

VERA-P1 series

Host-based V2X transceiver module

Data Sheet

Abstract

This technical data sheet describes the VERA-P1 series transceiver module that enables development of electronics for Vehicle-to-Everything (V2X) communication systems. The VERA-P1 series includes an integrated MAC/LLC/Baseband processor and the required RF front-end components. It is connected to a host processor through a USB or SPI interface.

1 Functional description

1.1 Overview

The VERA-P1 series are compact, embedded transceiver modules that enables development of electronics for Vehicle-to-Everything (V2X) communication systems. These automotive grade modules are designed for applications such as traffic safety, intelligent traffic management and entertainment. The modules can be used for in-vehicle units (OBU - On Board Unit) – their use in V2X infrastructure (RSU - Road Side Unit) is intended, but not authorized yet. The VERA-P1 series modules provide superior performance compared to V2X systems based on consumer-grade Wi-Fi chipsets, especially at high vehicle speeds and in non-line-of-sight (NLOS) conditions.

The VERA-P1 series includes an integrated MAC/LLC/Baseband processor and the required RF front-end components. The module is connected to a host processor through USB or SPI interface. Both interfaces can be used for data communication and firmware download.

1.2 Product features

Model	Radio			Interfaces				Power	Features			Grade		
	802.11p	Max output power at antenna pin	Antenna type	USB 2.0	GPIO	1PPS	SPI	Power supply: 3.3 V and 5 V	Antenna diversity	Single channel operation	Concurrent dual-channel operation	Standard	Professional	Automotive
VERA-P171	•	23 dBm	1p	•	•	•	•	•	•	•				
VERA-P173	•	23 dBm	2p	•	•	•	•	•	•	•				
VERA-P174	•	23 dBm	2p	•	•	•	•	•	◆	•	◆			

1p = One antenna pin 2p = Two antenna pins ◆ = Can be configured by the user as dual-channel or diversity

Table 1: VERA-P1 series main features summary

1.3 Block diagrams

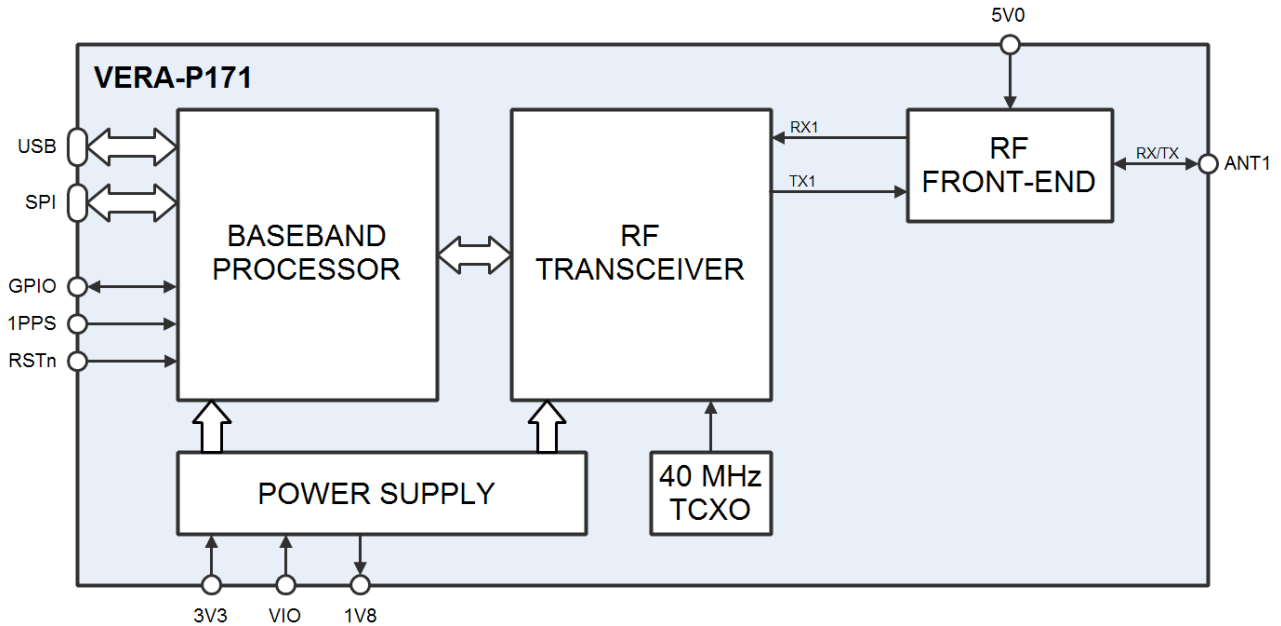

Figure 1: Block diagram of VERA-P171

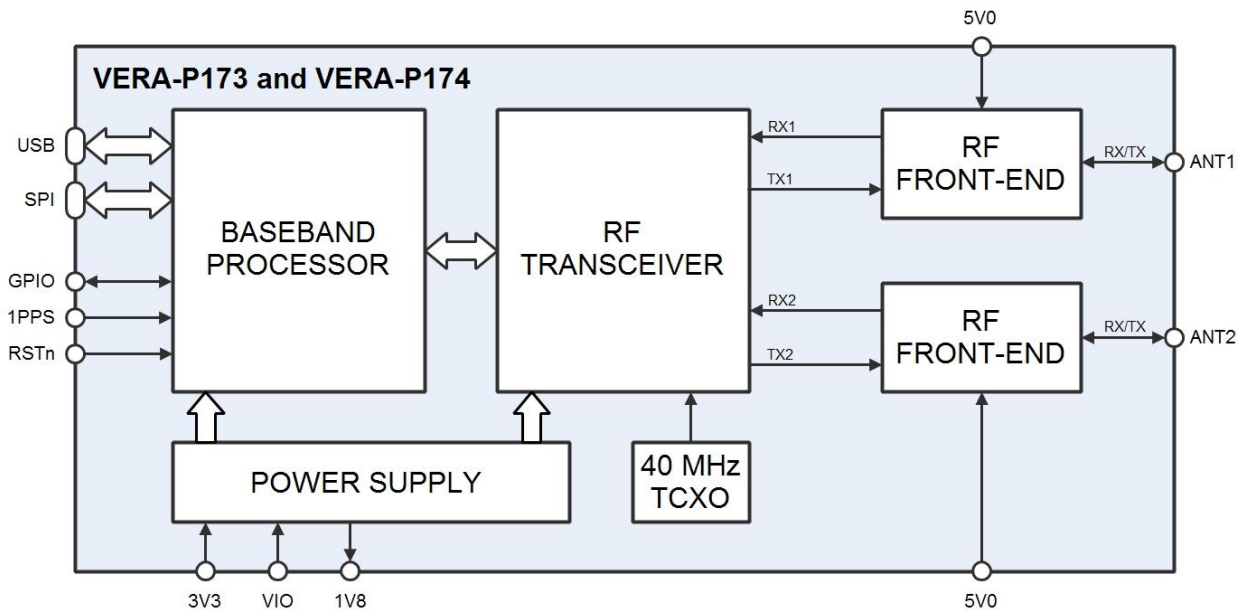

Figure 2: Block diagram of VERA-P173 and VERA-P174

1.4 Product description

Model	Description
VERA-P171	Single channel, no antenna diversity, one antenna
VERA-P173	Single channel, antenna diversity, two antennas
VERA-P174	Dual channel or single channel with antenna diversity, two antennas

Table 2: Product description

1.5 Supported features

- Compliance with WAVE and ETSI ITS G5 for US and Europe operations
- USB and SPI¹ host interfaces
- Frequency band 5.850 – 5.925 MHz (channels 172, 174, 176, 178, 180, 182, 184)
- Channel bandwidth 10 MHz²
- Data rates 3, 4.5, 6, 9, 12, 18, 24, 27 Mbps
- Antenna diversity (VERA-P173, VERA-P174) – CDD for TX and MRC for RX mode
- TX output power from -10 to +23 dBm (Class C), RX sensitivity -97 dBm at 3 Mbps
- Power supply 3.3 V and 5.0 V, 4 W maximum
- Operation temperature -40 °C to +95 °C
- Dimensions 29.6 x 24.8 x 3.5 mm

¹ SPI is not recommended as the main host interface for communication due to performance limitations.

² Support for 20 MHz mode is planned for future firmware releases subject to certain limitations, as the requirements for 20 MHz operation have not been fully specified.

2 Host interfaces

2.1 USB interface

The VERA-P1 series module supports a USB 2.0 high-speed interface for firmware loading (booting) and high speed data transfer (> 200 Mbps). The USB interface of the module is powered with 3.3 V supply voltage. The module acts as a device on the USB bus.

2.2 SPI interface

The VERA-P1 series module supports an SPI interface for firmware loading (booting) and data communication. Firmware can be loaded by the host processor while the module operates as a slave or from the FLASH memory while the module is in the master mode. When the module is configured as a master, it needs a USB interface connection for communication to the host. The interface is capable of full-duplex operation in master or slave mode. The maximum clock rate is 50 MHz in master mode, and 25 MHz in slave mode³.

³ SPI host interface for data communication in slave mode is tested only with 15 MHz clock rate.

3 Pin Definition

3.1 Pin description

Figure 3: Pin allocation (top view)

No.	Name	Pin type	Power domain	Description
A1	GND	Ground	-	Ground
A2	GND	Ground	-	Ground
A3	RSTn	I	VIO	Module Reset, has internal pull-up 100k to VIO
A4	GND	Ground	-	Ground
A5	3V3	Power	-	Baseband/Radio supply (3.0 to 3.6V)
A6	GND	Ground	-	Ground
A7	NC	-	-	Leave unconnected
A8	VIO	Power	-	I/O voltage (1.8/2.5/3.3V), in case of 1.8V pin 8 can get supply from pin B7

Table 3: VERA-P1 series pin description

4 Electrical specification

Stressing the device above one or more of the ratings listed in the Absolute Maximum Rating section may cause permanent damage. These are stress ratings only. Operating the module at these or at any conditions other than those specified in the Operating conditions section of this document should be avoided. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Operating condition ranges define those limits within which the functionality of the device is guaranteed. Where application information is given, it is advisory only and does not form part of the specification.

4.1 Absolute maximum ratings

Symbol	Description	Min.	Max.	Units
5V0_A1, 5V0_A2	Power supply voltage 5.0 V	-0.3	6.0	V
3V3	Power supply voltage 3.3 V	-0.3	3.9	V
VIO	I/O supply voltage 1.8 V/2.5 V/3.3 V	-0.3	3.9	V
T _{STORAGE}	Storage temperature	-40	+95	°C

Table 4: Absolute maximum ratings

The product is not protected against overvoltage or reversed voltages. If necessary, voltage spikes exceeding the power supply voltage specification, given in table above, must be limited to values within the specified boundaries by using appropriate protection devices.

4.2 Operating conditions

Symbol	Parameter	Min.	Typ	Max.	Units
5V0_A1, 5V0_A2	Power supply voltage 5.0 V	4.5	5.0	5.5	V
3V3	Power supply voltage 3.3 V	3.0	3.3	3.6	V
VIO	I/O supply voltage 1.8 V/2.5 V/3.3 V	1.65	1.8	1.95	V
		2.3	2.5	2.8	
		3.0	3.3	3.6	V
T _A	Ambient operating temperature	-40	-	+95	°C
Ripple Noise	Peak-to-peak voltage ripple on 5V0 and 3V3 supply lines.	-	-	10	mV

Table 5: Operating conditions

4.3 Digital pad ratings

Symbol	Parameter	Conditions	Min.	Max.	Units
V _{IH}	Input high voltage		0.7*VIO ⁴	VIO ¹	V
V _{IL}	Input low voltage		-0.3	0.6 ⁵	V
V _{IHS}	Input hysteresis		0.18	-	V
V _{OH}	Output high voltage	I _O max = 5 mA	VIO-0.4	-	V
V _{OL}	Output low voltage	I _O max = -5 mA	-	0.4	V

Table 6: Digital pad ratings

⁴ 1PPS pad always use 1.8 V internally generated IO supply regardless of the VIO pad voltage.

⁵ RSTn pad internally pulled high to VIO voltage by 100k. During reset it should be below 0.2 V.

4.4 Peak current consumption

Operation Mode		Peak current ⁶ (mA)			
		3V3	VIO ⁷	5V0_A1	5V0_A2
RX		700	TBD	35	35
TX	+23 dBm	700	TBD	500	500
	+15 dBm	700	TBD	TBD	TBD
	+10 dBm	700	TBD	TBD	TBD
	+0 dBm	700	TBD	TBD	TBD

Table 7: Peak current consumption

4.5 Current consumption

Power consumption for different operation modes – TBD

⁶ Peak values are shown. The average current for full operation mode strongly depends on RX/TX time ratio and remains within the range between the peak values of RX and TX.

⁷ VIO current is shown for 1.8 V I/O voltage.

4.6 Radio specifications

Parameter	Operation Mode		Specification	
RF Frequency Range	802.11p		5.85 – 5.925 GHz	
Modulation	802.11p		OFDM	
Supported Data Rates	802.11p		3, 4.5, 6, 9, 12, 18, 24, 27 Mbps	
Supported Bandwidth	802.11p		10 MHz	
Maximum Transmit Power	802.11p		20 dBm ± 2 dB	
Minimum Transmit Power	802.11p		-10 dBm	
Receiver sensitivity	802.11p	10 MHz, no multipath, 25 °C	3 Mbps	-98 dBm typ., -95 dBm min.
			4.5 Mbps	-96 dBm typ., -93 dBm min.
			6 Mbps	-95 dBm typ., -92 dBm min.
			9 Mbps	-93 dBm typ., -90 dBm min.
			12 Mbps	-90 dBm typ., -87 dBm min.
			18 Mbps	-86 dBm typ., -83 dBm min.
			24 Mbps	-82 dBm typ., -79 dBm min.
	10 MHz, NLoS (Non-line-of-sight), 25 °C	3 Mbps	-95 dBm typ., -92 dBm min.	
		4.5 Mbps	-92 dBm typ., -89 dBm min.	
		6 Mbps	-88 dBm typ., -85 dBm min.	
		9 Mbps	-86 dBm typ., -83 dBm min.	
		12 Mbps	-85 dBm typ., -82 dBm min.	
		18 Mbps	-82 dBm typ., -79 dBm min.	
		24 Mbps	na	
27 Mbps	na			
Receiver maximum operating input level	802.11p		-20 dBm	
RSSI accuracy	802.11p	Over temperature range	+/-2 dB	
Centre frequency and symbol clock tolerance	802.11p		+/-10 ppm	
Transmitter spectral flatness	802.11p	All modulation modes	< +/-2 dB	
Transmitter centre frequency leakage	802.11p		< -15 dB	
Transmit power control step size	802.11p		0.5 dB	
Transmit power control accuracy	802.11p	Over temperature range	+/-2 dB	

Table 8: Radio specifications

Table 9 shows the Highway NLoS (Non-line-of-sight) channel parameters that are used to obtain the receiver sensitivity values in Table 8. This channel was used in RF testing at the third ETSI Plug test (CMS3).

Each tap is faded using Pure Doppler, but the second antenna has a Doppler increased by 11 Hz, which prevents phase synchronization of channels. The RX Power listed in Table 8 refers to the power of Tap 0.

The values presented are typical values, measured at +25 °C.

Tap#	Relative Power (dB)	Delay (ns)	Doppler Frequency (Hz)
0	0	0	0
1	-2	200	689
2	-5	433	-492
3	-7	700	886

Table 9: Highway NLoS channel parameters

The adjacent and non-adjacent channel rejection measurements are provided in Table 10 and Table 11 respectively.

Bit rate	Target ACR (dB)	Target opt. enc. ACR (dB)	VERA-P1 typical ACR (dB)
3 Mbps (1/2BPSK)	16	28	37
4.5 Mbps (3/4BPSK)	15	27	33
6 Mbps (1/2QPSK)	13	25	35
9 Mbps (3/4QPSK)	11	23	29
12 Mbps (1/2QAM16)	8	20	29
18 Mbps (3/4QAM16)	4	16	25
24 Mbps (2/3QAM64)	0	12	22
27 Mbps (3/4QAM64)	-1	11	20

Table 10: Adjacent channel rejection

Bit rate	Target ACR (dB)	Target opt. enc. ACR (dB)	VERA-P1 typical ACR (dB)
3 Mbps (1/2BPSK)	32	42	51
4.5 Mbps (3/4BPSK)	31	41	48
6 Mbps (1/2QPSK)	29	39	48
9 Mbps (3/4QPSK)	27	37	45
12 Mbps (1/2QAM16)	24	34	42
18 Mbps (3/4QAM16)	20	30	38
24 Mbps (2/3QAM64)	16	26	34
27 Mbps (3/4QAM64)	15	25	32

Table 11: Non-adjacent channel rejection

Channel	Frequency, GHz
172	5.860
174	5.870
176	5.880
178	5.890
180	5.900
182	5.910
184	5.920

Table 12: Supported channels

5 Mechanical specifications

5.1 Physical dimensions

Figure 4: Physical dimensions

Symbol	Description	Millimeters		
		Min.	Nom.	Max.
A	Module Thickness	3.3	3.5	3.7
A1	Vertical distance from the solder mask to the pad surface	0.010	0.020	0.035
b	Width of the peripheral pads	0.70	0.75	0.80
D	Module horizontal dimension	24.8 BSC		
D2	Horizontal dimension of the exposed thermal pads pattern	17.7	17.8	17.9
D3	Horizontal dimension of the individual exposed thermal pad	3.9	4.0	4.1
E	Module vertical dimension	29.6 BSC		
E2	Vertical dimension of the exposed thermal pads pattern	22.3	22.4	22.5
E3	Vertical dimension of the individual exposed thermal pad	3.9	4.0	4.1
e	Pitch of the peripheral pads	1.2 BSC		
E1	Pitch of the individual exposed thermal pads	4.6 BSC		
aaa	Bilateral profile tolerance of the module body	0.2		
ddd	Co-planarity of the module bottom surface (unilateral tolerance)	0.1		
eee	Tolerance of the peripheral pads pattern position	0.2		
fff	Tolerance of the peripheral pads position with respect to each other	0.04		
ggg	Tolerance of the exposed thermal pads pattern position	0.08		

Table 13: VERA-P1 series dimensional references

The “aaa” tolerances +/- 0.2 mm may be exceeded in the corners of the PCB due to the cutting process. In worst case, the outer dimension “D” could reach 25.1 mm.

6 Qualification and approvals

6.1 Approvals⁸

Products marked with this lead-free symbol on the product label comply with the "Directive 2002/95/EC of the European Parliament and the Council on the Restriction of Use of certain Hazardous Substances in Electrical and Electronic Equipment" (RoHS).

VERA-P1 series V2X modules are RoHS compliant.

6.1.1 European Union regulatory compliance

TBD

6.1.2 FCC compliance

The VERA-P173 module complies with Part 95, Subpart L of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

Non authorized modification could void authority to use this equipment. The internal / external antenna(s) used for this module must provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instructions, may cause harmful interference to radio communications.

The outside of final product that contains the VERA-P173 module must display in a user accessible area a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains Transmitter Module FCC ID: XPYVERAP173" or "Contains FCC ID: XPYVERAP173".

Part 95, Subpart L covers DSRC service of On-Board Units. VERA-P173 authorization for Road Side Units is pending.

6.1.3 IC compliance

TBD

6.1.4 FCC and IC IDs

Model	FCC ID	IC ID
VERA-P171	tbd	tbd
VERA-P173	XPYVERAP173	tbd
VERA-P174	tbd	tbd

⁸ These approvals are pending.

6.1.5 Certification in other countries

TBD

6.2 Approved antennas

VERA-P173 is certified to be used with dipole antennas of up to 6 dBi peak gain. Table 15 below lists an example of an approved antenna.

Model name	Manufacturer and description	Gain [dBi] (peak)
TD.10.5113	Taoglas, Dipole Terminal Antenna SMA Connector	5.88 dBi

Table 15: Approved antennas (example)

7 Product handling & soldering

7.1 Packaging

The VERA-P1 series modules are delivered as hermetically sealed, reeled tapes to enable efficient production, production lot set-up and tear-down. For more information about packaging, see the u-blox Package Information Guide [1].

7.1.1 Reels

The VERA-P1 series modules are deliverable in quantities of 250 pieces on a reel. The VERA-P1 series modules are shipped on reel Type A as specified in the u-blox Package Information Guide [1].

7.1.2 Tapes

The dimensions of the tapes are specified in Figure 5.

- NOTES:
1. 10 SPROCKET HOLE PITCH CUMULATIVE TOLERANCE ± 0.2
 2. POCKET POSITION RELATIVE TO SPROCKET HOLE MEASURED AS TRUE POSITION OF POCKET, NOT POCKET HOLE.
 3. Ao AND Bo ARE MEASURED ON A PLANE AT A DISTANCE "R" ABOVE THE BOTTOM OF THE POCKET.

Figure 5: VERA-P1 tape dimensions

7.2 Shipment, storage and handling

For more information regarding shipment, storage and handling see the u-blox Package Information Guide [1].

7.2.1 Moisture sensitivity levels

The VERA-P1 series modules are rated at moisture sensitivity level 3. See moisture sensitive warning label on each shipping bag for detailed information. After opening the dry pack, modules must be mounted within 168 hours in factory conditions of maximum 30 °C/60%RH or must be stored at less than 10%RH. Modules require baking if the humidity indicator card shows more than 10% when read at $23 \pm 5^\circ\text{C}$ or if the conditions mentioned above are not met. Please refer to J-STD-033B standard for bake procedure.

7.2.2 Mounting process and soldering recommendations

The VERA-P1 series module is a surface mount module supplied on an 8-layer FR4-type PCB with gold plated connection pins and produced in a lead-free process with a lead-free soldering paste. The wrap page of the PCB is max. 0,75% according to IPC-A-610E. The thickness of solder resist on the host PCB top side and the JODY-W1 bottom side must be considered for the soldering process.

This module is compatible with industrial reflow profile for RoHS/Pb-free solders, Sn96.5/Ag3.0/Cu0.5 solder is a right choice. Use of "No Clean" soldering paste is strongly recommended, cleaning the populated modules is strongly discouraged - residuals under the module cannot be easily removed with any cleaning process. Cleaning with water can lead to capillary effects where water is absorbed into the gap between the host board and module. The combination of soldering flux residuals and encapsulated water could lead to short circuits between neighboring pins.

Only a single reflow soldering process is permitted for host boards with the VERA-P1 series modules.

The reflow profile used is dependent on the thermal mass of the entire populated PCB, heat transfer efficiency of the oven and particular type of solder paste used. Since the profile used is process and layout dependent, the optimum profile should be studied case by case. Recommendations below should be taken as a starting point guide. In case of basic information necessity, refer to J-STD-020C standard.

Profile feature	Sn-Pb eutectic (Sn63/Pb37)	RoHS/Pb-free (Sn96.5/Ag3.0/Cu0.5)
Ramp up rate ($T_{S_{MAX}}$ to T_p)	3 °C/sec max	3 °C/sec max
Minimum soak temperature ($T_{S_{MIN}}$)	100 °C	150 °C
Maximum soak temperature ($T_{S_{MAX}}$)	150 °C	200 °C
Soak time (ts)	60 - 120 sec	60 - 180 sec
Liquidus temperature (T_L)	183 °C	217 °C
Time above T_L (t_L)	60 - 150 sec	60 - 150 sec
Peak temperature (T_p)	215 – 225 °C	235 – 245 °C
Time within +0 / -5°C of actual TP (tp)	10 - 30 sec	20 - 40 sec
Ramp down rate	6 °C/sec max	6 °C/sec max
Time from 25°C to T_p	6 min max	8 min max

Table 16: Recommended reflow profile

The lowest value of T_p and slower ramp down rate (2 – 3 °C/sec) is preferred.

Figure 6: Reflow profile

7.2.3 ESD handling precautions

 **VERA-P1 series modules are Electrostatic Sensitive Devices (ESD). Observe precautions for handling! Failure to observe these precautions can result in severe damage to the Wi-Fi receiver!**

Wi-Fi transceivers are Electrostatic Sensitive Devices (ESD) and require special precautions when handling. Particular care must be exercised when handling patch antennas, due to the risk of electrostatic charges. In addition to standard ESD safety practices, the following measures should be taken into account whenever handling the receiver:

- Unless there is a galvanic coupling between the local GND (i.e. the work table) and the PCB GND, then the first point of contact when handling the PCB must always be between the local GND and PCB GND.
- Before mounting an antenna patch, connect ground of the device
- When handling the RF pin, do not come into contact with any charged capacitors and be careful when contacting materials that can develop charges (e.g. patch antenna ~10 pF, coax cable ~50-80 pF/m, soldering iron, ...)
- To prevent electrostatic discharge through the RF input, do not touch any exposed antenna area. If there is any risk that such exposed antenna area is touched in non ESD protected work area, implement proper ESD protection measures in the design.
- When soldering RF connectors and patch antennas to the receiver's RF pin, make sure to use an ESD safe soldering iron (tip).

8 Labeling and ordering information

8.1 Product labeling

8.2 Explanation of codes

Three different product code formats are used. The **Product Name** is used in documentation such as this data sheet and identifies all u-blox products, independent of packaging and quality grade. The **Ordering Code** includes options and quality, while the **Type Number** includes the hardware and firmware versions. Table 17 below details these three different formats:

Format	Structure
Product Name	PPPP-TGVV
Ordering Code	PPPP-TGVV-TTQ
Type Number	PPPP-TGVV-TTQ-XX

Table 17: Product Code Formats

Code	Meaning	Example
PPPP	Form factor	VERA
TG	Platform T – Dominant technology, For example, W: Wi-Fi, B: Bluetooth G - Generation	P1
VV	Variant based on the same platform; range [00...99]	71
TT	Major Product Version	00
Q	Quality grade A: Automotive B: Professional C: Standard	A
XX	Minor product version (not relevant for certification)	00

Table 18: Part identification code

8.3 Ordering codes

Ordering Code	Product name	Product
VERA-P171-00A-00	VERA-P171	VERA-P171 automotive grade module
VERA-P173-00A-00	VERA-P173	VERA-P173 automotive grade module
VERA-P174-00A-00	VERA-P174	VERA-P174 automotive grade module
EVK-VERA-P174-00A	EVK-VERA-P174	VERA-P171/3/4 Evaluation kit

Table 19: Product ordering codes

Product changes affecting form, fit or function are documented by u-blox. For a list of Product Change Notifications (PCNs) see our website.

Appendix

Glossary

Name	Definition
COTS	Commercial off-the-shelf
CS	Chip select
ESD	Electrostatic Sensitive Devices
ETSI	European Telecommunications Standards Institute
FCC	Federal Communications Commission
GND	Ground
GPIO	General-purpose input/output
IC	Industry Canada
LLC	Logical Link Control
MAC	Media Access Control
nACR	Non-adjacent channel rejection
NLoS	Non-Line-of-Sight
OBU	On Board Unit
OFDM	Orthogonal frequency-division multiplexing
PCB	Printed Circuit Board
RF	Radio Frequency
RSU	Road Side Unit
RoHS	Restriction of Hazardous Substances
SPI	Serial Peripheral Interface
USB	Universal Serial Bus
V2X	Vehicle-to-Everything

Revision history

Revision	Date	Name	Comments
R01	23-Feb-2017	ishe, kgom	Initial release.
R02	5-May-2017	ddie, kgom	Added VERA-P174 product variant and included block diagram, FCC/IC ID, and ordering code for this variant.
R03	11-Sep-2017	mzes, kgom, ddie	Updated Table 1. Included footnotes in section 1.5. Updated the ordering codes (section 8.3). Added reel size (section 7.1) and tape dimensions (Figure 5).
R04	7-Dec-2017	ddie, kgom	Removed references to VERA-P175 variant. Updated Table 1. Added section 6.1.2 on FCC compliance. Removed watermark. Clarified that RSU operation is not approved (Section 1.1). Updated maximum transmit power (Section 4.6).
