

The Model G9744Z2 is the same machine as the Model G9744Z but with minor updates to the headstock, belt tension mechanism and vise, and relocation of some electrical components. Additionally, the G9744Z2 uses a 121¹/₂" blade. The data sheet, electrical photos, and parts breakdowns in this insert replace the corresponding sections in the G9744Z manual. All other content in the Model G9744Z owner's manual applies to this machine.

AWARNING: To reduce the risk of serious injury, you MUST read and understand this insert—and the entire Model G9744Z manual—BEFORE assembling, installing, or operating this machine!

If you have any further questions about this manual insert or the differences between the Model G9744Z2 and the Model G9744Z, contact Technical Support at **(570) 546-9663** or email **techsupport@grizzly.com**.

Max. Capacity Rectangular Height at 90 Deg	
Max. Capacity Rectangular Width at 90 Deg.	
Max. Capacity Round at 90 Deg	
Max. Capacity Rectangular Height at 45 Deg	
Max. Capacity Rectangular Width at 45 Deg.	
Max. Capacity Round at 45 Deg	6 in.

Construction

Table	Precision-Ground Cast Iron
Upper Wheel	Cast Iron
Lower Wheel	Cast Iron
Body Base	Cast Iron
Base	Cast Iron
Stand	Pre-Formed Steel
Paint Type/Finish	Ероху

Other

Wheel Size	
Blade Guides Upper	
Blade Guides Lower	
Coolant Cap	

Table Info

Table Size Length	30 in.
Table Size Width	
Floor To Cutting Area Height	22-3/4 in.

Other Specifications:

Country of Origin	Taiwan
Warranty	
Approximate Assembly & Setup Time	1-1/2 Hours
Serial Number Location	ID Label on Front of Machine
ISO 9001 Factory	Yes
Certified by a Nationally Recognized Testing Laboratory (NRTL)	

Features:

Centralized control panel on top of saw bow Heavy-Duty All Steel, One Piece Base Adjustable hydraulic downfeed Worm gearbox has hardened and ground gears Quick-release vise for fast job changes Miter cutting ability Blade Wheels Have Heavy-Duty Ball Bearings Magnetic safety switch

Blade Selection

The Model G9744Z2 uses $121\frac{1}{2}$ " x 1" bandsaw blades.

Selecting the right blade for the job depends on a variety of factors, such as the type of material being cut, hardness of the material, material shape, machine capability, and operator technique.

The chart below is a basic starting point for choosing blade type based on teeth per inch (TPI) for variable-tooth-pitch blades and for standard raker type bi-metal blades/HSS blades. However, for exact specifications of bandsaw blades, contact the blade manufacturer.

To select the correct blade TPI:

1. Measure the material thickness. This measurement is the length of cut taken from where the tooth enters the workpiece, sweeps through, and exits the workpiece.

- 2. Refer to the "Material Width/Diameter" row of the blade selection chart in **Figure 19** and read across to find your workpiece thickness you need to cut.
- **3.** Refer to the "Material Shapes" row and find the shape and material to be cut.
- 4. In the applicable row, read across to the right and find the box where the row and column intersect. Listed in the box is the minimum TPI recommended for the variable tooth pitch blades.
- 5. The "Cutting Speed Rate Recommendation" section of the charts offers guidelines for various metals, given in feet per minute (speed FPM) and meters per minute in parenthesis. Choose the speed closest to the number shown in the chart.

MODEL G9744Z 10"x18" Metal Cutting Bandsaw OWNER'S MANUAL

COPYRIGHT © JULY, 2006 BY GRIZZLY INDUSTRIAL, INC. WARNING: NO PORTION OF THIS MANUAL MAY BE REPRODUCED IN ANY SHAPE OR FORM WITHOUT THE WRITTEN APPROVAL OF GRIZZLY INDUSTRIAL, INC. #PC8343 PRINTED IN TAIWAN

WARNING!

This manual provides critical safety instructions on the proper setup, operation, maintenance, and service of this machine/tool. Save this document, refer to it often, and use it to instruct other operators.

Failure to read, understand and follow the instructions in this manual may result in fire or serious personal injury—including amputation, electrocution, or death.

The owner of this machine/tool is solely responsible for its safe use. This responsibility includes but is not limited to proper installation in a safe environment, personnel training and usage authorization, proper inspection and maintenance, manual availability and comprehension, application of safety devices, cutting/sanding/grinding tool integrity, and the usage of personal protective equipment.

The manufacturer will not be held liable for injury or property damage from negligence, improper training, machine modifications or misuse.

Some dust created by power sanding, sawing, grinding, drilling, and other construction activities contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm. Some examples of these chemicals are:

- Lead from lead-based paints.
- Crystalline silica from bricks, cement and other masonry products.
- Arsenic and chromium from chemically-treated lumber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: Work in a well ventilated area, and work with approved safety equipment, such as those dust masks that are specially designed to filter out microscopic particles.

INTRODUCTION

Foreword

We are proud to offer the Model G9744Z Metal Cutting Bandsaw. This machine is part of a growing Grizzly family of fine metalworking machinery. When used according to the guidelines set forth in this manual, you can expect years of trouble-free, enjoyable operation and proof of Grizzly's commitment to customer satisfaction.

We are pleased to provide this manual with the Model G9744Z. It was written to guide you through assembly, review safety considerations, and cover general operating procedures. It represents our effort to produce the best documentation possible.

The specifications, drawings, and photographs illustrated in this manual represent the Model G9744Z as supplied when the manual was prepared. However, owing to Grizzly's policy of continuous improvement, changes may be made at any time with no obligation on the part of Grizzly. For your convenience, we always keep current Grizzly manuals available on our website at **www.grizzly.com**. Any updates to your machine will be reflected in these manuals as soon as they are complete. Visit our site often to check for the latest updates to this manual!

Contact Info

We stand behind our machines! If you have questions or need help, contact us with the information below. Before contacting, make sure you get the **serial number** and **manufacture date** from the machine ID label. This will help us help you faster.

> Grizzly Technical Support 1815 W. Battlefield Springfield, MO 65807 Phone: (570) 546-9663 Email: techsupport@grizzly.com

We want your feedback on this manual. What did you like about it? Where could it be improved? Please take a few minutes to give us feedback.

> Grizzly Documentation Manager P.O. Box 2069 Bellingham, WA 98227-2069 Email: manuals@grizzly.com

Other Specifications:

ISO Factory	ISO 9001
Country Of Origin	
Warranty	
Serial Number Location	
Assembly Time	15 minutes

Features:

Centralized Control Panel on Top of the Saw Bow
Heavy-duty Steel Base
Adjustable Hydraulic Downfeed
Worm Gear Box has Hardened and Ground Gears
Quick Release Vise for Fast Job Changes
Miter Cutting Ability
Blade Wheels have Heavy-duty Ball Bearings
Magnetic Safety Switch
Coolant Pump and Reservoir

Identification

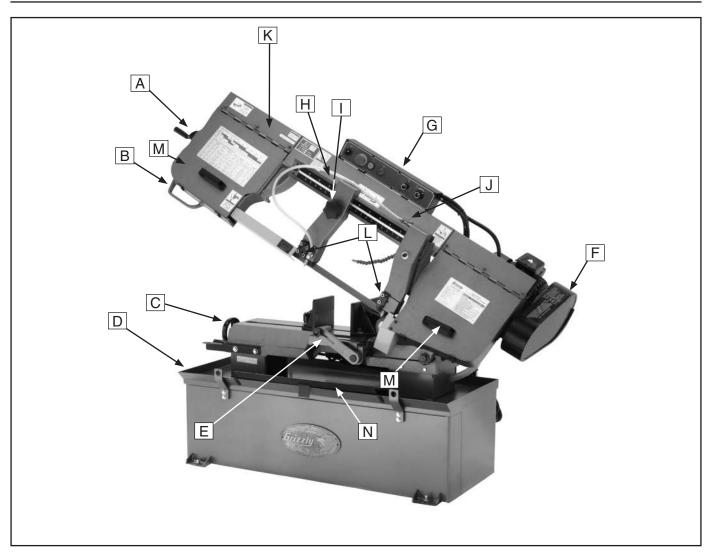

Figure 1. G9744Z machine identification.

- A. Blade Tension Handwheel
- B. Lift Handle
- C. Vise Handwheel
- D. Coolant Drip Pan
- E. Work Stop
- F. Pulley Cover
- G. Control Panel
- H. Blade Guide Scale
- I. Blade Guide Knob
- J. Coolant Valve Control
- K. Bow
- L. Blade Guides
- M. Wheel Covers
- N. Chip Tray

Control Panel

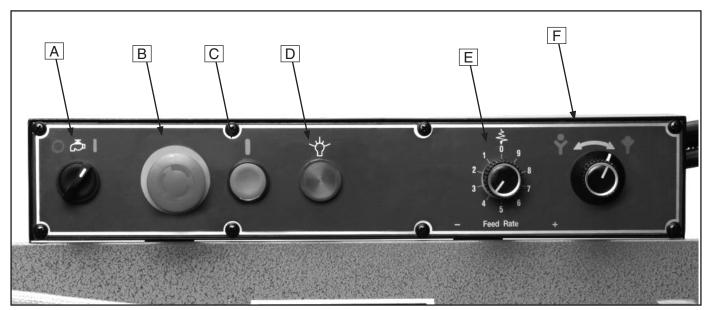

Figure 2. G9744Z control panel.

- A. Coolant Pump Switch: Turns the coolant pump ON.
- B. EMERGENCY STOP/OFF Button: Interrupts power to the system and turns the motor OFF. Twist the button until it pops out to reenergize the system. Also works as a standard OFF button.

Note: The bandsaw has an automatic shutoff (limit switch) that turns the motor and coolant pump **OFF** at the bottom of the cut.

- C. START Button: Turns the motor ON.
- **D. Power Light:** When lit, indicates that system is energized and machine is ready to operate.
- E. Feed Rate Dial: Fine tunes the feed rate by controlling the hydraulic valve. Range is from 0 (slowest) to 9 (fastest).
- F. Feed Control Knob: Turning the knob to the left lowers the bow at the feed rate you have set. Turning the knob to the right locks the bow in position.

For Your Own Safety, Read Instruction Manual Before Operating this Machine

The purpose of safety symbols is to attract your attention to possible hazardous conditions. This manual uses a series of symbols and signal words which are intended to convey the level of importance of the safety messages. The progression of symbols is described below. Remember that safety messages by themselves do not eliminate danger and are not a substitute for proper accident prevention measures.

Indicates an imminently hazardous situation which, if not avoided, WILL result in death or serious injury.

AWARNING Indicates a potentially hazardous situation which, if not avoided, COULD result in death or serious injury.

Indicates a potentially hazardous situation which, if not avoided, MAY result in minor or moderate injury. It may also be used to alert against unsafe practices.

NOTICE

This symbol is used to alert the user to useful information about proper operation of the machine.

AWARNING Safety Instructions for Machinery

- 1. READ THROUGH THE ENTIRE MANUAL BEFORE STARTING MACHINERY. Machinery presents serious injury hazards to untrained users.
- 2. ALWAYS USE ANSI APPROVED SAFETY GLASSES WHEN OPERATING MACHINERY. Everyday eyeglasses only have impact resistant lenses, they are NOT safety glasses.
- 3. ALWAYS WEAR AN NIOSH APPROVED RESPIRATOR WHEN OPERATING MACHINERY THAT PRODUCES DUST. Wood dust is a carcinogen and can cause cancer and severe respiratory illnesses.

- 4. ALWAYS USE HEARING PROTECTION WHEN OPERATING MACHINERY. Machinery noise can cause permanent hearing damage.
- 5. WEAR PROPER APPAREL. DO NOT wear loose clothing, gloves, neckties, rings, or jewelry which may get caught in moving parts. Wear protective hair covering to contain long hair and wear non-slip footwear.
- 6. NEVER OPERATE MACHINERY WHEN TIRED, OR UNDER THE INFLUENCE OF DRUGS OR ALCOHOL. Be mentally alert at all times when running machinery.

AWARNING Safety Instructions for Machinery

- 7. ONLY ALLOW TRAINED AND PROP-ERLY SUPERVISED PERSONNEL TO OPERATE MACHINERY. Make sure operation instructions are safe and clearly understood.
- 8. KEEP CHILDREN AND VISITORS AWAY. Keep all children and visitors a safe distance from the work area.
- 9. MAKE WORKSHOP CHILD PROOF. Use padlocks, master switches, and remove start switch keys.
- **10. NEVER LEAVE WHEN MACHINE IS RUNNING.** Turn power *OFF* and allow all moving parts to come to a complete stop before leaving machine unattended.
- **11. DO NOT USE IN DANGEROUS ENVIRONMENTS.** DO NOT use machinery in damp, wet locations, or where any flammable or noxious fumes may exist.
- 12. KEEP WORK AREA CLEAN AND WELL LIT. Clutter and dark shadows may cause accidents.
- 13. USE A GROUNDED EXTENSION CORD RATED FOR THE MACHINE AMPERAGE. Undersized cords overheat and lose power. Replace extension cords if they become damaged. DO NOT use extension cords for 220V machinery.
- 14. ALWAYS DISCONNECT FROM POWER SOURCE BEFORE SERVICING MACHINERY. Make sure switch is in OFF position before reconnecting.
- **15. MAINTAIN MACHINERY WITH CARE.** Keep blades sharp and clean for best and safest performance. Follow instructions for lubricating and changing accessories.
- 16. MAKE SURE GUARDS ARE IN PLACE AND WORK CORRECTLY BEFORE USING MACHINERY.

- 17. REMOVE ADJUSTING KEYS AND WRENCHES. Make a habit of checking for keys and adjusting wrenches before turning machinery *ON*.
- 18. CHECK FOR DAMAGED PARTS BEFORE USING MACHINERY. Check for binding and alignment of parts, broken parts, part mounting, loose bolts, and any other conditions that may affect machine operation. Repair or replace damaged parts.
- **19. USE RECOMMENDED ACCESSORIES.** Refer to the instruction manual for recommended accessories. The use of improper accessories may cause risk of injury.
- **20. DO NOT FORCE MACHINERY.** Work at the speed for which the machine or accessory was designed.
- 21. SECURE WORKPIECE. Use clamps or a vise to hold the workpiece when practical. A secured workpiece protects your hands and frees both hands to operate the machine.
- 22. DO NOT OVERREACH. Keep proper footing and balance at all times.
- 23. MANY MACHINES WILL EJECT THE WORKPIECETOWARDTHEOPERATOR. Know and avoid conditions that cause the workpiece to "kickback."
- 24. ALWAYS LOCK MOBILE BASES (IF USED) BEFORE OPERATING MACHINERY.
- 25. BE AWARE THAT CERTAIN DUST MAY BE HAZARDOUS to the respiratory systems of people and animals, especially fine dust. Make sure you know the hazards associated with the type of dust you will be exposed to and always wear a respirator approved for that type of dust.

AWARNING

Additional Safety Instructions for Metal Cutting Bandsaws

- 1. BLADE CONDITION. Do not operate with dull, cracked or badly worn blade. Inspect blades for cracks and missing teeth before each use.
- 2. HAND PLACEMENT. Never position fingers or thumbs in line with the cut. Hands could be crushed in vise or by falling machine components or cut by the blade.
- 3. ENTANGLEMENT HAZARDS. Do not operate this bandsaw without blade guard in place. Otherwise, loose clothing, jewelry, long hair and work gloves can be drawn into working parts.
- 4. BLADE REPLACEMENT. When replacing blades, make sure teeth face toward the workpiece. Wear gloves to protect hands and safety glasses to protect eyes.
- 5. WORKPIECE HANDLING. Always support the workpiece with table, vise, or other support fixture. Flag long pieces to avoid a tripping hazard. Never hold the workpiece with your hands during a cut.
- 6. LOSS OF STABILITY. Unsupported workpieces may jeopardize machine stability and cause the machine to tip and fall, which could cause serious injury.
- 7. **POWER INTERRUPTION.** Unplug machine after power interruption. Machines without magnetic switches can start up after power is restored.

- 8. FIRE HAZARD. Use EXTREME CAUTION if cutting magnesium. Using the wrong cutting fluid will lead to chip fire and possible explosion.
- 9. CUTTING FLUID SAFETY. Always follow manufacturer's cutting fluid safety instructions. Pay particular attention to contact, contamination, inhalation, storage and disposal warnings. Spilled cutting fluid is a slipping hazard and a toxicity hazard.
- **10. ATTENTION TO WORK AREA.** Never leave a machine running and unattended. Pay attention to the actions of others in the area to avoid unintended accidents.
- **11. MAINTENANCE/SERVICE.** All inspections, adjustments, and maintenance are to be done with the machine *OFF* and the power disconnected to the machine. Wait for all moving parts to come to a complete stop.
- 12. HEARING PROTECTION & HAZARDS. Noise generated by blade and workpiece vibration, material handling, and power transmission can cause permanent hearing loss over time and interfere with communication and audible signals. Always wear hearing protection.
- **13. HOT SURFACES.** Due to friction, the workpiece, chips, and some machine components can be hot enough to burn you.

WARNING

No list of safety guidelines can be complete. Every shop environment is different. Like all machines there is danger associated with the Model G9744Z. Accidents are frequently caused by lack of familiarity or failure to pay attention. Use this machine with respect and caution to lessen the possibility of operator injury. If normal safety precautions are overlooked or ignored, serious personal injury may occur.

SECTION 2: CIRCUIT REQUIREMENTS

220V Single-Phase

Serious personal injury could occur if you connect the machine to the power source before you have completed the setup process. DO NOT connect the machine to the power source until instructed to do so.

Amperage Draw

The Model G9744Z motor draws the following amps under maximum load:

Motor Draw at 220V..... 15 Amps

Circuit Requirements

We recommend using a dedicated circuit for this machine. You MUST connect your machine to a grounded circuit that is rated for the amperage given below. Never replace a circuit breaker on an existing circuit with one of higher amperage without consulting a qualified electrician to ensure compliance with wiring codes. If you are unsure about the wiring codes in your area or you plan to connect your machine to a shared circuit, consult a qualified electrician.

220V Circuit......20 Amps

Plug/Receptacle Type

Recommended Plug/Receptacle....NEMA L6-20

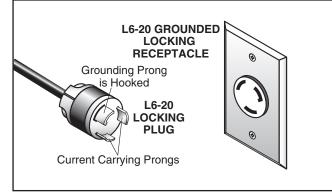

Figure 3. NEMA L6-20 plug and receptacle.

Grounding

In the event of an electrical short, grounding reduces the risk of electric shock. The grounding wire in the power cord must be properly connected to the grounding prong on the plug; likewise, the outlet must be properly installed and grounded. All electrical connections must be made in accordance with local codes and ordinances.

Electrocution or fire could result if this machine is not grounded correctly or if your electrical configuration does not comply with local and state codes. Ensure compliance by checking with a qualified electrician!

Extension Cords

We do not recommend the use of extension cords. Instead, arrange the placement of your equipment and the installed wiring to eliminate the need for extension cords.

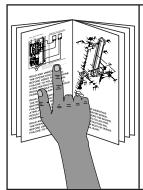

If you find it absolutely necessary to use an extension cord at 220V with your machine:

- Use at least a 12 gauge cord that does not exceed 50 feet in length!
- The extension cord must also contain a ground wire and plug pin.
- A qualified electrician MUST size cords over 50 feet long to prevent motor damage.

SECTION 3: SETUP

Setup Safety

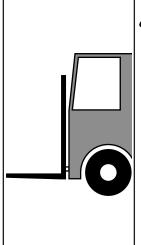

WARNING

This machine presents serious injury hazards to untrained users. Read through this entire manual to become familiar with the controls and operations before starting the machine!

Wear safety glasses during the entire setup process!

The Model G9744Z is an extremely heavy machine. Serious personal injury may occur if safe moving methods are not followed. To be safe, you will need assistance and power equipment when moving the shipping crate and removing the machine from the crate.

Items Needed for Setup

The following items are needed to complete the setup process, but are not included with your machine:

Description

• Safety Glasses (for each person) 1

Qtv

- Solvent Cleaner.....1
- Shop Towels.....1
- Mounting Hardware (optional)......1
- Assistant......
- Wrench 12mm 1

Unpacking

The Model G9744Z was carefully packed when it left our warehouse. If you discover the machine is damaged after you have signed for delivery, *please immediately call Customer Service at* (570) 546-9663 for advice.

Save the containers and all packing materials for possible inspection by the carrier or its agent. *Otherwise, filing a freight claim can be difficult.*

When you are completely satisfied with the condition of your shipment, you should inventory the contents.

Inventory

After all the parts have been removed from the crate, you should have the following items:

Box	(1: (Figure 4)	Qty
Α.	Model G9744Z Bandsaw	1

Hardware and Tools (Not Shown)

Chip Tray	. 1
Triangle Screw 5/16-18 x 3/4"	. 1
Flat Washer 5/16"	. 1
Hex Nut 5/16-18	. 1
Hex Bolts M12-1.75 x 50 (Leveling)	. 4
Hex Nuts M12-1.75 (Leveling)	. 4
Handwheel	. 1
Handwheel Handle	. 1
	Triangle Screw 5/16-18 x 3/4" Flat Washer 5/16"

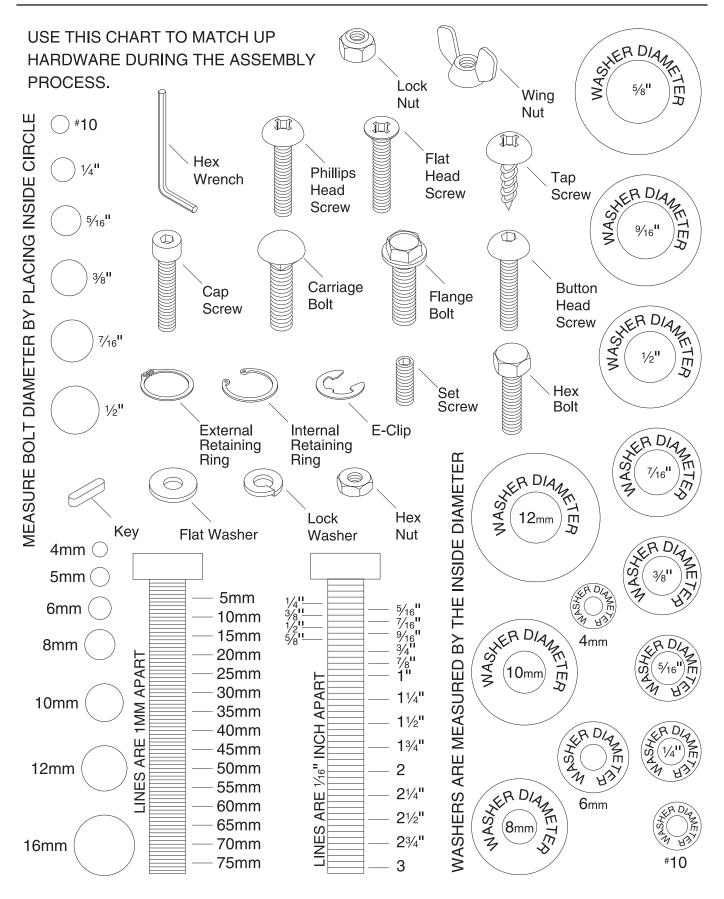

Figure 4. G9744Z inventory.

In the event that any nonproprietary parts are missing (e.g. a nut or a washer), we would be glad to replace them, or for the sake of expediency, replacements can be obtained at your local hardware store.

NOTICE

Some hardware/fasteners on the inventory list may arrive pre-installed on the machine. Check these locations before assuming that any items from the inventory list are missing.

Hardware Recognition Chart

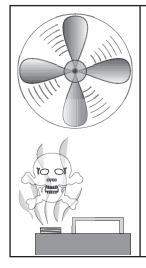

Clean Up

The unpainted surfaces are coated with a waxy oil to protect them from corrosion during shipment. Remove this protective coating with a solvent cleaner or citrus-based degreaser such as Grizzly's G7895 Degreaser. To clean thoroughly, some parts may need to be removed. For optimum performance from your machine, make sure you clean all moving parts or sliding contact surfaces that are coated. Avoid chlorine-based solvents, such as acetone or brake parts cleaner, as they will damage painted surfaces should they come in contact. Always follow the manufacturer's instructions when using any type of cleaning product.

Gasoline and petroleum products have low flash points and could cause an explosion or fire if used to clean machinery. DO NOT use gasoline or petroleum products to clean the machinery.

A CAUTION Many of the solvents commonly used to clean machinery can be toxic when inhaled or ingested. Lack of ventilation while using these solvents could cause serious personal health risks or fire. Take precautions from this hazard by only using cleaning solvents in a well ventilated area.

Floor Load

Refer to the **Machine Data Sheet** for the weight and footprint specifications of your machine. Some floors may require additional reinforcement to support both the machine and operator.

Machine Placement

Consider existing and anticipated needs, size of material to be processed through each machine, and space for auxiliary stands, work tables or other machinery when establishing a location for your new machine. See **Figure 5** for the minimum working clearances.

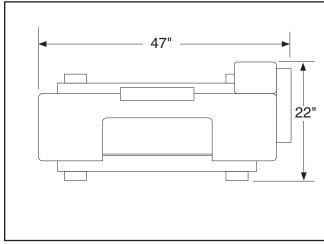

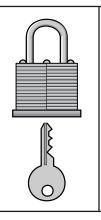

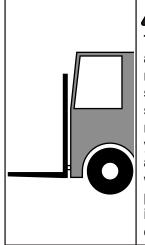

Figure 5. Minimum working clearances.

Unsupervised children and visitors inside your shop could cause serious personal injury to themselves. Lock all entrances to the shop when you are away and DO NOT allow unsupervised children or visitors in your shop at any time!

Moving & Placing Base Unit

Mounting to Shop Floor

The Model G9744Z is an extremely heavy machine. Serious personal injury may occur if safe moving methods are not followed. To be safe, you will need assistance and power equipment when moving the shipping crate and removing the machine from the crate.

The Model G9744Z comes with lifting brackets installed on the base. Use a forklift and straps rated for the machine weight to lift the machine off the pallet and onto a suitable location (see **Figure 6**). The lifting brackets can be removed and saved for future use.

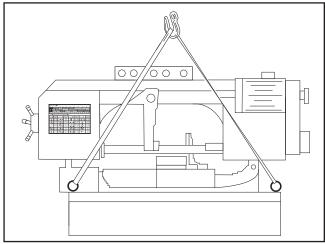

Figure 6. G9744Z lifting points.

Although not required, we recommend that you mount your new machine to the floor. Because this is an optional step and floor materials may vary, floor mounting hardware is not included. Generally, you can either bolt your machine to the floor or mount it on machine mounts. It will be necessary to level your machine after mounting. If you choose to set your machine on the floor, four M12-1.75 x 50 leveling bolts have been included.

Bolting to Concrete Floors

Lag shield anchors with lag bolts (**Figure 7**) and anchor studs are two popular methods for anchoring an object to a concrete floor.

NOTICE

Anchor studs are stronger and more permanent alternatives to lag shield anchors; however, they will stick out of the floor, which may cause a tripping hazard if you decide to move your machine.

Using Machine Mounts

Using machine mounts, shown in **Figure 7**, gives the advantage of fast leveling and vibration reduction. The large size of the foot pads distributes the weight of the machine.

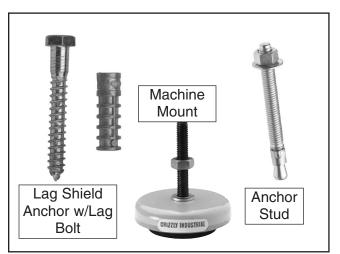

Figure 7. Typical options for machine mounting.

Shipping Bracket

A bracket has been installed to keep the saw in alignment during shipping. Before using your saw you will need to remove it. Store it for safe keeping in the event you move your saw to a different location.

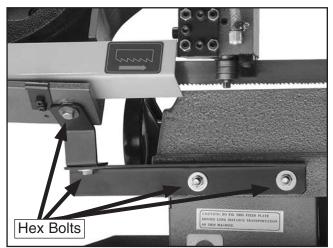

Figure 8. Shipping bracket.

To remove the shipping bracket:

1. Remove all four hex bolts shown in **Figure 8** with a 12mm wrench.

The workstop is used when many cuts of the same length are needed (see **Figure 9**).

To setup the workstop:

- **1.** Position the workstop rod the desired distance from the blade and tighten the cap screw to hold it in place.
- 2. Fine tune the measurement by adjusting the hex bolt and stop nut.
- **3.** Swing the workstop arm down and out of the way when not in use.

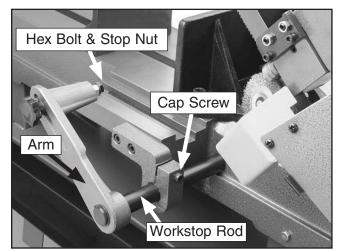

Figure 9. Workstop assembly.

Chip Tray

Components and Hardware Needed:	Qty
Chip Tray	1

The chip tray fits over the lip of the base as illustrated in **Figure 10**.

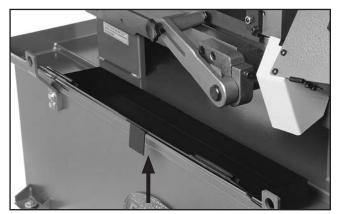

Figure 10. Chip tray installed.

Depending on how the Model G9744Z was shipped, it may be necessary to adjust the feed stop before the test run. The blade should not make contact with any part of the vise assembly.

To adjust the feed stop bolt:

Adjust the feed stop bolt and jam nut (Figure 11), so the bandsaw blade teeth are just below the vise table surface when the cut is complete.

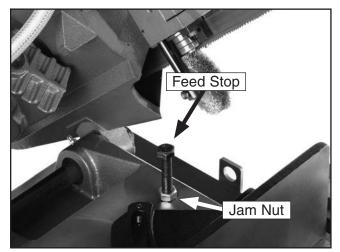

Figure 11. Feed stop.

Recommended Adjustments

The adjustments listed below have been performed at the factory. However, because of the many variables involved with shipping, we recommend that you at least verify the following adjustments to ensure accurate cutting results.

Step-by-step instructions on verifying these adjustments can be found in **SECTION 7: SERVICE ADJUSTMENTS.**

Factory adjustments that should be verified:

- 1. Blade Tracking (Pages 35 & 36).
- 2. Blade Guide Bearings (Page 36).

Test Run

AWARNING Projectiles thrown from the machine could cause serious eye injury. Wear safety glasses during assembly and operation.

Complete this process once you have familiarized yourself with all instructions in this manual.

Starting the machine:

- 1. Read the entire instruction manual.
- 2. Make sure all tools and foreign objects have been removed from the machine.
- **3.** Put on safety glasses and secure loose clothing or long hair.
- 4. Connect the bandsaw to power.
- 5. Raise the bandsaw and close the feed control knob to keep the saw in place (see Figure 12).

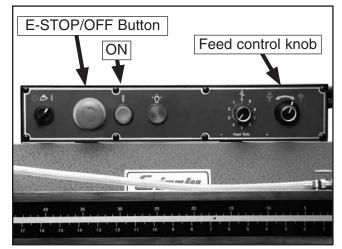

Figure 12. Control panel.

 Start the bandsaw while keeping your finger near the EMERGENCY STOP/OFF button (Figure 12) at all times during the test run. The bandsaw should run smoothly with little or no vibration.

Note: If the EMERGENCY STOP/OFF button is pressed, it needs to be twisted until it pops out or the bandsaw will not start.

- **7.** Push the emergency stop button. The blade should stop turning and the coolant pump should shut *OFF*.
 - -If you suspect any problems, immediately stop the bandsaw and correct before continuing.
 - -If you need any help with your bandsaw call our Tech Support at (570) 546-9663.

NOTICE

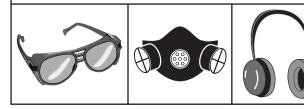

DO NOT operate saw without checking gear box oil level! Operating without sufficient oil will damage the machine.

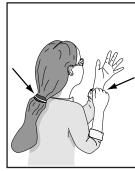

SECTION 4: OPERATIONS

Operation Safety

Damage to your eyes, lungs, and ears could result from using this machine without proper protective gear. Always wear safety glasses, a respirator, and hearing protection when operating this machine.

AWARNING Loose hair and clothing could get caught in machinery and cause serious personal injury. Keep loose clothing and long hair away from moving machinery.

NOTICE

This bandsaw is for trained operators only. WE STRONGLY RECOMMEND that you read books, trade magazines, and get formal training before beginning any projects. Regardless of the content in this section, Grizzly Industrial will not be held liable for accidents caused by lack of training.

Vise

Always turn the saw *OFF* and allow the blade to come to a complete stop before using the vise! Failure to follow this caution may lead to injury.

The vise has a quick release feature that allows jaw width to be quickly adjusted when changing from one sized material to another.

To rapidly change the vise jaw gap:

- 1. Turn the handwheel counterclockwise to relieve any pressure on the vise jaw.
- 2. Pull or push the jaw in the desired direction.
- **3.** Finish tightening the jaw against the workpiece with the handwheel.

Note: *Figure 13* shows correct methods of holding different workpiece shapes.

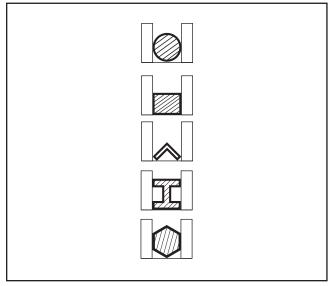

Figure 13. Workholding options by material shape.

The vise can be adjusted to cut any angle from a straight 90 degree cut-off, to a 45 degree angle by loosening the two vise lock handles. Positive stops at 90° and 45° allow you to quickly return the rear jaw to either angle. Angles between 90° and 45° can be read using the scale on the side of the vise table. Use a combination square or bevel protractor if higher precision is required when finding these angles.

To adjust the positive stops:

1. Check the current vise jaw-to-blade angle with a machinist square (see **Figure 14**).

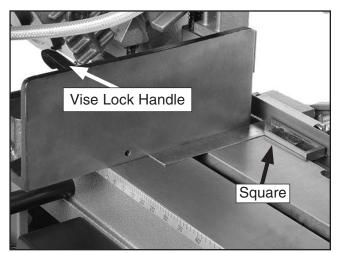

Figure 14. Squaring vise to blade.

If the angle is not 90°, loosen the vise lock handle then adjust the set screw as needed to set the positive stop to 90° (see Figure 15).

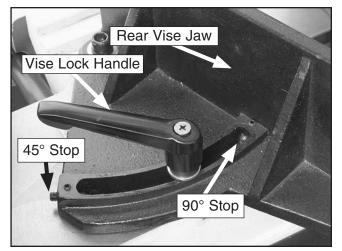

Figure 15. Positive stop adjustments.

- **3.** With the rear vise jaw making contact with the positive stop, tighten the rear vise jaw and recheck the angle.
- **4.** Loosen the rear vise lock handle and swing the rear jaw until it reaches the 45° positive stop.
- 5. Tighten the rear jaw and check the angle.
- 6. If the angle is not at 45° , loosen the vise jaw and adjust the set screw as needed to set the positive stop to 45° .
- 7. With the rear vise jaw making contact with the positive stop, tighten the rear vise jaw and recheck the angle.

For setting angles between the stops $(45^{\circ}-90^{\circ})$:

- 1. To find your angle, use the scale on the side of the vise or use a combination square or bevel protractor for more precise measurements.
- **2.** Adjust and lock the rear vise jaw to your chosen angle.
- 3. After the final angle has been chosen, loosen the lock handle in **Figure 16** on the opposite jaw so the jaw can float, and match the angle of the workpiece and rear jaw.

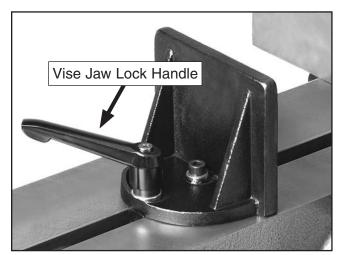

Figure 16. Front vise jaw lock handle.

4. Tighten the vise against the workpiece then tighten the jaw lock handle.

Blade Guide Arms

The blade guide bearings are mounted on the front and rear arms. The rear arm is adjustable and should be set as close to the workpiece as possible. This will help ensure straight cuts by keeping the blade from twisting and drifting off of the cut line.

To adjust the rear blade guide arm:

Loosen the knob shown in **Figure 17** and slide the rear blade guide as close to the workpiece as possible, then tighten the knob.

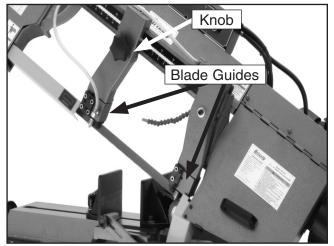

Figure 17. Blade guides.

The front blade guide arm has a self-adjusting wire brush that makes contact with the blade to help clear away chips and extend blade life (see **Figure 18**).

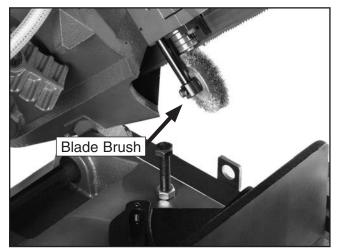

Figure 18. Blade brush.

Blade Selection

The Model G9744Z uses 129 $^{3}\!\!/_{8}$ " x 1" bandsaw blades.

Selecting the right blade for the job depends on a variety of factors, such as the type of material being cut, hardness of the material, material shape machine capability, and operator technique.

The chart below is a basic starting point for choosing blade type based on teeth per inch (TPI) for variable tooth pitch blades and for standard raker type bi-metal blades/HSS blades. However, for exact specifications of bandsaw blades, contact the blade manufacturer.

To select the correct blade TPI:

1. Measure the material thickness. This measurement is the length of cut taken from where the tooth enters the workpiece, sweeps through, and exits the workpiece.

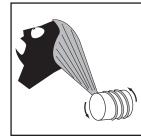

- 2. Refer to the "Material Width/Diameter" row of the blade selection chart in Figure 19 and read across to find your workpiece thickness you need to cut.
- **3.** Refer to the "Material Shapes" row and find the shape and material to be cut.
- 4. In the applicable row, read across to the right and find the box where the row and column intersect. Listed in the box is the minimum TPI recommended for the variable tooth pitch blades.
- 5. The "Cutting Speed Rate Recommendation" section of the charts offers guidelines for various metals, given in feet per minute (speed FPM) and meters per minute in parenthesis. Choose the speed closest to the number shown in the chart.

Material W	idth/Diam aterial Sha		Teeth Per I	nch Variab	le Pitch Blac	les		
	TOOTH mm 50	SELECTIO) 75 5/8	N 100 150	200		00 350	400 2/3	450

		•	•			•	•	

Figure 19. Model G9744Z blade selection and speed chart.

Blade Speed

Entanglement Hazard! You MUST install the pulley cover before operating or severe injury may occur.

The Model G9744Z has four speed settings—114, 196, 288, and 377 feet per minute (FPM). Refer to the chart on **Page 23** for cutting speed recommendations by material type.

To change blade speeds:

- 1. UNPLUG THE BANDSAW!
- 2. Open the belt cover.
- **3.** With one hand, support the weight of the motor. With the other hand, loosen the belt tension knob (see **Figure 20**). The motor will drop and the V-belt will slacken.

Figure 20. Belt tension knob.

4. Move the V-belt to the desired pulley combination (see Figure 21).

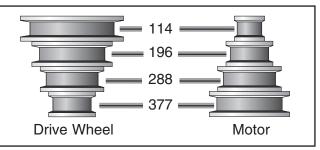

Figure 21. V-belt positions in FPM.

- **5.** Lift the motor to tension the belt and tighten the belt tension knob.
- 6. Close the belt cover.

Feed Rate

The speed at which the saw blade will cut through a workpiece is controlled by blade type, feed rate, and feed pressure. The feed rate is controlled by two knobs on the control panel.

Note: If a lubricant is used on the cut, the feed rate can be increased by approximately 15%.

To set the feed rate:

- 1. Raise the bow to the highest position.
- 2. Set the "Feed Rate Dial" in Figure 22 to the desired feed rate—0 (slowest), 9 (fastest).

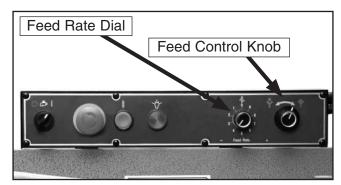

Figure 22. Feed rate controls.

3. Turn the feed control knob to the left to lower the bow at the feed rate you have set. Turning the knob to the right locks the bow in position.

Coolant System

FIRE HAZARD! DO NOT cut magnesium when using oil-water solutions as a cutting fluid! Always use a cutting fluid intended for magnesium. The water in the solution will cause a magnesium-chip fire.

This bandsaw has a built-in coolant system that extends the life of your bandsaw blades by lowering the temperature of the blade and workpiece when cutting.

See **Cutting Fluid** on **Page 26** for additional information.

To use the coolant system:

1. Access the reservoir by removing the rear panel on the base (see Figure 23).

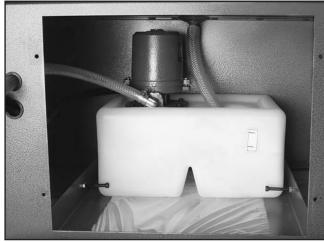

Figure 23. Coolant system reservoir and cover.

- 2. Thoroughly clean and remove any foreign material that may have fallen inside the reservoir during shipping.
- **3.** Fill the reservoir with your chosen cutting fluid solution and replace the rear panel.
- 4. Make sure the coolant control valve is turned *OFF*.
- 5. Turn the coolant pump switch *ON* before making your cut.
- 6. Adjust the valve on the coolant hose to control the flow of coolant (see **Figure 24**). Make sure that the pressure is not so high that coolant spills on the floor and creates a slipping hazard.

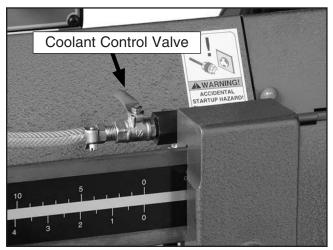

Figure 24. Coolant control valve.

7. When the bandsaw reaches the bottom of the cut, the motor and coolant system will shut *OFF.*

NOTICE

Keep the tray chip screen clear so coolant can recycle to the pump reservoir. NEVER operate the pump with the reservoir below the low mark or you will overheat the pump and void your warranty!

Cutting Fluid

AVARNING BIOLOGICAL AND POISON HAZARD! Use proper personal protection equipment when handling cutting fluid and follow federal, state, and fluid manufacturer requirements to properly dispose of cutting fluid.

While simple in concept and function, many issues must be taken into account to find and use the correct cutting fluid. Always follow all product warnings and contact the fluid manufacturer for unanswered questions.

Use the selections below to choose the appropriate cutting fluids:

- For cutting low alloy, low carbon, and general-purpose category metals with a bi-metal blade—use a water soluble cutting fluid.
- For cutting stainless steels, high carbon, and high alloy metals, brass, copper and mild steels—use "Neat Cutting Oil" (commonly undiluted mineral oils) that have extreme pressure additives (EP additives).
- For cutting cast iron, cutting fluid is not recommended.

Remember: Too much flow at the cutting fluid nozzle will make a mess and can make the work area unsafe; and not enough fluid at the cut will heat the blade, causing the blade teeth to load up and break.

Adjust the flow rate lever so the coolant will cool and lubricate the blade, and flush the chips away so they do not stick to the blade. If the chips build up on the blade, eventually they will bind and skid in the next cut, breaking blade teeth, and damaging the bandsaw wheels.

The reservoir on this machine is designed to store cutting fluid. During storage some fluids grow dangerous microbes, or due to the collection of toxic metal chips in the fluid, the fluid can become a potent and extremely poisonous solution to humans and animals.

USE the correct personal protection equipment when handling cutting fluids to prevent infections and poisoning.

USE a good bactericide and fungicide for additional protection.

FOLLOW federal, state, and the fluid manufacturer requirements to properly dispose of cutting fluid when it becomes unsafe.

NOTICE

Clean coolant system with a bactericide and fungicide between coolant changes to prevent recontamination. You need to change coolant when you notice the following conditions:

- Low sump level
- Abnormal appearance (change in fluid color)
- Foul smell (rancidity)
- Floating matter on the fluid (chips, swarf, mold)
- Tramp oil floating on the surface (leaking machine and hydraulic oils)
- Excessive foam (improper mixture, too high of pressure, excessive air in system)
- Dirty machine or trenches (cleaners in the fluid have become depleted)
- User notices skin irritation
- User has respiratory irritation
- Other problems that might be fluid related are:
 - -rust on machine or part
 - -staining on machine or part
 - -tool failure due to loss of coolant performance
 - -growth of fungi that would block coolant flow
 - -change in coolant viscosity (thicker or thinner
 - accumulation of water at the bottom of the sump in straight oils
 - -dirt and grit suspended in coolant
 - -general loss of performance (burning part or tool)

Consult your coolant manufacturer and MSDS for complete use and disposal information.

Operation Tips

The following tips will help you safely and effectively operate your bandsaw, and help you get the maximum life out of your saw blades.

Tips for horizontal cutting:

- Use the work stop to quickly and accurately cut multiple pieces of stock to the same length.
- Clamp the material firmly in the vise jaws to ensure a straight cut through the material, and use the positive lock to speed production.
- Let the blade reach full speed before engaging the workpiece.
- Never start a cut with the blade in contact with the workpiece, and do not start a cut on a sharp edge.
- Chips should be curled and silvery. If the chips are thin and powder like, increase your feed rate.
- Burned chips indicate a need to reduce your blade speed.
- Wait until the blade has completely stopped before removing the workpiece from the vise, and avoid touching the cut end—it could be very hot!
- Support long pieces so they won't fall when cut, and flag the ends to alert passers-by of potential danger.
- Adjust the blade guides as close as possible to the workpiece to minimize side-to-side blade movement.
- Use coolant when possible to increase blade life.

NOTICE

Loosen blade tension at the end of each day to prolong blade life.

SECTION 6: MAINTENANCE

WARNING

Always disconnect power to the machine before performing maintenance. Failure to do this may result in serious personal injury.

Schedule

For optimum performance from your machine, follow this maintenance schedule and refer to any specific instructions given in this section.

Daily Check:

- Loose mounting bolts.
- Damaged saw blade.
- Worn or damaged wires.
- Any other unsafe condition.
- Clean after each use.
- Proper blade tension.
- Coolant level.
- Coolant condition.

Monthly Check:

- Lubricate vise screw.
- Check gear box fluid level.

Annual Check:

• Change gear box oil (every four months if being used daily).

Cleaning

Cleaning the Model G9744Z is relatively easy. After using your bandsaw, remove excess chips by sweeping. Then remove chips for recycling.

Wipe down the machine and remove any standing coolant.

Lubrication

Since all bearings are sealed and permanently lubricated, leave them alone until they need to be replaced. Do not lubricate them. However, you must periodically lubricate threaded adjustment locations and check the gear box oil level.

Lubricate the following areas as follows:

• Blade Tension Mechanism: Open the main blade guard and drop a few drops of oil on the tension knob lead screw (see Figure 33).

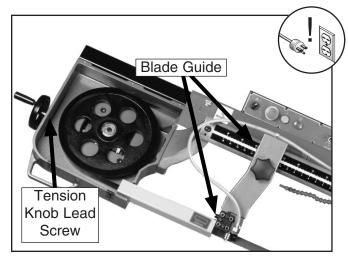

Figure 33. Main lubrication points.

- Blade and Guides: Drop a few drops of light machine oil on the blade and the blade guides daily, especially when cutting cast iron, as no cutting fluid is recommended (see Figure 33).
- Table and Machined Surfaces: Tables can be kept rust-free with regular applications of products like SLIPIT®. For long term storage you may want to consider products like Boeshield T-9[™].
- Vise Leadscrew: Place a few drops of light machine oil on the vise leadscrew weekly (see Figure 34).

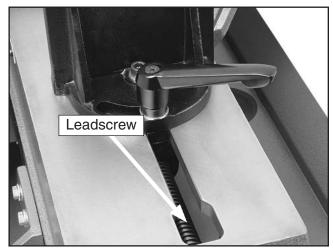

Figure 34. Vise leadscrew lubrication area.

• Grease Fittings on Pivot Point: Grease these with general purpose grease as needed to keep the pivot moving freely (see Figure 35).

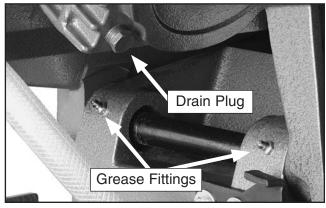

Figure 35. Lubrication points.

The gearbox should be drained and refilled after the first 50 hours of use and then once every year. Use a high quality, ISO 68 or SAE 90 gear oil.

To change the gear oil:

- 1. Run the bandsaw for a couple of minutes to warm up the oil in the gearbox.
- 2. UNPLUG THE BANDSAW!
- **3.** Raise the bow to the highest angle and close the feed control knob to lock the bow in position.
- 4. Drain the gearbox by removing the drain plug shown in **Figure 35**.
- 5. Replace the drain plug, then lower the bow to its lowest position.
- 6. Open the fill cap and fill the gearbox with oil until you see the oil level reach the halfway point in the sight glass (see **Figure 36**).

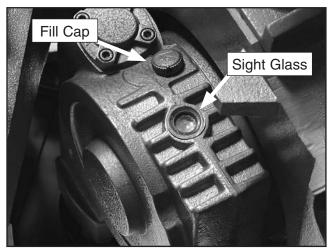

Figure 36. Gear box.

7. Tighten the fill plug, connect the machine to power and run the saw for a minute or two, then check the oil level. Add more oil if needed to maintain the level at the halfway mark in the sight glass.

SECTION 7: SERVICE

Review the troubleshooting and procedures in this section to fix your machine if a problem develops. If you need replacement parts or you are unsure of your repair skills, then feel free to call our Technical Support at (570) 546-9663.

Troubleshooting

Motor & Electrical

SYMPTOM	POSSIBLE CAUSE	CORRECTIVE ACTION
Machine does not start or a	1. Emergency-Stop button pressed.	1. Twist Emergency-Stop button until it pops out.
breaker trips.	2. Plug/receptacle is at fault or wired incorrectly.	2. Test for good contacts; correct the wiring.
	3. Start capacitor is at fault.	3. Test/replace capacitor if faulty.
	 Wall fuse/circuit breaker is blown/ tripped. 	 Ensure correct size for machine load; replace weak breaker.
	5. Motor connection wired incorrectly.	5. Correct motor wiring connections.
	6. Power supply is at fault/switched OFF.	Ensure hot lines have correct voltage on all legs and main power supply is switched ON.
	7. Motor ON/OFF switch is at fault.	7. Replace faulty ON/OFF switch.
	8. Wiring is open/has high resistance.	 Check for broken wires or disconnected/corroded connections, and repair/replace as necessary.
	9. Motor is at fault.	9. Test/repair/replace.
Machine stalls or is under- powered.	1. Wrong blade for the workpiece material.	 Use blade with correct properties for your type of cut- ting.
	2. Wrong workpiece material.	 Use metal with correct properties for your type of cut- ting.
	3. Feed rate/cutting speed too fast for task.	3. Decrease feed rate/cutting speed.
	4. Blade is slipping on wheels.	4. Adjust blade tracking and tension.
	5. Low power supply voltage.	5. Ensure hot lines have correct voltage on all legs.
	6. Motor bearings are at fault.	 Test by rotating shaft; rotational grinding/loose shaft requires bearing replacement.
	7. Plug/receptacle is at fault.	7. Test for good contacts; correct the wiring.
	8. Motor connection is wired incor- rectly.	8. Correct motor wiring connections.
	9. Motor has overheated.	9. Clean off motor, let cool, and reduce workload.
	10. Motor is at fault.	10. Test/repair/replace.
Machine has vibration or noisy operation.	1. Motor fan is rubbing on fan cover.	 Replace dented fan cover; replace loose/damaged fan.
	2. Blade is at fault.	2. Replace/resharpen blade.
	3. Gearbox is at fault.	3. Rebuild gearbox for bad gear(s)/bearing(s).
	4. Wrong blade for material.	4. Change blade.
	5. Speed is set too slow.	5. Adjust speed as required.

Blade Change

CUTTING HAZARD! Blades are sharp! Wear heavy leather gloves when handling blades to prevent cuts.

Blades should be changed when they become dull, damaged, or when you are using materials that require a blade of a certain type or tooth count.

To change the blade on the bandsaw:

- 1. UNPLUG THE BANDSAW!
- 2. Raise the bow of the bandsaw about six inches, lock in position by turning the feed control knob to the right to close the feed control valve.
- **3.** Loosen and slide both blade guides toward the center of the bow.

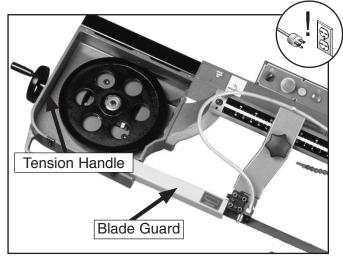

Figure 37. Tension handle and blade.

4. Remove the two screws to open the upper blade guard (see Figure 38).

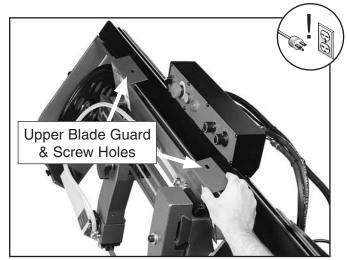

Figure 38. Opened upper blade guard.

- 5. Open both wheel covers and clean out all the chips and shavings.
- 6. Loosen the blade tension handle in **Figure 37** and slip the old blade off of the wheels then out of the blade guide roller bearings.
- Install the new blade into the front and rear blade guide roller bearings, as shown in Figure 39, then around the bottom and top wheels.

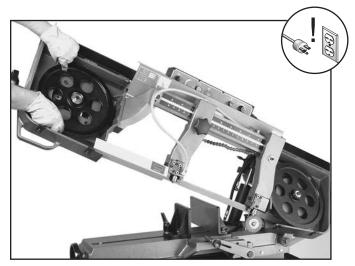

Figure 39. Installing the blade.

Note: It is sometimes possible to flip the blade inside out, in which case the blade will be installed in the wrong direction. Check to make sure the blade teeth are facing toward the workpiece, as shown in **Figure 40**, after mounting on the bandsaw. Some blades will have a directional arrow as a guide.

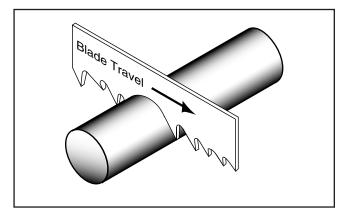

Figure 40. Blade cutting direction.

- 8. Apply a light amount of tension to hold the blade in place. Work your way around the blade to adjust the position so the back of the blade is against the flange of the wheels.
- 9. Complete the blade change by following the steps in **Blade Tension & Tracking**.

Blade Tension & Tracking

Proper blade tension is essential to long blade life, straight cuts, and efficient cutting. The Model G9744Z features a blade tension indicator to assist you with blade tensioning.

Two major signs that you do not have proper blade tension are: 1) the blade stalls in the cut and slips on the wheels, and 2) the blade frequently breaks from being too tight.

NOTICE

Loosen blade tension at the end of each day to prolong blade life.

To tension the blade on the bandsaw:

- **1.** Turn the blade tension handle clockwise to tension the blade.
- 2. Use the graduated scale on the blade tension indicator (Figure 41) to determine blade tension in PSI.
 - -For carbon blades, the blade tension should be 20,000 PSI.
 - -For bi-metal blades, like the one supplied with your machine, the blade should be tensioned from 30,000 to 35,000 PSI.

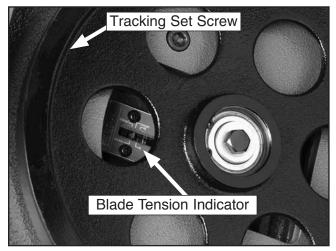

Figure 41. Blade tension indicator.

3. To fine tune blade tension, use a blade tensioning gauge, like the one found in **SECTION 5: ACCESSORIES** on **Page 28**. Please follow the instructions included with your gauge and the blade manufacturer's recommendations on blade tension.

Continued on next page ------

The blade tracking has been properly set at the factory. The tracking will rarely need to be adjusted if the bandsaw is used properly.

To adjust the blade tracking on the bandsaw:

 Loosen or tighten the tracking set screw in Figure 42 until the blade is tracking properly. The blade is tracking properly when the back of the blade is lightly touching the flange of both wheels.

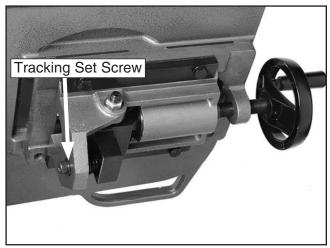

Figure 42. Tracking set screw.

2. Remove the V-belt from the motor pulley and spin either wheel by hand to observe how the blade is tracking. Make sure the blade teeth are not cutting into any part of the saw. Adjust as needed.

Blade Guide Bearings

The blade guide bearings are adjusted at the factory but due to shipping and storage may need adjustment. Use **Figures 43 & 44** to guide you through the following steps.

To adjust the blade guide bearings:

- 1. Before making adjustments, make sure the blade is tensioned and tracking correctly.
- 2. UNPLUG THE BANDSAW!
- **3.** Raise the bow high enough to give you room to work, then lock in place.
- 4. Remove both blade guards.
- 5. The back of the blade (A) in **Figure 43** should make light contact with the backing bearing (C).
 - If it does not, loosen the set screw (B) shown in Figure 43, and move the bearing (C) up or down until it lightly touches the back of the blade.

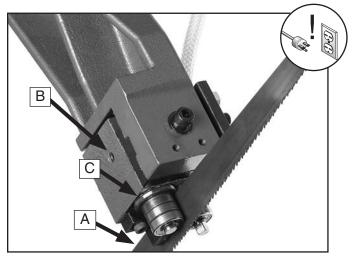

Figure 43. Blade guide adjustments.

The blade guide roller bearings also need to be adjusted. The front bearing is mounted on an eccentric and can be easily adjusted to suit the blade thickness.

To adjust the blade guide roller bearings:

1. Loosen the set screw shown in **Figure 44** to allow the eccentric bushing to turn.

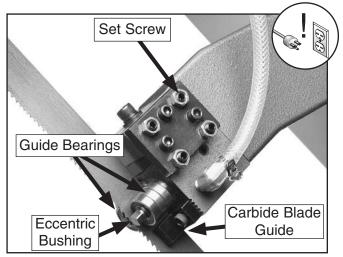

Figure 44. More blade guide adjustments.

- 2. Turn the square nut on the eccentric shaft to adjust the distance of the guide bearing. The guide bearings and blade should make light contact or have a maximum clearance of 0.002".
- **3.** Adjust the carbide blade guides so they make the same contact with the blade as the bearings.
- 4. Adjust the eccentric blade guide roller bearing on the front arm the same way.

Squaring Blade to Table

This adjustment has been made at the factory and should not need to be adjusted under normal circumstances. However, if you find the saw is not cutting square, you may need to adjust the blade. Only make this adjustment after factors such as excessive feed rate or the blade guide being set too far away from the workpiece have been ruled out.

To square the blade the to the table:

- 1. UNPLUG THE BANDSAW!
- 2. Examine your workpiece for clues as to which way the blade is twisted, or Set up a machinist square on the table and blade as shown in Figure 45.

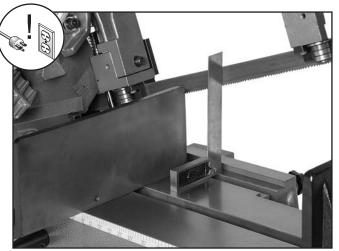

Figure 45. Square blade to table.

- **3.** Check for gaps along several points of the blade length between the two blade guides. Set the machinist square between the blade teeth for a more accurate reading.
- Adjust the blade by loosening the lock nuts and turning the set screws. This will cause the bearing bracket to pivot (see Figure 46).

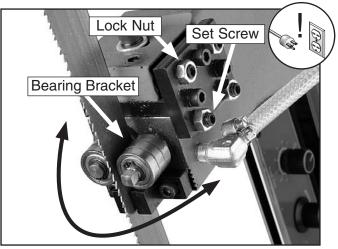

Figure 46. Bearing block pivot.

- 5. Adjust the set screws in pairs. Tightening the upper pair will pivot the bearing block toward the table. Tightening the lower pair will pivot the bearing bracket away from the table.
- 6. Cut a small section from a scrap piece of material with a known square end and measure for uniform thickness. If the thickness is not uniform, repeat **Steps 1-5** until your personal requirements are met.

WARRANTY AND RETURNS

Grizzly Industrial, Inc. warrants every product it sells for a period of **1 year** to the original purchaser from the date of purchase. This warranty does not apply to defects due directly or indirectly to misuse, abuse, negligence, accidents, repairs or alterations or lack of maintenance. This is Grizzly's sole written warranty and any and all warranties that may be implied by law, including any merchantability or fitness, for any particular purpose, are hereby limited to the duration of this written warranty. We do not warrant or represent that the merchandise complies with the provisions of any law or acts unless the manufacturer so warrants. In no event shall Grizzly's liability under this warranty exceed the purchase price paid for the product and any legal actions brought against Grizzly shall be tried in the State of Washington, County of Whatcom.

We shall in no event be liable for death, injuries to persons or property or for incidental, contingent, special, or consequential damages arising from the use of our products.

To take advantage of this warranty, contact us by mail or phone and give us all the details. We will then issue you a "Return Number," which must be clearly posted on the outside as well as the inside of the carton. We will not accept any item back without this number. Proof of purchase must accompany the merchandise.

The manufacturers reserve the right to change specifications at any time because they constantly strive to achieve better quality equipment. We make every effort to ensure that our products meet high quality and durability standards and we hope you never need to use this warranty.

Please feel free to write or call us if you have any questions about the machine or the manual.

Thank you again for your business and continued support. We hope to serve you again soon.
