Overview

The HDCU4300 Camera Control Unit connects to a HDC4300 Color Camera or HDC-P43 Multi Purpose Camera¹⁾ with an optical fiber cable, and carries out the processing of video signals from the camera and provides an interface with external equipment.

Connecting a camera facilitates 4K video shooting or HD high frame rate video shooting. HD normal speed video and SD normal speed video can even be simultaneously output when 4K video shooting and HD high frame rate video shooting.

The unit can output video signals and audio signals as IP signals by installing an HKCU-IP43F Networked Media Interface Board.²⁾

12G-SDI output or 6G-SDI output is also supported by installing an HKCU-4002 12G-SDI Extension Kit in the unit.

- 1) To connect to the HDC-P43, an HKCU-SM100 CCU Extension Adaptor and a single-mode fiber cable are required.
- 2) An SFP+ module is required to use IP output.

This unit may be combined with an MSU-1000 series Master Setup Unit (optional) or an RCP-1000 series Remote Control Panel (optional) to form a camera control system. This enables you to configure a system capable of controlling multiple video cameras.

Notes

- Before operating the system, check that the software and ROM versions of each of this unit, HDC4300, HDC-P43, MSU-1000 series, and RCP-1000 series are supported.
- An HKCU-IP43F Networked Media Interface Board and an HKCU-4002 12G-SDI Extension Kit cannot be installed at the same time.

System Configuration

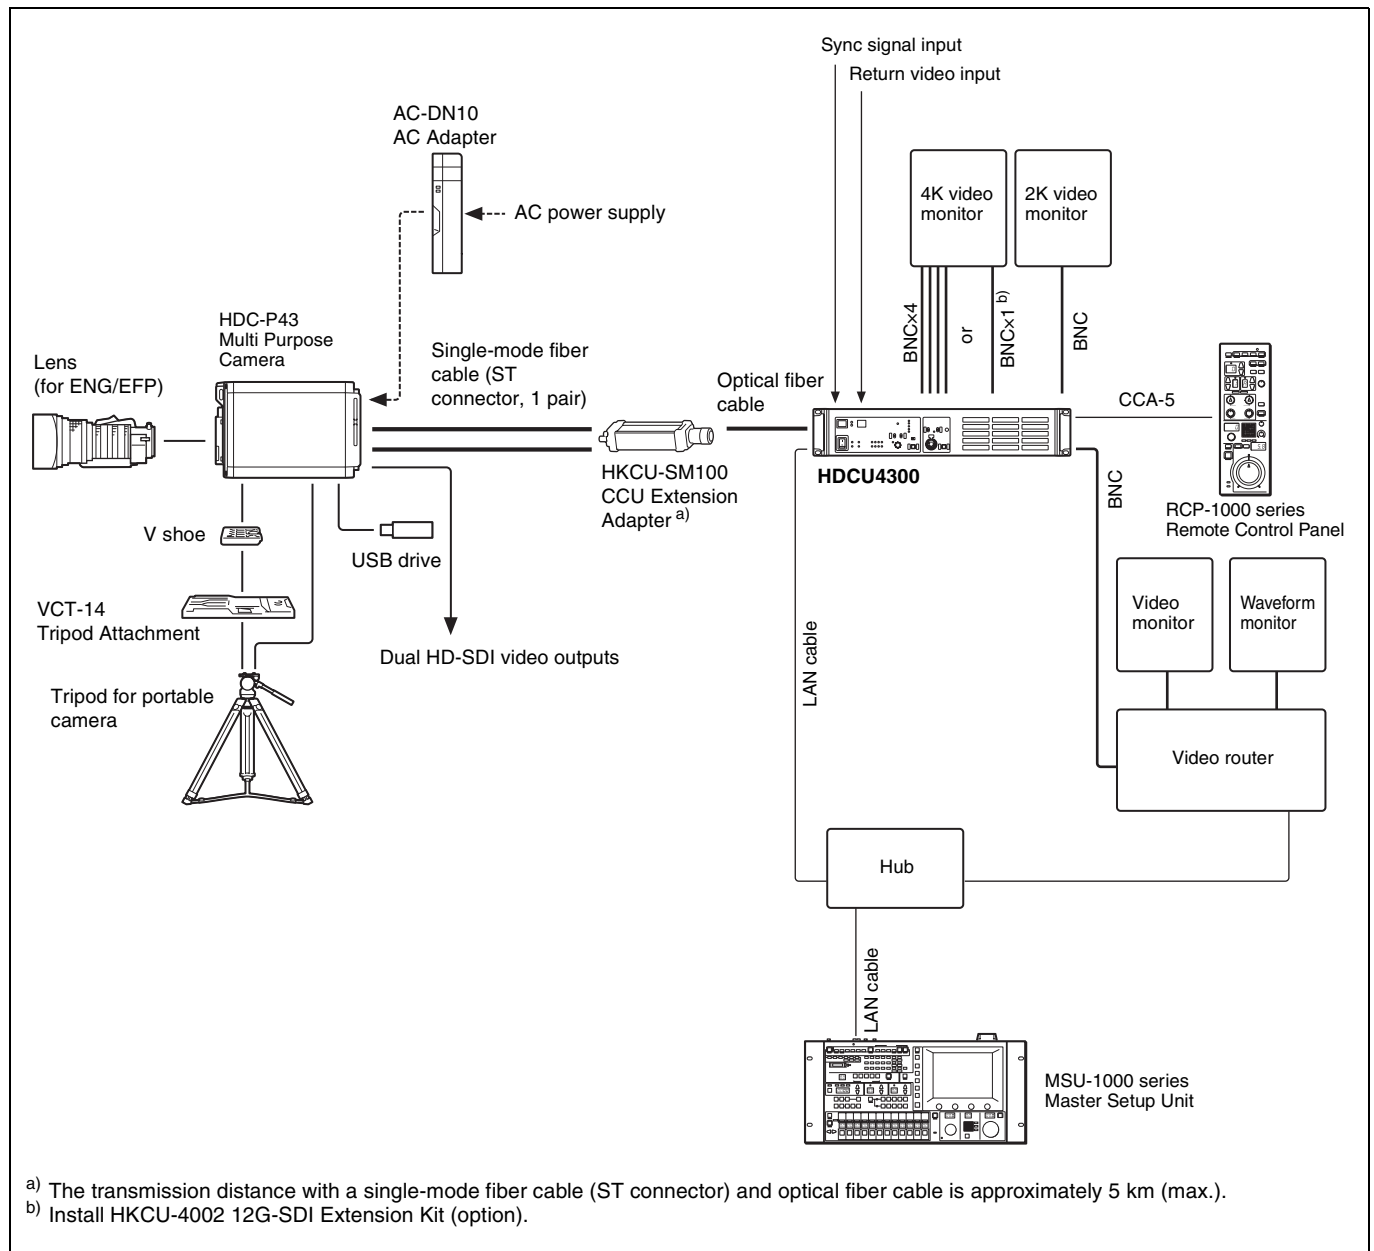

Note

Production of some of the peripherals and related devices shown in the figures may have been discontinued. For advice on choosing devices, please contact your Sony representative or dealer.

Name and Function of Parts

Front Panel

1 Red tally indicator

Lights in red when this unit receives a red tally signal. You can attach the supplied number plate here.

2 Yellow tally indicator

Lights in yellow when this unit receives a yellow tally signal.

3 Green tally indicator

Lights in green when this unit receives a green tally signal.

4 CCU number display

Displays the camera number set in the CCU menu.

5 NMI STATUS indicator

Displays the NMI-LAN status.

Green: Normal status

Flashing green: Network synchronization in progress

Off: SFP+ module is not installed.

Disconnected from IP Live System Manager.

Connection with IP Live System Manager in progress

Flashing red: Not locked to network sync signal. Signal reception is unavailable.

6 Status display indicator

REF IN (green): Indicates presence of reference input signal.

UNLOCK (Red): The input REFERENCE is not locked.

NETWORK: Displays the status when there is a network system connection.

On: When CNS SETTING in the NETWORK SETTING menu is set to either BRIDGE or MCS, this indicates that external control equipment (MSU-1000/1500 Master Setup Unit, RCP-1000 series Remote Control Panel, or other equipment) is connected.

Flashing: When CNS SETTING in the NETWORK SETTING menu is set to either BRIDGE or MCS, this indicates that the unit cannot connect correctly with the external control equipment (MSU-1000/1500 Master Setup Unit, RCP-1000 series Remote Control Panel, or other equipment).

Off: When CNS SETTING in the NETWORK SETTING menu is set to either BRIDGE or MCS, this indicates that a LAN cable is not connected or that the network system connection settings have not been configured.

When CNS SETTING in the NETWORK SETTING menu is set to LEGACY, this remains turned off.

COM ERROR (Red): Communication with the camera or external control equipment (such as the RCP-1000 series Remote Control Panel) is not possible.

FAN STOP (Red): The fan is stopped.

7 INTERCOM audio input/output and control block

• MIC/PGM (microphone/program) switch

ON: Turns the headset microphone on.

OFF: Turns the headset microphone off.

PGM: Selects program audio output. In this mode, the INTERCOM knob adjusts the headset program audio level.

• INTERCOM (intercom select) switch

Selects the intercom signal input/output connection source for the INTERCOM connector on the front panel.

PROD: Connects the producer line.

PRIV: Blocks the connection to the producer line or engineer line, allowing private intercom talk between the CCU and the camera.

ENG: Connects the engineer line.

• PRIV (private) indicator

Lights when the intercom is in private mode.

• INTERCOM (intercom adjustment) knob

Adjusts the receiver audio level of the intercom.

• INTERCOM connector (XLR 5-pin)

Connects the intercom headset.

To use a headset with a plug other than an XLR 5-pin plug, consult a Sony service or sales representative.

8 MAIN POWER switch and indicator

Turns the entire camera system on and off, including this unit, the video camera, and the RCP-1000 series Remote Control Panel connected to the REMOTE connector of this unit.

Switch to "I" to turn the power on, and switch to "O" to turn the power off. The MAIN indicator lights when the power switch of the unit is turned on. The CAM indicator lights when power is supplied to the video camera.

9 CABLE ALARM indicators

SHORT (red): Lights in red when the power supply cord of an optical fiber cable is shorted to the outer sheath, or two power supply cords are shorted. Power is not input to the camera when this indicator lights.

OPEN (red): Lights in red when a camera is not connected to the CAMERA connector on the rear panel of this unit via an optical fiber cable.

10 Optical signal reception status indicator

Indicates the communication status of the camera and CCU.

When the two lamps on the right (green) are lit: Reception status is excellent.

When the second lamp from the right (green) is lit: Reception status is good.

When the second lamp from the left (yellow) is lit: Reception status is low.

When the lamp on the left (red) is lit: Reception status is at the lowest level.

11 MENU control block

• DISP/MENU lever and indicator

Selects the status display or setup menu display. In setup menu mode, the indicator turns on.

• CANCEL/ENTER lever

In setup menu mode, used to cancel and enter settings.

• CONTROL knob (rotary encoder)

In status screen mode, used to change the displayed page. In setup menu mode, used to move the cursor on a page and to change menu settings.

Pushing the control knob has the same function as setting the CANCEL/ENTER level to ENTER.

12 Assignable button

You can set a function for this button via the CCU menu.

13 Menu lock switch

This locks out operation of the front panel menu operation area.

14 Call button

When pressed, this outputs a call signal to the camera or external control device (the RCP-1000 series, etc.) that are connected to this unit. Use this when you want to call and speak with the camera operator or external control device operator via intercom. This button lights in red when it is pressed or the call button of other equipment is pressed.

Rear Panel

1 TRUNK A connector (round 12-pin)

Used to connect to the CCU connector on a video camera via an RS-232C or RS-422A interface. Communication with up to two channels is available.

2 RCP/CNU connector (round 8-pin)

Used to connect to an MSU-1000 series Master Setup Unit, CNU-700 Camera Command Network Unit, or RCP-1000 series Remote Control Panel via a CCA-5 Connection Cable. Control signals are sent and received via this connector. When using an RCP-1000 series unit, power is also supplied.

3 3G/HD SDI OUTPUT (SDI output) connector (BNC-type)

Used to output video signals from the video camera using Multi-Link format comprising 3G-SDI signals or HD-SDI signals.

For details about assignments to each signal output connector in the Multi-Link interface, see *“Relationship between Connection Type and BNC Connector Assignment”* (page 16).

4 LAN connector (RJ-45 8-pin)

Used to connect to a LAN. Connect a LAN HUB (10BASE-T/100BASE-TX), using a LAN cable (shielded type of category 5 or more).

5 AUDIO OUT CH1, CH2 (audio output 1, 2) connectors (XLR 3-pin)

Used to output the audio signal to the AUDIO IN connectors of the video camera.

6 CAMERA connector (optical fiber connector)

Used to connect a video camera, using an optical fiber cable. All video camera signals, including power supply, control, video, and audio, are sent and received over one optical fiber cable.

Notes

- Dust on the connection surface of the optical fiber cable may result in transmission errors. When not connected, always cover the end of the connector with the supplied cap.

- Connection with an HDC-P43 requires an HKCU-SM100 CCU Extension Adaptor and single-mode fiber cable.

7 INTERCOM/TALLY/PGM (intercom/tally/program audio) connector (D-sub 25-pin)

Used to input and output intercom, tally, and program audio signals. Connect to the intercom/tally/program audio connector of the intercom system.

REAR PREVIEW function: Pin 10 is assigned for the output pin of the REAR PREVIEW function.

8 RETURN SDI IN 1/2 (3G/HD/SD-SDI return video 1/2) connectors (BNC-type)

Two different 3G/HD/SD-SDI return video input signals may be received independently. The selection of RET 1 or 2 is made by the return switch of the video camera. The aspect ratio can also be selected for an SD signal.

The type of input signal on RET 1 and 2 may be set individually using the setup menu, or using the MSU-1000 series Master Setup Unit.

For details on the setup menu, contact a Sony service or sales representative.

Refer also to the Master Setup Unit manual.

9 3G/HD SDI I/O 1/2 (SDI input/output 1/2) connectors (BNC-type)

These can be used as return video inputs, HD prompter inputs, camera video signal outputs, and HD-TRUNK outputs. Set them in SLOT3 on the <I/F SETTINGS> page of the MAINTENANCE menu according to the application.

10 INPUT area

1 PROMPTER 1, 2 (tele-prompter input) connectors (BNC-type)

Input the prompter signal of 1 channel or 2 channels depending on the setting of PROMPTER CHANNEL MODE on the <TRUNK/PROMPTER1> page of the MAINTENANCE menu. When 1 channel is set, the input signal is output from the other connector as is (loop-through). If loop-through output

is not used, terminate the unused connector at 75 ohms. When 2 channels are set, both connectors become inputs and they are terminated at 75 ohms inside the unit. If the signal used is a 1.0 Vp-p, 75-ohm analog signal, it may be output from the PROMPTER OUT connector of the video camera with a frequency bandwidth of 5 MHz, regardless of signal format.

② REFERENCE connectors (BNC-type)

Input an HD tri-level reference sync signal or SD reference sync signal (black burst signal, or black burst signal with 10 Field ID) to either of the two connectors. The input signal is output from the other connector as is (loop-through output). If loop-through output is not used, terminate the unused connector at 75 ohms. The type of reference signal is selected using the setup menu, or using the MSU-1000 series Master Setup Unit.

For details on the setup menu, contact a Sony service or sales representative.

Note

When a black burst signal with a 10 Field ID is input, 10F BB on the <GENLOCK> page of the SYSTEM OPERATION menu must be set to ON.

⑪ RETURN VBS IN 3/4 (VBS return video input 3/4) connectors (BNC-type)

Two different VBS return video input signals may be received independently. The selection of RET 3 or 4 is made by the return switch of the video camera. The type of input signal on RET 3 and 4 may be set individually using the setup menu, or using the MSU-1000 series Master Setup Unit. An aspect ratio may also be selected for SD signals.

For details on setup menu operations, contact a Sony service or sales representative.

Refer also to the Master Setup Unit manual.

⑫ 3G/HD SDI OUTPUT (SDI output) connector (SLOT2) (BNC-type)

The signal from the video camera may be output as four 3G-SDI signals, HD-SDI signals or SD-SDI signals. They can output signals with superimposed text characters and markers.

For details on settings, contact a Sony service or sales representative.

⑬ NETWORK TRUNK connector (RJ-45 8-pin)

Used to connect the NETWORK TRUNK connector of the device connected to the camera with the network connection device.

⑭ OUTPUT area

① VBS MONITOR (VBS monitor output) connector (BNC-type)

Outputs an SD analog video signal.

② CHARACTER/SYNC (character output / sync signal output) connector (BNC-type)

Outputs the self-diagnostic results or setup menu of the unit as an SD analog video signal. If CHARACTER/SYNC OUT on the <I/F SETTINGS> page of the MAINTENANCE menu is set to SYNC, this connector can also be used as the sync signal output (SYNC) connector. An SD composite sync or HD tri-level sync signal will be output from the internal sync signal generator.

For details on how to select the signal, contact a Sony service or sales representative.

⑮ ~ AC IN (AC power input) connector

Use the specified AC power cord to connect to an AC power supply. The AC power cord can be secured to this unit, using the plug holder (optional).

HKCU-IP43F Networked Media Interface Board (Option)

Note

For safety, only a qualified technician with service training should perform tasks inside the unit.

The HDCU4300 supports IP output of a single 4K signal or dual HD signals by installing an HKCU-IP43F in the HDCU4300.

HDCU4300 software version 1.11 or later is required. In addition, an OTM-10GSR1 or other SFP+ module is required to use IP output.

For details about installation, contact a Sony service or sales representative.

① NMI-LAN connectors (SFP+)

These connectors output IP video signals and audio. The output signal format is the same as the format set for SLOT4.

HKCU-4002 12G-SDI Extension Kit (Option)

Note

For safety, only a qualified technician with service training should perform tasks inside the unit.

The HDCU4300 supports 4K 2-system 12G-SDI output or 6G-SDI output by installing an HKCU-4002 in the HDCU4300. HDCU4300 software version 1.50 or later is required.

For details about installation, contact a Sony service or sales representative.

❶ 12G/6G-SDI output connectors

These connectors are 12G-SDI output connectors or 6G-SDI output connectors. The output format is the same as the format set for SLOT1 of the HDCU4300.

For details, see page 33.

Connections and Settings

4K System Connection

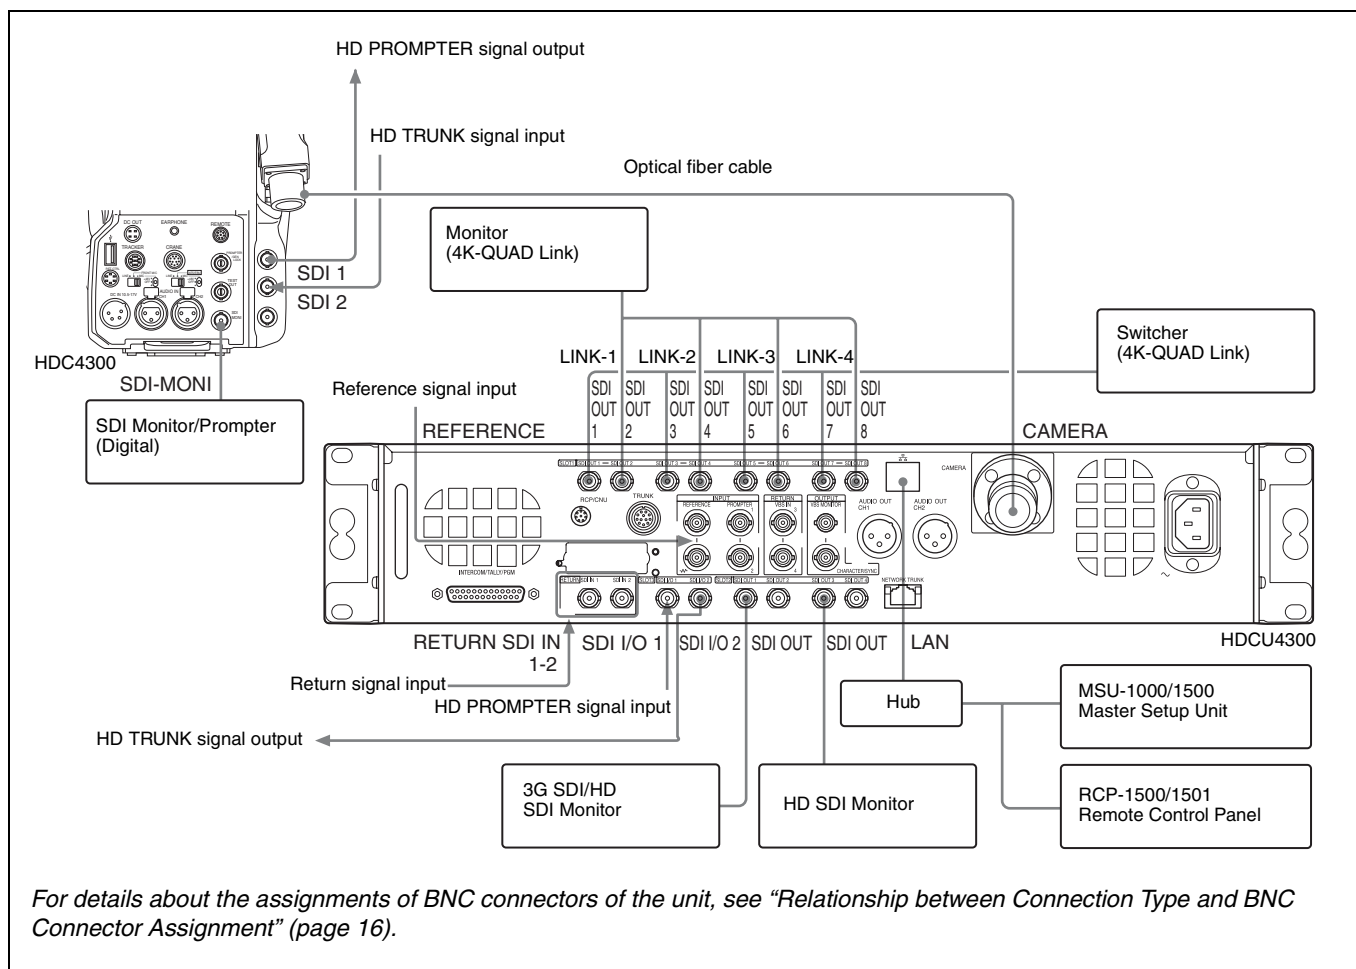

A 4K format camera system is formed by connecting the unit and a video camera (HDC4300 or HDC-P43¹⁾) with optical fiber cables.

The functions provided by the unit (genlock, power supply to the video camera, various interface functions, etc.) can be used as is.

HD signals down-converted from 4K signals can be output from SLOT2 and SLOT3.

1) Requires an HKCU-SM100 CCU Extension Adaptor and single-mode fiber cable.

Connection example

Settings

| Device | Purpose | Menu/Page | Item | Set value |
|----------|--|----------------------------------|----------------|----------------------------------|
| HDCU4300 | HD system format setting | SYSTEM OPERATION/<MULTI FORMAT> | BASE FORMAT | Set other than 3G-SDI |

| | | | SDI-2 OUT/IN | HD TRUNK/RET IN |

HD CUTOUT Video System

An HD signal can be extracted from the 4K signal by installing the optional SZC-2001/2001M/2001W HD CUTOUT Software in the HDCU4300.

The region that is cut out can be controlled using a mouse or other device connected to the HD CUTOUT Controller.

For details about setup and operation, refer to the SZC-2001/2001M/2001W User's Guide.

The cutout HD signal is output from SLOT1.

HD video down-converted from 4K signals can be output from SLOT2, SLOT3, and SLOT4.

Also, a wire frame indicating the cutout region can be displayed.

1) Interlaced output is also supported in HD HFR 1080 format.

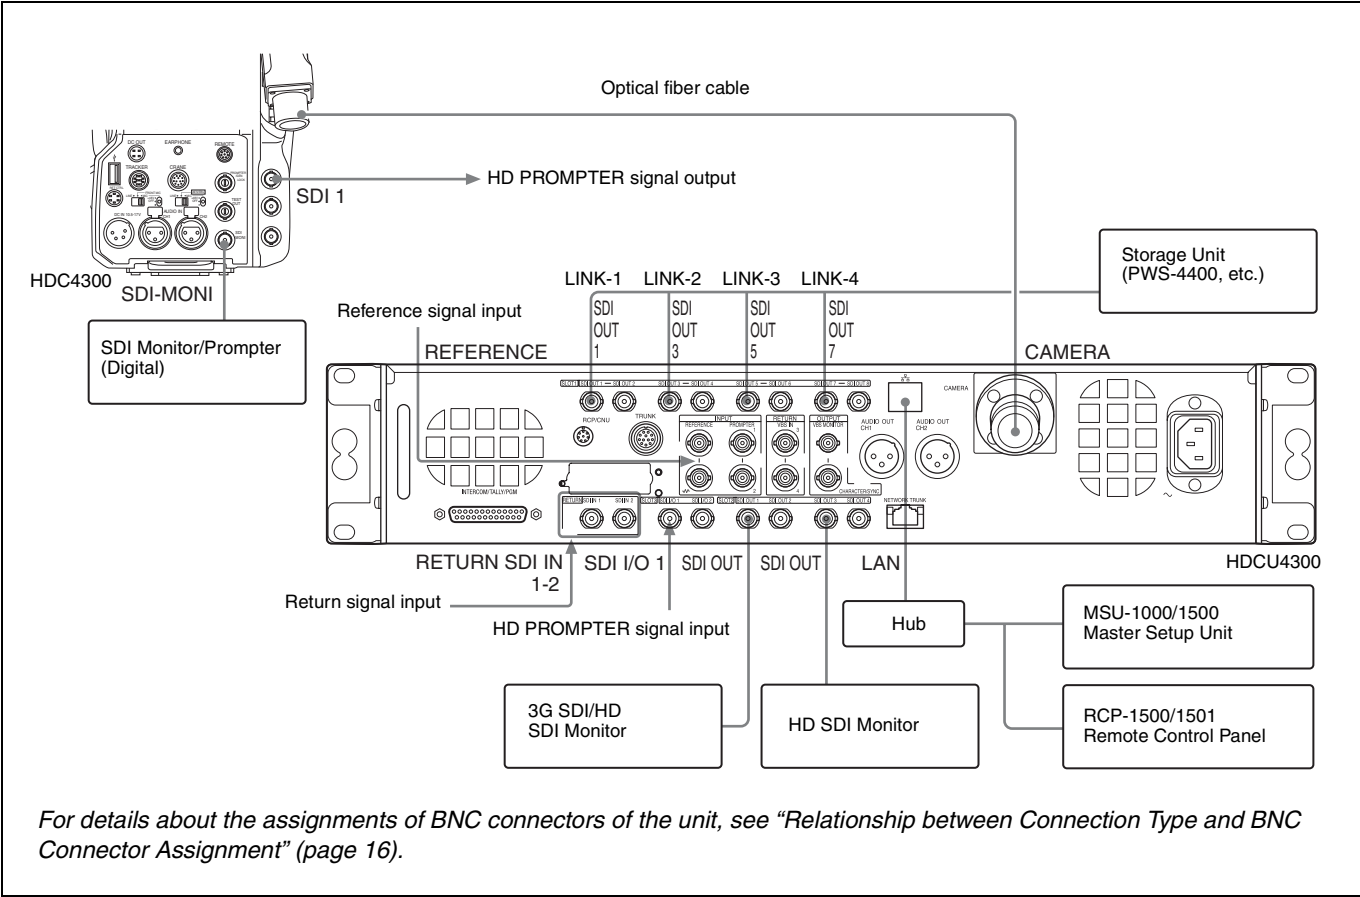

2) Selectable only when the format is set to 720P.

1x video can be output at the same time from SLOT2 and SLOT3.

Note

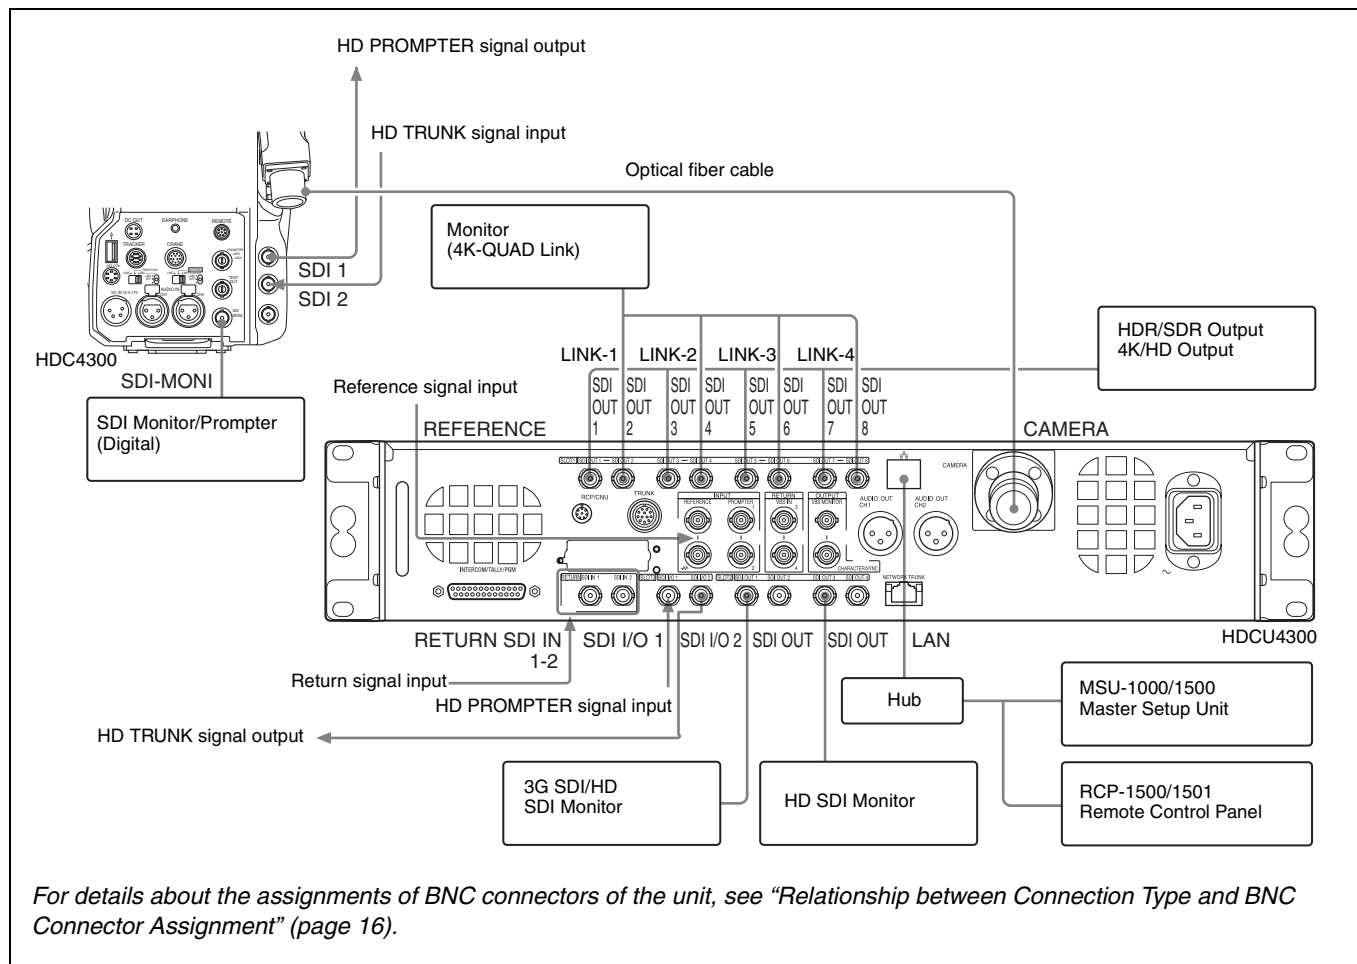

The HFR imaging function is dependent on the software version of the connected camera. Check the compatibility of each device before use.

Connection example (4x HD)

HDR Video System

When a 4K format camera system is selected, the dynamic range of the camera can be enhanced to produce HDR video output from SLOT1 by setting HDR MODE to Live HDR. HDR/SDR or 4K/HD can be output from SLOT1. The HD output from SLOT2, SLOT3, and SLOT4 is always SDR video.

Settings

Relationship between Connection Type and BNC Connector Assignment

The names of output interfaces in Table 1 correspond to BNC connector assignments in Table 2 (*page 18*). Check the output interface for the format you want to use in Table 1, then check the signal assignments to BNC connectors in Table 2.

1) Output is P when the division method is 2SI, and PsF when the division method is SQD.

2) Output only when the BASE FORMAT is 720P.

3) A Slot1 output format of “4K” refers to 4096×2160 or 3840×2160.

4) Supported when the BASE FORMAT is 1080.

5) Supported when HKCU-4002 is installed.

Paint Functions in HDR MODE and COLOR SPACE

Some paint functions are disabled, depending on the HDR MODE and COLOR SPACE settings on the HDCU4300.

Disabled items can still be adjusted from the PAINT menu on the camera or RCP/MSU, but the settings are not applied to the HDR video that is output from SLOT1.

Status Display

The CCU system status can be monitored using a video monitor connected to the PIX connector.

For information on monitoring and changing settings, see “Menu Settings” (page 26).

Displaying the Status Screen

The menu screen is controlled using the knob and levers in the MENU control block on the front panel.

DISP/MENU lever

CONTROL knob

To display the status screen

Set the DISP/MENU lever to the DISP position. The most recently viewed status screen page is displayed (when first powered on, the camera settings page is displayed). Turning the CONTROL knob changes the displayed page.

To exit the status screen display

In status screen display mode, set the DISP/MENU lever to the DISP position.

Status Display Screen

The following information is displayed on the status display screen.

- Camera settings
- System status
- Camera and unit audio status
- Camera and unit intercom status
- Warning display

Camera settings

① CHU MODE indication

Displays the CHU MODE (connected camera).

② Lens file name indication

Displays the lens file name.

③ F drop indication

Displayed when an F drop occurs.

④ EX (lens extender) indication

Displayed during use of the lens extender.

⑤ F-stop value indication

Displays the lens F-stop value (iris value).

⑥ Camera auto control information area

Top: Displays the Auto Setup type and execution status.

Bottom: Displays the execution item.

⑦ Gain value indication

Displays the video output signal gain setting value (dB).

⑧ ND filter indication

Displays the currently selected ND filter type.

⑨ CC filter indication

Displays the currently selected CC filter type.

⑩ Camera microphone status indication

Displayed when the camera microphone is on.

⑪ Shutter speed/Clear scan frequency indication

Displays the shutter speed. When ECS is on, displays the clear scan frequency.

⑫ Shutter/ECS indication

Displays the on/off state of the shutter/ECS.

Notes

- Items that are turned off using the <DISPLAY> page settings of the VIDEO/MONITOR menu are not displayed.

- A “-” mark is displayed for each item when a camera is not connected.

Menu Settings

The CCU system and peripheral settings can be checked and modified using a video monitor connected to the PIX connector.

Changing Menu Item Settings

The menu screen is controlled using the knob and levers in the MENU control block on the front panel. Setting the CANCEL/ENTER lever to the ENTER position and pressing the CONTROL knob perform the same function.

To display a menu page

Set the DISP/MENU lever to the MENU position. When first powered on, the CCU MENU page is displayed.

To display the CCU MENU page

In menu display mode, turn the CONTROL knob to move the pointer (➡) to TOP in the upper right corner of the menu page, then press the CONTROL knob. The CCU MENU showing the menu configuration is displayed.

```

| DIAGNOSIS | Displays the unit status. |

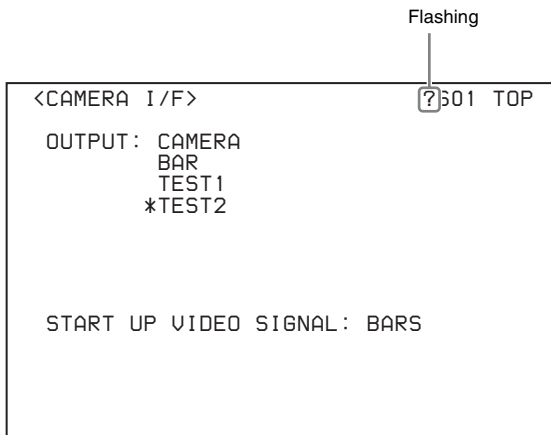

To select an item in the CCU MENU

Turn the CONTROL knob to move the pointer (➡) up/down to the desired menu item, then press the CONTROL knob. The most recently viewed page in the selected menu is displayed.

To change the displayed page

- 1 Turn the CONTROL knob to move the pointer (➡) to the page number, then press the CONTROL knob.

The pointer (➡) changes to a flashing question mark (?).

- 2 Turn the CONTROL knob to change the displayed page to the desired page, then press the CONTROL knob.

The question mark (?) changes back to the pointer (➡). Items on the page can now be selected and changed.

To change a menu item setting

If a question mark (?) is displayed beside the page number, press the CONTROL knob to restore the pointer (➡). Items on the page can now be selected and changed.

- 1 Turn the CONTROL knob to move the pointer to the desired item, then press the CONTROL knob.

The pointer (➡) changes to a flashing question mark (?).

- 2 Turn the CONTROL knob to change the setting.

To cancel a changed setting

Set the CANCEL/ENTER lever to the CANCEL position before pressing the CONTROL knob. The item is restored to its current setting.

To suspend menu changes

Set the DISP/MENU lever to the MENU position to exit the menu screen.

The DISP/MENU lever can be set to the MENU position again to restart the operation.

- 3 Press the CONTROL knob.

The question mark (?) changes back to the pointer (➡), and the item setting is registered.

- 4 Repeat steps 1 to 3 to change other settings on the same page.

To enter a character string

Some menu items require a character string input.

Moving the pointer (➡) to an item with a character string input and pressing the CONTROL knob displays a rectangular cursor and a list of selectable characters.

Turning the CONTROL knob moves the cursor between characters. The following menu item has character strings:

- VIDEO/MONITOR menu →
<BAR CHARACTER> page → BAR CHARACTER

- 1 Move the text cursor to the input position, then press the CONTROL knob.

A second cursor is displayed in the character list.

- 2 Turn the CONTROL knob to move the cursor to the desired character, then press the CONTROL knob.

Repeat steps 1 and 2 to enter other characters.

- Select INS to insert a space character at the cursor position.
- Select DEL to delete the character at the cursor position.
- Select RET to return to step 1 without changing the string.
- Entering the maximum number of characters (up to the right edge) moves the cursor to ESC on the lower right of the character list.

- 3 Turn the CONTROL knob to move the cursor to END, then press the CONTROL knob.

The new input string is registered.

To cancel the character string setting

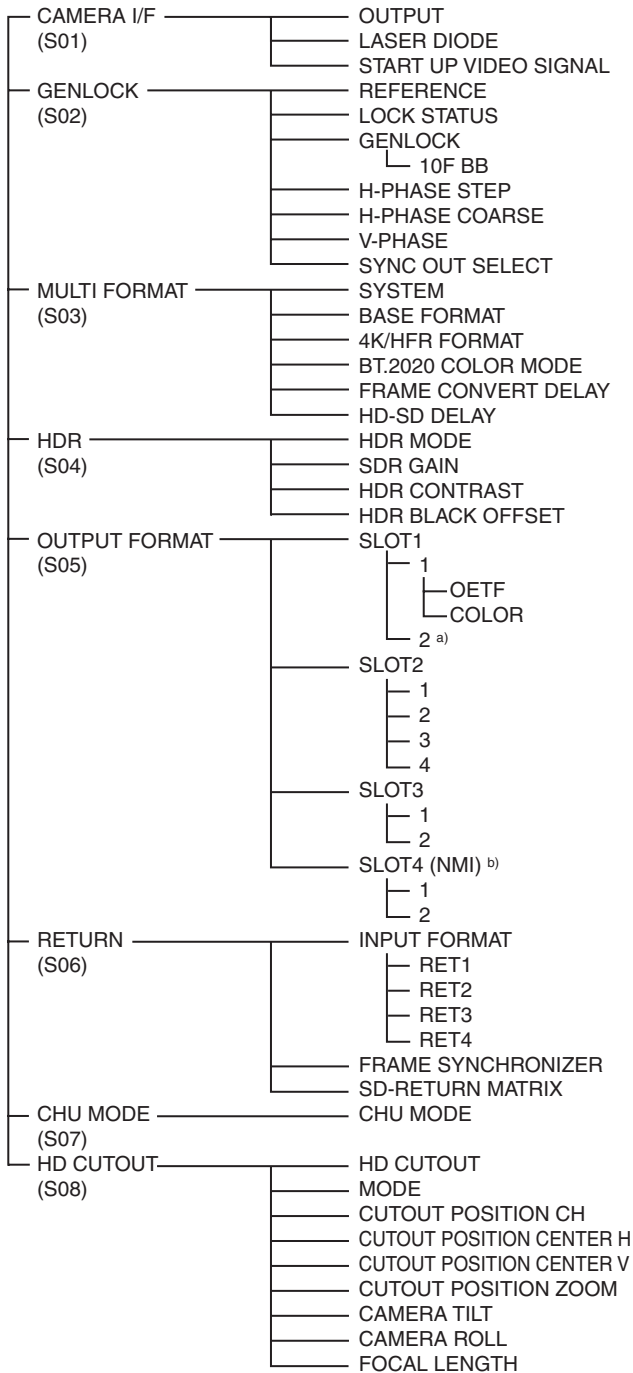

Turn the CONTROL knob to move the cursor to ESC, then press the CONTROL knob.

To exit the menu display

In menu display mode, set the DISP/MENU lever to the MENU position.

| <HD CUTOUT> S08 | HD CUTOUT | <u>OFF</u> , ON | Turns the HD cutout function ON/OFF. Enabled only when HDC(HD CUTOUT) is selected in CHU MODE. The cutout HD signal from the 4K source is output from SLOT1. |
| | MODE | <u>SIMPLE HD</u> , ZOOM&PERSPECTIVE | Selects the cutout mode. SIMPLE HD: Outputs a 1920×1080 HD region cutout from the 4K video as-is. Dual output is supported. The cutout signal set by the CUTOUT POSITION CH1 setting is output from the 1/2 connector and 5/6 connector of Slot1, and the cutout signal set by the CUTOUT POSITION CH2 setting is output from the 3/4 connector and 7/8 connector of Slot1. ZOOM&PERSPECTIVE: Outputs an HD signal formed by zooming in or out of the cutout region from the 4K video. In this mode, a perspective transformation is performed according to the focal length of the lens, and an image similar to the image obtained by the camera facing the cutout direction is output. |
| | CUTOUT POSITION CH | <u>1</u> , 2 | Selects the cutout position channel. Only channel 1 is available when ZOOM&PERSPECTIVE is selected. |
| | CUTOUT POSITION CENTER H | –1536 to 1535, <u>0</u> | Specifies the cutout position center (horizontal direction, 0: center). (Setting when MODE is ZOOM&PERSPECTIVE, CUTOUT POSITION ZOOM is 4.0, and FOCAL LENGTH is Infinity) |
| | CUTOUT POSITION CENTER V | –810 to 809, <u>0</u> | Specifies the cutout position center (vertical direction, 0: center). (Setting when MODE is ZOOM&PERSPECTIVE, CUTOUT POSITION ZOOM is 4.0, and FOCAL LENGTH is Infinity) |
| | CUTOUT POSITION ZOOM | 1.0 to 4.0, <u>2.0</u> | Specifies the zoom factor (1.0: same position as the 4K video) Enabled only when ZOOM&PERSPECTIVE is selected. |
| | CAMERA TILT | –45.0 to 45.0, <u>0</u> | Specifies the tilt angle of the camera (0: horizontal, positive angles represent upward tilt) Enabled only when ZOOM&PERSPECTIVE is selected. |
| | CAMERA ROLL | –5.0 to 5.0, <u>0</u> | Specifies the roll angle of the camera (0: horizontal, positive values represent counterclockwise roll) Enabled only when ZOOM&PERSPECTIVE is selected. |
| | FOCAL LENGTH | <u>7</u> to 500, ∞ | Specifies the focal length of the lens (unit: mm) To avoid shape change due to perspective transformation, increase the focal length until “INFINITY” is displayed. Enabled only when ZOOM&PERSPECTIVE is selected. |

4K 2SI diamond marks

This function is for displaying a test pattern like the following in the area at the bottom right of the 4K color bar when 4K 2 sample interleave output. OK is displayed if the connections for Links 1 to 4 are correct, and OK is not displayed if they are incorrect. This function can be used to check the connections.

HFR channel marks

This function is for displaying marks in the video area of HD HFR output.

The number of squares indicates the channel number so you can easily identify the channel number of a multi-link interface.

Example: Indication for channel 4

Precautions

If the unit is suddenly taken from a cold to a warm location, or if ambient temperature suddenly rises, moisture may form on the outer surface of the unit and/or inside of the unit. This is known as condensation. If condensation occurs, turn off the unit and wait until the condensation clears before operating the unit. Operating the unit while condensation is present may damage the unit.

The fan and battery are consumable parts that will need periodic replacement.

When operating at room temperature, a normal replacement cycle will be about 5 years. However, this replacement cycle represents only a general guideline and does not imply that the life expectancy of these parts is guaranteed. For details on parts replacement, contact your Sony representative.

The life expectancy of the electrolytic capacitor is about 5 years under normal operating temperatures and normal usage (8 hours per day; 25 days per month).

If usage exceeds the above normal usage frequency, the life expectancy may be reduced correspondingly.

Do not push the mesh portion of the front panel with your fingers or sharp objects.

Operating environment

- Avoid high-temperature rooms and near sources of heat.
- Do not place in locations with strong electric or magnetic field.
- Dry location with good ventilation.
- Avoid locations exposed to sunlight or strong lighting.

Avoid violent impacts

Dropping the unit, or otherwise imparting a violent shock to it, is likely to cause it to malfunction.

Do not cover with cloth

While the unit is in operation, do not cover it with a cloth or other material. This can cause the temperature to rise, leading to a malfunction.

After use

Set the POWER switch to the OFF position.

Care

If the body or panels of the unit become dirty, wipe them with a dry cloth. For severe dirt, use a soft cloth steeped in a small amount of neutral detergent, then wipe dry. Do not use volatile solvents such as alcohol or thinners, as these may damage the finish.

To prevent electromagnetic interference from portable communications devices

The use of portable telephones and other communications devices near this camera can result in malfunctions and interference with audio and video signals.

It is recommended that the portable communications devices near this camera be powered off.

Error Messages

When an error is detected in this unit or the camera, the ALARM indicator turns on and an error message is displayed on this unit.

| Error message | Description |
|-----------------------------------|---|
| CCU:GENLOCK ERROR | External reference sync error |
| CCU:10FIELD-ID ERROR | 10Field ID is not detected even though the 10F BB setting is On |
| CCU:FORCE LEGACY | FORCE LEGACY is set for CNS MODE |
| CCU:PS FAN STOP | Power supply block FAN error |
| CCU:PS CABLE SHORT | CAMERA connector optical fiber cable short circuit error |
| CCU:PS CABLE OPEN | CAMERA connector optical fiber cable open circuit error |
| CCU:PS RCP POWER SUPPLY ERROR | Remote control panel (connected to REMOTE connector) power supply error |
| CCU:PS TEMP WARNING | Power supply unit temperature error |
| CCU:DVP FAN STOP | DVP board fan stopped |
| CCU:OPTICAL CONDITION ERROR | Light sensor level on CCU side dropped |
| CCU:OPTICAL CONDITION WARNING | |
| CCU:OPTICAL CONDITION CARE | |
| CCU:COMMAND ERROR | Command communication error of camera and remote control panel |
| CCU:XXX POWER ERROR | Board power supply section error (XXX is the board name) |
| CCU:XXX PLD ERROR | PLD error (XXX is the PLD name) |
| CCU:XXX TEMP WARNING | Board temperature error (XXX is the board name) |
| CCU:OPT NO OPTION | Option key required for when CHU MODE is set to HDC(CUTOUT) is not installed. |
| CCU:PLEASE UPDATE CAMERA SOFTWARE | There is a software version mismatch between the camera and this unit. |
| CCU:PLD CONFIG ERROR | DPR PLD is not configured for HD CUTOUT when CHU MODE is set to HDC(HD CUTOUT). |
