow them to connect to the network.
Save Changes	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.

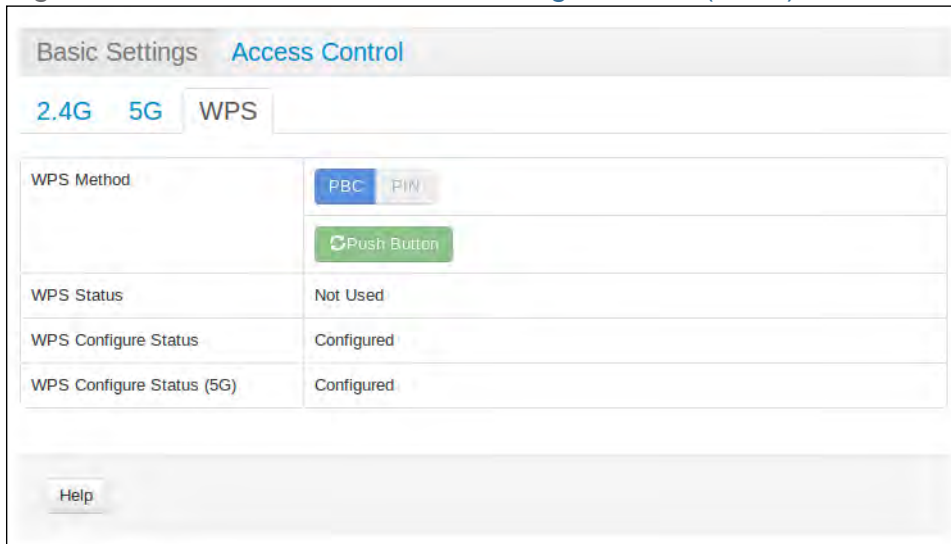

5.2.3 WPS

Use this screen to manage WiFi Protected Setup (WPS).

NOTE: It is strongly recommended that you set up security on your network; otherwise, anyone in the radio coverage area can access your network.

Click **Wireless > Basic Settings**, then click the **WPS** tab. The following screen displays.

Figure 37: The Wireless: Basic Settings Screen (WPS)

The following table describes the labels in this screen.

Table 28: The Wireless: Basic Settings Screen (WPS)

WPS Settings	
WPS Method	Use these buttons to run WiFi Protected Setup (WPS): <ul style="list-style-type: none"> ▶ Click the PBC button and then Push Button to begin the Push-Button Configuration process. You must then press the PBC button on your client wireless devices within two minutes in order to register them on your wireless network. ▶ Click the PIN button to begin the PIN configuration process. In the screen that displays, enter the WPS PIN that you want to use for the CGNM/ CGNM-3552, or the WPS PIN of the client device you want to add to the network.
WPS Status	This displays whether or not the CGNM/ CGNM-3552 is using WiFi Protected Setup.
WPS Configure Status	This displays the WiFi Protected Setup configuration for the wireless network.
WPS Configure Status (5G)	This displays the WiFi Protected Setup configuration for the 5G wireless network.
Help	Click this to see information about the fields in this screen.

5.3 The Access Control Screen

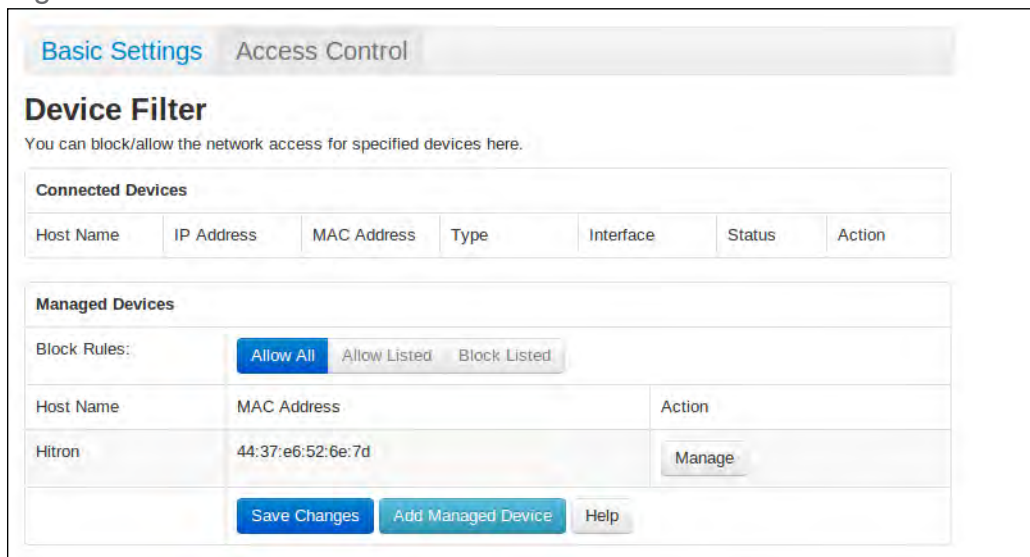

Use this screen to configure Media Access Control (MAC) address filtering on the wireless network.

NOTE: To configure MAC address filtering on the wired LAN, see [The Device Filter Screen](#) on page 100.

You can set the CGNM/ CGNM-3552 to allow only certain devices to access the CGNM/ CGNM-3552 and the network wirelessly, or to deny certain devices access.

Click **Wireless > Access Control**. The following screen displays.

Figure 38: [The Wireless: Access Control Screen](#)

The following table describes the labels in this screen.

Table 29: [The Wireless: Access Control Screen](#)

Connected Devices	
Host Name	This displays the name of each network device that has connected to the CGNM/ CGNM-3552 on the wireless network.
IP Address	This displays the IP address of each network device that has connected to the CGNM/ CGNM-3552 on the wireless network.

Table 29: The Wireless: Access Control Screen (continued)

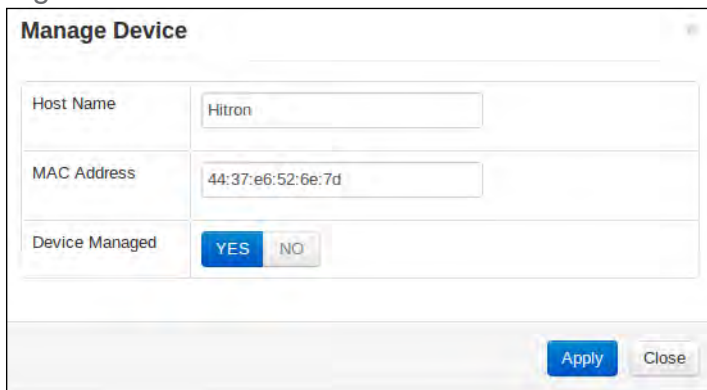

MAC Address	This displays the MAC address of each network device that has connected to the CGNM/ CGNM-3552 on the wireless network.
Type	This displays whether the device's IP address was assigned by DHCP (DHCP-IP), or self-assigned .
Interface	This displays the name of the interface on which the relevant device is connected.
Status	This displays if the device filter is active or not.
Action	Click Manage to make changes to the device's filtering status; see Adding or Editing a Managed Device on page 17 for information on the screen that displays.
Managed Devices	
Block Rules	Use these buttons to control the action to be taken for the devices listed: <ul style="list-style-type: none"> ▶ Select Allow All to ignore the Devices list and let all devices connect wirelessly to the CGNM/ CGNM-3552. ▶ Select Allow to permit only devices you added to the Devices list to access the CGNM/ CGNM-3552 and the network wirelessly. All other devices are denied access. ▶ Select Deny to permit all devices except those you added to the Devices list to access the CGNM/ CGNM-3552 and the network wirelessly. The specified devices are denied access.
Host Name	This field displays the name of the wireless device.
MAC Address	This field displays the device's MAC (Media Access Control) address.
Action	Click Manage to make changes to the device's filtering status; see Adding or Editing a Managed Device on page 17 for information on the screen that displays.
Save Changes	Click this to save your changes to the fields in this screen.
Add Managed Device	Click this to add a new service filtering rule (see Adding or Editing a Managed Device on page 17).
Help	Click this to see information about the fields in this screen.

5.3.1 Adding or Editing a Managed Device

- ▶ To add a new managed device, click **Add Managed Device** in the **Wireless > Access Control** screen.
- ▶ To edit an existing managed device, locate the device in the **Wireless > Access Control** screen and click its **Manage** button.

The following screen displays.

Figure 39: The Wireless: Access Control Add/Edit Screen

The following table describes the labels in this screen.

Table 30: The Wireless: Access Control Add/Edit Screen

Host Name	Enter the name of the wireless device.
MAC Address	Enter the device's MAC (Media Access Control) address.
Device Managed	Use this field to define whether the device should have its access privileges filtered or not. <ul style="list-style-type: none"> ▶ Click Yes to filter the device's access privileges. ▶ Click No not to filter the device's access privileges.
Apply	Click this to save your changes to the fields in this screen.
Close	Click this to return to the Wireless Access Control screen without saving your changes to the rule.

6

Admin

This chapter describes the screens that display when you click **Admin** in the toolbar. It contains the following sections:

- ▶ [Admin Overview](#) on page 1
- ▶ [The Management Screen](#) on page 2
- ▶ [The Remote Management Screen](#) on page 3

- ▶ [The USB Storage Screen](#) on page 7
- ▶ [The Device Reset Screen](#) on page 8

6.1 Admin Overview

This section describes some of the concepts related to the **Admin** screens.

6.1.1 Debugging (Ping and Traceroute)

The CGNM/ CGNM-3552 provides a couple of tools to allow you to perform network diagnostics on the LAN:

- ▶ Ping: this tool allows you to enter an IP address and see if a computer (or other network device) responds with that address on the network. The name comes from the pulse that submarine SONAR emits when scanning for underwater objects, since the process is rather similar. You can use this tool to see if an IP address is in use, or to discover if a device (whose IP address you know) is working properly.
- ▶ Traceroute: this tool allows you to see the route taken by data packets to get from the CGNM/ CGNM-3552 to the destination you specify. You can use this tool to solve routing problems, or identify firewalls that may be blocking your access to a computer or service.

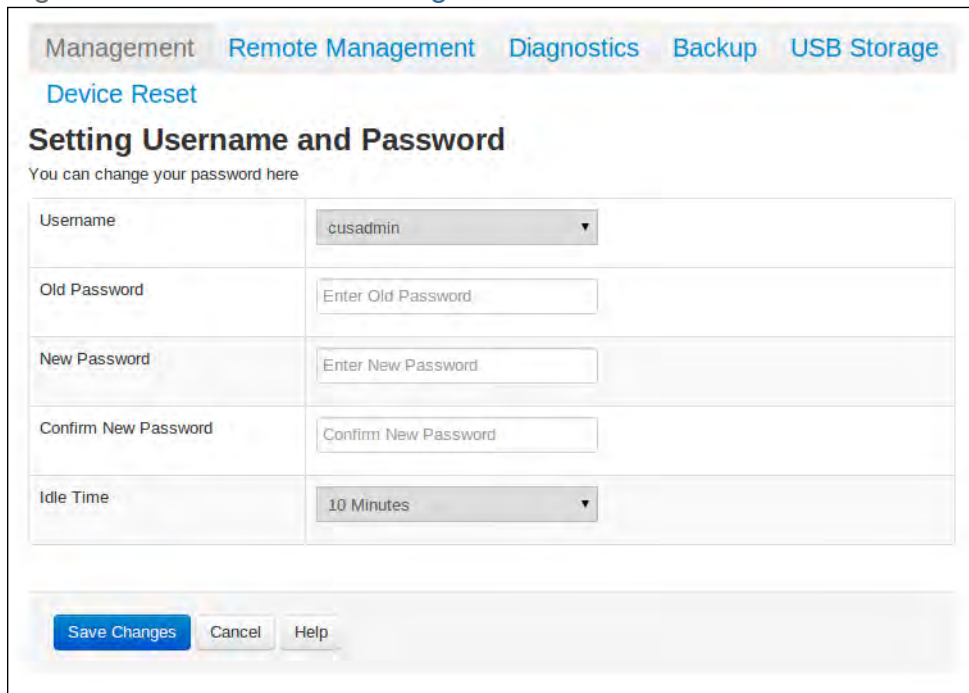

6.2 The Management Screen

Use this screen to make changes to the CGNM/ CGNM-3552's login credentials (username and password).

NOTE: If you forget your password, you will need to reset the CGNM/ CGNM-3552 to its factory defaults.

Click **Admin > Management**. The following screen displays.

Figure 40: The Admin: Management Screen

The screenshot shows the 'Management' section of the device's web interface. The 'Management' tab is selected, and the 'Device Reset' sub-tab is active. The main heading is 'Setting Username and Password', with a sub-heading 'You can change your password here'. The form contains five rows of input fields:

Username	<input type="text" value="cusadmin"/>
Old Password	<input type="text" value="Enter Old Password"/>
New Password	<input type="text" value="Enter New Password"/>
Confirm New Password	<input type="text" value="Confirm New Password"/>
Idle Time	<input type="text" value="10 Minutes"/>

At the bottom of the form are three buttons: 'Save Changes' (highlighted in blue), 'Cancel', and 'Help'.

The following table describes the labels in this screen.

Table 31: [The Admin: Management Screen](#)

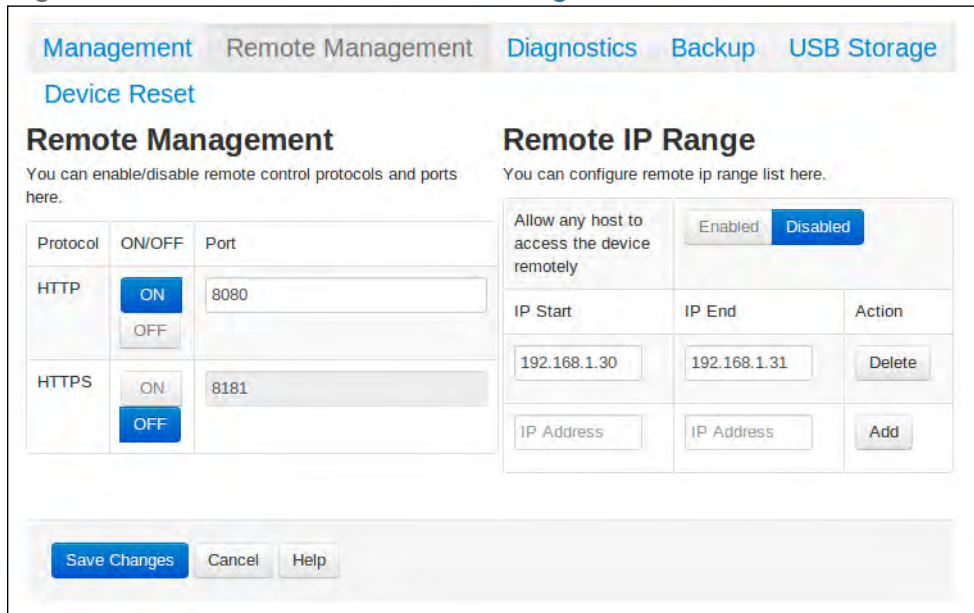

Username	If your CGNM/ CGNM-3552 supports multiple user accounts, select the account you want to modify from the list.
Old Password	Enter the password with which you currently log into the CGNM/ CGNM-3552 for this account.
New Password	Enter and re-enter the password you want to use to log into the CGNM/ CGNM-3552 for this account.
Confirm New Password	
Idle Time	Use this to set your CGNM/ CGNM-3552's idle time
Save Changes	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.

6.3 The Remote Management Screen

Use this screen to back up your CGNM/ CGNM-3552's settings to your computer, to load settings from a backup you created earlier, to reboot your CGNM/ CGNM-3552, or to return it to its factory default settings.

Click **Admin > Remote Management**. The following screen displays.

Figure 41: The Admin: Remote Management Screen

The following table describes the labels in this screen.

Table 32: The Admin: Remote Management Screen

Remote Management	
Protocol	Use this field to enable/disable remote control protocols and ports on CGNM. <ul style="list-style-type: none"> ▶ HyperText Transfer Protocol (HTTP) ▶ HyperText Transfer Protocol Secure (HTTPS) ▶ Telnet
ON/OFF	Use this field to enable/disable each protocol.
Port	Use this field to specify which port to use with each protocol.
Remote IP Range	
Remote Range Allow All	This function allows you to grant access to a certain range of IP addresses or all IP addresses.
IP Start	Use this field to enter the start IP.
IP End	Use this field to enter the end IP.
Action	Use this field to Delete a port forwarding rule. The deleted rule's information cannot be retrieved.
Save Changes	Click this to save your changes to the fields in this screen.

Table 32: The Admin: Remote Management Screen (continued)

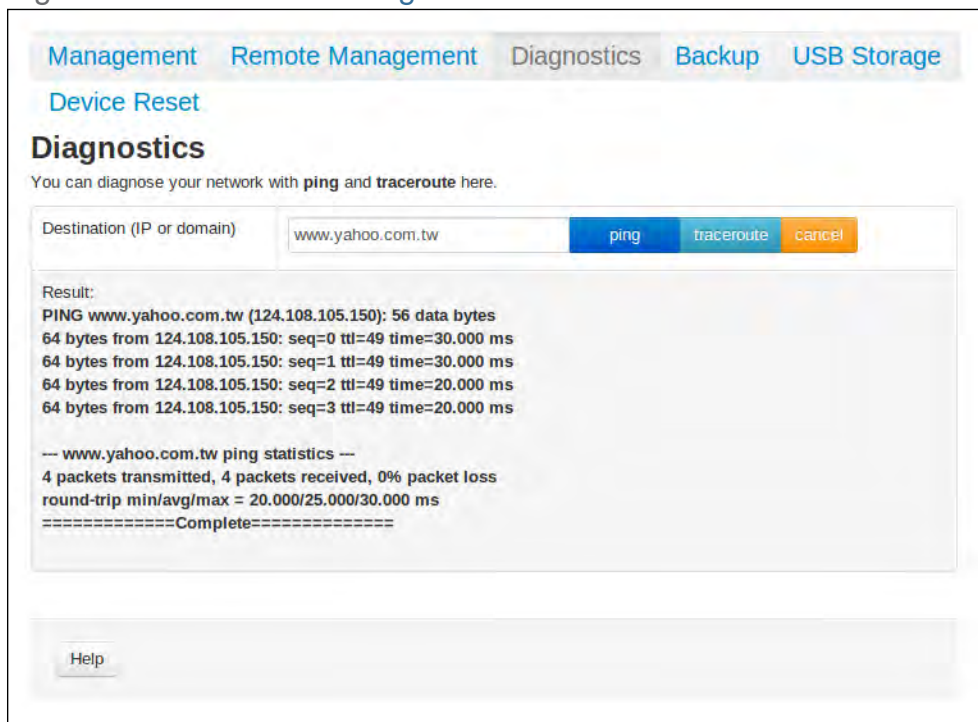

Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.

6.4 The Diagnostics Screen

Use this screen to perform ping and traceroute tests on IP addresses or URLs.

Click **Admin > Diagnostics**. The following screen displays.

Figure 42: The Admin: Diagnostics Screen

The following table describes the labels in this screen.

Table 33: The Admin: Diagnostics Screen

Destination (IP or Domain)	Enter the IP address or URL that you want to test.
Ping	Select the type of test that you want to run on the Destination that you specified.
Traceroute	

Table 33: The Admin: Diagnostics Screen (continued)

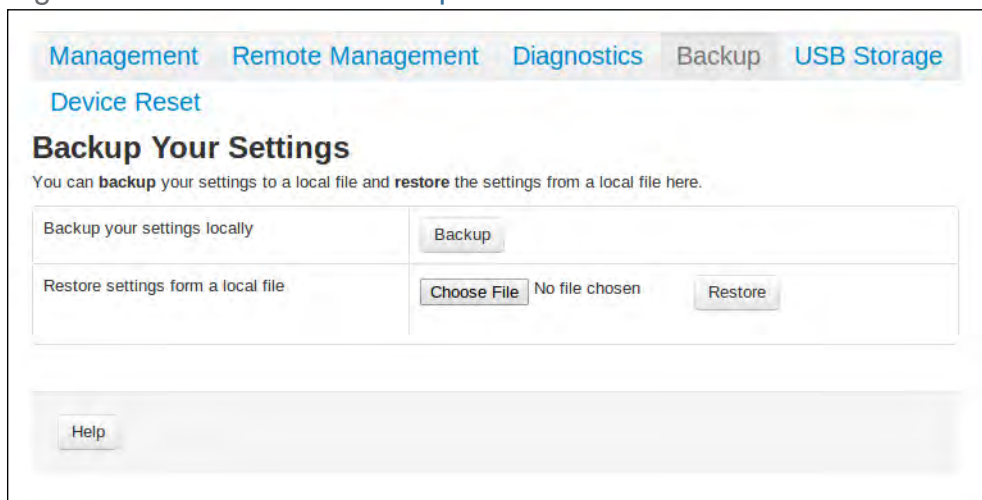

Result	This field displays a report of the test most recently performed.
Apply	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.

6.5 The Backup Screen

Use this screen to back up your CGNM/ CGNM-3552's settings to your computer, to load settings from a backup you created earlier, to reboot your CGNM/ CGNM-3552, or to return it to its factory default settings.

Click **Admin > Backup**. The following screen displays.

Figure 43: The Admin: Backup Screen

Management Remote Management Diagnostics Backup USB Storage

Device Reset

Backup Your Settings

You can **backup** your settings to a local file and **restore** the settings from a local file here.

Backup your settings locally

Restore settings form a local file No file chosen

The following table describes the labels in this screen.

Table 34: The Admin: Backup Screen

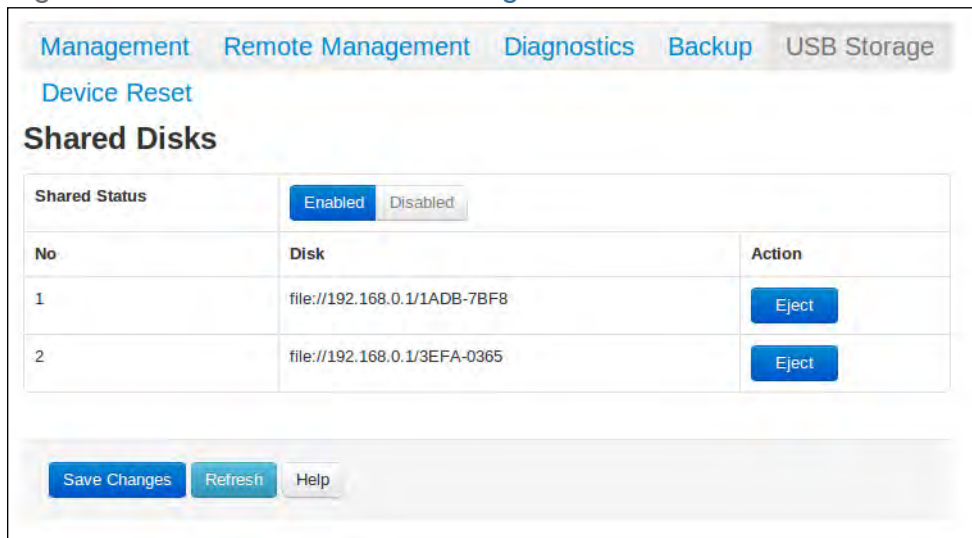

Back Up Your Settings Locally	Click this to create a backup of all your CGNM/ CGNM-3552's settings on your computer.
Restore Settings From a Local File	Use these fields to return your CGNM/ CGNM-3552's settings to those specified in a backup that you created earlier. Click Browse to select a backup, then click Restore to return your CGNM/ CGNM-3552's settings to those specified in the backup.
Reboot Device	Click Reboot to restart your CGNM/ CGNM-3552.
Restore Factory Default Settings	Click Factory to return your CGNM/ CGNM-3552 to its factory default settings. <i>When you do this, all your user-configured settings are lost, and cannot be retrieved.</i>

6.6 The USB Storage Screen

Use this screen to configure your CGNM/ CGNM-3552's USB settings.

Click **Admin >USB Storage**. The following screen displays.

Figure 44: The Admin: USB Storage Screen

Management Remote Management Diagnostics Backup USB Storage

Shared Disks

Shared Status	<input checked="" type="radio"/> Enabled <input type="radio"/> Disabled	
No	Disk	Action
1	file://192.168.0.1/1ADB-7BF8	<input type="button" value="Eject"/>
2	file://192.168.0.1/3EFA-0365	<input type="button" value="Eject"/>

The following table describes the labels in this screen.

Table 35: The Admin: USB Storage Screen

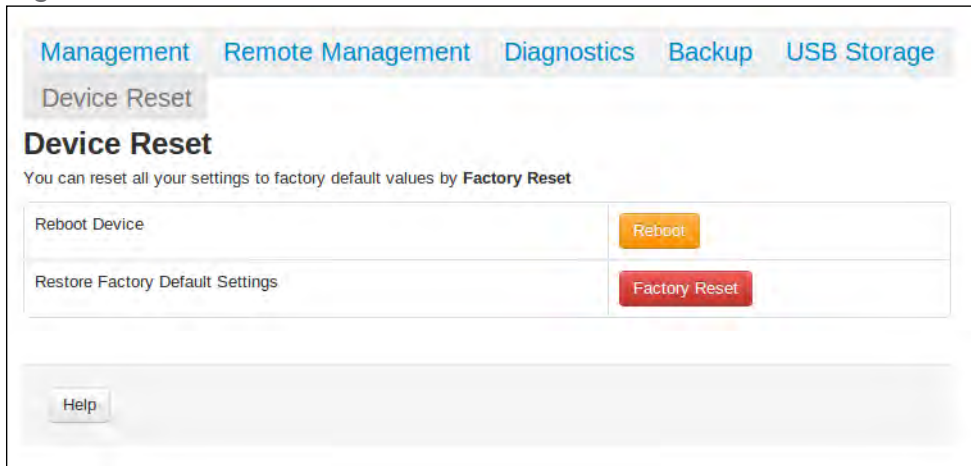

Shared Status	Use this field to select whether the shared status of USB be active or not. <ul style="list-style-type: none">▶ Select Enabled to activate the shared status.▶ Select Disabled to deactivate the shared status.
No	This displays the arbitrary identification number assigned to the shared disk.
Disk	This displays the network path of the shared disk.
Action	Click Eject to remove the shared disk.
Save Changes	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.

6.7 The Device Reset Screen

Use this screen to back up your CGNM/ CGNM-3552's settings to your computer, to load settings from a backup you created earlier, to reboot your CGNM/ CGNM-3552, or to return it to its factory default settings.

Click **Admin > Device Reset**. The following screen displays.

Figure 45: The Admin: Device Reset Screen

The following table describes the labels in this screen.

Table 36: The Admin: Device Reset Screen

Reboot Device	Click Reboot to restart your CGNM/ CGNM-3552.
Restore Factory Default Settings	Click Factory Reset to return your CGNM/ CGNM-3552 to its factory default settings. <i>When you do this, all your user-configured settings are lost, and cannot be retrieved.</i>
Help	Click this to see information about the fields in this screen.

7

Security

This chapter describes the screens that display when you click **Security** in the toolbar. It contains the following sections:

- ▶ [Security Overview](#) on page 1
- ▶ [The Firewall Screen](#) on page 2
- ▶ [The Service Filter Screen](#) on page 5
- ▶ [The Device Filter Screen](#) on page 10
- ▶ [The Keyword Filter Screen](#) on page 14

7.1 Security Overview

This section describes some of the concepts related to the **Security** screens.

7.1.1 Firewall

The term “firewall” comes from a construction technique designed to prevent the spread of fire from one room to another. Similarly, your CGNM/ CGNM-3552's firewall prevents intrusion attempts and other undesirable activity originating from the WAN, keeping the computers on your LAN safe. You can also use filtering techniques to specify the computers and other devices you want to allow on the LAN, and prevent certain traffic from going from the LAN to the WAN.

7.1.2 Device Filtering

Every networking device has a unique Media Access Control (MAC) address that uniquely identifies it on the network. When you enable MAC address filtering on the CGNM/ CGNM-3552's firewall, you can set up a list of devices, identified by their MAC addresses, and then specify whether you want to:

- ▶ Deny the devices on the list access to the CGNM/ CGNM-3552 and the network (in which case all other devices can access the network)

or

- ▶ Allow the devices on the list to access the network (in which case no other devices can access the network).

7.1.3 Service Filtering

Service filtering is a way of preventing users on the LAN from connecting with devices on the WAN via specific services, protocols or applications. It achieves this by permitting or denying traffic from the LAN to pass to the WAN, based on the target port.

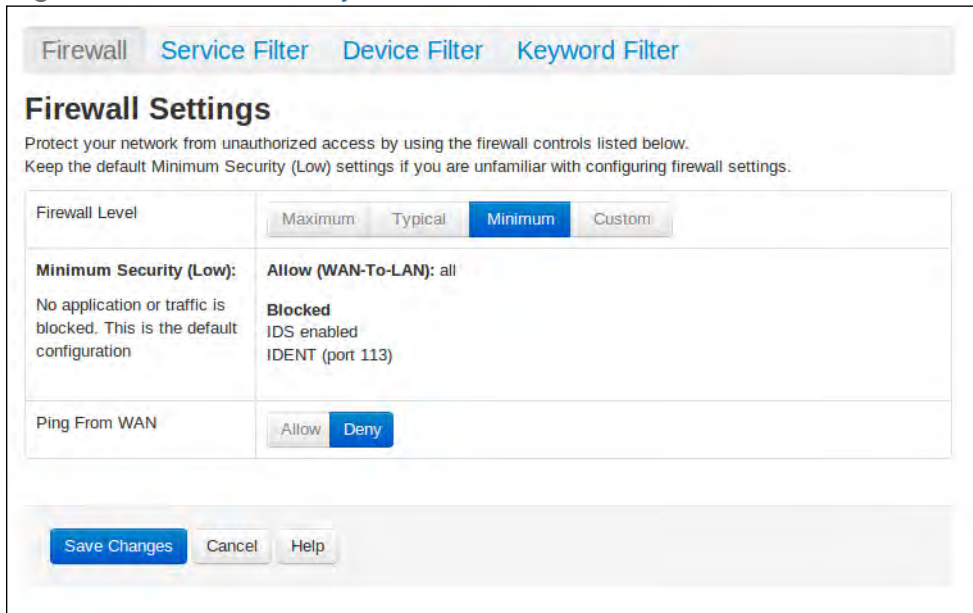

7.2 The Firewall Screen

Use this screen to turn firewall features on or off and to allow or permit certain applications and protocols. You can select the level of firewall protection from pre-defined options, or create a custom protection profile.

NOTE: To block specific ports, use the Service Filter screen (see [The Service Filter Screen](#) on page 5).

Click **Security** > **Firewall**. The following screen displays.

Figure 46: The Security: Firewall Screen

Firewall	
Service Filter	
Device Filter	
Keyword Filter	
Firewall Settings	
Protect your network from unauthorized access by using the firewall controls listed below. Keep the default Minimum Security (Low) settings if you are unfamiliar with configuring firewall settings.	
Firewall Level	Maximum Typical Minimum Custom
Minimum Security (Low): No application or traffic is blocked. This is the default configuration	Allow (WAN-To-LAN): all Blocked IDS enabled IDENT (port 113)
Ping From WAN	Allow Deny
Save Changes Cancel Help	

The following table describes the labels in this screen.

Table 37: The Security: Firewall Screen

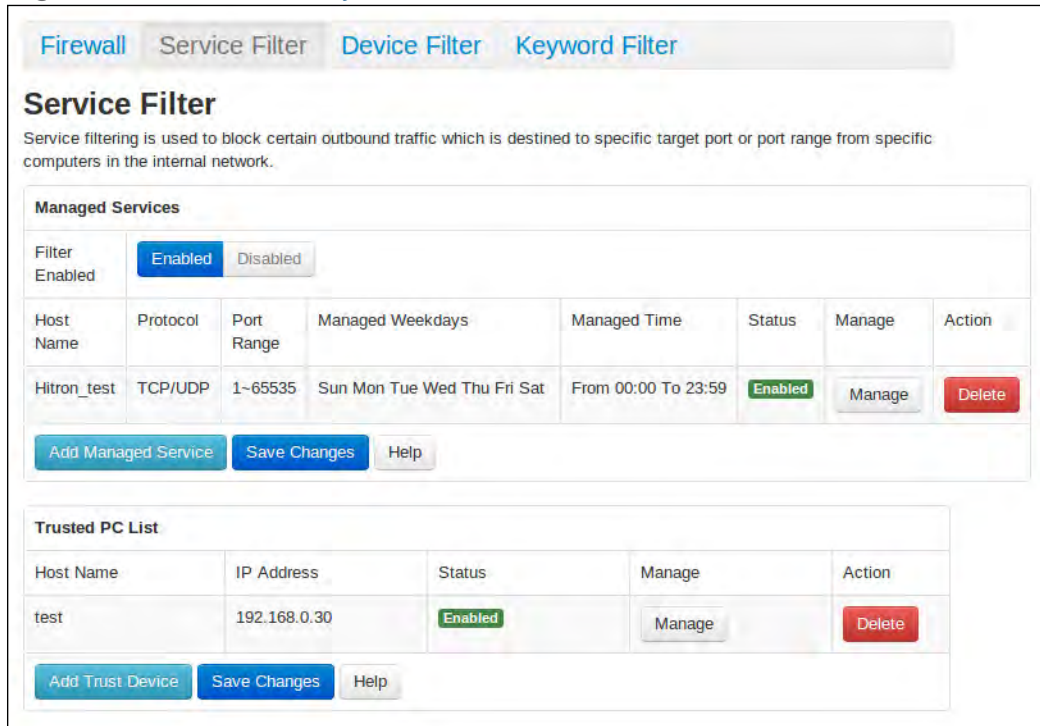

Firewall Level	Select the level of firewall protection that you want to apply to your LAN. Details about the protection level display beneath the buttons.
(Security Level)	<p>These fields describe the specific protocols and applications that are permitted or denied by the firewall security level you select.</p> <p>When you select Custom in the Firewall Level field, additional fields display that allow you to toggle specific features on or off:</p> <ul style="list-style-type: none"> ▶ Entire Firewall: select ON to enable firewall security protection, or select OFF to disable it (not recommended). ▶ HTTP: use this field to Allow or Deny HyperText Transfer Protocol traffic. ▶ ICMP: use this field to Allow or Deny Internet Control Message Protocol traffic. ▶ Multicast: use this field to Allow or Deny multicast traffic (sent to multiple devices at once). ▶ P2P: use this field to Allow or Deny peer-to-peer traffic (such as BitTorrent). ▶ Ident: use this field to Allow or Deny Identification protocol traffic. The Identification protocol allows remote hosts to request identifying information about users of a device.
Save Changes	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.
Help	Click this to see information about the fields in this screen.

7.3 The Service Filter Screen

Use this screen to configure service filtering. You can turn service filtering on or off and configure new and existing service filtering rules.

Click **Security > Service Filter**. The following screen displays.

Figure 47: The Security: Service Filter Screen

The following table describes the labels in this screen.

Table 38: The Security: Service Filter Screen

Managed Services	
Filter Enabled	Use this field to turn service filtering on or off. <ul style="list-style-type: none"> ▶ Select Enabled to turn service filtering on. ▶ Select Disabled to turn service filtering off.
Host Name	This displays the name you assigned to the filtering rule when you created it.

Table 38: The Security: Service Filter Screen (continued)

Protocol	This field displays the protocol or protocols to which this filtering rule applies: <ul style="list-style-type: none"> ▶ Transmission Control Protocol (TCP) ▶ User Datagram Protocol (UDP)
Port Range	This displays the start and end port for which this filtering rule applies.
Managed Weekdays	This displays the days of the week on which this rule applies.
Managed Time	This displays the start (From) and end (To) of the time period during which this rule applies, on the specified Managed Weekdays .
Status	This displays the status of a service filter rule.
Manage	Click Manage to make changes to a port blocking rule (see Adding or Editing a Service Filter Rule on page 7).
Action	Click Delete to remove the existing service filter from the list. NOTE: The deleted rule's information cannot be retrieved.
Add Managed Service	Click this to add a new service filtering rule (see Adding or Editing a Service Filter Rule on page 7).
Save Changes	Click this to save your changes to the fields in this screen.
Help	Click this to see information about the fields in this screen.
Trust PC List	
Host Name	This displays the name of the trust device connected.
IP Address	This displays the IP address of the trust network device connected.
Status	This displays whether or not the service filter rule is enabled to the trust device connected.
Manage	Click Manage to make changes to the trust device's service filter status (see Adding or Editing a Trust PC List on page 9).
Action	Click Delete to remove the existing trust device from the list.

Table 38: The Security: Service Filter Screen (continued)

Add Trust Device	Click this to add a new Trust Device. (see Adding or Editing a Trust PC List on page 9).
Save Changes	Click this to save your changes to the fields in this screen.
Help	Click this to see information about the fields in this screen.

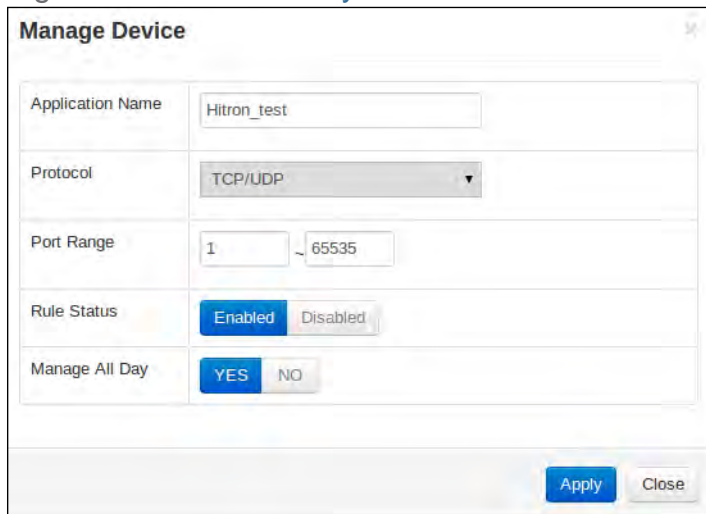

7.3.1 Adding or Editing a Service Filter Rule

- ▶ To add a new service filter rule, click **Add Managed Service** in the **Security > Service Filter** screen.
- ▶ To edit an existing service filter rule, locate the rule in the **Security > Service Filter** screen and click its **Manage** button.

NOTE: Ensure that **Enabled** is selected in the **Security > Service Filter** screen in order to add or edit service filtering rules.

The following screen displays.

Figure 48: The Security: Service Filter Add/Edit Screen

Manage Device

Application Name:

Protocol:

Port Range: ~

Rule Status: Enabled Disabled

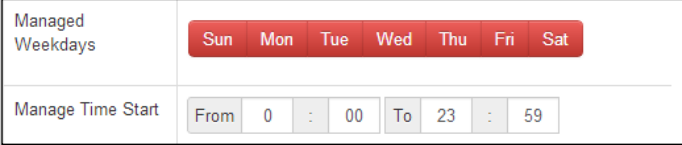

Manage All Day: YES NO

The following table describes the labels in this screen.

Table 39: The Security: Service Filter Add/Edit Screen

Application Name	<p>Enter a name for the application for which you want to create the rule.</p> <p>NOTE: This name is arbitrary, and does not affect functionality in any way.</p>
Protocol	<p>Use this field to specify whether the CGNM/ CGNM-3552 should filter via:</p> <ul style="list-style-type: none">▶ Transmission Control Protocol (TCP)▶ User Datagram Protocol (UDP) <p>NOTE: If in doubt, leave this field at its default (TCP).</p>
Port Range	<p>Use these fields to specify the start and end port for which this filtering rule applies. These are the ports to which traffic will be blocked.</p> <p>Enter the start port number in the first field, and the end port number in the second field.</p> <p>To specify only a single port, enter its number in both fields.</p>
Rule Status	<p>Use this field to select whether the filtering rule should be active or not.</p> <ul style="list-style-type: none">▶ Select Enabled to activate the rule. Matching traffic will be blocked.▶ Select Disabled to deactivate the rule. Matching traffic will not be blocked.

Table 39: The Security: Service Filter Add/Edit Screen

Manage All Day	<p>Use this field to specify whether the filtering rule should apply on all days of the week, at all times, or whether the rule should be applied only at certain times.</p> <ul style="list-style-type: none"> ▶ Select YES to apply the rule at all times. ▶ Select NO to apply the rule only at certain times. Additional fields display, allowing you to specify the times at which the rule should be applied. <p>Figure 49: Additional Service Filtering Options</p>  <p>Use the Managed Weekdays fields to specify the days on which the rule should be applied. A red background indicates that the rule will be applied (traffic will be blocked), and a green background indicates that the rule will not be applied (traffic will not be blocked). Click a day to toggle the rule on or off for the relevant day.</p> <p>Use the Manage Time Start fields to specify the period during which the rule should be applied. Enter the start time in the From fields, using twenty-four hour notation, and enter the end time in the To fields.</p>
Apply	Click this to save your changes to the fields in this screen.
Close	Click this to return to the Service Filter screen without saving your changes to the rule.

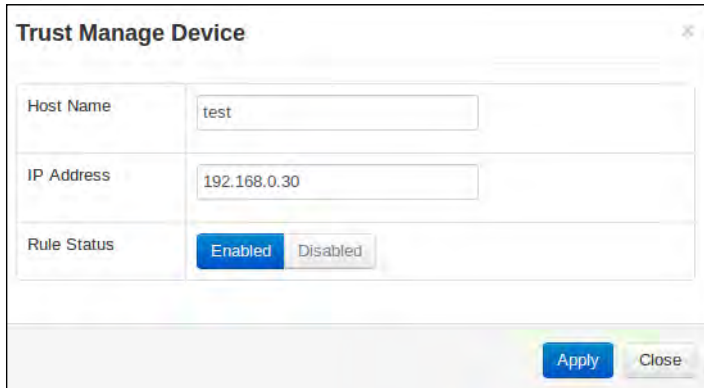

7.3.2 Adding or Editing a Trust PC List

- ▶ To add a new trust PC to the list, click **Add Trust Device** in the **Security > Service Filter** screen.
- ▶ To edit an existing trust PC in the list, locate the device in the **Security > Service Filter** screen and click its **Manage** button.

NOTE: NOTE: Ensure that **Enabled** is selected in the **Security > Service Filter** screen in order to add or edit a trust PC.

The following screen displays.

Figure 50: The Security: Service Filter > Trust PC List Add/Edit Screen

The following table describes the labels in this screen.

Table 40: The Security: Service Filter Add/Edit Trust Manage Device Screen

Host Name	This displays the name of each network device connected.
IP Address	This displays the IP address of each network device connected.
Rule Status	Use this field to select whether the filtering rule should be active or not. <ul style="list-style-type: none"> ▶ Select Enabled to activate the rule. Matching traffic will be blocked. ▶ Select Disabled to deactivate the rule. Matching traffic will not be blocked.
Apply	Click this to save your changes to the fields in this screen.
Close	Click this to return to the Service Filter screen without saving your changes to the trust PC list.

7.4 The Device Filter Screen

Use this screen to configure Media Access Control (MAC) address filtering on the LAN, and to configure IP filtering.

You can set the CGNM/ CGNM-3552 to allow only certain devices to access the CGNM/ CGNM-3552 and the network, or to deny certain devices access.

You can turn filtering on or off, and configure new and existing filtering rules.

Click **Security** > **Device Filter**. The following screen displays.

Figure 51: The Security: Device Filter Screen

The following table describes the labels in this screen.

Table 41: The Security: Device Filter Screen

Connected Devices	
Host Name	This displays the name of each network device connected on the LAN.
IP Address	This displays the IP address of each network device connected on the LAN.
MAC Address	This displays the Media Access Control (MAC) address of each network device connected on the LAN.
Type	This displays whether the device's IP address was assigned by DHCP (DHCP-IP), or self-assigned .
Interface	This displays the name of the interface on which the relevant device is connected.
Status	This displays if the device filter is active or not.
Action	Click Manage to make changes to the device's filtering status; see Adding or Editing a Managed Device on page 12 for information on the screen that displays.

Table 41: The Security: Device Filter Screen (continued)

Managed Devices	
Block Rules	Use these buttons to control the action to be taken for the devices listed: <ul style="list-style-type: none"> ▶ Select Allow All to ignore the Managed Devices list and let all devices connect to the CGNM/ CGNM-3552. ▶ Select Allow to permit only devices you added to the Managed Devices list to access the CGNM/ CGNM-3552 and the network. All other devices are denied access. ▶ Select Deny to permit all devices except those you added to the Managed Devices list to access the CGNM/ CGNM-3552 and the network. The specified devices are denied access.
Host Name	This displays the name of each network device in the list.
MAC Address	This displays the Media Access Control (MAC) address of each network device in the list.
Managed Weekdays	This displays the days of the week on which the device is managed.
Managed Time	This displays the start (From) and end (To) of the time period during which the device is managed, on the specified Managed Weekdays .
Action	Click Manage to make changes to a filtering rule (see Adding or Editing a Managed Device on page 12).
Save Changes	Click this to save your changes to the fields in this screen.
Add Managed Device	Click this to add a new service filtering rule (see Adding or Editing a Managed Device on page 12).
Help	Click this to see information about the fields in this screen.

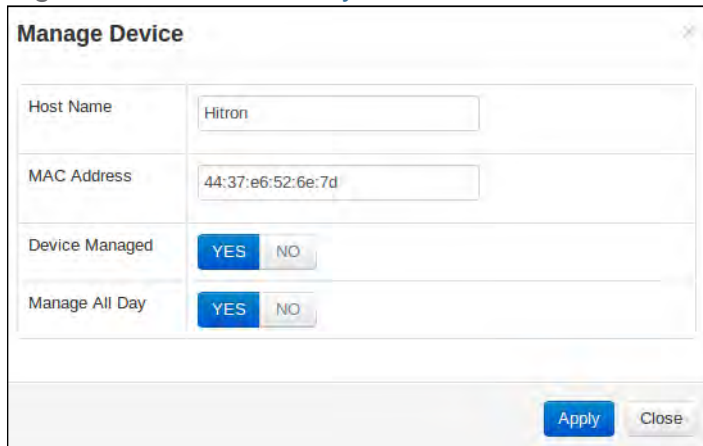

7.4.1 Adding or Editing a Managed Device

- ▶ To add a new managed device, click **Add Managed Device** in the **Security > Device Filter** screen.

- ▶ To edit an existing managed device, locate the device in the **Security > Device Filter** screen and click its **Manage** button.

The following screen displays.

Figure 52: The Security: Device Filter Add/Edit Screen

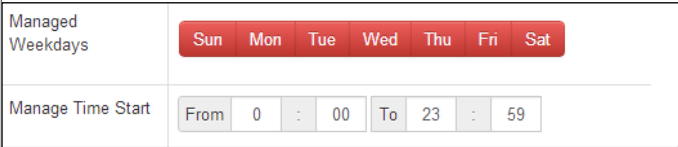

The following table describes the labels in this screen.

Table 42: The Security: Device Filter Add/Edit Screen

Host Name	If you are managing a device that already connected via the LAN, this field displays the device's name. Alternatively, if you are managing a device that is not connected via the LAN, you can enter its name here if you know it.
MAC Address	If you are managing a device that already connected via the LAN, this field displays the device's MAC (Media Access Control) address. Alternatively, if you are managing a device that is not connected via the LAN, you can enter its MAC address here if you know it.
Device Managed	Use this field to define whether the device should have its access privileges filtered or not. <ul style="list-style-type: none"> ▶ Click Yes to filter the device's access privileges. ▶ Click No not to filter the device's access privileges. When a device is not being managed, the Manage All Day field, and related fields, do not display.

Table 42: The Security: Device Filter Add/Edit Screen

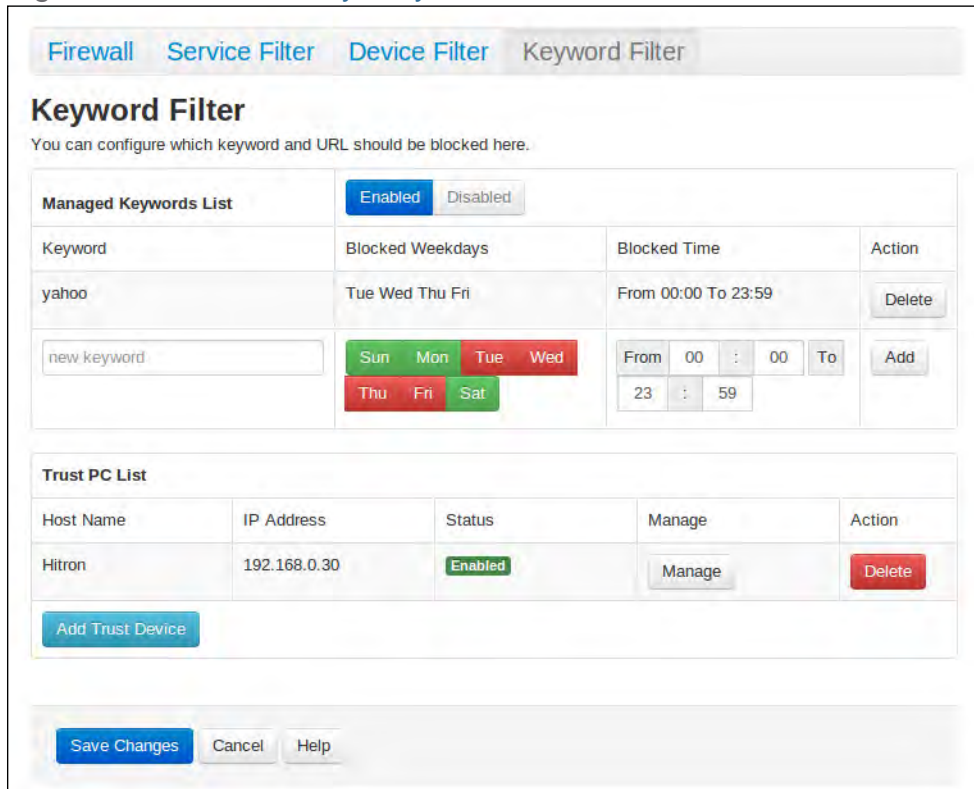

Manage All Day	<p>Use this field to specify whether the device should be managed on all days of the week, at all times, or whether the device should be managed only at certain times.</p> <ul style="list-style-type: none"> ▶ Select YES to managed the device at all times. ▶ Select NO to managed the device only at certain times. Additional fields display, allowing you to specify the times at which the device should be managed. <p>Figure 53: Additional Service Filtering Options</p>  <p>Use the Managed Weekdays fields to specify the days on which the device should be managed. A red background indicates that the device will be managed (access will be blocked), and a green background indicates that the device will not be managed (access will not be blocked). Click a day to toggle the rule on or off for the relevant day.</p> <p>Use the Manage Time Start fields to specify the period during which the device should be managed. Enter the start time in the From fields, using twenty-four hour notation, and enter the end time in the To fields.</p>
Apply	Click this to save your changes to the fields in this screen.
Close	Click this to return to the Device Filter screen without saving your changes to the rule.

7.5 The Keyword Filter Screen

Use this screen to block access from the LAN to websites whose URLs (Web addresses) and page content (text) contain certain keywords. You can create multiple keyword blocking rules, and set them to apply on certain days and at certain times.

Click **Security** > **Keyword Filter**. The following screen displays.

Figure 54: The Security: Keyword Filter Screen

The following table describes the labels in this screen.

Table 43: The Security: Keyword Filter Screen

Managed Keywords List	Use this field to turn keyword filtering on or off. <ul style="list-style-type: none"> ▶ Select Enabled to turn keyword filtering on. ▶ Select Disabled to turn keyword filtering off.
Keyword	Enter the keyword that you want to block. The CGNM/CGNM-3552 examines both the page's URL (Internet address) and its page content (text).
Blocked Weekdays	Use these fields to specify the times at which the keyword should be blocked. A red background indicates that the rule will be applied (access will be blocked), and a green background indicates that the device will not be applied (access will not be blocked). Click a day to toggle the rule on or off for the relevant day.
Blocked Time	Use these fields to specify the period during which the rule should be applied. Enter the start time in the From fields, using twenty-four hour notation, and enter the end time in the To fields.

Table 43: The Security: Keyword Filter Screen (continued)

Action	<p>Click Add to create a new keyword blocking rule; a new row of fields display.</p> <p>Click Delete to remove a existing keyword blocking rule.</p>
Save Changes	Click this to save your changes to the fields in this screen.
Cancel	Click this to return the fields in this screen to their last-saved values without saving your changes.

Close	Click this to return to the Keyword Filter screen without saving your changes to the trust PC list.

8

Advanced

This chapter describes the screens that display when you click **Advanced** in the toolbar. It contains the following sections:

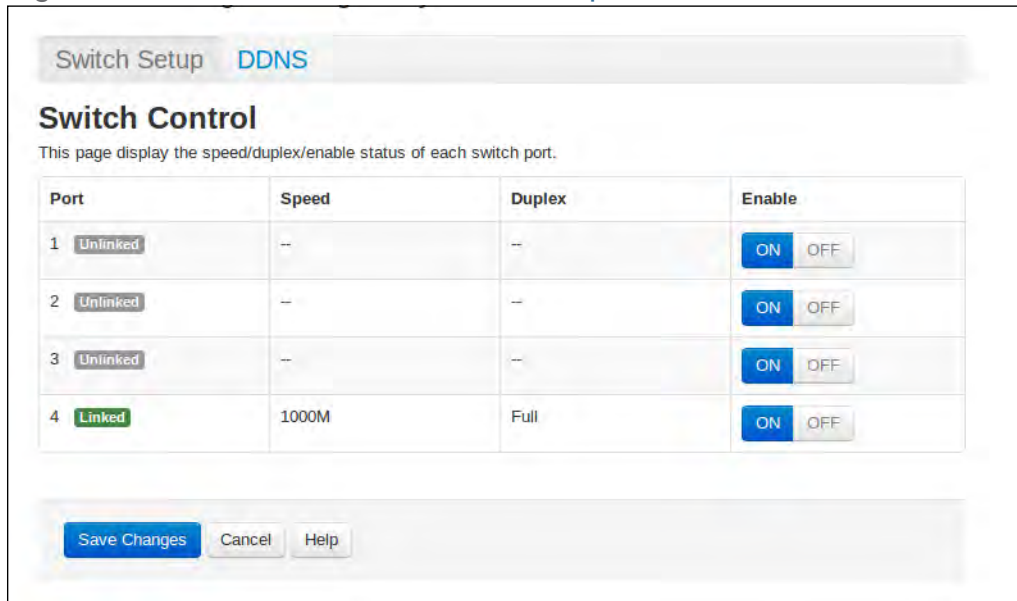

- ▶ [The Switch Setup Screen](#) on page 1
- ▶ [The DDNS Screen](#) on page 3

8.1 The Switch Setup Screen

Use this screen to view the speed and duplex status of each of the CGNM/ CGNM-3552's LAN ports, and enable or disable them.

Click **Advanced** > **Switch Setup**. The following screen displays.

Figure 56: The Advanced > Switch Setup Screen

The following table describes the labels in this screen.

Table 45: The Advanced > Switch Setup Screen

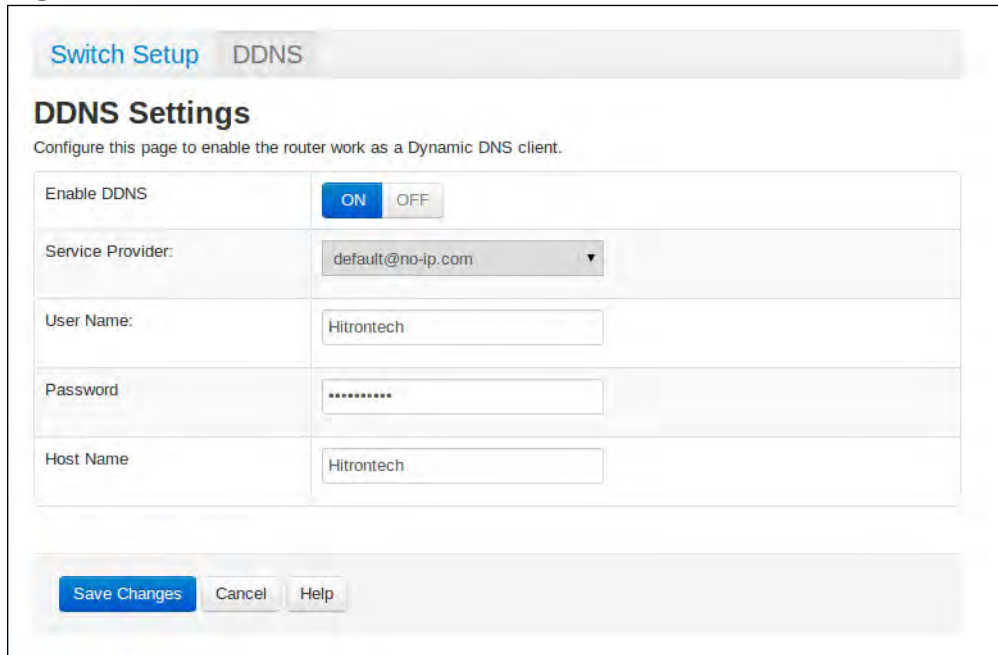

Port	This displays the number of each LAN port. <ul style="list-style-type: none"> ▶ When no device is connected to the LAN port, Unlinked displays. ▶ When a device is connected to the LAN port, Linked displays.
Speed	This displays the speed of the data link to the device connected to the LAN port, in kilobits per second (kbps).
Duplex	This displays the duplex status of the data link to the device connected to the LAN port.
Enable	Use this to turn the LAN port on or off. <ul style="list-style-type: none"> ▶ Click a disabled LAN port's On button to enable the port. Data can be exchanged with the device connected to this port. ▶ Click an enabled LAN port's Off button to disable the port. Data cannot be exchanged with the device connected to this port.
Save Changes	Click this to save your changes to the settings in this screen.
Cancel	Click this to discard your changes to the settings in this screen.

8.2 The DDNS Screen

Use this screen to configure the CGNM/ CGNM-3552's Dynamic Domain Name System (DDNS) settings.

Click **Advanced > DDNS**. The following screen displays.

Figure 57: The Advanced > DDNS Screen

The following table describes the labels in this screen.

Table 46: The Advanced > DDNS Screen

Enable DDNS	Use this to configure the CGNM/ CGNM-3552's DDNS function. <ul style="list-style-type: none"> ▶ Click On to have the CGNM/ CGNM-3552 work as a DDNS client. The CGNM/ CGNM-3552 receives DDNS information from the Service Provider you specify. ▶ Click Off to have the CGNM/ CGNM-3552 not work as a DDNS client.
Service Provider	Select the organization from which you wish to receive DDNS information.

Table 46: The Advanced > DDNS Screen (continued)

User Name	Enter the credentials assigned to you by the selected Service Provider .
Password	
Host Name	
Save Changes	Click this to save your changes to the settings in this screen.
Cancel	Click this to discard your changes to the settings in this screen.
Help	Click this to see more information about the items in this screen.

9

Troubleshooting

Use this section to solve common problems with the CGNM/ CGNM-3552 and your network. It contains the following sections:

- ▶ [None of the LEDs Turn On](#) on page 1
- ▶ [One of the LEDs does not Display as Expected](#) on page 2
- ▶ [I Forgot the CGNM/ CGNM-3552's IP Address](#) on page 2
- ▶ [I Forgot the CGNM/ CGNM-3552's Admin Username or Password](#) on page 3
- ▶ [I Cannot Access the CGNM/ CGNM-3552 or the Internet](#) on page 3
- ▶ [I Cannot Access the Internet and the DS and US LEDs Keep Blinking](#) on page 3
- ▶ [I Cannot Connect My Wireless Device](#) on page 4

Problem: **None of the LEDs Turn On**

The CGNM/ CGNM-3552 is not receiving power, or there is a fault with the device.

- 1 Ensure that you are using the correct power adaptor.

Using a power adaptor other than the one that came with your CGNM/ CGNM-3552 can damage the CGNM/ CGNM-3552.

- 2 Ensure that the power adaptor is connected to the CGNM/ CGNM-3552 and the wall socket (or other power source) correctly.
- 3 Ensure that the power source is functioning correctly. Replace any broken fuses or reset any tripped circuit breakers.

- 4 Disconnect and re-connect the power adaptor to the power source and the CGNM/ CGNM-3552.
- 5 If none of the above steps solve the problem, consult your vendor.

Problem: **One of the LEDs does not Display as Expected**

- 1 Ensure that you understand the LED's normal behavior (see [LEDs](#) on page 6).
- 2 Ensure that the CGNM/ CGNM-3552's hardware is connected correctly; see the Quick Installation Guide.
- 3 Disconnect and re-connect the power adaptor to the CGNM/ CGNM-3552.
- 4 If none of the above steps solve the problem, consult your vendor.

Problem: **I Forgot the CGNM/ CGNM-3552's IP Address**

- 1 The CGNM/ CGNM-3552's default LAN IP address is **192.168.0.1**.
- 2 You can locate the CGNM/ CGNM-3552's GUI by entering the LAN domain suffix into your browser's address bar (on a computer connected to the LAN). The default LAN domain suffix is displayed in the **Basic > LAN Setup** screen's **Domain Suffix** field. See [The LAN Setup Screen](#) on page 3 for more information.
- 3 Depending on your operating system and your network, you may be able to find the CGNM/ CGNM-3552's IP address by looking up your computer's default gateway. To do this on (most) Windows machines, click **Start > Run**, enter "cmd", and then enter "ipconfig". Get the IP address of the **Default Gateway**, and enter it in your browser's address bar.
- 4 If you still cannot access the CGNM/ CGNM-3552, you need to reset the CGNM/ CGNM-3552. See [Factory Default Resetting the CGNM/ CGNM-3552](#) on page 14. All user-configured data is lost, and the CGNM/ CGNM-3552 is returned to its default settings. If you previously backed-up a more recent version your CGNM/ CGNM-3552's settings, you can now upload them to the CGNM/ CGNM-3552; see [The Backup Screen](#) on page 6.

Problem: I Forgot the CGNM/ CGNM-3552's Admin Username or Password

- 1 The default username is **cusadmin**, and the default password is **password**.
- 2 If the default username and password do not work, you need to reset the CGNM/ CGNM-3552. See [Factory Default Resetting the CGNM/ CGNM-3552](#) on page 14. All user-configured data is lost, and the CGNM/ CGNM-3552 is returned to its default settings. If you previously backed-up a more recent version your CGNM/ CGNM-3552's settings, you can now upload them to the CGNM/ CGNM-3552; see [The Backup Screen](#) on page 6.

Problem: I Cannot Access the CGNM/ CGNM-3552 or the Internet

- 1 Ensure that you are using the correct IP address for the CGNM/ CGNM-3552.
- 2 Check your network's hardware connections, and that the CGNM/ CGNM-3552's LEDs display correctly (see [LEDs](#) on page 6).
- 3 Make sure that your computer is on the same subnet as the CGNM/ CGNM-3552; see [IP Address Setup](#) on page 10.
- 4 If you are attempting to connect over the wireless network, there may be a problem with the wireless connection. Connect via a **LAN** port instead.
- 5 If the above steps do not work, you need to reset the CGNM/ CGNM-3552. See [Factory Default Resetting the CGNM/ CGNM-3552](#) on page 14. All user-configured data is lost, and the CGNM/ CGNM-3552 is returned to its default settings. If you previously backed-up a more recent version your CGNM/ CGNM-3552's settings, you can now upload them to the CGNM/ CGNM-3552; see [The Backup Screen](#) on page 6.
- 6 If the problem persists, contact your vendor.

Problem: I Cannot Access the Internet and the DS and US LEDs Keep Blinking

Your service provider may have disabled your Internet access; check the **Status > DOCSIS WAN** screen's **Network Access** field (see [The DOCSIS WAN Screen](#) on page 16).

Problem: I Cannot Connect My Wireless Device

- 1 Ensure that your wireless client device is functioning properly, and is configured correctly. See the wireless client's documentation if unsure.
- 2 Ensure that the wireless client is within the CGNM/ CGNM-3552's radio coverage area. Bear in mind that physical obstructions (walls, floors, trees, etc.) and electrical interference (other radio transmitters, microwave ovens, etc) reduce your CGNM/ CGNM-3552's signal quality and coverage area.
- 3 Ensure that the CGNM/ CGNM-3552 and the wireless client are set to use the same wireless mode and SSID (see [The Basic Settings Screen](#) on page 4) and security settings (see [The Access Control Screen](#) on page 15).
- 4 Re-enter any security credentials (WEP keys, WPA(2)-PSK password, or WPS PIN).
- 5 If you are using WPS's PBC (push-button configuration) feature, ensure that you are pressing the button on the CGNM/ CGNM-3552 and the button on the wireless client within 2 minutes of one another.
