Vehicle Theft Prevention Quick Reference Guide

FOR THE
LAW ENFORCEMENT
COMMUNITY

FOREWORD

The National Highway Traffic Safety Administration (NHTSA) is responsible for establishing and enforcing vehicle antitheft regulations. Motor vehicle theft is a growing problem that results in billions of dollars in losses every year. NHTSA has developed this annual guide to provide the law enforcement community with a concise reference tool to help identify passenger motor vehicles that have been exempted from the parts-marking requirements through model year 2017, and also to assist law enforcement in its prosecution and motor vehicle theft prevention efforts. This updated Vehicle Theft Prevention Quick Reference Guide for the Law Enforcement Community provides a quick-reference, comprehensive summary of the vehicles that have been installed with antitheft devices as standard equipment, identifying which vehicles are exempted from the parts-marking requirements, the type of exemption granted (partial or full), and the production years for which the exemptions apply.

This guide gives comprehensive information for vehicle lines based on the amendment to the parts-marking requirements. The parts-marking requirements apply to:

- all passenger cars;
- all multipurpose passenger vehicles with gross vehicle weight ratings of 6,000 pounds or less;
- all light-duty trucks with gross vehicle weight ratings of 6,000 pounds or less determined to be high-theft; and
- all low-theft, light-duty trucks with gross vehicle weight ratings of 6,000 pounds or less having a majority of their major parts interchangeable with those of a passenger motor vehicle line subject to the theft prevention standard.

As a result of that amendment, this publication provides updated information to the law enforcement community **only on new light-duty truck lines that have become subject to the parts-marking requirements and information on existing and newly exempted vehicle lines.**

On April 6, 2004, NHTSA adopted a phase-in of the parts-marking requirements (69 FR 17960) over a two-year period. Specifically, vehicle lines representing not less than 50 percent of a manufacturer's production of vehicle lines that were not subject to the parts-marking requirements before September 1, 2006, must have been marked by September 1, 2007. Because of the phase-in, this publication lists the vehicle lines reported by manufacturers that were used during the phase-in provision to delay parts-marking until September 1, 2008. It also lists those vehicle lines reported by manufacturers as having an annual vehicle production of 3,500 or less, which are excluded from the parts-marking requirements, and their new 2017 vehicle line introductions.

Comprehensive information on vehicle lines that were determined to be likely high-theft and subject to the parts-marking requirements prior to extension of the rule may be obtained from previous issues of the Parts-Marking Quick Reference Guide for the Law Enforcement Community, available online at www.nhtsa.gov/Vehicle+Safety/Vehicle-Related+Theft.

This guide provides the most reliable and updated information available from the vehicle manufacturers at the time of publication.

BACKGROUND

In 1984, the Motor Vehicle Theft Law Enforcement Act was created. It added Title VI to the Motor Vehicle and Information Cost Savings Act (recodified as Chapter 331 of Title 49, United States Code). As a means to prevent the theft of motor vehicles for their parts, the 1984 Theft Act required passenger cars and the major replacement parts for those cars to have vehicle identification numbers. This act required the Secretary of Transportation to complete a number of rulemaking actions targeted to reduce and deter motor vehicle theft. These rulemaking actions established standards for selecting high-theft cars and for identifying which parts of these high-theft cars should be marked with the vehicle identification number. Future rulemakings required the compilation and publication of theft rates for passenger vehicles.

On October 24, 1985, NHTSA published the Federal Motor Vehicle Theft Prevention Standard, 49 CFR Part 541. The purpose of this standard is to reduce motor vehicle theft by assisting law enforcement authorities trace and recover the parts from stolen vehicles. The standard requires manufacturers to inscribe or attach the vehicle identification number (VIN) onto major parts of vehicles identified by the agency as likely high-theft car lines. This standard became effective beginning with the 1987 model year and required that selected high-theft car lines have 12 (two-door models) or 14 (four-door models) of its major components parts-marked with the VIN. Each vehicle in a high-theft line must have its major parts and major replacement parts marked unless the vehicle line is granted an exemption from the parts-marking requirements. The vehicle can be exempted if an antitheft device has been installed as standard equipment on the entire line.

As a result of an increase in motor vehicle thefts and associated crimes, the Anti Car Theft Act of 1992 (the 1992 Theft Act) was created. The 1992 Theft Act identified carjackings and owning or operating a “chop shop” as Federal crimes, carrying with them stiff criminal penalties. The 1992 Theft Act amended the Theft Prevention Standard by extending the Federal

parts-marking requirements to include light-duty trucks and multipurpose passenger vehicles (with a gross vehicle weight rating of 6,000 pounds or less). On December 13, 1994, the final rule amending the Theft Prevention Standard was published. This December 1994 rulemaking extended the parts-marking requirements as follows: (a) included multipurpose passenger vehicles and light-duty trucks; (b) listed the major component parts and replacement parts to be marked for each of the classes of vehicles such as the engine, transmission, front/rear bumper, right/left front fender, hood, right/left front door, right/left rear door, sliding or cargo door(s), right/left quarter panel (passenger cars), right/left-side assembly (MPVs), pickup box, and/or cargo box (light-duty trucks), rear doors, decklid or hatchback and tailgate; and (c) established a new median theft rate (3.5826) for all passenger motor vehicles. This amendment became effective beginning with MY 1997 vehicles.

On August 28, 1985, NHTSA published the Procedures for Selecting Lines to Be Covered by the Theft Prevention Standard, 49 CFR Part 542. This August 1985 regulation established procedures to determine which passenger motor vehicle lines (passenger cars only) are covered by the Theft Prevention Standard. These procedures require automobile manufacturers to provide NHTSA with information necessary to select whether a new vehicle introduced for sale into the United States is likely to be a high-theft line and subject to the parts-marking requirements. On April 26, 1994, this regulation was amended to apply to all passenger cars, multipurpose passenger vehicles, and light-duty trucks (rated at 6,000 pounds gross vehicle weight or less).

On September 8, 1987, NHTSA published the regulation titled Exemption from the Vehicle Theft Prevention Standard, 49 CFR Part 543. This regulation encourages the installation of antitheft devices as standard equipment in factory-delivered motor vehicles. This rule allows for exemption from the parts-marking requirements of the Theft Prevention Standard. A manufacturer may petition for

exemption of a high-theft vehicle line when it plans to install a standard equipment antitheft device on the entire line. The agency must determine that the antitheft device to be installed on the line is “likely to be as effective in reducing and deterring motor vehicle theft as parts marking.” On March 8, 1994, this regulation was amended to limit the number of high-theft lines that could be exempted per model year.

On April 6, 2004, NHTSA published a Final Rule extending the anti-theft parts-marking requirements of the Federal Motor Vehicle Theft Prevention Standard, CFR Part 541. This regulation expands NHTSA’s current anti-theft parts-marking requirement to include: (1) all below-median-theft-rate passenger cars and multipurpose passenger vehicles (with a gross vehicle weight rating of 6,000 pounds or less), and (2) below-median-theft-rate light-duty trucks with major parts that are interchangeable with passenger motor vehicles subject to parts-marking. This final rule became effective September 1, 2006.

On May 19, 2005, NHTSA published a Final Rule responding to petitions for reconsideration of the new rule extending the anti-theft parts-marking requirements. This Final Rule made the following changes and clarifications to the agency’s expanded parts-marking requirements: (1) manufacturers are no longer required to submit “likely theft rate determinations” for vehicle lines introduced prior to the September 1, 2006, effective date if the manufacturers choose to voluntarily mark the new vehicle lines immediately after their introduction; (2) manufacturers are permitted to petition the agency to exempt low-theft vehicle lines equipped with antitheft devices from the parts-marking requirements beginning with model year 2006; and (3) vehicle lines with annual production of not more than 3,500 vehicles are excluded from the parts-marking requirements.

On September 29, 2016, NHTSA published a Final Rule amending the regulation titled Exemption from Vehicle Theft Prevention Standard, 49 CFR Part 543. Specifically, §543.7 adds a streamlined exemption procedure for immobilizer-equipped vehicles by adding performance criteria for immobilizers. This amendment allows manufacturers to obtain an exemption from the theft prevention standard by complying with any of the four performance criteria currently accepted by Transport Canada and brings the U.S. anti-theft requirements more into line with those of Canada. Manufacturers simply need to provide data to the agency showing that the device meets the performance criteria and a statement ensuring the reliability and durability of the device.

NHTSA also retained the existing process for gaining an exemption from the vehicle theft prevention standard. Therefore, manufacturers are still able to petition the agency to install other antitheft devices as standard equipment in a vehicle line to obtain an exemption from the theft prevention standard. However, this amendment does not increase the number of exemptions available to a manufacturer from the theft prevention standard.
