(Download free from Google Play™)

Enhance Your D-STAR Experience with iOS™/Android™ Apps

The RS-MS1I (for iOS™ devices) and RS-MS1A (for Android™ devices) let your transceiver wirelessly connect to a D-STAR transceiver and remotely set the DR functions, link with a map app and send/receive messages in the DV mode. In addition, pictures on an iOS™/Android™ device can be transmitted in the DV Fast Data mode or DV mode.

Share Pictures

You can take pictures with your iOS™ or Android™ device, or use stored pictures, and share them. Pictures of your shack, operating place in the field, rigs, or friends can be sent to other D-STAR transceivers that are also using the app. Add images and make QSOs even more enjoyable. Pictures can be sent in the DV Fast Data mode or conventional DV mode (with voice).

Share pictures example
(Photo shows the RS-MS1A)

Text Messaging

Text messaging enables you to chat with other D-STAR users that are using the app. Use the function when texting is better than exchanging information over voice. By using iOS™/Android™ devices, you can exchange messages in your preferred language.

DR Functions and Remote Setting

You can set the transceiver's "FROM" and "TO" fields and change some of the transceiver's function settings from your iOS™/Android™ device. When using with the optional VS-3 Bluetooth® headset, you can wirelessly talk through the IC-705, ID-4100A/E or ID-5100A/E from a short distance* away from your rig.

* Communication range of Bluetooth® is approximately 10 meters (33 feet).

D-STAR Stations and Repeater Sites Mapping

See the location of other stations or repeater sites on a map using received position data. The transceiver's "FROM" and "TO" can be automatically set by tapping a repeater site or a D-PRS station on the map. When used with a previously used or locally cached map, your own and other station's locations can be shown without needing an Internet connection (Offline map function*).

* For only the RS-MS1A.

Repeater List Viewer

You can see detailed repeater information, including frequencies, call signs and frequency offsets. in the Repeater list. You can use it to manually set your transceiver when you are in a different area from your usual operating environment.

Receive History

In the DV mode, you can read and edit the received station's information. Additional information from an Internet database, such as QRZ.com or APRS.fi, can be downloaded.

Call Sign List

The app enables you to edit call signs and names used in the DR function. Also, you can add a call sign and a name in the Call sign list at any time.

Import and Export

You can import a user-programmable repeater list, or a repeater list on the Internet, from a PC to the app. In addition, receive history can be exported from the app to a PC.
