Designed with the Urban Security sector in mind, the new HI-SCAN 5030C has the compact footprint and mobility demanded for applications with restricted floor space. Ideal for screening mail, packages, bags and other items of interest, it can help improve security and operational efficiency in confined spaces. It brings next generation technology to its extremely successful predecessor – the HI-SCAN 5030si which sold over 6,000 units.

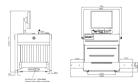

Offering excellent flexibility, the HI-SCAN 5030C is available in stationary desktop or compact mobile versions. It is particularly suitable for use in mailrooms, entrance lobbies, prisons, court buildings, schools and many other security sensitive areas.

Key new features of both HI-SCAN 5030C versions include a larger display screen; keyboard with additional image manipulation and review keys; a re-designed emergency stop button to eliminate accidental activation. The mobile version additionally includes vibration shock absorbers and storage capacity for the monitor, keyboard and other items. A range of optional software offers further functionality from extra image storage to advanced image analysis support. The optional foldaway conveyor extension for the mobile version is easy to use and delivers even more flexibility.

Featuring the HiTraX 3 electronics and software platform, the HI-SCAN 5030C leverages the advanced software features and optimum image processing and presentation delivered by this user-friendly technology.
